## SPECIAL NOTICES AND ANNOUNCEMENTS

### SPECIAL NOTICES

FOR SALE: Steinway Grand Style B. Original cost \$2,250. In excellent condition. Will sacrifice for \$600. c/o Etude, CET.

### ANNOUNCEMENTS

PIANO TEACHERS' COURSE: Leschetizky principles—markings—graded mate-

rial. Correspondence—personal. Certified, college recommendations. Bertha Yocum, 7028 Paschall Ave., Philadelphia, Pa.

HARMONY and arranging taught by correspondence. Manuscripts corrected. Arranging done. Poems set to music. Hall Axtell, 1609 Fillmore St., Amarillo, Texas.

SINGING MADE EASY: Send for free detailed information to Eastern School of Voice Culture, Chambersburg, Penna.

## New Concepts in Present Day Music

(Continued from Page 227)

of them tucked away in the contrapuntal fabric of this great master who is the basis of everything in music. Combine the glory of Bach with the sweetness of Mendelssohn and the grandeur of Beethoven, and you have touched the horizons of all music.

"I look upon the Philadelphia Symphony Orchestra under Leopold Stokowski and Eugene Ormandy as the greatest musical instrument of its type in the world. There has never been anything in the way of an orchestra so exquisitely perfect and responsive. In my opinion the best orchestras in England could not stand with our foremost similar American organizations. The English orchestras are superb in their finish, but the rich color is not there. Combine the fire of Ole Bull, the vibrato of Elman, the youthful vigor of Menuhin, and the soul of Kreisler, and you have them all in the Philadelphia Orchestra. The fastest developing symphony orchestra in America, to my mind, is unquestionably the National Symphony Orchestra under Hans Kindler.

"The orchestra I use in broadcasting at present is made up as follows:

- 9 saxophones
- These expert players all double; that is, they play the following instruments when the arrangements call for it:
- 9 play clarinet
- 5 play bass clarinet
- 3 play flute
- 2 play oboe
- 2 play English horn
- 2 play bassoon
- 6 brass including
- 3 trumpets and 3 trombones
- 2 pianos
- 2 guitars
- 2 drums
- 1 string bass
- 6 violins
- 2 violas

(I am often asked why we do not use horns. Well, if a horn player in a symphony orchestra is an expert, he is usually too old to learn to play our complicated rhythms. If he has not this technic, it takes him too long to get it.)

"After many years of experience and innumerable tours with my group, during which time we have combined with the greatest symphony orchestras in the land, to show the public what this new form of

music is; I am coming to the opinion that we do not belong with a symphony orchestra, and a symphony orchestra does not belong with us. In fact I am continually looking for something new, as the opportunities of the times make this possible.

### The Ever Widening Horizon

"BROADCASTING AND RADIO have made new and important obligations. Many people who are acquainted only with the finished type of symphony orchestra, in which the player takes one place at the beginning of the concert and never moves until intermission, are amazed when they attend one of my broadcasts and find the player continually moving about. One humorist observer said that they seemed to dance from here to there on the stage like goldfish in an aquarium. This is not done for visual effect, of course, but merely to bring certain groups nearer to the microphone so that some particular part will be properly stressed. For instance, the drummer may run up to the microphone with cymbal and a wire fly-swatter and, holding both right up before the "mike," let it one swat. That is because that particular sound effect would be lost to the air if the drummer were in his usual place. These things must be very carefully studied and tried out many times, before they are introduced.

"Some years ago (in 1924), I gave the first concert of music in the modern style at Aeolian Hall, which included the famous *Rhapsody in Blue* and also an original work written for the occasion by Victor Herbert. Besides Gershwin and Herbert almost the whole concert consisted of well established jazz numbers, such as *Yes, we have no Bananas*.

"Last Christmas night, at Carnegie I gave another program which included the first time music especially written for electrical amplification, and many different novelties, embracing the new palette of musical colors and tonal values made possible by modern conditions. We have new in our orchestral scores new musical elements which are adding to music a new interest. I am seriously interested in the future possibilities of this expansion of musical materials, as may be understood when I state that, although the house was sold out on Christmas Eve, the various expenses of the concert exceeded the receipts of six thousand dollars.

## Eight Years Abroad with a Jazz Band

(Continued from Page 234)

heaven-like, velvety sweetness were so irresistible that I went again and again to hear them. I had long been dreaming of the time when I could give up jazz and devote my life to a choir that might reveal the beauties and the infectious rhythms of the southern Negro, in much the same manner as these marvelous choirs presented the folk music of Russia in spiritualized form. Thus The Wooding Southland Spiritual Choir had its inspiration in Russia. Of all places!

We were sorry to leave Russia with its art loving public. Their politics was none of our business, but the people were. The serious Russian musicians took an unusual interest in our work, particularly from a standpoint of rhythm. Russia now is more literate than it was twenty years ago; but our men had to keep together for fear of getting lost. Once I went out in a taxi and became beautifully lost. The driver could speak no English, and I could speak no Russian. The time for our show at the theater was rapidly drawing near. I remembered having seen a poster on a wall. This I pointed out to the driver. It had a fan-

tastic black face upon it. This, nevertheless, meant nothing to him, as he could not read his own tongue. We had to wait before a girl who could read Russian came. Then he raced me to the theater for the show.

Thus, for a total of eight years (during which time I and the band made a return for a year in America) I was moved from pillar to post all over Europe and parts of South America. I wish that I had space to tell of the interesting and amazing happenings in Scandinavia, Belgium, Holland, England, Brazil and the Argentine Republic. It is scarcely necessary to say that I am very grateful for our reception everywhere. Our band played repeatedly for royalty. The Queen of Spain by royal etiquette, had to start all dances which she attended as the guest of honor. She was also expected to end the dances. We played a Red Cross engagement with Prince Carl of Sweden. When we played at Roumania was in exile, and he heard of our band nightly. Edward VIII, now Duke of Windsor, when still Prince of Wales repeatedly attended our performances.

MUSIC STUDY  
EXALTS LIFE

MUSIC STUDY  
EXALTS LIFE

## The Cover for This Month

Those who will most enjoy the cover on this issue of THE ETUDE will be those who have a faculty for seeing many things behind that which meets their eyes.

When the idea for this cover came along, we turned to photographs of musicians in The Philadelphia Orchestra. Mr. David S. Loeb, on the staff of the Philadelphia Record, a lover of music, and a camera enthusiast, had taken a number of splendid photographs of Philadelphia Orchestra Musicians, and all we had to do was make satisfactory arrangements with this gentleman for the use of his photographs, then borrow his negatives and have each photograph used enlarged to a size that would give us the uniform hand-size we felt was necessary in the preparation of the original.

The original negatives were 4 x 5 in size and some of the enlargements ran as large as 20 x 25 inches. The variety of enlargements readily can be appreciated by taking into

consideration that some of the pictures were only the chest and head of the musicians, while others were seated using only half-body lengths, while still others in standing positions used full-body lengths.

The hand portions of each enlargement had to be cut out, the edges on the back of each skived down carefully to make a thin edge for pasting down all of these hands on the board, upon which the artist then had to air brush very carefully the common background utilized.

It takes very little time to relate these details, but the cover was weeks in preparation before we had an original to give to the lithographers. The little key illustration below identifies the well-known Philadelphia Orchestra musicians represented on this cover. The pianist's hands are those of Dr. Rudolf Ganz and we are indebted to the Steinway Collection and Dr. Ganz for the use of this photograph.

1. WILLIAM KINCAID  
(Flute)
2. SAUL CASTON  
(Trumpet)
3. MARCEL TABUTEAU  
(Oboe)
4. ARTHUR BERI  
(French Horn)
5. C. E. GERHARD  
(Trombone)
6. PHILIP A. DONATELLI  
(Tuba)
7. ALEXANDER HILSBURG  
(Violin)
8. RUDOLPH GANZ  
(Piano)
9. WM. VANDENBURG

11. ROBERT MCGINNIS  
(Clarinet)
12. EDNA PHILLIPS  
(Harp)
13. ADRIAN SIEGEL  
(English Horn)
14. J. WALTER GUETTER  
(Bassoon)

In advance of publication single copies of *Play and Sing* may be ordered at the special price, 25 cents, postpaid. The sale of this book will be restricted to the U.S.A. and Its Possessions.

## All-Classic Band Book

Arranged by Erik W. G. Leidzén

When the term "easy" is used in reference to things musical, one is tempted to infer that the music itself is likely to be not only simple, but also juvenile in quality. Only of late years has the fact dawned upon us that some of the most popular and enduring melodies are simple, and that many of them are taken bodily from the writings of the great composers. Out of such material has been selected the contents of our new *All-Classic Band Book*.

Some of the better-known titles are the *Soldiers' March* of Schumann, *Martini's Romance*, Schubert's *First Waltz*, a *Reverie* from Mendelssohn, a *Bach Polonaise*, and a *Gavotte* from Handel. Other composers included are Gluck, Verdi, Haydn, Beethoven, and Mozart.

So much for the contents. As to their treatment in the hands of the skillful arranger, Erik W. G. Leidzén, the limitations of young players are carefully considered, and each part is simple and within the medium range of the instrument. At the same time, different styles of playing are introduced wherever possible, such as legato, staccato, soft tonguing, etc., together with the various signs and symbols found in more advanced arrangements.

While the modern school band instrumentation is used, the harmony will be complete if the clarinets and brasses are present. Included is a Conductor's Score, which has

a playable piano part for study and rehearsal, together with a compact short score on two staves for conducting.

Copies of these parts may be ordered at the special advance of publication cash price (postpaid) of 15 cents each; 25 or more, 10 cents, each; Conductor's Score (piano), 25 cents; delivery to be made upon publication.

## Fragments from Famous Symphonies

Compiled and Arranged for Piano  
By William Baines

This probably will be the last month during which copies of this book may be ordered at the special advance of publication price. The plates have been engraved and it will be only a short time before the printers and binders have completed their work and then copies will be obtainable at your music store or from the publishers.

Mr. Baines, in bringing tuneful excerpts of the great symphonic masterpieces within the playing capabilities of young pianists in about the second year of study, has made a real contribution to musical enjoyment in the home. It is true that excellent recordings of the popular symphonies are available, that occasional broadcasts of them may be heard over the radio, but nothing can equal the pleasure obtained in playing excerpts from them on the piano whenever one is in the mood to enjoy these imperishable bits of melodic invention.

While the sale of *Fragments from Famous Symphonies* will be restricted to the U.S.A. and Its Possessions, the price at which it will be published must necessarily be considerably higher than the special cash price 30 cents, postpaid, at which first-off-the-press copies now may be ordered.

## The Etude Historical Portrait Series

In planning Spring concert and recital programs, the clever teacher or musical director does not neglect the important detail of the printed program. Essentially a guide to the listener, the program should be attractive in appearance and interesting to read, as well.

Many ingenious ways have been devised to bring about this desired result without undue expense. The two most frequently used are to include either a word picture of the number to be performed or biographical information concerning the composer. Many program arrangers prefer the former but use the latter as it involves less preparation and is much easier to obtain, thanks to *The Etude Historical Musical Portrait Series*. Through this unique feature of THE ETUDE you have ready access to biographical information concerning nearly 4000 of the world's best known musicians, both classic and contemporary.

The 44 biographies with pictures on page 218 of this issue represent just one of the 86 instalments presented to date. Forthcoming issues will continue the series until the entire alphabetical sequence is completed. As a regular part of THE ETUDE, therefore, you can enjoy and obtain the concluding instalments. And we have printed extra separate copies of all past instalments so that if you would like to have a complete set we will be glad to supply you at the rate of 5 cents for each instalment.

## Graduation Awards and Gifts

Progressive teachers consider it more than a courtesy, or a gesture of appreciation, to bestow awards on deserving students at the conclusion of the teaching season. It's good business, because it encourages both the recipient and other students to further efforts, it helps to keep enrollment in classes up to par, even to increase interest in study.

Naturally, music teachers in selecting appropriate awards look for something suggesting music. There being comparatively little general demand for such items, few stationers carry diploma and certificate forms with musical designs. The Theodore Presser Co., however, in their vast dealings with the music public, are cognizant of this demand and, therefore, have prepared special designs in Students' Diplomas and Certificate forms, as well as Teachers' Certificates, that may be obtained at very reasonable prices. They also supply special designs in Gold and Silver Medals suitable for presentation to honor pupils.

The *Music Teacher's Handbook*, a FREE catalog, lists, illustrates and describes these articles and gives information on many other items of value in conducting a music studio. Teachers are invited to send for a copy for their reference library.

Parents, relatives and friends who wish to remember graduates and successful students of music, might consider gifts of music albums or books on interesting musical topics. These always are welcome and then, too, they serve as permanent reminders of the giver's thoughtfulness. Suggestions as to appropriate volumes cheerfully will be offered by the publishers.

Theodore Presser Co. also is in a position to undertake special engraving of recipients' names, etc. on diploma and certificate forms, and the engraving of initials, names, dates, and other data, on medals. Full information on request—but remember, Spring is the busy season for penmen and engravers, and ample time should be allowed in ordering when special work of this kind is requested.

(Continued on Page 284)

## Advance of Publication Offers

—April 1939—

All of the Forthcoming Publications in the Offers Listed Below Are Fully Described in the Paragraphs Following. These Works Are in the Course of Preparation. The Low Advance Offer Prices Apply to Orders Placed Now, with Delivery to be Made When Finished.

## Commencement Music

This paragraph is like a warning finger pointing to the calendar to remind music directors that any further delay in securing dances, vocal solos, or instrumental pieces, needed for a Commencement Program will be rather disastrous.

There are specific numbers in mind to delay ordering them immediately. If, on the other hand, there is the desire to examine music, in order to choose a number to serve Commencement needs, not a cent should be lost in writing and asking for a selection of material sent "On April" indicating the type and classification of music wanted.

The Theodore Presser Co. with its special-mail order service will do its share to order music, or requested selection pages, post haste.

## Play and Sing

Favorite Songs in Easy Arrangements for Piano

By Ada Richter

Kindergarten and piano teachers, and those having in charge the instruction of young children, were delighted with the announcement of this book's forthcoming publication, especially those who had used the author's immensely successful *My First Song Book* (75c). There is no doubt but that youngsters like to play songs that are more or less familiar. Parents and adult relatives, too, derive much enjoyment from hearing these well known tunes, and some of them, whose youthful musical education has been neglected, confess to enjoying themselves to play the easy arrangements in *My First Song Book*.

The piano part of the songs in this new book will be a bit more difficult than in the first, but the classifications and arrangements will be carried out in the same manner. There will be about 40 pieces, including songs, Songs from Other Lands, Songs from My Country, Songs from Operas and Songs from My Grandmother Sang Long Ago.

A follow-up to *My First Song Book*, or supplementary material for a young student in the second grade of piano study, this book should prove most satisfactory. Of course, the primary grade school teacher can use these songs by rote, playing the accompaniment herself if a piano is available, or having them played by talented members of the class.

## Out of the Sea

An Operetta for Children in One Act  
Book and Lyrics by Ethel Watts Mumford  
Music by Lily Strickland

When a children's operetta tells an amusing story, you may be sure that it will arouse much interest. When that story is supplemented by pretty music, the operetta will be voted an ideal vehicle for displaying the talents of young folk. The publishers believe this new work combines these two most necessary features and expect to hear of many successful performances after copies of the operetta are available.

The composer has supplied solos that are easy to sing and of moderate range, the choruses and refrains are partly in unison and partly in simple two-part form. The dialog should not be difficult to memorize and the opportunities for picturesque staging and costuming can be well imagined from the following cast: King Neptune, Undina, Sea Serpent, Oyster, Hermit Crab, Fiddler Crab and Davy Jones among the sea people; an inquisitive Mr. Beebe, a skeptical Aviator, and two children, Jacky and Jilly, among the earth folk. The action takes place on a rocky sea shore.

Copies of the vocal score, with complete dialog and directions for staging, costuming and the dancing numbers, may be ordered now at the special advance of publication cash price, 35 cents, postpaid.

## The Youthful Baritone

An Album of Songs for Studio and Recital

In the exuberance of youth there is a great temptation for the young baritone of high school or early college age to attempt solos for which his vocal equipment is not as yet prepared. The rousing, manly type of song that professional baritones so effectively sing is a great temptation to the student, but certainly should not be attempted except under the guidance of an experienced teacher.

To supply young baritones with repertoire numbers that may be used in public appearances, in addition to their use as "study songs," is the object of this collection. Naturally, the compilers are choosing carefully, and considerable care will be taken in the editing of each song included.

Those who are interested in obtaining copies of *The Youthful Baritone* when it is published can order copies now at the special pre-publication price, 35 cents, postpaid. Delivery will be made when the volume is issued.

## The Youthful Tenor

An Album of Songs for Studio and Recital

The utmost care is being given to the selection and editing of the songs that will make up this unique collection. The young tenor voice should not be required to sing too high or too low notes, and extended intervals also should be avoided. Then, again, texts that meet with the approval of young men are most desirable.

While all of this attention is being given to choosing songs that the beginner in voice study will enjoy, it is remembered that the songs should have a general appeal, to listeners as well as to singers. With this in mind it is quite probable that some more experienced tenors also will want to own a copy of this album because most of the songs will make ideal encores or a and b program numbers.

During the period that this book is in preparation for publication, a single copy may be ordered at the special advance of publication cash price, 35 cents, postpaid.

## 16 Modern Etudes

For the Advanced Trumpet Player  
By John Huber

In line with the rapidly improving band and orchestra performances, especially of school groups, this should prove a most opportune publication. Greater proficiency than ever is being demanded of the trumpet player, even in the dance bands that specialize in playing the popular hits of the day.

This set of studies contains daily embouchure drills, exercises for triplets, chromatics, trills, mordents, rhythm and velocity playing. Helpful suggestions precede each study as an aid toward overcoming the technical difficulties which are encountered. They should develop flexibility of the lips, single and triple tonguing, correct tone production,

proper breathing and general interpretability.

Single copies of this work may be ordered now by teachers and others interested at the special advance of publication cash price, 40 cents, postpaid.

## Manual of Fugue

By Preston Ware Orem, Mus. Doc.

There is still opportunity this month to order copies of Dr. Orem's last theoretical work at the special advance of publication price as there are several details to be taken care of before our Printing Department can release the book for sale to the general public. Many teachers and ambitious students have placed orders for this work, especially those who are acquainted with the author's previously published books, *Harmony Book for Beginners* (1.25) *Theory and Composition of Music* (1.25) and *The Art of Interweaving Melodies* (First Studies in Counterpoint) (1.25).

This new book will not be quite so extensive as its predecessors, but it will cover the subject most thoroughly and in that same interesting style that characterizes the first three works in the series. Single copies now may be ordered at the special advance of publication cash price, 40 cents, postpaid.

## Ten Studies in Black and White

For Piano  
By Mana-Zucca

Whenever any new invention of usefulness or pleasure finds its way into popular favor, there always are people endeavoring to show the public the best way to learn how to use and enjoy it. When the piano became a cultural necessity, musicians had to learn how to play it,

and time produced such composer-teachers as Heller, Clementi, Von Bülow, Loeschhorn, Cramer, etc., whose technical studies for the piano greatly enriched musical literature for their own and future generations.

But time marches on, and younger musicians are prone to have an eye open for newness and variety. Occasionally a modern composer branches into the field of piano technic and produces studies that have the elements of long-lived usefulness and popularity. Such a composer is Mana-Zucca, and of such a character are her *Ten Studies in Black and White*.

The Music Mastery Series surely will have a valuable acquisition in this new volume of piano studies. Customers ordering single copies in advance of publication at the special cash price of 20 cents each, postpaid, will receive them immediately upon publication.

## Organist's Resource

A New Collection of Organ Music  
Selected from the Compositions and Arrangements of I. V. Flagler

The many organists and students who have already subscribed for this noteworthy collection will soon be rewarded with first-from-the-press copies, since the final details of publication have been completed and the book is now ready for printing.

A preview of the contents reveals twenty-eight interesting compositions, offering a wide variety to meet the needs of the church and recital organist. Composers generally associated with organ literature are represented as follows: Alexander Guilmant, with *Meditation*, *Pastoral in A*, and *Andante*; Joseph Rheinberger, *Idylle*; Bruce Steane, *Consolation*; and Charles M. Widor, with his famous *Serenade*. Best known of the arrangements selected are *Night Song* and *Romance* by Schumann; *Prelude from "Parsifal"* Wagner; *Slumber Song*, Bizet; *Romance*, Svendsen; and *Longing*, Jungmann. Nine favorite original compositions by I. V. Flagler have been included, among them being the *Cantilene*, *Contemplation*, *Evening Prayer*, *Reverie*, and *Invocation*. Then there are *Postludes* by Volkmar and Flagler and a *Processional March* by Flagler, to provide for service requirements. It will be noted that care has been taken to avoid hackneyed compositions which are already available in other collections of organ music.

For those who have not read previous announcements of this book, it might be said that it represents a choice selection from

the very best of the compositions and arrangements appearing originally as Flagler's *Collection of Organ Music* in five volumes. Orders placed now at the special advance of publication cash price of 60 cents, postpaid will be filled immediately upon publication. The sale is restricted to the U. S. A. and Its Possessions.

## Advance of Publication Offers Withdrawn

Two exceptionally interesting items are withdrawn from the advance of publication offers this month. One, *Reward Cards* (Second Series), is especially timely with Spring graduations and commencement exercises approaching and, of course, piano teachers always welcome a new educational publication of the noted pedagog, John M. Williams. As is customary, when new publications are placed on sale in the music stores, the special advance of publication offers expire and hereafter copies are obtainable at a fair market price and may be had either from your music dealer or from the publisher.

*Reward Cards for Music Pupils* (Second Series) is a set of 16 cards, post-card size, on one side containing a lithographic reproduction in water color tints of a noted composer and his birthplace, or other scene of interest, and on the reverse a brief biography, his signature and a facsimile of his manuscript. A Prize Card, printed from steel engravings and containing the portraits of 8 great music masters in a neat border design, with spaces for the pupil's name, teacher's signature, the date, etc., also is included in the envelope that brings this set to you. The following composers are included: Bizet, Chaminade, Debussy, Dvořák, Elgar, Gluck, Grieg, MacDowell, Massenet, Moszkowski, Moussorgsky, Rimsky-Korsakow, Rossini, Rubinstein, Saint-Saëns and Sibelius. Price, complete with Prize Card, 50 cents.

*Fifth Year at the Piano* by John M. Williams is the latest addition to the celebrated "year by year" series of piano instruction books. To those teachers who are having such success with Mr. Williams' books, no introduction to this volume is necessary. It will contain more than the usual number of piano pieces of educational value. For each, Mr. Williams has prepared a "master lesson" showing in detail both practice procedure and harmonic analysis. Price \$1.00.

The sale of this book will be confined to the U.S.A. and Its Possessions.

## Popular Preferences

"The ol' swimming hole" of poetic fame and fond boyhood days became the favorite rendezvous of exuberant youth because there were real reasons why it stood in "popular preference" over other spots in streams or creeks of the nearby country-side.

We well recall a number of miles of a winding, good size creek where a number of spots were tried out for swimming pleasure, but some did not have enough shade, other spots the bottom was too rocky, still others were too muddy, but the favorite had many good points.

Various music selections became favorites that are used over and over again because they have more good points than other selections that have been tried. During the last month the Publisher's Printing Orders had many items for which there are orders coming in every day. Some of the numbers which thus came up for reprinting are here named for the benefit of those who like to keep informed as to music which has come into "popular preference" with active music workers in various fields of music endeavor. Through the Theodore Presser Co. liberal examination privileges, any of these numbers may be obtained "On Approval."

| SHEET MUSIC—PIANO SOLOS |  |       |        |  |
|-------------------------|--|-------|--------|--|

any readers of this journal secure fine merchandise absolutely without cost by securing new subscriptions to THE ETUDE. Carefully selected rewards, representing product of high class manufacturers and are to please. The following is a list of gifts taken at random from our Premium Catalog. No rewards given for your own subscription.

**JELLY DISH**—Although labeled "Relish" this attractive item will prove equally useful for jelly, preserves, etc. The crystal dish is of course removable and the "Jelly" style base is finished in non-chromium. Size 11" x 4 1/4". Your reward for securing three subscriptions.

**KNIFE SET**—This fine set consists of an 8" Slicing Knife, a Butcher Knife, a Pot Fork and a Parer. They are made of high quality, heavy gauge Vanadium Steel and have polished wood handles. An unusual gift or prize for securing four subscriptions.

**SUGAR AND CREAMER SET**—This set, yet smartly designed three-piece set is a fine gift and award. The oval Tray 11 1/4" x 6 1/4" with the Sugar and Creamer

in proportionate size. All three pieces have a chromium finish so that they will not dull, or require polishing. Your reward for securing four subscriptions.

**FRUIT BOWL**—This new design Fruit Bowl is very attractive. It has an irregular rim and gracefully bulged sides. Top diameter is 9". Finished in chromium, it will remain bright and new looking without polishing. A fine gift or prize. Your reward for securing three subscriptions.

**BREAD TRAY**—Here is a Bread Tray that is a little different in shape and for that reason may be a little more appealing than others offered. It is 11" x 6 3/4" and has a gracefully irregular rim with decorated ends. Its chromium finish is easily kept bright and new looking. Your reward for securing one subscription.

**CHROMIUM PLATED CAKE OR SANDWICH TRAY**—Chromium Tray and swinging handle with fine lace doily under glass. Tray 10 1/2", height 7". Your reward for securing five subscriptions.

Send post card for complete Premium Catalog.

## Beware of Fraud Magazine Agents

THE ETUDE again finds it necessary to warn its musical friends to exercise every possible care in paying money to strangers requesting subscriptions. Pay no money before signing a contract or receipt offered you. Do not permit an agent to change the terms on a contract. Do not pay cash to any one unless you have personally convinced yourself of the ability of the solicitor. Representatives

of THE ETUDE carry the official receipt of the Theodore Presser Co., publishers. Do not accept any ordinary stationery store receipt for money paid. We cannot be responsible for the work of swindlers.

## Changes of Address

Where addresses are changed, be sure to advise us at least one month in advance of such a change, giving both old and new addresses. Please co-operate with us so that copies will not go astray.

## World of Music

(Continued from Page 220)

THE SADLER'S WELLS COMPANY of London has added Verdi's "Don Carlos" to its repertory, and this at prices which the poorest working girl can afford. Why not a movement in American cities, to give a home to some of our unemployed musicians?

R. JAMES R. NINNISS, for twenty-five years the dean of music at Queens-Chicora College at Charlotte, North Carolina, died November 21st, at the age of fifty-four. Born in Lancashire, England, and educated in London and Vienna, he came to America as a young man and became one of the most respected musicians of the South.

THE GERMAN THEATER AND OPERA of Prague, is reported to have been closed, probably permanently. In this, one of the most historic opera houses of the world, several of Mozart's works were first performed, with the premiere of "Don Giovanni," October 28, 1787; Carl Maria von Weber was for years its musical director; and here Franz Mahler, Karl Muck, Leo Blech, Alexander von Zemlinsky, Erich Kleiber, Gustav Strinsky, and Otto Klemperer had their first experience as conductors.

THE MONDE MUSICAL (The Musical World) of Paris has celebrated its fiftieth anniversary. As a recorder of timely events in the world of musical progress throughout the century, it has rendered a valuable service to the musical art in general.

## COMPETITIONS

THE EURIDICE CHORUS of Philadelphia offers a Prize of One Hundred Dollars to a Chorus for Women's Voices, in three or four parts, either a capella or unaccompanied, to words of the composer's choice. Competitions must be received not later than October 1, 1939, addressed to Miss Susanna M. Mum, 2107 Walnut Street, Philadelphia.

Pennsylvania, to whom application may be made for further information.

PRIZES OF TWO HUNDRED DOLLARS each, for a composition for organ alone, and for one for organ, strings, horns, and tympani, or any part of this combination, are offered in the John Haussermann Prize competition. Compositions may be from five to twenty minutes in length; and they must be delivered by mail not later than June 1st. For complete information, address John Haussermann, 40 Scarborough Road, Briarcliff Manor, New York.

A PRIZE OF FIVE HUNDRED DOLLARS is offered by the Henry Hadley Foundation for the best composition in any of the major forms to be submitted within the autumn months. Full particulars may be had from the Henry Hadley Foundation, 633 West 155th Street, New York City.

A ONE THOUSAND DOLLAR HONORARIUM towards one year of piano study with Tobias Matthay in London, is offered by the American Matthay Association, Inc. The Contest will be held in May, in New York City; and candidates will take a preliminary examination in theoretical subjects, and play a Prelude and Fugue from "The Well Tempered Clavichord" of Bach, the First Movement from Beethoven's "Sonata Appassionata," and a composition of not more than six minutes in length, of their own selection. Further particulars from Miss Margaret Littell, 2600 West 17th Street, Wilmington, Delaware.

AMERICAN COMPOSERS are asked to submit works to Howard Barlow, Columbia Broadcasting Company, 485 Madison Avenue, New York City, to be considered for performance on the Everybody's Music orchestral series over CBS. Having begun with July 24th, each program now includes one American composition—a fine recognition and opportunity for our creative musicians.

(Continued from Page 278)

future holds promise of still greater advances. There are several factors tied up with the progress of modern bands. We owe much, surely, to the scientists and manufacturers who have made possible such perfection in our instruments. A study of old band scores will be convincing proof of the strides taken in the matter of instrumentation and of the new uses of many of the voices in the band. Another vital factor, the band personnel, has seen great improvement since the inception of the school band movement nearly twenty years ago.

To my mind, the progress of this day will become more evident with the passing of the years, and I believe that if transplanted back to that "golden band era," about 1880, our bands would score heavily in all musical considerations.

## The Value of the School Band

By A. R. McALLISTER

President, National School Band Association

I BELIEVE THE SCHOOL BAND is the greatest agency in existence to-day for building musical tradition and good citizenship in the United States, and that its phenomenal growth, even through the most severe years of our depression, indicates that it will continue to act as such. Not only does it have inspiration and appeal to the members of the organizations, but on account of its versatility and mobility, it brings itself to millions who otherwise would not be interested in music.

Unlike other organizations, it does not remain on the concert stage to be heard only by those who are already interested in music, but goes out to act as missionary and "Good Samaritan" for culture in America.

At the recent National Clinic at the University of Illinois, two student bands of one hundred members each, recruited from sixty-seven high schools from every section of the United States, and directed by twenty bandmasters covering the entire country, served as the best evidence of the uniform standard and general distribution of school bands. The fact that they sat together in the first rehearsal and spoke fluently in the universal language, music, whether conducted by a director from New York, Utah, Arkansas, or Illinois, is further evidence of the value of the school band in teaching democratic citizenship.

Boys who occupied solo chairs in their own bands cheerfully took the positions assigned to them in this band, and gave their best for the organization. What training equals this in preparing them for future contented and useful citizenship in the United States of America?

I ask for the continued support of the school band, not only by the schools and the general public, but by philanthropists and foundations to continue and to develop further this most useful agency for good.

\* \* \* \* \*

As a final contribution to this group of comments, it is a privilege to quote a letter

from Mr. Arthur Pryor, who needs no introduction to the band conscious people of our nation. I feel that his words embody the fine spirit of all that has been expressed about past, present, and future of our American bands:

## American Band History

By ARTHUR PRYOR

"I AM GLAD TO WRITE of the history and progress of 'American Bands.' It is true, notwithstanding that as time goes on and memories fade, the record of the life of Patrick Sarsfield Gilmore is the most insistent in conjuring thought of remembrance. He was the 'Father of the American Band.' His reputation as a musician and showman is incomparable.

"The idea for the great 'American Band' started not long after Pat arrived in this country from Ireland. As leader of the Salem Cadet Band, his fame, personality, and great musicianship started the evolution of the march of progress for the 'American Band.'

"So far as New York and the United States are concerned, the old Twenty-Second Regiment Band in cream colored tunics—led by the famous Pat Gilmore—created an atmosphere of the ultimate in band music never equaled in the history of our country. He was the inspiration of all musicians, conductors, and students.

"In every city bands of great promise were organized; and the progress of band music conducted by Cappa of the Seventh Regiment, Innes of the Thirteenth Regiment, Billy Bayne of the Sixty-ninth Regiment and Dr. Conterno, a wonderful musician, all of New York; Fred Weldon, Second Regiment of Chicago, and Wallie Reeves of Providence; all these gave us the great performers after Gilmore's death in 1892—the nucleus of the artistic and inspired Band of the immortal Sousa.

"Sousa really believed in bringing the public to a better understanding of the nobility, sincerity, romance, and melodies of our nation. It does not mean that he believed that absolute perfection had been reached in his band, but he did mean that whatever evolution is brought about must be achieved through constructive and progressive musicianship.

"We always have been band conscious, and, with the university and high school bands functioning in such a laudable manner, we will continue so. The inspired benefits I have received from the supervisors, men gifted with great ideas, prove to me that they are directing public instruction, not only in the right spirit, but also with a sense of honor and tradition to serve the great cultural art, music, with humility and fidelity.

"The real progress is service; when we develop and encourage merit in helping the right men to adjust themselves and measure up to the responsibilities, we will again be thrilled by the charm of the prophetic strains of the great 'American Band.' We who have to perpetuate this great art must not forget."

## Emma Thursby Data Wanted

Mr. Richard M. Gipson, of 14 Sutton Place South, New York City, is preparing a biography of the famous American prima donna, Emma Thursby, and would be pleased to hear from anyone who will lend letters, clippings, photographs or other material bearing upon her life. These will be carefully preserved and returned as soon as their use is completed.

# THE JUNIOR ETUDE

Edited by  
ELIZABETH A. GEST

"WHAT ARE YOU looking for, Jack?" asked his sister Mary Ann, as they sat one on each side of Uncle John, in the big church that bright Easter morning.

"The pipes."

"What pipes?"

"The pipes to the pipe organ."

Mary Ann began looking around the church, too. "There they are, up in the balcony," she said.

"But those pipes don't sound," Uncle John told the children. "They are used merely as a decoration for the church. The pipes that sound are enclosed in a pipe

## The Great Organ

By NELLIE G. ALLRED

chamber somewhere, and the chamber has one or more openings controlled by swell shutters that can be opened or closed to control the power of sound."

"I hope they play the organ bells to-day," said Mary Ann.

"An organ doesn't have bells," Jack exclaimed.

"Yes it does; doesn't it, Uncle John?" Mary Ann asked.

"Of course. The pipe organ can imitate just about every instrument in the orchestra."

"It has two or three keyboards, doesn't it?" Mary Ann continued.

"Some organs have as many as six ranks of keys," Uncle John replied. "These keyboards are called *manuals*, because they are played with the hands, and they are contained in a case called the *console*."

"I'm glad I am studying piano instead of organ," observed Mary Ann. "What if I had to practice on six keyboards, instead of one!"

"How does the organist know which keyboard to play?" asked Jack.

"Well, the organ is made into several divisions, such as Great Organ, Swell Organ, Choir Organ, Solo Organ, and Echo Organ. There is also a Pedal Organ played with the feet, by means of large wooden keys at the bottom of the console. You might be interested in knowing, too, that long ago the organ keys were so large that the hand could span only four or five keys, instead of the octave, as on the modern organ, and often the organist had to use his elbows and fists to play."

"Goodness!" Jack exclaimed; "the organ must be the biggest instrument in the world."

"So it is," Uncle John answered. "It is sometimes called the King of Instru-

ments; it is so large; sounds so grand!"

"I wonder who figured out how to make an organ," Jack said.

"That's a long story," Uncle John answered. "But the principle of building the organ came from the old Pan's Pipes of the Greeks."

"What were Pan's Pipes?" Mary Ann asked.

"Reeds of different lengths bound together, through which a person blew, to play a tune," Jack answered. "Even I know that."

"Right," Uncle John agreed. "And the organ was built on this principle of producing sounds by the vibration of air in tubes into which the air is forced by some sort of pressure. Long ago, air was forced into organ tubes by means of water. Such organs were known as *hydraulic*, or water, organs. Some years ago, when I was in Europe, I saw, in the museum of Naples, Italy, two hydraulic organs which were excavated from the ruins of Pompeii. Pompeii, you know, was destroyed by the eruption of the volcano, Vesuvius, in 79 A. D."

"Yes," both children nodded. "We have studied about old Vesuvius in school."

"The first hydraulic organ," Uncle John continued, "was built by an Egyptian named Ctesibius, in the third century before Christ. Later, air was forced into organ tubes by bellows, which were pumped by men standing on them. In all the old organs, muscular force was required. But now electricity takes the place of this physical force. An electric circuit transmits the playing impulse from the keys to the pipes."

"I'd like to try to play an organ," Jack whispered, as the organist began the *Prelude* which opened the Easter service.

"You? Why, you can not even play the piano," his sister answered with a superior air. "What do you think you could do with an organ?"

"You just wait and see, and I'll show you some day. But, now let's pay attention to what is going on."

"Yes, we had better stop talking and listen to the beautiful *Prelude*." And Mary Ann closed her eyes to hear the Easter service begin.

## The Mountain and the Hill

By Gladys Hutchinson

BILLY HAD NEVER climbed a mountain (never played an arpeggio) but he looked forward to that adventure with keen anticipation. Yet Billy was wise enough to realize that he could not climb a mountain (could not play an arpeggio) without getting hopelessly lost, if he did not first practice climbing a hill (playing a scale).

Billy's brother Charlie was able to climb mountains (play arpeggios) with the greatest of ease.

Each day the two brothers started out, one to climb the hill (play a scale) and the other to climb the mountain (play an arpeggio), and they always returned at exactly the same moment.

"Pretend that your left hand is Billy, and Billy is to climb the hill (ascend and descend a one octave scale) while Charlie (the right hand) is to ascend and descend a mountain (arpeggio).

And then sometimes, for variety, the right hand will play the scale (climb the hill) and the left hand will play the arpeggio (climb the mountain).

If there are two pianos available one pupil may play arpeggios (climb mountains) at one piano, and two pupils may play a one octave scale (climb a hill) at the second piano.

## ??? Who Knows ???

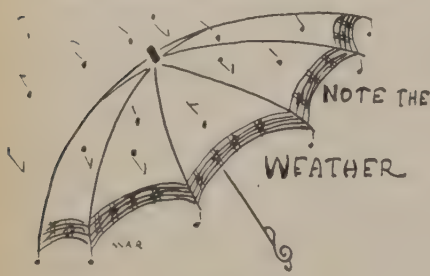

1. In what city did Mendelssohn establish a conservatory of music?
2. Is the piccolo a wood wind or brass instrument?
3. In what opera is the song, *O Thou Sublime, Sweet Evening Star* found?
4. Who wrote it?
5. What was Verdi's first name?
6. What is the augmented fifth from C-sharp?
7. What is meant by modulation?
8. What is a mazurka?
9. In what country did it originate?
10. Who wrote the opera "Don Giovanni"?

## Weather Report

By Mrs. Paul Rhodes

April showers bring May flowers

## Letter to Bach

DEAR UNCLE JOHN SEBASTIAN:

To-day my teacher gave me one of your pieces and I thought I would write a letter to tell you how much I like it. My teacher says you wrote it for your young wife. It is called *Musette*. I am going to learn some more of your compositions, too, and next year some harder ones—fugues and things.

My teacher was telling me about you and how you wrote so many fugues and cantatas, and taught Latin. I wish you were here now to help me with my Latin! I never did like Latin anyway and never get good marks in it. I never thought a pianist needed to study it, but if you taught it you must have been very good at it. Do you think that helped make you such a wonderful musician? I guess I had better study my Latin more. Maybe it will help me with my scales. I don't see just how, but it might.

And I don't see how you ever got time to write so much music and to travel all over Germany giving organ concerts. I like to hear organs, but now ours are mostly electric, and yours were hand made, weren't they? And then you must have been terribly busy in your house, with so many children. Did all the children keep quiet when you were composing, or did you get used to their noise? And just think how busy Mrs. Bach must have been, too!

Well, I am glad you made so many beautiful compositions in concerts. Our school orchestra often plays your choral called *Sleepers Awake*. And that reminds me that it is bed time and sleepy time for me.

So good night,

From JUNIOR.

# JUNIOR ETUDE—(Continued)

## The Music Garden

By LEONORA SILL ASHTON

DEAR! Do I have to begin a new piece?  
y?" asked Gladys, in a discontented  
"I wanted to go out and plant some  
rs in the garden."  
suppose we plant some music first,"  
her teacher. Then she opened a sheet  
music and stood it on the piano rack.  
as a Lullaby.  
hat is that first note, Gladys?" asked  
Daley.  
s—G," answered the little girl.  
es. And I want you to plant it way  
there in the bass, for G is the root  
is new piece. Now let us see what  
grow from it."  
Gladys read the next few notes that were  
on the staff.  
ere's another G up here, and that  
B, and that, a D."  
she named the notes she sounded  
on the piano. "There is another B."  
e notes went up and down. "It's like  
ng. Is that the cradle?" Gladys asked.  
hat is just what the music there is

meant to represent. And do you see Gladys,  
how the root G has sprouted into those  
other notes?"

"Yes," answered Gladys. "But there is  
no flower to the music plant."

"What about the notes up in the treble?"  
asked Miss Daley.

Gladys hunted them out on the treble  
staff, and when she played them one after  
the other she found they made a lovely  
little song.

"There is the music flower!" she cried.

"Yes," answered Miss Daley. "There  
you have planted the strong root G, down  
in the bass. That note sends out the notes  
which belong to it just as a root in the  
ground sends out stems and leaves; and in  
turn those stems and leaves blossom into  
a lovely melody of song, which the mother  
is supposed to be singing to her baby to  
put him to sleep. And now that you have  
made a lovely little music plant grow, it  
is time to go out and plant some flowers  
in the garden."

## Lesson from Spring

By CARMEN MALONE

ked along a little path  
side a running stream  
saw the water polish rocks  
til they were agleam.  
rd the wind sigh through the trees,  
ay the branches sway,  
tice this way patiently  
ch day," it seemed to say.  
the birds up in the trees  
d heard them chirp and sing,  
ure to note the clear sweet tones  
music that we bring."

I went back home to polish up  
My violin and case,  
To think of south wind's rhythm and  
Of trees asway with grace,  
To ponder on the tones I heard—  
So beautiful, so true,—  
From sweetly swelling throats of birds  
Of every type and hue.  
I saw and heard the loveliness  
That things of nature bring;  
And so that day I gladly took  
A hint or two from spring.

JUNIOR ETUDE:  
answers to the puzzles in THE ETUDE  
to arrive late because THE ETUDE arrives  
the Philippines late. You see, I live far  
THE ETUDE's home. I have just received  
py and worked out the puzzle and I have  
to solve it correctly. I will send the an-  
even though it is too late.  
From your friend.

HENEDINE MAY SEGUNDO (Age 9),  
Luzon,  
Ilocos Norte,  
Philippine Islands.

We are sorry our far-away readers  
get their contest answers here on time,  
but is because the mail takes so long to  
far; and THE ETUDE must be printed on  
tain date, or everybody would be dis-  
t. But, Henedine May, why not write a  
ong letter to our Letter Box instead?  
are lots of things we would like to hear  
the Philippines.

## Beheading Puzzle

By E. Mendes

initials beheaded will give, reading  
the name of a composer (answers  
include all words and beheadings).  
head a map and leave an animal.  
head periods of time and leave be-  
gins to us.  
head to believe, and leave a tree.  
head to put and leave a thin open-  
work fabric.  
head angry and leave percentage  
ice.  
head more recent and leave a pitcher.

## Junior Etude Contest

THE JUNIOR ETUDE will award three pretty  
prizes each month, for the best and neatest  
original stories or essays, and for answers  
to puzzles.

Any boy or girl under sixteen years of  
age may compete, whether belonging to a  
Junior Club or not. Class A, fourteen to  
sixteen years of age; Class B, eleven to  
under fourteen; Class C, under eleven  
years.

### RULES

Put your name, age and class in which  
you enter, on upper left corner of your paper,  
and put your address on upper right cor-  
ner. If your contribution takes more than  
one sheet of paper, do this on each sheet.  
Write on one side of paper only.

Do not use typewriters and do not

Subject for story or essay this month,  
"The orchestra." Must contain not over  
one hundred and fifty words, and must  
be received at the Junior Etude Office,  
1712 Chestnut Street, Philadelphia, Penn-  
sylvania, by April 18th. Names of prize  
winners and their contributions will ap-  
pear in the September issue. The thirty  
next best contributors will receive honor-  
able mention.

have anyone copy your work for you.

When clubs or schools compete, please  
have a preliminary contest first and submit  
no more than six contributions (two for  
each class).

Competitors who do not comply with all  
of the above rules will not be considered.

### My Favorite Composer (Prize Winner)

My favorite composer at this time is George  
Frederick Handel. I like him because he  
composed a great deal of sacred music. I admire  
him because he gave up his night's rest and  
went up to the cold attic to play the clavichord.  
Although his father tried to keep him away  
from music, he could not crush the talent of  
his great son. His oratorio, "MESSIAH," with  
its famous *Hallelujah Chorus*, showed plainly  
that the Lord wanted him to be a musician.  
Handel, true to his name, did surely "handle"  
the wonderful subject of music in a wonderful  
way.

JOHN KERR-HECKER (Age 10),  
British Columbia.

Junior Music Club  
Charleston, West Virginia

### Answer to January Letter E Puzzle

1-3, Elgar; 5-6, End; 2-4, Etude; 1-2,  
Euterpe.

### Prize Winners for January Puzzle:

Class A, Richard McNeil (Age 15),  
Pennsylvania.

Class B, Rhonda Reed (Age 12), New  
York.

Class C, Lily Mae Lanznar (Age 10),  
Missouri.

### Answers to Who Knows

1. In Leipzig, Germany; 2. Wood wind;  
3. "Tannhäuser"; 4. Wagner; 5. Giuseppe;  
6. G double-sharp; 7. Passing from one  
established key to another by means of ac-  
cidentals (tones not included in the first  
established key), and without breaking the  
melodic or harmonic design; 8. A dance in  
three-four time; 9. Poland; 10. Mozart.

### My Favorite Composer (Prize Winner)

Of all the composers I would choose Chopin  
because his works produce a soothing, restful  
feeling of contentment. Whenever I hear  
Chopin's compositions I hear these beautiful  
qualities.

His nocturnes, waltzes and preludes are  
most beautiful to me, especially. He was a very  
great man, and one who will always live in  
the minds and hearts of music lovers. If his  
life could have been longer he might have given  
us even greater masterpieces than the ones he  
left behind him. I think all admirers of Chopin  
admire him for the qualities he put into his  
compositions. The quiet, singing tones of his  
nocturnes always make us relax and become  
absorbed only in listening breathlessly to the  
music of this great composer.

ELIZABETH WILLIAMS (Age 12),  
Kentucky.

### My Favorite Composer (Prize Winner)

Composers, to me, are wonderful people. How  
can I say there is a favorite? I hear indeed, so  
many famous compositions, and when I hear  
them I think, "Ah, at last, this composer—  
this one—his music, his life, his thoughts—  
they are mine." But you see, then there is  
another. How could I say Schubert is greater  
than Mendelssohn; then there are Mozart, and  
Wagner, and Handel, and poor Beethoven, and  
wonderful Johann Sebastian Bach; and our  
melodious Strauss, and many others. Dear  
Editor, I can not have a favorite. I simply  
must say "The really great composer is God,  
who sends forth these men with the burdens  
of the world to conquer; these men as messen-  
gers of His love and goodness, kindness and  
understanding. For what else can music be?"

JOAN McCOMBER (Age 15),  
Minnesota.

### Honorable Mention for January Essays

Margaret Goodman; Joan Cunningham;  
Joan Beverly Ford; Nancy Spain; Jim Lee-  
man; Betty Jean Cooper; Viola Vouch; Wil-  
liam E. Wendlandt; Nancy Curran; John  
Newell; Peggy A. Kehoe; Evelyn L. Smith;  
Jeanette E. Porter; Beatrice Gonzales; Etelle  
Robinson; Helene June Bradbury; Rita Klein;  
Edith Johnson; Esther Kerk-Hecker; Rose-  
marie Voros; Adrienne Kindelan; Carolyn  
Cunningham; Leone Kelsel; Virginia Brift;  
Vera Lee James; Catherine Evoret; Janice  
Laney; Betty Drucker; Bernice Klein.

### Favorite Composers

IT WAS INTERESTING to find who the favorite  
composers were among the Juniors this  
month. Beethoven came first, Mozart sec-  
ond; and these two were far ahead. Then,  
for third place came Chopin, with Bach  
fourth. Fifth place had several candidates,  
Handel, Verdi, Stephen Foster, Paderew-  
ski and Liszt being about equal; and bring-  
ing up the rear were Grieg, Wagner,  
Clementi, Schumann, and Tchaikowsky.  
Then, of course, there were a few less im-  
portant composers mentioned as being fa-  
vorites; but those mentioned above were  
the prominent ones. This, however, does  
not mean that all the Juniors would vote  
this way; but this is the vote of those who  
entered the contest on "My Favorite Com-  
poser."

Juniors of GADSDEN, Alabama

## MUSICAL BOOKS REVIEWED

### The Band's Music

By RICHARD FRANKO GOLDMAN

What is unquestionably the best discussion of band music that has yet appeared has just come from the pen of Richard Franko Goldman, son of Edwin Franko Goldman, the noted bandmaster and formerly a Special Fellow in Fine Arts at Columbia University. This will prove a "must" book for the library of all bandmasters above the rank of the street fair. It describes all of the works of the classic composers and modern writers of music who are worthy of serious consideration. At least it is designed to include as many such works as possible. One hundred and thirty-one composers are given consideration, and over one thousand compositions are represented. The book is written with a fine sense of values. It tells the band leader just what he wants to know and gives many valuable suggestions that will help him in building up a repertoire. One interesting chapter in the book deals with original wind instrument music. Although there are some twenty-eight pages to this section, it is surprising to note how very little of the time of great masters has been devoted to wind instrument music, in comparison with the strings.

Pages: 442.

Price: \$3.00.

Publisher: Pitman Publishing Corporation.

### Edvard Grieg

By DAVID MONRAD-JOHANSEN

The Princeton University Press and the American Scandinavian Foundation should take pride in bringing out an American translation of David Monrad-Johansen's monumental life of Edvard Grieg. The work has been translated very excellently indeed, by Midge Robertson. It is so much more comprehensive and so much better documented than any previous biography of the great Norwegian master, that it becomes a "must" book for all musical libraries. The volume, however, does not displace the admirable and very readable "Life of Grieg" by the late Henry T. Finck, to which this larger book makes sixteen references.

The author has presented a very faithful picture of the keenly artistic and retiring personality of his subject and has indicated his methods of work as only a musician could portray them. David Monrad-Johansen, born in Oslo in 1888, is a well known critic and composer in his native land.

Pages: 400.

Price: \$4.00.

Publisher: Princeton University Press.

### My Husband, Gabilowitsch A Great Poet of the Piano

By CLARA CLEMENS

As might be expected from a daughter of Mark Twain, her biography of her husband is by no means a conventional chronological narrative of the accomplishments of Ossip Gabilowitsch. She has endeavored to interpret the spiritual and artistic nature of the man she married in 1909.

Although conducting absorbed the major part of the time of Gabilowitsch, during the last two decades of his life, he will nevertheless remain in the memory of musicians as a pianist. His exquisite talent and his loftiness of purpose were well known to all who were familiar with his work.

Clara Clemens went to Vienna in 1898, where her father, Mark Twain, was known almost as well as in America. The writer remembers how, as a student, he saw postal card pictures of our Mark Twain in many of the shops of the Austrian capital, lined up with those of the Austrian, as well as the German, Kaiser. The object of the trip to Vienna was to permit Clara to study with Leschetizky. Almost immediately she met Gabilowitsch and Mark Hambourg, at a dinner given to Leschetizky, in Mark Twain's apartment. Although Clara Clemens is known chiefly through her career as a singer, readers of THE ETUDE will be glad to peruse her account of playing the "Concerto in G minor" of Mendelssohn at Leschetizky's classes, before an audience of budding virtuosi. In this atmosphere her friendship with the brilliant and lovable genius of the piano, developed into courtship.

Fortunate indeed it was for an artist such as Gabilowitsch to have such a gifted and understanding wife as Clara Clemens to immortalize him in a way that intelligent people will take delight in reading.

Pages: 350.

Price: \$4.00.

Publisher: Harper & Brothers.

### Such Sweet Compulsion

By GERALDINE FARRAR

We confess to an agreeable disappointment in "Such Sweet Compulsion," Geraldine Farrar's autobiography which has recently appeared. Unlike the towers of egotism which some biographies of singers reveal, it is really a kaleidoscopic etching of international musical affairs in which the writer took an active and interesting part. There are many bits of instructive information which should be of value to young singers. The style is engaging and the work as a whole should prove interesting to all readers, especially to those who can relate, with Miss Farrar, the exciting years during which she was most active. The book is copiously illustrated.

Pages: 297.

Price: \$3.00.

Publisher: The Greystone Press.

Supreme Spectacle, as envisioned by an artist, of fire, fountains and fireworks to be "staged" at The New York World's Fair with sound effects and music.

## Next Month

THE ETUDE for May 1939 will be especially rich in musical features.

### MUSIC AT THE WORLD'S FAIR

In May The Etude will present a conference with Mr. Olin Downes, noted critic of the New York Times and General Musical Director of the World's Fair, which gives for the first time Mr. Downes' personal conception of the immense musical festival which will be held in New York this summer.

### KERSTIN THORBORG

The fascinating Scandinavian contralto of the Metropolitan Opera Company, who has been particularly successful in Wagnerian roles for the woman's low voice, gives Etude readers a very thoughtful discussion of "How to Build the Vocal Instrument."

### MISCHA ELMAN

Mr. Elman, known for his great virtuosity as a violinist and especially for his luscious tone, tells "How to Make Music Study Profitable."

### TEN YEARS BEFORE THE MIKE

Virginia Rea, highly successful radio singer, gives pointers on the art of sending the voice out on the ether.

### SCHUMANN'S HINTS TO YOUNG MUSICIANS

Probably no more widely read series of "rules" ever has been written. Raymond Morin, practical teacher, discovers new and workable ideas from Schumann's genius.

### A New Department

In May we shall present for the first time "The Etude Music Lover's Book Shelf," an intimate and popular survey of the latest books upon music, which we feel will be most helpful to our readers.

## Radio Flashes

By PAUL GIRARD

STOKOWSKI AND HOLLYWOOD staged the idea in "One Hundred Men and a Girl," and now radio follows suit in a program called "Ninety-nine Men and a Girl," directed by Raymond Paige. This new program has for the Girl none other than that clever and ingratiating singer, Hildegard. Heard on Wednesdays over the Columbia Broadcasting System from 10:00 to 10:30 P. M., EST., Paige and his ninety-nine-piece orchestra feature unusual instrumental combinations, a male chorus of eight voices and, of course, the Girl. The idea behind the program is to cut a musical swath somewhere between the popular jazz band and the symphonic orchestra.

It has been aptly said that the pleasure of listening to music will be increased a thousandfold when the auditor acquires some understanding of its language. A short-wave program that fulfills this sort of function in a highly interesting manner is Understanding Music, presented by the Wide World University of the Air, and conducted by Donald J. Grout of Harvard University. It is heard on Wednesdays at 8 P. M., EST., on a frequency of 6.04

megacycles or 49.6 meters, or on Saturdays at 4.30 P. M., EST., on 11.79 megacycles or 25.4 meters. These programs, like all those presented by Station WIXAL, are "Dedicated to Enlightenment," and are intended for all lovers of music, whether or not they have any technical knowledge of the subject.

The concert and operatic artist of to-day can travel to the ends of the earth; but radio goes with him and keeps him constantly in touch with his friends and admirers at home. Richard Crooks, the American tenor, set out at the end of January on a long concert tour which will carry him to Australia for the second time and to Africa for the first time. Crooks, a regular feature singer on the Firestone broadcasts (NBC-Red network—Mondays 8:30 P. M. EST.) will not be missing from the programs, however, for his voice is to be "piped" in from as far away as Honolulu. He will be heard, for example, from Los Angeles on April 3rd and 10th, and from the capital of Hawaii on April 24th. He will probably be heard from some other points of his tour at a later date.

## LETTERS FROM ETUDE FRIENDS

### Encourage the Adult Beginner

TO THE ETUDE:

I read with delight, another "Adult Student" letter in THE ETUDE for June. Our numbers are increasing; at some distant day, we may have the "Adult Student Convention."

Twenty years ago, when I started as an adult student of the violin, I was almost a pianist. Certainly I was considered a mild lunatic by most people. However, I always have courage of my convictions, and so I kept the study for fifteen years, to my own enjoyment. For the last two years, I have been having piano lessons with an excellent teacher and am still rejoicing in every bit of skill and knowledge gained.

To my mind a crying need of the adult student, is lessons in confidence—confidence to play the pieces learned with assurance and dignity. Whereas the young student is encouraged and praised (and rightly so) for his least effort in playing, the adult student is discouraged and jeered at for his best efforts. Some people, female is sure to reward the adult performer with, "My six year old plays that"; or, "Why don't you study stenography, something you can use?" or "But what can you do with music at your age?" and so on. All this is very discouraging to most adults. I have heard someone say, "I would like to study, but am afraid someone would laugh at me"; or, "I tried lessons but felt so foolish I gave it up."

For my own part, I have been very lucky. My family have stood back of me, nobly. At I had a school mate who was very helpful. Whenever she came to see me I would grab my violin and saw away in her ear. She always praised and encouraged me to go on. If you are me music teachers are grand people—I have had eight teachers, and each one has cheerfully helped me along and encouraged all my efforts with never an impatient word or look from any of them. So I can say with Oliver W. Holmes "I have had a lot of enjoyment even if I have not made much music."

—ALICE M. SMITH

### Sing With Your Heart

(Continued from Page 230)

Melba. But you will bring something to your singing which is freshly and truly your own, and which will therefore be better than copying anybody.

Above all, work! Work with your brain and your heart, as well as with your voice. A New York critic recently wrote that the day may come when it will be no longer possible to present Mozart's operas, because the present day singers lack the suavity of line and the polish necessary to do them full justice. That would be a dreadful day to which to look forward. There is no lack of fine vocal material. But vocal material alone is a long distance from worthy art. The great operas of pure *bel canto*—those of Mozart, Rossini, Bellini, and some of Verdi—lacked nothing when they were sung by artists of the stamp of Melba, Lilli Lehmann, Battistini, and the De Reszkes. And those artists, in their turn, devoted their entire lives to the perfection of their work. They did not merely coach parts for next week's performance; they made musical history! It is regrettable that our own day, which has brought us such progress in making music accessible, should be contented with standards that are less splendid than those of the past. There is a reason for it, of course; an age of speed and spectacular successes makes it impossible to go ahead on less than perfection; and if this can be done, there is the inevitable temptation to do it. But the artist who is worthy of the name will not surrender to such temptations. She will continue to strive for perfection, for the sake of her own inner peace. The students of to-day will be the artists of to-morrow. It is to them that I appeal. Let the flame in the torch go on burning clearly. Only by honest hard work and honest sentiment can one succeed in moving the hearts of others.

**EST YOUR MUSIC MONEY WISELY**

MY 18 is the Bible the cheapest book in the world. Why can you purchase the complete works of Shakespeare at less than the cost of the latest novels? The answer is simple—mass production; no royal—constant demand.

For the same token you can buy Beethoven's "Sonata Op. 10, No. 3"—15 pages of the world's best music—for only 15¢. In the CENTURY EDITION, beautifully printed, carefully edited, the best of workmanship throughout.

Link of it! Over 2,000 selections to choose and none of them cost more than 15¢ a copy. Every Sheet Music is truly dollar value for 15¢.

TEACHERS who are today supplying their pupils' from the Century catalogue are making it possible for many parents to continue their children's musical education, and its low cost is likewise aiding in their new student enrollment.

It's why we say, "Please Ask for Century Edition," and you'll get a new conception of your money's worth.

## The World of Music

Interesting and Important Items Gleaned in a Constant Watch on  
Happenings and Activities Pertaining to Things Musical Everywhere

ERMANNOWOLF-FERRARI

**ERMANNOWOLF-FERRARI'S** "La Dama Boba (The Silly Girl)" had its world première on February 1st, at Milan, when it was cordially received. The libretto is an adaptation by Mario Ghisalbetti of a comedy by Lope de Vega, dealing with a seventeenth century episode in Madrid. The climax evolves when the love of a penniless poet, rather than that of a noble suitor proposed by an ambitious father, awakens the latent intelligence of the dull witted heroine.

**THE FAMOUS VIENNA BOYS CHOIR** is reported to be about to be disbanded by the Nazi government, at the close of its present American tour. So much for *Kultur a la Hitler*.

**MISCHA MISCHAKOFF**, concertmaster of Toscanini's orchestra assembled for his recent series of radio concerts, played a Stradivarius violin that would bring at least fifty thousand dollars, if placed on the market. Stefan Sopkin, who sat next to Mischakoff, plays what is known as the *Edler Stradivarius*, made in 1723, and of about the same value as the one owned by Mischakoff.

**MUSIC WEEK** will begin on May 7th, with special attention to American Music recommended by the National Committee. This fine movement has had a tremendous influence in spreading a wider attention to music throughout our nation, till about fifteen thousand communities now take cognizance of it. The 1939 Circular Letter, giving many suggestions to all music lovers as to preparation of programs for the observance of this far flung event, may be had gratis by writing to Mr. C. M. Tremaine, secretary of National Music Week Committee, 30 Rockefeller Plaza, New York City.

**IGNACE PADEREWSKI**, now seventy-eight years of age, made his first broadcast in America, when on February 26th he was heard in a one hour program over the NBC Blue Network.

**THE FOUNDLING HOSPITAL**, dear to the heart of Handel, has celebrated its second centennial by a production of the master's "Theodora," which had not been heard in London for sixty years.

WILLY HESS

**WILLY HESS**, distinguished violinist of earlier decades, died on February seventeenth, in Berlin, at the age of eighty. Born in Mannheim, Germany, he was brought to the United States as a child and at ten made a tour as soloist with the Theodore Thomas Orchestra. From 1904 to 1910 he was concertmeister of the Boston Symphony Orchestra, after which he returned to succeed Halir as violin teacher at the Royal High School of Music in Berlin.

**MAUDE ADAMS**, idol of theater goers of former decades, and especially remembered for her sympathetic interpretation of the title rôle in Barrie's "Peter Pan," is a skillful violinist, having given the instrument serious study in her youth.

**BACH'S "MASS IN B MINOR"** had its thirteenth annual performance by the Oratorio Society of New York, on February twenty-eighth, with Albert Stoessel conducting; and with a quartet of soloists including Helen Marshall, soprano; Lydia Summers, contralto; John Priebe, tenor; and Lansing Hatfield, bass-baritone.

**MARIAN ANDERSON** has been honored by being selected to receive the Spingarn Medal for 1938. This medal is conferred annually for the "highest and noblest achievement by an American Negro during the preceding year or years." We know of none other more worthy.

**THE DOYLY CARTE OPERA COMPANY**, inimitable in the inimitable Gilbert and Sullivan repertory, have been giving a season in eastern American musical centers. Such team work as fills the theaters with audiences as enthusiastic as in past decades, is but a natural result of the British way of doing things thoroughly. Why can we not have an American Savoy Company, that will perfect itself in ensemble and individualities and make itself a vital part of our musical life? An opportunity for many now inactive musicians.

**JOAQUIN NIN**, eminent French pianist, recently gave in the Salle Chopin of Paris his one thousandth piano recital, featuring his own published compositions.

A **MUSICAL NOVELTY** is said to be a small harmonica attached to the stem of a pipe. And now its inventor is puzzled as to whether it is to be christened as a pipe organ or a mouth organ.

**MAURICE ROSENFELD**, veteran music critic of Chicago, passed away on February 25th at the age of seventy. Born in Vienna, he was brought to America at the age of eight, was a diamond medal graduate of the Chicago Musical College, and for more than half a century was active in Chicago musical circles. For many years he taught the piano at Chicago Musical College, organized in 1916 his own piano school, and was for long periods music critic of *The Chicago Examiner* and *The Chicago Daily News*.

**THE CHICAGO PUBLIC HIGH SCHOOLS** held their First All-City Music Festival on March 28th to 30th, when ten thousand school children participated in the various events.

**ALBERT CARRÉ**, eminent French impresario, so long director of the Opéra-Comique, has been honored by the presentation of his bust to this institution, by his widow, Marguerite Carré who was for many years one of its leading sopranos.

**WHEN THE BOSTON SYMPHONY ORCHESTRA**, with Serge Koussevitzky conducting, gave its "Concert Extraordinaire" at Carnegie Hall, New York, on February 8th, the men came upon the stage in silk stockings and periwigs of eighteenth century style, to interpret Haydn's "Farewell Symphony," in the last movement of which one player after another rose, snuffed out his candle and left the stage, the conductor doing the same when the last two men were gone. And so tradition endures.

**GASPAR CASSADO**, eminent Spanish violoncellist, has been concertizing throughout the United States. On January 19th and 20th he was soloist with the Kansas City Philharmonic Orchestra, when he played the too seldom heard "Arpeggione" Sonata of Schubert.

**THE CALIFORNIA-WESTERN MUSIC EDUCATORS CONFERENCE** was held at Long Beach, California, from April 2nd to 5th, with representatives present from Arizona, California, Hawaii, Nevada, the Philippine Islands, and Utah.

**JACQUES THIBAUT** has instituted a Prize of Eight Thousand Francs to be awarded annually at the Bordeaux Conservatory where this noted violinist began his musical education.

**THE ROYAL CHORAL SOCIETY** of London gave on January 28th, at Royal Albert Hall, a performance of Haydn's "Creation" which, in the words of one critic "transported us to the edge of innocence." So, in dear old London, cradle of classic traditions, we observe a note of desire for more frequent hearings of this sense pleasing masterpiece.

**THE "SECOND PIANO CONCERTO"** of Bela Bartok had its American première when presented, on March second, on the program of the Chicago Symphony Orchestra with Dr. Frederick Stock conducting, and with the Chicago born pianist, Storm Bull, as soloist.

**RUTH POSSELT**, youthful Boston violinist, was soloist with the Boston Symphony Orchestra in its concerts of November 11th and 12th, when she gave the first public performances of Edward Burlingame Hill's new "Concerto for violin and orchestra." Both work and artist were enthusiastically received.

**PUCCINI'S TRIPTYCH** of one act operas, "The Cloak (Il Tabarro)," "Sister Angelica (Suor Angelica)," and "Gianni Schicchi," had what is believed to have been their first performance in English, when given at the historic Academy of Music of Philadelphia, on March thirtieth, by the Philadelphia Opera Company, with Sylvan Levin conducting, and with competent Quaker City talent as soloists, chorus, and orchestra.

**PIERRE MONTEUX** is reported to have signed a new three year contract as conductor of the San Francisco Symphony Orchestra.

**EMMA JUCH**, one of the most brilliant sopranos that America has produced, passed away on March 6th, at her home in New York City, aged seventy-six. She was the last link with the famous Academy of Music of Manhattan, where she made début as *Philine* in the "Mignon" of broise Thomas, with a cast including Campanini and Giuseppe del Puente, respectively the greatest tenor and baritone of their generation. She was one of our ear and most enthusiastic advocates of "O in English," that the people might understand.

**THE TWELFTH ANNUAL FOSTER MEMORIAL** program was presented January 12th, by the University of Pittsburgh, in the Stephen Collins Foster Memorial, the first time this event has been in this beautiful shrine.

**MISCHA ELMAN** this year celebrates thirtieth anniversary of his début in America; and in honor of the event he has making a coast to coast tour, with distinguished success.

**THE LONDON MUSIC FESTIVAL**, April 23rd to 28th, had the distinguished patronage of Their Majesties King George VI and Queen Elizabeth. For one of chamber concerts the King graciously gave special permission for the use of the Hall of Hampton Court Palace.

**MOZART'S "DIE ZAUBERFLÖTE"** (Magic Flute) is announced for a spring revival at the Opéra of Paris, for which it be presented in its original form complete with many of Mozart's recitatives that not hitherto been heard in the French capital.

**RICHARD COPLEY**, widely known organist, and assistant of many a young organist toward recognition, died suddenly on January twenty-seventh, at Toronto, Canada, aged sixty-three. He began his career as assistant to the once so famous Henry W. Sobin.

**THE SOCIEDADE FILARMONICA SÃO PAULO** (Philharmonic Society of Paulo), Brazil, is reported to be the musical society in South America to regular symphonic concerts with elaborate programs announced for fixed dates.

**GEORGE F. McKAY** has been announced as the winner of the Two Hundred Dollar Prize offered by *The Diapason*, under the auspices of the American Guild of Organists, for the best organ composition submitted. The Prize of One Hundred Dollars, offered by the H. W. Gray Company, for the best anthem submitted, was bestowed upon William S. Nagle of Upper Darby (Philadelphia), Pennsylvania.

(Continued on Page 353)

# A QUEST FOR IDEALS

**I**N 1926, Yale bred Dr. Hamilton Holt, a practical idealist with a wide experience in business and in journalism (he was for years editor of *The Independent*), accepted the presidency of Rollins College, at Winter Park, Florida. Ten years later, he wrote and issued a brochure called "Educating a College President," which attracted wide attention. Since it contains so much common sense and practical educational advice, we have obtained Dr. Holt's permission to print parts of this on our editorial page. Dr. Holt is an amateur musician of ability and, since he has been at Rollins, he has written the *Rollins' Chapel Song*. Mighty good work for a college president, we say! The chorus of the song follows this editorial. He recounts some of the things he learned as a college president in the following lines.

"If ever there was an amateur college president, evidently I was such. I do not presume to say what education others may have obtained at Rollins during the past decade, but if I were asked what I have learned, I should include the following:

"First—Nothing worth while comes easily. Half effort does not produce half results. It produces *no* results. Work, continuous work and hard work, is the only way to accomplish results that last.

"Second—One must not expect things to happen too quickly. Patience may well be the watchword of every college president. Ten years ago, I thought Rollins would be much farther advanced than it is to-day; but I have found that many people, whom I assumed would help me, could not or would not. My greatest support often has come from unexpected sources and at unexpected times.

"Third—Age has as much to learn from youth as youth from age. Age has wisdom. Youth has idealism. The youth of to-day think they are the sophisticated and we are the

DR. HAMILTON HOLT  
President of Rollins College

innocents. Of course, it is just the reverse. Young men and young women of to-day, as of yesterday, believe they will succeed in their chosen careers. They believe they will be happily married. They believe they will be healthy, wealthy and wise. The fact that they so believe tends to make their dreams come true. But as we of the older generation pass through the decades, and as our future turns into the past, the vicissitudes of life inevitably leave their scars. Ideals dim. Yet it is as we grow older that we most need ideals. The surest way to regain them, I believe, is association with youth. Youth, however, needs wisdom. But wisdom, alas, seems to come only with experience. We cannot blame youth for not having wisdom. But surely we can blame ourselves for losing idealism.

"Fourth—By treating students with sympathy, understanding and respect, anything can be done with them. We have tried to treat our students as responsible adults. We have given them extreme liberty. We find that only about four out of a hundred mistake liberty for license. If, however, we hedged them about with rules, regulations and prohibitions, more likely forty per cent than four per

cent would break the restrictions.

"Fifth—Any subject can be made interesting; first, if taught by a good teacher, and second, if the student is not permitted to go faster than is justified by his ability to master the subject. If a student is permitted to smear and smatter; if he is forced to progress faster than he can consolidate the ground under his feet; he flounders and soon becomes lost. He hates the teacher, he hates the course, and he hates the college. The lockstep system of instruction, which permits the fast student to shirk and loaf, and which kicks, cuffs, cudgels and flunks the slow student, is as unfair to the one as the other.

"Sixth—No educational institution can educate any-

## Chorus

Come, sing her praises end-lessly With love's e-ter-nal ray; Her beauty shin-eth ra-di-ant and fadeth not a-way.

body. All education is self-education. A college can aid, clarify, elucidate, stimulate and point out the way, but the work must be done and the path must be trod by the individual. How can the student be inspired to assume the direction of his own future? The wisest way, I believe, is, first to provide him with teachers he can respect, admire, love and therefore emulate, and second, to help him acquire a philosophy of life or a religion, for upon philosophy and religion depends conduct, and upon conduct depends success in life.

"We are often told that personality is the product of three elements—the physical, the mental and the moral. Homer, I suppose, more than any man who ever lived, represents the physical at its best. His limpid and flowing verse, vibrant with the nobility of life and the heroism of death, pulsating with the romance of love and adventure, contest and conquest, valor and victory, has never been surpassed in the annals of literature. Students are at the age where they ever respond to the Homeric appeal. Glowing with health, tingling with exuberant spirits and the urge to action, they glorify the delights and activities of the body, as indeed they should.

"Socrates is the master mind of the ages. He is perhaps the wisest man that ever lived. Professors, past the spontaneity and flush of youth, often exalt the cultivation of knowledge as the aim and end of education. To be intelligent is the *summum bonum* of life.

"Jesus is the supreme master of morals, the ineffable teacher of service through faith and love. If the past ten years have taught me anything, they have taught me that, greater than the cultivation of the body, and greater than the cultivation of the mind, is the cultivation of the human heart for human service. To me the supreme task of education is to exalt the ideas personified by Homer, Socrates and Jesus.

"Forever abideth Homer, Socrates and Jesus—these three—but the greatest of these is Jesus."

We are so thoroughly in sympathy with Dr. Holt's presentation of these ideals that comment is unnecessary. The humanity, the tolerance, the understanding, the forgiveness, the love of Jesus, all seem to us, at this tragic moment of universal disorder, to be the guiding light in a world darkened with war, strife, hate, jealousy and fear.

### THE SECRET OF YOUTH

**T**O-DAY we sat at a public luncheon in the ballroom of a great hotel, with a young lady of ninety-two, who entertained us mightily with her wit and charm. The occasion was one of those organization luncheons which seem to be necessary to "whoop it up" in "drives" designed to make the society public turn its tax-bitten pocket-book upside down and inside out. It so happens that this function (to use a technical term) was in behalf of the Salvation Army. Our ninety-two year old companion, long a valued civic leader who manages to attend several luncheons a week, was asked by a group to what she attributes her wonderful spirit of youth, which is the marvel of all who know her. With an unforgettable smile and wink of her clear blue eye, she replied, "That's easy. I love people. When love steps out, age steps in."

What philosopher ever made a wiser remark? This very engaging lady has been the counselor and friend of hundreds of broken men and women traveling down the river of tears. They needed her loving sympathy. After talking with her, they always felt more hopeful, more cheerful, more radiant. Bulwer-Lytton knew that the distinguishing mark of youth is its natural tendency to accept the best. He said, "Every street has two sides, the shady side and the sunny side. When two men shake hands and part, mark which of the two takes the sunny side; he will be the younger man of the two." We have known young men and young women of twenty who habitually took the shady side of the street and we have known young men and young women of eighty who always took the sunny side. We have

watched them for years. Those who take the shady side usually have their faces scarred with wrinkles years before those who walk on the sunny side.

Very few people ever carry the true spirit of youth much beyond their teens. Hawthorne reflected upon this and wrote, "At almost every step in life we meet with young men from whom we anticipated wonderful things, but of whom, after careful inquiry, we never hear another word. Like certain chintzes, calicoes and gingham, they show finely on their first newness, but cannot stand the sun and rain, and assume a very sober aspect after washing day." Years ago, at the opening of a great museum, the speaker was Charles W. Eliot, then President of Harvard. He was already an old man in years. We heard someone comment upon his splendid vitality and youthfulness, and he said, "When I was twenty, I saw youth going, but when I was sixty, I saw youth coming." Much of his finest work was done after sixty.

Not until we understand that youth is far more a state of mind than a time of life, as one wise old industrialist said, do we have the key to that incomparable chamber of life happiness—undying youth. One of the supreme examples of this is that of the marvelous Goethe, who retained his aspect of youth until his end at eighty-three. Goethe's soul was always turned toward the light. Titian at ninety-two was painting portraits of youth that fairly shone with his own fabulous virility.

The secret of keeping eternally young is to hold on to youth. How? Surround yourself with young thoughts, young ideas, young people. Sense their ever changing aspects and ambitions. Help them in their aims, without dominating them.

In America the organization known as the Music Educators National Conference is composed of thousands of music supervisors working daily with youth in the public schools. The exuberance and vitality of their conventions, which often number thousands of members, is a marvel to business men who have attended them. At one of their banquets we sat with a nationally famous merchant. He said, "These people have been 'conventioning' all over this hotel since early this morning, and they have twice as much energy left as I expect in two days from my workers. They seem tireless. How do you explain it?" The explanation is easy. They were working with youth and for youth. Life, to them, was a lovely and exuberant thing. They were teeming with the joy of living. They were finding the great secret of life, as Browning saw it, "Youth means love."

The heavenly dreams of the years of spring soon vanish into the ether unless the dreamer feels in all that is done the spirit of undying love—the sap of the tree of life.

### ENCORE

**I**N MAY, 1924, we wrote a little editorial entitled "Trouble and Music," which has kept bobbing up incessantly, ever since. A Chicago friend of *The Etude* has just asked us to print this fifteen year old writing again, so here it is:

Never was there an anodyne for trouble, that could compare with music. There seems to come a time when this dear angel of relief touches the world-tired brow of the soul in grief, saying:

*"Look up. To-morrow the sun shines once more.  
Joy shall come again. Listen, I am singing of the  
beauties of life here and hereafter."*

If music had no other office than this, its value to mankind would be infinite. Blessed is he who can sing when the darkening clouds seem to smother the joy of life.

The ability to play an instrument has been a godsend to many a man where trouble has come so fast that there seemed no way out. Music cleans the brain of sorrow and worry and fits one to take up the load of responsibility with renewed vigor.

OFFICIAL PAINTING OF THE NEW YORK WORLD'S FAIR  
Over 1200 Acres of Exhibits from 62 Nations.

Copyright New York World's Fair 1939

VISITOR FROM CAPETOWN, South Africa, who was taken for a preview through the New York Fair grounds, was heard to exclaim in a kind of neo-Mayfair accent, "My one couldn't begin to see all of this in my lifetime." The reason for this doubt was that the highly experienced and energetic men behind the huge project realized that the millions who will visit The World's Fair must be presented with an enormous variety of appeals, high-brow, low-brow, wide-brow and narrow-brow—something representative of everything under the sun, and everybody under the sun.

One might say that these same dimensions and characteristics apply to the music programs arranged and still being arranged for the World's Fair. In fact, these dimensions are so extensive that even though I have been surrounded by them since the beginning, I am still bewildered by their scope. They have long since left the bounds of the fair itself.

It reminds me of the story of a colored man named Esau, who worked upon the grounds of a little southern college in an invisible upon the map. At the time of the Chicago fair he was enraptured by the posters in the railroad station. He returned to take his savings and venture upon a long trip. Practically none of the colored folks had ever been more than three miles from town. When he left, every one from the neighboring plantations came to the station to see him off. He was gone a month. Colored picture postals from his friends thrilled his friends. When he came back an anxious and excited crowd was on hand to greet him. The president of the college later asked the traveler what he had seen at the fair. Esau scratched his head and meditated, and then said, "Well, Boss, you see when I got to Chicago I got so busy I never did get time to go to the fair grounds."

#### On Monumental Outlines \*

AS A MATTER OF FACT, the plans for the World's Fair, as now outlined, will very likely be devoted to concerts and operas in New York city itself. About one half of the celebrations will be upon Manhattan

Island and one half at the fair grounds. As projected, the six months of the fair season (May first to November first) will include so many important occasions that one can confidently predict that it will be the most significant musical festival the world has ever known.

New York is normally blessed every summer with a surprising amount of notable music, including the Lewisohn concerts at the Stadium, the Goldman Band Concerts and a varied number of unusual events. The great auditoriums are, however, usually closed, and the alluring posters that decorate the walls of Carnegie Hall and the Metropolitan Opera Building give place to announcements for the coming season. This year, however, there will be hardly any break, and the summer music will present far more features than may be heard during the winter season.

Foreign governments have been so sincerely enthusiastic over the musical opportunities offered by the fair that they have cooperated very munificently, and the

programs in many instances will take on the nature of diplomatic achievements.

New York is one of the best ventilated cities in the world. Literally surrounded and indented by salt waterways, and with Greater New York actually touching the Atlantic Ocean for miles, it has long been looked upon by many as a summer resort. It can be very warm in New York when a heat wave zooms down on the planet, but then it is warm everywhere. Usually, however, there is a breeze, and the city is no warmer than many of the festival centers of Europe located far inland.

#### From Beyond the Seas

WE HAVE GIVEN a suggestion as to the participation of some foreign governments. It may be interesting to know that several countries overseas recognize the importance of music as a glorified expression of national ideals; and therefore these countries have arranged to engage great American symphony orchestras to play the music of their famous composers at a distinguished

series of concerts given under the auspices of these countries. The plans are so far-reaching, that I can give here only a sketch. Two performances of the New York Philharmonic-Symphony Orchestra are certain, and six to ten are possible. Poland has engaged this great orchestra for a Polish program on May 3rd; and Roumania has engaged it for May 5th. Roumania has also engaged the Philadelphia Orchestra for May 14th and 16th, to be conducted by the eminent Roumanian composer, Georges Enesco. Czechoslovakia, Brazil, Switzerland, Finland, Argentina, and other nations are now negotiating for similar engagements with American orchestras. Practically all of the leading American orchestras have been invited to come to the Fair, and many have accepted.

Meanwhile at the Fair Grounds there will be tremendous musical activity. The compelling spectacle at the fair will be the great Fountain of light, water, fire and steam which occupies a focal location at the exposition in a lagoon at the end of a

# The New York World's Fair Music Festival

SIX MONTHS OF EXTRAORDINARY EVENTS  
THE MOST COMPREHENSIVE MUSICAL PROGRAM IN HISTORY

By OLIN DOWNES

General Music Director of The World's Fair; Music Critic of The New York Times

From a Conference Secured Expressly for THE ETUDE MUSIC MAGAZINE

By WILLIAM ROBERTS TILFORD

THE ETUDE has repeatedly endeavored to secure advance information from Mr. Downes, but he has refrained from making announcements until matters were sufficiently developed. Owing to uncertain conditions abroad, even some of the following events may be changed without notice. This, however, will not interfere with the World's Fair having one of the outstanding musical celebrations of all history. 15,000,000 people are expected to attend.—Editor's Note.

magnificent boulevard lined by beautiful trees in front of imposing buildings. This astounding fountain will be seen nightly by millions and is expected to be the most gorgeous display of its kind ever conceived. Some six hundred tons of water, glowing with iridescent lights, will continually be suspended in the air. Meanwhile huge flames of gas, into which sawdust will be projected in order to make showers of glittering sparks, will serve as a background together with clouds of steam illuminated by rainbow-hued search lights. The fountain will be exhibited nightly. A regular program of band music, orchestra music and choruses, amplified many hundreds of times by a new and very ingenious system of giant amplifiers, said to do away with sound distortion, will accompany the exhibition. Probably no one who visits the fair will miss this exciting spectacle, and those who see it will certainly never forget it.

Numerous "name-bands," that is, bands known by the prominence of their conductors, will play at the fair; and there will be all manner of other musical events distinctively American in the highest and broadest sense of the word. One of the great objectives of the fair is to emphasize American opportunities, particularly at this extraordinary moment in world affairs. America, by reason of its own natural talents, its own long and arduous labors and its training received from the greatest technicians of all lands, as well as because of the disturbing social conditions that prevail in Europe and have inhibited free cultural progress, has now unquestionably become the music center of our day and age.

### The Land of Musical Promise

ONLY ONE WHO HAS BEEN in the heart of things in musical activities in our country realizes how anxious foreign artists of all countries and all races are to secure American engagements. The day has long since passed when artists accepted American contracts and laughed in their sleeves at our provincialism. Not only do they now recognize the enormous musical progress of America but also they know that in Europe a successful American tour under its fine auspices is just about the best testimonial they could possibly have. Therefore they are greatly honored and pleased with an invitation to sing in the United States, just as American artists of days gone by thought that appearances in London, Paris, Berlin and Milan were absolutely necessary before they even dared to peep over the footlights in their native land. It is not so much that we hold the money bags and pay more for music than any European country, but because our trained public, which for decades has been hearing the best in concerts and operas and through radio programs, has now a fine sense of artistic discrimination. American taste has become so elevated that we will accept only the best. Our standards are of the highest, as they should be in a nation of idealists. We have long enough been invidiously called "Dollarland." Anyone who knows anything about the artistic situation, from an international standpoint, is soon aware that the appetite for American dollars is nowhere more ravenous than overseas.

### Of Universal Scope

THEREFORE, TO MY WAY of thinking, the American representation in this fair is the most important part. We rejoice in the magnificent cooperation shown by foreign governments; but, after all, this is an American fair for the American people. We have invited all of the outstanding American organizations to take part, and many have accepted. The great National Federation of Music Clubs has taken an entire day and will supervise the programs which are the result of a nation-wide survey to appraise musical conditions in all parts of the country. The Federation will present two very fine concerts at the Fair Auditorium, and many other events. As a result of the findings of the National Federation of Music

Clubs, all kinds of characteristic American musical activities have been investigated and a vast number of groups of a very distinctive description have been asked to take part. One thing I would like to have this great fair bring to the attention of all who attend, and especially of New Yorkers, is that American music must be representative of the thousands of musical activities in all parts of America, and not of any one group or locality. "Hill Billy" music in the heart of the Great Smokies is just as much a genuine, distinctive American achievement as the latest modernistic string quartet heard in Town Hall. There is a Loggers' Chorus in a western forest operation that we expect to have with us. There is also a remarkable Vermont Symphony Orchestra, composed partly of farmers, that has never been in New York. There are scores of such organizations, as well as the wonderful Negro groups with a music definitely their own. It is quite as provincial for the New Yorker not to know of these out-of-

worse, trite words. This, however, has nothing to do with the music. There may be music that is ungrammatical; but ungrammatical music with a "punch" is often many times nearer to worth while music than the reams of grammatical "Akademisch Music" turned out in classrooms, but entirely lacking in invention. It makes no difference how elaborately such sterile ideas may be expressed in symphonic garb, they will still be boring. The Germans call such music "Kapellmeister Musik"; that is, music made by a fine technician who is nothing more than a technician. I prefer my music grammatical and "streamlined," but most of all it must have real and viable ideas.

What have we to say about ungrammatical music? Some very wonderful literature has been deliberately written in dialect, which is ungrammatical. Should we do away with dialect in literature? Everybody knows that many of the greatest works of literature in all languages get

pealed more to Mr. Edison than to Beethoven. However, we have galloped the period of musical snobbery in America and in the broader outline of the music the epochal World's Fair we shall witness the music that springs from the whimsy, folk lore, the nervous convulsions, as the hearts and the souls of our people. We shall exalt those who have great and great technic combined, but first are the ideas. It is hoped that the program selected will make ample place for serious American composers, of whom we are all very proud and who need our support.

## The Staccato Slur

By ANNETTE M. LINGELBACH

THE OPENING right hand phrase of Handel's, *Queen Anne's Lullaby* affords an excellent drill in the *staccato slur*.

Ex. 1

When transposed, it stretches the hand and makes it doubly flexible for staccato practice. The rapid slipping under of thumb, and the constant employment of fifth finger, increase the endurance and speed of these two digits.

For further practice, of the *staccato slur* transpose this phrase into the following pattern:

Ex. 2

## FIFTY YEARS AGO THIS MONTH

DR. EUGENE THAYER, eminent music theorist and authority on musical lore, contributed the following sage advice to young students and teachers of our art, one of his last writings, as on the coming June his pen was to be forever stilled by tragic death:

"It is safe to say that only a very small percentage of the young music teachers of our land understand Musical Theory, any large extent; that is, Harmony, Counterpoint, and Musical Form. It is also to say that they cannot teach without great success until they do understand. After the first six months, the teaching of harmony should be a part of every piano lesson. Can they do this? When harmony is well understood, it should be followed by the other two studies. Can they do these? I fear an answer must be given in the negative. The few who can are the ones who make a successful permanent name as teachers.

"It is no longer safe to rely on improvisation as the road to a permanent reputation. The number of executants or players has increased so rapidly in the few years that only musicianship has claim or chance of success now.

"Of course the first thought of the young teacher is to buy a harmony book and issue the study alone, not thinking him able to afford lessons from a competent teacher. This plan has never worked successfully and never will. Suppose he works out all the problems and exercises, is he to tell whether they are right or not? Even if his book has a key, which it rarely has, it does him no good, as he learns nothing of the possible variations of harmony. Make a little more effort, do it the right way."

BUILDING THE WORLD OF TOMORROW  
Interior exhibit in the great Globe or Perisphere which, with the triangular Spire or Trylon, is the Theme Center of the Fair.

town activities as it is for the man in Oklahoma not to know that Bartok's latest cacophonous masterpiece is being done by a group of dilettanti on Park Avenue. We have been delighted with the fine spirit shown by the willingness of these groups to take part in our New York Fair. We want them and welcome them as fellow Americans, sincerely and honestly putting their lives into music, and not as freakish evidences of rural music. Any veritable organization without artificiality and with adequate technic or finish has been welcomed.

### The Spark of Vitality

THERE IS, TO ME, no bad music. There may be music that is associated with cheap, unworthy and immoral words, or, perhaps

much of their virility from dialect, whether it be the dialect of Shakespeare, of Tolstoi, of Dickens, or of Mark Twain. A language without slang is a language without color, a very anæmic and perishing thing. In music everybody knows that some strikingly interesting rhythms and harmonies have come from the so-called "jam sessions," in which players in swing orchestras have improvised parts, which were later written out in notes. I assume that everyone knows that in this enlightened and fitful age, a "jam session" is one of those turbulent breakdowns of clamor and din in which the swing orchestras "go to town." In this wild tonal spree, just one idea may accidentally evolve, which, resting in one player's memory, is later transcribed to paper. The method is empirical. It would have ap-

# The Building and Use of a Vocal Instrument

By

KERSTIN THORBORG

Prima Donna Contralto of The Metropolitan Opera Company

A Conference Secured Expressly for THE ETUDE Music Magazine

By ROSE HEYLBUT

WHAT IS THE PURPOSE of vocal study? If the answer is made hastily, you may say that one studies to develop the voice; to sing well; to advance one's self in a career. These are noble and legitimate reasons; but to my mind they are not the most important ones. The prime reason for vocal study is the development of an instrument that shall be physically flexible and responsive, and to give an ability to modulate this human instrument to the finest shadings of artistic in-

entirely different beginnings. The violinist has his instrument put into his hands; he has only to learn to use it. The singer, on the other hand, should not begin the use of his instrument until he has attended to its construction. If a violinist were to be given his instrument in a hundred small pieces, and had to spend years in putting it together before he could attempt to play upon it, his problem would more nearly approach that of the singer. This is a far-fetched comparison, perhaps, but it is none the less a useful one. Continuing it further, one would hardly expect the violinist's technical progress to stop at the moment when he had his violin pieced together. Indeed, the completion of his instrument would mark the time when his actual playing could begin. It is just as great a mistake to suppose that the singer's work is ended when his vocal equipment begins to be in sound condition. It is then that his real work begins. A naturally beautiful voice and a good singing technic are certainly important; but they are not enough to make an artist. The artist is one who develops his voice into a noble musical instrument, and then learns to control it, to discipline it according to the demands of music.

## Laying the Safe Foundation

THE PRELIMINARY BUILDING of the vocal instrument is the same for all singers, regardless of the range, quality, or color of the voice. I do not believe that one set of counsels is suitable for sopranos, and an entirely different set for contraltos. After the voice is established, the demands of the music to be sung may require a certain amount of specialization, but the fundamentals never change. There is only one approach to good singing, and that is the flexible resonating of correctly placed tones. This depends chiefly upon the proper use of the breath.

In singing, the giving out of the breath is even more important than drawing it in. Large inhalations are not necessary. The phrase is supported by the wise and practiced distribution of the exhalation. In the boxing ring, a slim man who has expert technic at his command, can overcome a great, heavy adversary who has only brute force upon which to rely. In singing, a correct use of the breath can outlast a mere advantage of physical supply.

One can draw a comparison from violin playing. To play a long phrase, the violinist does not need a longer bow. He secures his effect by the amount of bow which he devotes to each note or phrase. It is possible to use the entire bow for one tone; it is also possible to play a long phrase on a single bow. The singer's breath is like the bow. It is sometimes necessary to ex-

pend a full breath on one vocal tone, but, normally speaking, only a slight breath is needed to vocalize each note. The reserve amount must be carefully divided over the complete phrase. It takes years of work to accomplish this. It must be begun most carefully, by the individual teacher, and continued by the singer himself throughout his entire career. But once he has learned the feeling of this correct giving out of breath, the singer is on the high road to mastering his art.

## The Vital Art of Breathing

IN STRIVING FOR THE MASTERY of breath control, the singer never should release too

watching the rapidity of his breathing. For that reason the singer should early school himself to remain as calm and as natural as possible. This often may require the sternest self-control, but such discipline is necessary.

The young singer should be careful to avoid overspecialization in the practice period. By that I mean the rather general tendency to develop the outstanding or "exciting" notes of the voice, at the expense of the full scale. Sopranos will be often found practicing their exercises in the upper registers almost exclusively, while altos may be tempted to concentrate upon those deeper notes which make for outstanding contralto range. This is not a wise thing to do. Normal daily practice should be concentrated in the normal middle register, wherever that happens to be. Only after that middle register is secure, tone for tone, should the "special" notes be added. It will be found, too, that these special notes fall into the voice far more easily, once the middle register is under sure control. One sometimes hears coloratura sopranos who produce uncertain tones as soon as they go below the coloratura range. This is not due to any defect of voice but to incorrect habits of practicing. The ideal of singing is to pass from one vocal register to the other evenly, smoothly, without effort, without the slightest variation of tonal quality.

## Little by Little The Oak

TO ACHIEVE THIS even tonal passage one should, as I have said, work chiefly in the middle register. One should derive the full value from each breath and use the vocal cords themselves as little as possible. One should also work slowly. Let the day's practicing begin with full scales, sung slowly, with the full breath devoted to a single tone, and that tone brought as near as possible to perfection before the next is attempted. This is the only way one may be practically sure he is not fooling himself. The careful singing of the grand scale shows up every least vocal insecurity; and these insecurities are precisely the points which need work and a finished polishing. Trills and ornaments can

Thorborg as Amneris in "Aida"

KERSTIN THORBORG

Thorborg as Ortrud in "Lohengrin"

much breath at once; he never should push on the tone. He should try not to sing while in a state of nervousness or agitation. Nervousness always makes for shortness and unevenness of breath. Even where singing is not concerned, it is possible to tell that a person is nervous or excited, by

come later. They are important, of course, but not so important as the sure emission of well placed, well resonated tone.

Well resonated tone is arched into the chambers behind the nose and above the soft palate. It is never nasal. Indeed, one can test his tone by pinching the nostrils shut and then releasing them, while he sings. If this can be done without altering the quality of tone, the voice production is somewhere near correct.

The resonance chambers of the head do for the vocalized breath exactly what the body of the violin does for the tone of the vibrating strings; they amplify it, and give it life and resonance. Incorrect tones lack these qualities. A tone that is allowed to sound from the throat is uncovered and thick. To avoid this error, the throat should be fully open, yet quite relaxed. All vocalized breath should be arched into the head chambers, and then sent out, in a downward direction, through an open throat.

The importance of this correct passage of the breath will be realized when I state that I have frequently avoided colds by the use of my vocal exercises. It has happened more than once that I have awakened to find the peculiar tightness or roughness in my throat which indicates the beginning of a cold. At once, then, I have set to work singing scales in the manner that has been indicated, sending each full breath into the resonance chambers of the head and releasing it through a fully open throat. After half an hour of such singing, the rough feeling has disappeared, and the threatened cold never asserted itself. Actually, such exercises serve as a massage, drawing the blood to the surface of the membranes, and giving new life to them.

Another point of importance to the singer is the position of the tongue. Unless it is actually needed for the formation of certain consonants like *l*, *n*, *r*, and so on, the tongue should lie as flat as possible and as relaxed as possible in its normal place in the mouth. It should not be pushed back, or raised up, or allowed to move. The flatter the tongue, the freer the space through which the vocalized breath passes, and the more unhampered the vibration of the tone will be. There is an illustration of this principle in the common garden hose. Let some water run through the hose, and see how evenly it flows. Then press the finger very lightly against the hose, and note how the flow jerks and becomes uneven. Even the slightest pressure will bring this about. It is quite the same with the vibrating breath. Even the slightest obstacle, such as an incorrectly placed tongue, will break the even passage of tone.

### The Making of a Master

BUT THESE DISTINCTLY VOCAL PROBLEMS serve only for the building of the instrument. Its use is a very different matter. Let me begin by telling you an illuminating little anecdote about Toscanini. After I had sung the "Missa Solennis" with him in London last year, a friend approached the great conductor, in ecstasies over the sheer perfection of his work.

"But how do you do it, Maestro?" pressed the friend. "How do you manage to achieve such transparency, such meaning, such polish?"

"It is very simple," said Toscanini. "I am over seventy years old. More than fifty-three of those years have been spent in studying music as carefully as I can, so that I may understand how to study better to-day."

That is the best example I can offer you of the real mission of the artist—after his vocal instrument has been built. We have to-day many magnificent voices among the younger singers, but the *tempo* of our modern world is so fast that it blocks out the prospect of a half century of careful service to music.

# Victor Herbert As I Knew Him

## Memories of the Man and His Music

By GUSTAV KLEMM

### Part Two

WHAT A PRODIGIOUS CAPACITY for work had Victor Herbert; and he composed with almost phenomenal rapidity. His pen seemed to fly with even greater fluency and skill, when working under pressure and against

in Toyland" score, because much of it was written while he was staying at the Hotel Stafford, during an engagement in that city in the fall of 1902.

In 1916 Herbert contracted to write the first completely original score ever created

VICTOR HERBERT with a "Lamb's Club Gambol" on Tour

time. Nor was it necessary at these times, or others, for him to be alone in a quiet place, surrounded by the conducive conditions we have come to expect are vitally important to the creative musician.

In the early days of his touring with band and orchestra, he would do much of his writing while on the train *en route* to the next engagement. Robert W. Iverson, his faithful secretary over a long period, a former French horn player in the 22nd Regiment Band and Pittsburgh Symphony Orchestra, and, along with his charming wife, a dear and valued friend of ours for many years, has told us countless stories of Herbert's flying pen, under any and all conditions. On steaming hot July nights in the South—there was no air-conditioning then—Herbert would sit in a coach surrounded by his musicians, who would be talking, playing cards, smoking and often practicing their instruments, all to the complete indifference of the absorbed Herbert who, stripped to his dripping undershirt and with a towel wrapped around his peripating head, would write on and on through the night.

One of his loveliest musical comedies, "The Only Girl," was written in exactly seven days. He started work on Henry Blossom's lyrics of this operetta, on one Wednesday morning and finished them the following Tuesday night. The score contains *When You're Away*, a close runner up in popularity to the prize thoroughbred in his song stables, *Kiss Me Again*.

### Where Tunes Were Born

BALTIMORE HAS ALWAYS had a particularly affectionate feeling for his splendid "Babes

directly for a full-length feature film. The picture was "The Fall of a Nation," a successor by Thomas Dixon to his own immortal "The Birth of a Nation," which had made screen history when it fell, under David Wark Griffith's inspired direction, on an amazed world the year before. "The Fall of a Nation" was a ghastly failure, but Herbert's music created a great deal of favorable discussion because of its symphonic proportions, with its excellent musical underlining of each important character and incident photographed. Harold Sanford, for many years, his faithful lieutenant conducted the 30-piece orchestra twice daily at the Liberty Theatre in New York and was with Herbert during most of the score's birth. Near the close of the film, there is a tremendous battle scene that calls on the full resources of the orchestra. This scene lasted almost a half-hour, but Sanford has told us that the music for the entire sequence was written in less than three hours. The orchestration, of course, was written out carefully later. The only melody from this score available today is *The Love Theme*, one of the loveliest melodies Herbert ever wrote.

Incidentally, Herbert and Sanford developed ultimately such a close musical understanding that the composer would often turn over a rough sketch of a new number, containing orchestral indications, to Sanford who would then arrange the full score, after which Herbert would check over it to find if all was as he wanted. He seldom had to make any changes.

For further indications of Herbert's speed in writing, one has only to look at his manuscripts, of which we have a large col-

lection. So far as legibility, neatness and correctness are concerned, they are perfection itself; but he made use of every abbreviation possible, and all through his scores are directions in pen and pencil to the copyist and conductor, little memorandums that tell of a pen trying to beat time to the dead line.

On a number of "Babette"—it may be seen in the music division of the Library of Congress in Washington—is a pencilled note, "Will have the parts for this—opening in Washington." The overture to his "The Red Mill" is another example of his ability to write with amazing rapidity. It started one August morning in 1906, at Lake Placid, and finished the following day. Across the top of the first page, he wrote, out of the fullness of his panting heart, "Hot as the devil."

### On Skill in Composition

HERBERT ALWAYS ADVISED all young composers—old ones, too—to get their idea on paper as *quickly* as possible. "Don't bother with each and every harmony," he would urge. "Do as an artist does in starting a drawing—sketch in quickly and roughly the bare outlines." In other words, take a sheaf of manuscript paper and let your pencil fly. A note here, a snatch of harmony there—just enough to show the broad pattern your composition will follow. Then, this much done, the composer may go back over his sketch, filling in his harmonies, altering them, adding to and subtracting from his phrases, polishing the diamond—he hopes—he has extracted from the rough. It was good advice and always will be, especially for those composers who never get to see the real woods of greatness because of the tantalizing trees that stand all about, waiting to distract them.

Herbert, who never had a day of real illness in his life, was impatient of anything that kept him off his feet. Once, while in London, his appendix flared up and he begrudgingly consented to follow the surgeon's advice that it be removed. But, just to show that he was secretly ashamed of the whole thing and felt it a sort of admission of weakness, he was up and free of his hotel room before most people are out of the ether. For some time after that, he was "appendix conscious" and would urge anyone who still possessed his appendix to have it removed whenever he had two or three free days.

On another occasion, when his bed had succeeded in achieving one of its infrequent embraces of his bulky body, he kept his fretting hands busy by writing the lovely *Badinage*, one of his most popular numbers and truly Herbertian.

Writing of *Badinage*, and "truly Herbertian," brings us to the individuality early stamped on his music. He created a style all his own, almost as soon as he started to write; and its characteristics became tell-tale trade marks that clung to each creation that came from his busy pen. A Herbert tune was never cheap, never commonplace. Without any apparently conscious striving, his melodies always turned a way you were not expecting; and his harmonies, always crystal clear, were perfect complements to his tunes. Think of any Herbert composition, particularly those for orchestra, and its Herbert characteristics will immediately come to mind. Few composers are ever able to create such a personal style, such a musical signature.

This individuality was never more clearly indicated than in a composition he wrote while conductor of the Pittsburgh Symphony Orchestra. It was during his first season (1898) and the number was *Al Fresco*. Herbert, anxious to make a good impression as a conductor of serious music, so called, did not feel that he was sufficiently well established to risk associating his name with such a gay little piece as *Al Fresco*, so he issued it under the *nom de plume* of Frank Roland. But the sparkling phrases

(Continued on Page 350)

# Bach's Musical Helpmate

A Graphic Picture of Anna Magdalena Bach and Her *Notenbüchlein*

By HATTIE C. FLECK

THE DAYS OF THE GREAT Masters of Germany there prevailed a custom, in families devoted to music, which each member must possess a *Notenbüchlein* (notebook, or music book) in which favorite compositions would be written in his or her own hand.

It was an old custom handed down through many generations, even then; but it was not to find more popularity during the eighteenth century than before. The complete custom prevails even now in certain circles in Germany; and it was charming to find it among some people in France. The custom probably brought the idea from Germany, since there had been intermarriage in considerable numbers, but a few generations before.

One, in the older days, was permitted to enter a composition in the book of another, neither was anyone to show his or her book to others until a certain date set for changing books and comparing notes. One felt ashamed of their musical taste;

*Morning Music in the Home of BACH.*

*BACH at His Prime.*

work to do. The real intention was to encourage the student or performer in more ways than one, the principal object being to promote a taste for the best in music, along with the art of copying a composition clearly if not perfectly. The periodical exchange of notes was an excellent lure to doing one's very best, and contributed largely to reading music readily. Persons became helpful to each other by what seemed to some a little

more than play; and it was not seldom that a real musician was discovered, or often developed, by this excellent means.

## Three Musical Treasures

IN THE FAMILY of Johann Sebastian Bach there were at least three such *Notenbüchlein*, which are preserved. There probably were many more, since the Bach family was a large one. One of these three books belonged to Friedemann, eldest son of Johann Sebastian. It is a *piano-book* begun in 1720, at Köthen. Another, dated 1722, is supposedly that of Johann's wife, bears the inscription, "For Anna Magdalena Bachin," but in a strange hand. It contains

the five early French suites, along with several shorter entries. The third of these is definitely that which belonged to Frau Bach, bearing her name, and dated 1725. This last book is a prized possession of

act. If nothing more, it urged a student or performer to write; and the fact that it would be presented for inspection helped to establish a certain pride in accuracy or even in presenting a more or less perfect sheet of musical characters.

Anna Magdalena Bach, born September 20th, 1701, was the youngest daughter of Johann Caspar Wülcken, a musician of note; and as such she was an ardent devotee of music at an early age. While still very young she was recognized as a singer of rare ability; and when her father was appointed to his musical service by the Duke of Weisenfels, in 1714, this little girl appeared under his direction in the royal concert chambers. Later, in 1716, accompanied by her father, the youthful singer appeared in Köthen, where she was warmly welcomed, and received an offer to become *Fürstliche Sängerin* (first woman singer) within a few years. Bach, a widower since 1720, met the charming young artist at this time, when she was twenty-two years of age; for he was the director of the Royal Orchestra at Köthen, and it was in that town that they were married on December 3, 1721. Johann Sebastian insisted that it was their mutual love for music which bound them so closely together.

*A Recent German Statue of BACH by Josef Weiss.*

## Leipzig Claims Immortals

TWO YEARS LATER the couple made their home in Leipzig, together with the children of Bach's first marriage. In a short time the charming artist had settled down to become a dutiful *Hausfrau* (housewife); and, between the years of 1723 and 1742, she became the mother of thirteen children. This gifted woman, who had begun life as a promising star in the musical firmament, was satisfied to retire and become her hus-

were shy, not knowing what to expect; and, again, others were for they were certain that they were to be acclaimed as the musician of the circle. Then there were those who were real lovers of music, who were in their entries, and who were not to be pleased and entertained, but delved deeper into the whys and mores of their choice. Such were to defend their taste if ridiculed, they gave time and study to know about both the composition and the performer.

The proceedings were not merely play with each other; they had nobler

the Berlin Library. It is bound in a hard cover which is done in pale green paper, is embellished with gold fleckings and border, with the letters, in large sized capitals, A M B, in heavy gold. The year, 1725, below, is also in the same heavy gold, to correspond with the initials. There are evidences of two clasps, or locks, having adorned the book; and there still re-

By CAROL SHERMAN

band's devoted helpmate; and, because of her perfectly feminine character and exceeding gentleness, she accepted her duties and considered them her highest accomplishments. With all these demands, she found time to encourage her husband in his work, sharing it whenever an opportunity presented itself. At the family concerts she did her part by singing in a voice which her husband called "einen sauberen Soprano (a clear, or clean soprano)"; and she also found time to make use of her *Notenbüch*, which contains forty numbers mostly composed by Johann Sebastian Bach, although there are some lighter, even rather flimsy entries. One of the numbers is François Couperin's, *Rondeau, B-dur (Rondo in B major)*, and another is by Georg Böhm, organist and early teacher of Bach. This is the *Menuet G-dur (Minuet in G major)*, and is entered in Bach's own hand. The Chorale, which is among the entries, *Wer nur den lieben Gott lässt walten (If Thou But Suffer God to Guide Thee)*, has no other authority than that of a handwritten notation by Philipp Emanuel, Von J. S. Bach (by J. S. Bach), to recommend it as his father's composition. It is agreed that it was probably used as the *Eingangsglied (Introductory Song)* at family festivities.

In many of Bach's compositions the lyrics are profoundly religious. This is particularly true of those entered in the *Notenbüchlein*. It is said of Bach that "No one else has managed so well to combine the earthly with the eternal." His wife's entries help to prove this. Her notes, written so beautifully, were at their best when she copied her husband's work, much of which has been reproduced and sent out into the world of music. Many beautiful stories have been entwined around Anna Magdalena's *Notenbüchlein*, one of which is told in Bach's biography by Philipp Spitta, in which the author says:

"It relates the most tender and intimate relationship between these two married people even to a touching degree."

Yet, with all this, there is little evidence of Bach's personal interference with the *Notenbüch*. He had embellished his gift to his wife by entering two of his *Klavier-suiten (clavier suites)*; but the remainder of the pages are mostly done in her own exquisite hand. There remains no doubt that she had intended to reserve her gift book entirely for her husband's compositions, which she loved best; but as the years passed the book shows that the wife found it convenient to share its pages with other composers.

The book must have been forgotten at times, owing to other duties; but at this time the family was growing rapidly, and there are evidences that she encouraged the children at an early age to use her *Notenbüch*, for their own compositions or arrangements. Mother's *Notenbüch* seemed to be their goal, for one interesting item is that written clumsily by the eleven year old Philipp Emanuel and corrected by his father, who either had been looking over the shoulder of the struggling boy, or, perhaps, on one of his evenings of leisure had been shown the boy's attempt at music. The sheet shows corrections in the characters, changes in the bass, and memos of dictation about the time and intervals, in Bach's own hand. There are many more evidences of Bach's concern in the children's musical education, but not one that might be considered a challenge to the marvelous appreciation of things musical in Anna Magdalena. She was an excellent pianist, and there are no testimonies of her husband's authority over her.

## A Matchless Mother

FRAU ANNA MAGDALENA insisted on proper advantages for their children, and she engaged a dancing master for them at an

(Continued on Page 356)

A HUGE CARILLON, consisting of seventy-five tubular bells with a range of two chromatic octaves from middle C, will be exhibited in the Florida building at the New York World's Fair. The new and immense carillon, which was designed and constructed by J. C. Deagan, Inc., of Chicago, will be dismantled after the fair and installed in a campanile, or bell tower, to be erected beside the Swanee River at White Springs, Florida, as a memorial to the composer of *Way Down Upon the Swanee River*. The total cost of the caril-

the ordinary set of chimes. The bells are made of drawn metal, instead of cast metal, which is porous and brittle. Like the Liberty Bell, many of the famous cast bells of the past have cracked and thereby have been ruined. The tubular bell, giving far greater volume than the cast bell and also a superior tone, is almost indestructible.

When a tubular bell is struck, practically every ounce of metal therein is set into vibration. In the case of the cast bell, only a small portion of the metal vibrates when it is struck. Thus a tubular bell weighing three hundred seventy-five pounds will have a greater volume than a cast bell weighing five thousand pounds.

The new Deagan carillon and its equipment will weigh twenty-five tons. The bells, placed end to end, would have a total length of six hundred feet. More than sixty miles of wire are used in the connections employed in operating the electric player which may be used when the bells are not operated by hand. The carillon will have fifty-eight thousand seven hundred and fourteen individual parts, and it may be operated either by a small hand-playable keyboard of two chromatic octaves, or by an automatic electric player, or by a Westminster Chime device. The old fashioned,

At the top—The Keyboard of the Stephen Foster Carillon. Below—Method of Tuning the Bells of the Great Carillon.

lon and the memorial will be approximately three hundred and fifty thousand dollars.

This is not just an ordinary set of bells, or set of chimes, but properly a carillon in the modern sense, as the bells are cylindrical metal units, with three bells to be struck simultaneously for each note, thus insuring greater volume, carrying power, and richness of tone. Thus, mere size and volume have not been the chief aims of the designers, but rather tonal qualities superior to those obtainable in

clumsy carillon keyboard, which looked something like the switchboard of a railroad tower house, is eliminated entirely, and the bells may be operated with the same facility with which a piano or an organ keyboard is played. This giant carillon is bound to be one of the major attractions for visitors at the Fair. The great White Sulphur Springs, Fla., is housed in an old fashioned building surrounded by three stories of balconies. Thousands of gallons of sulphur water pour from it daily.

THE COLUMBIA BROADCASTING SYSTEM recently had a survey taken to find out what programs to which the farming listen. The agents sent out had no business who had contracted for their services they made no direct or indirect reference CBS in any of their inquiries. Two cities in every state, selected as typical communities, were canvassed by agents conducted personal interviews. Maybe of our readers were among those who interviewed. From this survey CBS one of the most significant results wealth of statistics proving farmers city dwellers have much the same preferences in entertainment.

Eugene Dubois, Belgian violinist, Alexander Semmler, pianist, recently joined in a new weekly series devoted to violin and combined instruments for the Midway Hour heard on Columbia network (Thursday, 3:30 to 4 P.M., EST). Dubois well known to American music lovers, has contributed several outstanding recordings for Columbia; but this is the first time he has been featured on the radio a series of his own programs. Dubois has been before the public since he was a teen. He was a pupil of César Thomson. Semmler has been with the CBS network since its origin in 1927. Born in Dortmund, Germany, he studied at the conservatory there under Gustav Jenner, a pupil of Brahms. He has given many notable solo on CBS.

When Paderewski inaugurated his twentieth concert tour of this country with radio broadcast on February 26, he wrote a page in the history of radio in this country. The seventy-eight year old pianist played with remarkable feeling. His program, made up of familiar music, opened with Beethoven's "Moonlight Sonata" and closed with the pianist's own *Minuet in G*. The enthusiasm of the assembled audience stirred the radio listeners, and many of the telephone calls and telegrams. It was touching tribute the nation paid to a veteran musician, and no one will know how many people cut a notch in their memory with that radio event. The National Broadcasting Company and the Radio Corporation of America are to be congratulated for sponsoring this achievement.

They call it "Music For Fun" but more than that. It is a program in which young folks, school children, present their frank opinions of the music performed by the Columbia Concert Orchestra under Howard Barlow's direction, on Friday from 5:15 to 5:45 P.M., EST, Columbia Network. William Spier acts as host-in-viewer, bringing a welcome cordiality to the broadcast. Much of it is "in fun," many of the youngsters have some illuminating and interesting comments to make.

Following Toscanini, Bruno Walter assumed leadership for several concerts with the NBC Symphony Orchestra in Saturday night broadcasts. Walter is an old favorite with American music lovers for he has made a great many symphony recordings, and has been heard in years past, on the air with the New York Philharmonic-Symphony Orchestra. Because of recent happenings in Austria, Bruno Walter was forced to give up, after an association of twenty years, his leadership of the Vienna Philharmonic Orchestra, the oldest organization of its kind existing. A tireless worker, Walter's typical day in Vienna often called for a rehearsal in the morning, a recording session in the afternoon, conducting or a vocal rehearsal at 6 P.M., and a performance at the opera in the evening. Since the Anschluss, Walter has been inactive. Released from his duties in Vienna he moved on to Paris.

# My Old Kentucky Home

An Eighty-five Year Old Folk Song and Something of Its History

By ANNA L. McCLEARY

1. The sun shines bright in the old Ken-tuck-y home, 'Tis sum-mer, the  
2. They hunt no more for the pos-sum On the mead-ow, the  
3. The head must bow, and the back will er the

THE LITTLE GIRL'S DEFINITION, "A folk song is a song that nobody ever wrote," seems to be the commonly accepted. This is absurd of course. The folk songs did not "just grow" Topsy; somebody wrote them and that somebody was a bard or local poet or a musician too modest to claim authorship, too unpretending to exploit his own works. *My Old Kentucky Home* is a good example of a song of this type, but in this instance the name of the author and composer is preserved. There is always a romantic interest in the songs of our picturesque and ever charming south. There are few more beautiful than *My Old Kentucky Home* about which comparatively little is known.

Between the bales of merchandise on a dock at Pittsburgh, a young couple moved aboard the gangplank of the stern-wheeler steamboat, "James Millinger," making ready to start upon the long trip down the Ohio and the Mississippi to New Orleans with passengers expecting to attend Mardi Gras. It was February, 1852. When Foster, with his bride of two years, was taking advantage of being passengers upon the boat owned by Foster's father, who was moving a cargo to the western metropolis. The voyage took several days and it is probable that there were many stops at the leading cities. It is not unlikely that the Fosters stopped at Louisville and that they visited Foster's uncle and cousin, the elderly Judge John Rowan, who had been U. S. Senator from Kentucky in 1828.

## A Romantic Spot

JUDGE ROWAN HAD A HOME in Louisville one in Bardstown, which is now designated by Kentuckians as "My Old Kentucky Home." Strangely enough few of enthusiastic researchers have come forward with actual and convincing contemporary evidence that Foster ever visited the home. Notwithstanding this, a notice appeared in the "Pittsburgh Press," in January, 1852, stating that "My Old Kentucky Home" has reference to 'Federal Hill,' home of Judge Rowan. The old home mansion caught the fancy of the poet and lingered with him until written into this beautiful melody. The house in Bardstown, Kentucky, was visited by Foster on this trip." This thread of contemporary comment, possibly written by a Pittsburgh friend of Foster, may identify

the "Federal Hill" house as the actual site of the Home. However, the song was copyrighted and published one year later, in January, 1853, and the general burden of circumstantial evidence is that this was the source of his inspiration. His brother, Morrison, stated in 1900 (thirty-six years after Foster's death) that Stephen occasionally visited the Bardstown home known as "Federal Hill," and it is quite reasonable to believe that this fine southern mansion of other days was the provocation for this song.

The poem itself seems to have gone through many mutations. At first Foster evidently had in mind a song known as "Poor Uncle Tom, Good Night." The chorus ran:

"Oh, good night, good night, good night  
Poor Uncle Tom,  
Grieve not for your old Kentucky home,  
You're bound for a better land,  
Old Uncle Tom."

This he finally twisted around until he evolved the wonderful lines:

"De sun shines bright on de old  
Kentucky home,"

and,

"Den poor Uncle Tom, good night."

Foster possibly had in mind Harriet Beecher Stowe's "Uncle Tom's Cabin," which was published in 1851, the year before *My Old Kentucky Home*, and which jumped into immediate success. Foster, however, was a Democrat and was said not to be in sympathy with the Abolitionists.

In 1922 the "Federal Hill" home was purchased, for sixty-five thousand dollars, through subscription by a group of loyal Kentuckians, with the deed conveying the property to the State of Kentucky. The state now provides for its maintenance, and it is operated as a public museum, after the manner of Washington's home at Mount Vernon. The home contains a tablet presented by the City of Pittsburgh, representing that Foster wrote his immortal song in the "Federal Hill" mansion; but research indicates that the only foundation for this statement is hearsay. The Rowan country home in romantic Kentucky must have had a strong appeal to Foster; and the well known southern hospitality makes it reasonable to suppose that Foster was upon many occasions the guest of his

"The Old Kentucky Home"  
at Bardstown, Kentucky, originally the residence of Judge John Rowan, where Foster is supposed to have written "My Old Kentucky Home."

prominent and wealthy relative, and that while there he had many chances to furbish his imagination with the tokens of southern "atmosphere." His first visit to the far south however, came after *Old Folks at Home*. Foster, however, needed no fillic to his musical imagination to help in creating an idea. He never saw the Swanee River. The river originally selected was the "Peedee," then the "Yazoo"; and finally, in his brother's office, they picked out the little known "Swanee River" in Florida.

## Not so Impecunious as Thought

THE GENERAL BELIEF that Foster lived a life of total poverty and died in New York as a pauper, is partly contradicted by the facts. He unquestionably received considerable sums of money in the 1850's. The song, *My Old Kentucky Home*, now eighty-five years old, must have had a very large sale since Foster's reliable publishers, Firth, Pond & Company, noted in 1854 that the ballad had sold ninety thousand copies. *Old Folks at Home* had then sold one hundred and thirty thousand copies. His contract, signed that year with his publishers (which may still be seen at the Library of Congress), calls for a ten percent royalty, and his account books show the receipt of large sums. His prodigality, however, soon made these sums disappear, and he was thus "always poor." Stephen's sister, Ann Eliza Foster Buchanan (sister-in-law of President James Buchanan), wrote the following letter in the quaint, illiterate spelling of the day, in which she puts to rout the "death in penury" stories:

"Elm Cottage near Pittsburgh,  
Feby 4/64.

"My Dear Sister: I received your very welcom letter of the 1st inst.

to day and hasten to reply, in hopes I may in some measure relieve your sorrow by the assurance that we found everything connected with Stevey's life and death in New York much better than we had expicted [sic], he had been boarding at a very respectable Hotel and did not owe the Landlord a cent or any one else that we knew of, had retired early to bed on Saturday evening, the following morning opened his door and spoke to the chambermaid [sic] and turned to go back to his bed when he fell as if he had been shot striking his head . . . a surgeon was procured immediately and his wounds dressed, he then sent for his friend, Mr. Geo Cooper (as fine a little gentleman as I ever met) who telegraphed to Morrison and I, and persuaded Stevey to go with him in a carriage to the Hospital where he would be better attended to. On Tuesday he was much better, and Mr. Cooper was with him. On Wednesday he was propped [sic] up and after having taken some soup was quite cheerful. When they commenced dressing his wounds, and just as the person was washing out the rag, without Stevey saying a word he fainted away and never came to again. . .

This letter came into the hands of Mr. Josiah K. Lilly, famous pharmaceutical manufacturer of Indianapolis, who has given so munificently for the preservation of Foster's memory.

After death Foster's body was taken to Pittsburgh by the Pennsylvania Railroad, which refused to accept payment for transportation. When he was buried the Citizens' Brass Band played in the cemetery. There (Continued on Page 335)

# The Threshold of Music

## The Art of Musical Voyaging: Modulation

By LAWRENCE ABBOTT

Assistant to Dr. Walter Damrosch

This article is the twelfth in a series on "The Doorstep of Harmony." The first appeared in *The Etude* for January, 1938, and an article will appear each month hereafter.

ONE OF THE JOYS OF MUSIC is its constantly varied panorama of shifting colors and shifting levels. An interesting piece of music is like a ramble through a fascinating old house or a storybook castle, a journey in which we keep turning into crooked passageways, going up a few steps, or down a few steps, exploring strange and bewildering new places, until, just as we are sure we are completely lost and will never find our way back to the starting point, we suddenly discover ourselves once more in familiar territory.

In music, the effect of wandering into strange places is accomplished by changing from key to key. The keys are the levels on which the music moves, and when we change the key we change our level, altering our whole point of view.

The most important level of any piece of music is the one in which it begins. This becomes firmly fixed in our minds as the "home key." As we listen to music we unconsciously remember this starting point of our wanderings, and until we are back in the original key we do not feel we have reached the end of our journey.

Modulation is the art of maneuvering gracefully from one key to another. Some keys are closely related; others are as far apart as if they were on different planets. When two tonalities have practically nothing in common, the feat of "bridging the span" is a difficult one, and great is the triumph when a smooth and natural modulation leads us into a distant key with the dexterity of a three point landing.

Here is a remarkable bit of key changing, which Schubert managed with unerring craftsmanship, in the *Second Movement* of his "Unfinished Symphony."

The phrase opens in the key of A minor (which has no sharps or flats in its signature), alights on B-flat major (two flats), and then slips with apparent ease into the distant key of D-flat major (five flats). A difficult feat, superbly performed.

Much of the fascination of César Franck's music is due to its unexpected shifts of tonality. His symphony is full of modulations which have a breath taking quality not unlike that caused by the sudden starting or stopping of an express elevator. Here is one of his characteristically deft modulations, from the *Third Movement* of the "Symphony in D Minor."

This quotation is reproduced by the kind permission of J. Hamelle, owner of the copyright.

In the fifth and sixth measures Franck accomplishes a change from the key of F (one flat) to the key of E (four sharps).

Popular songs of the Victorian Era (such as *Love's Old Sweet Song*), of the gay nineties (*A Bicycle Built for Two*), and of the years preceding the World War (*Everybody's Doin' It*), were wary of straying far from the home key. A few standard chords sufficed. Not so to-day. Popular songs have become as sophisticated as symphonies, and some of their harmonic travels are really venturesome. For instance, *Suddenly*, by Vernon Duke, and from the Ziegfeld Follies, is a very apt title for a song that includes so abrupt a change of key as this one.

This passage, and Ex. 6, are reprinted by special permission of the Music Publishers Holding Corporation, owners of the copyright thereto.

The phrase starts in C major (no sharps or flats), changes on the words "the hurdy-" to B-flat major (five flats), and then swings into A-flat major (four flats). Notice, by the way, that it was that versatile chord, the diminished seventh (on the second "the") which engineered the change. The return to the original key of C is just as sudden, but there is not space to quote it.

The reason why these samples from the works of Schubert, César Franck and Vernon Duke produce effects of sudden change is that in each case the music shifts to a key which has almost nothing in common with the previous key. We find that the reverse is equally true; that, when music shifts to a key that has almost everything in common with the preceding key, the change is so smooth and natural that we can hardly believe a modulation has taken place. When two keys have much in common with each other, they are known as related keys.

### The Family Circle of Keys

WE HAVE ALREADY LEARNED that certain notes are related to each other. Every tonic has its "brother dominant" and its "sister subdominant." The supertonic (Re) is like a step-brother, being the brother of the dominant, which in turn is brother to the tonic. The third note of the scale (Mi) can be called the favorite cousin of Messrs. Tonic and Dominant, since the three of

them play around together, forming the 1-3-5 triad. The sixth note (La) is another favorite cousin, forming with the subdominant and tonic the 4-6-8 triad. Likewise the leading tone (Ti) is the favorite cousin of the dominant and supertonic, forming the 5-7-9 triad. These three triads, in case you have not recognized them from their numbers, are the tonic, subdominant and dominant triads.

Each of the seven notes of the scale is also the keynote or tonic of a key of its own. For instance, G is a brother-note to C, but it is also the big boss of its own key, the key of G. This key is therefore a brother-key to the key of C. Likewise the key of F is a sister-key to C. These are the two most closely related to the key of C.

If we compare the major scales of C and G, we will see how closely these two keys are related.

#### Ex. 4

Major Scale, Key of C

Major Scale, Key of G

Notice that between these two brother keys every note but one is held in common. The only note that is not the same is F. In the key of C it is F-natural, while in G it is F-sharp.

This one small note, however, is in a strategically important position. It is like a pointing finger which focuses our attention on the note nearest it. When the note is F-natural the finger points down to E, obeying the Melody Law, which pulls a note to its nearest neighbor. E is an important note in the key of C, being the third in the tonic chord of C—the sensitive note which tells us whether we are in C major or C minor. Hence F-natural, by its affinity to E, makes us feel subconsciously that we are in the tonality of C.

But if we change F-natural to F-sharp we lose E as our closest neighbor and acquire a new one, G. The pointing finger swings around and focuses our attention on this new note. In other words, the alteration of F to F-sharp creates a leading tone for the new key of G. (The reason why the seventh tone of the scale (Ti) is called the leading tone is because it leads us, through its strong Melody Law pull, into the tonic just above it. Once E has dropped out of the picture, we have lost our feeling of C tonality and have gained a new feeling that G is the important note—important enough to be the tonic of a new key.)

Here in a nutshell, is the simplest example of modulation. We changed one small note; and immediately we felt ourselves on a new level, looking at the harmonies around us from a fresh point of view.

An example of a modulation to the dominant key is found in *Willow, Willow, Waly*, from "Patience" by Sir Arthur Sullivan.

#### Ex. 5

No-body I care for comes a court-ing

This quotation is published with the kind permission of D'Oyly Carte, owner of the copyright.

Since this tune is in the key of A, the crucial subdominant note is D. When this note is raised it becomes D-sharp, with a leading tone personality that suggests a new tonic and a new tonality of E. Notice that when D occurs in the right-hand part of the word "court," it finds its resting place a note later on C-sharp (at the word "me"). A simple progression from Fa to Mi. But when D is replaced by D-sharp (on "hey") it reaches its resting place by moving upward to E (on "wil-"). This progression must be analyzed as Ti moving up to Do in the key of E.

Whenever we want to shift into a brother key we can raise Fa by half a tone. Fa will lose its "Fa personality" and acquire "Ti personality," pointing toward the new tonic. Now, we can also do exactly the reverse and change keys in the other direction. If we lower Ti of whatever key we happen to be in, half a tone, we destroy its "Ti personality" and give it a "Fa personality" which tells us that it is the fourth floor of a new key. In the key of G, for instance, if we lower F-sharp to F-natural the note pulls downward once more, focusing on E and returning us to the tonic triad in the key of C.

We can continue this same process in the key of C. We lower Ti half a tone—B to B-flat. The leading tone personality is destroyed. B no longer strains upward to C. C loses some of its importance, and A comes into the spotlight. A was only a unimportant note in the key of C, but in the key of F it is the important middle note in the tonic triad. Lo, and behold! we have arrived in the key of F major, the subdominant or sister key to C.

If we examine the scale of F major, we find that its notes are the same as those of C major with one exception—B-flat instead of B-natural. Thus we discover that the way to modulate into a sister key is to lower the leading tone one-half step.

Here are phrases which shift into a sister key (modulate to the subdominant). They are from the popular *The Love Nest* from "Mary" by Louis A. Hirsch.

#### Ex. 6

Just a love nest—coz-y and

This tune runs along in E-flat major until the word "like," when it modulates into A-flat major by the simple process of lowering the leading tone, D, to D-flat. This one change is enough to set us gently but firmly in the new key.

# Ten Remarkable Years Before the "Mike"

From a Conference Secured  
Expressly for THE ETUDE MUSIC MAGAZINE  
with the Well Known Radio Artist

## VIRGINIA REA

("OLIVE PALMER")

By C. E. LE MASSENA

BORN IN LOUISVILLE, KENTUCKY, Miss Rea started to sing as a child and eventually became the most popular of all radio singers as well as a highly successful concert soloist. She was better known under her name of "Olive Palmer" than she was Virginia Rea. In discussing her career she feels that much of her success is due to being ready to act "when opportunity knocks." She thus tells some of her interesting experiences.

I can recall at least five definite knocks or opportunities that were influential factors in determining the course of my life work. Opportunity is not a synonym for luck—it is a matter of happy chance or coincidence, to which the wise person is especially alert. My first 'Knock' came when I was a child. My parents loved music and they encouraged my feeble efforts. Starting with hymns I soon found myself bravely attempting songs and arias. Before I was grown I applied for admission to the choir of the Methodist Church as 'soloist.' The director hesitated to engage me without my parents' consent. He called them and their consent was gained. My success was such that I went to study singing at Drake University at Des Moines, Iowa, where I studied the Fine Arts course. In Des Moines I soon secured a church engagement at five dollars a week. Dean Holmes was the tenor of our quartet. He was a wonderful personality; a fine singer and an excellent teacher. He gave me a solid foundation which served me well for many years.

My 'opportunity knock' number two came when I learned of a call for students to sing out for parts in a forthcoming opera. I practiced the leading rôle in my study room, often with the window open. Some passerby heard me and I was thereafter assigned to the rôle. This appearance gave me great encouragement and moral courage.

Then, I seemed to have radio opportunity and my third opportunity knock came as a result of an audition by long distance telephone. Returning from a period of study in Paris I learned that the famous opera singer, William Wade, then director of the American Opera Company, was planning an operatic performance at the Park Theater in New York. I called him by long distance 'phone only to find that he had more singers than he possibly could use. He advised, 'Better come here and stay in Louisville.' I persuaded him to listen while I sang the *Shadow Song* from 'Dinorah.' He was my delight when his voice came over the wire with, 'Young lady, take me; I can train you can get—I need a voice artist.'

In New York I found an inspiring teacher in Sergei Klibansky. He was on what he termed 'support of the voice' which proved very valuable to me. He counseled me not to imitate a certain famous singer whom I admired and

to realize that my obligation was to develop my own voice along its natural lines.

### A Career Begins

"MY FOURTH KNOCK came when the Brunswick Phonograph Company gave me a contract at three thousand dollars for six years. I was also offered a contract by the Edison Company. Brunswick sent me on a coast to coast tour, many of the appearances being joint recitals with such prominent artists as Leopold Godowsky, Max Rosen, and Percy Grainger. The next year I appeared in opera again in Baltimore, as *Gilda* in 'Rigoletto.' This was followed by a second Pacific Coast tour.

and a second trip to Paris where I spent a winter coaching under the celebrated Blanche Marchesi.

"My fifth knock of opportunity came in 1925, with my first radio broadcast. WJZ furnished the air medium. I found this work scarcely different from making records. We rehearsed the program and then sang it into a microphone instead of into a funnel. Little did I think that first broadcast would result in a ten-year radio career without interruption.

In the course of months an offer came to be the soloist on the Eveready Hour. Before the contract expired I was engaged for the Palmolive program. Under the assumed name of Olive Palmer, I sang two hundred and eight broadcasts over a period of four years, or until 1932, when the program was discontinued. Other engagements came in rapid order—six months on Goodyear and Buick programs (1932-34), eighteen months on America's Album of Familiar Music (1935-36), and eighteen months on The Chevrolet Program (1936-37). In addition there were numerous guest appearances with General Motors, Show

"Facing Millions  
Who Can Not  
See Us."

### VIRGINIA REA

Boat, Hit Parade, Magic Key, Smith Brothers, Paul Whiteman, Radio City Party and others.

"During my ten years before the 'mike,' I never missed a rehearsal or a broadcast, never met with a mishap during a performance other than the unavoidable accidents incident to broadcasting, which, while small, might easily disconcert one. For example, once when my music dropped from the stand to the floor I kept right on, avoiding the natural inclination to stoop and pick it up, which of course would have caused a break in the continuity.

### About Broadcasting

"DURING THIS DECADE I sang in many kinds of studios, under various conditions—with orchestra, with chorus, with other singers, and with piano. I became accustomed to surprises, too, not the least of which was having to face a different type of microphone whenever the engineers wanted to try out something new by way of improvement. I have seen 'mikes' come and go with the everadvancing science of broadcasting. There may be some who deplore technical progress in other lines, complaining that the age is becoming overmechanized; but in broadcasting we may safely say that the more perfect it

becomes mechanically, the nearer it approaches the faithful transmission of the spoken word.

"The 'mike' is but the symbol of the entire broadcasting mechanism, therefore I early schooled myself to disregard the changes in this small gadget. I believe that this accounts for the fact that I have never suffered from 'mike fright,' which appears to be the most violent form of stage fright known to artists. The reason for this is clearly understood when one considers the dozens of admonitions a singer receives during the preparation of a program, including reports from the control-room, arrangement of vocal and orchestral setups, the cutting of script and music—an apparent confusion quite likely to jangle the nerves of anyone whose mind is primarily concerned with the art of singing. Such confusion, however, is only apparent, for it is the means of approach to a certain ideal of broadcast which is possible of attainment only by the process of trial and error. All this goes on during rehearsal period, through adjustment and readjustment leading to coordination, and a perfect ending on the second by the clock. I discovered, long ago, that the way to spare my own nerves and to conserve my own energy, during these trying periods, was to remember that my business was simply to sing, and that the complex science of broadcasting might be left to those who were as devoted to their work as I was to mine.

"In broadcasting there is a fixed formula of procedure covering all kinds of programs. Script or music, or whatnot, is selected, then parts are cast or soloists are engaged; and orchestra parts are fitted to requirements. Then come the rehearsals, which cover individual as well as group

'workouts.' Then come the final rehearsal and stop-watch timing. Routine soon becomes a habit, and one fits into the scheme as easily as one gets into proper clothes.

### The Secret of Broadcasting

"THE SECRET OF BROADCASTING lies in the ability to please both sponsor and audience; and the two essentials for this are personality and 'product.' One has to make good, and there is no limit to opportunity, once you have become popular. The selection of materials is a matter of good judgment on the part of program officials, who have to ascertain what sort of entertainment is most in demand and then supply it. Radio artists are asked to do a lot of things they might prefer not to do; yet that does not mean that one has to be in-artistic, or stoop to claptrap, but merely that she must be subjective to the needs of the occasion. Generally I choose my own songs and arias, with the approval of the music director, and in accordance with the nature of the program.

"How may a singer get on the air, secure an engagement, and what are the broadcasting requirements? There are several ways of approach: Through contacts with advertising agencies who have sponsor accounts and build programs; and with station directors, production agents and concert managers. Personal acquaintances and friends in key positions are most helpful; and then there is the audition, although this rarely leads to an assignment. All my contracts came directly to me. I never sought an engagement. I attribute this partially to the fact that I was always on the *qui vive* for opportunity knocks and ran to open the door. Once you have become popular, there is bound to be a demand for your services, and this leads to bidding by agents and sponsors. Therefore the singer who can gather the largest audience for the program, and hold it week after week, is the singer sponsors want and the singer who will receive big fees, often far in excess of any sum that could be possibly earned in opera or concert.

"Popularity is a term that applies strictly to individuality or personality. You may hear the 'knock,' get the contract, but if you fail with the audience, there will be no renewal for you. There is no rule for popularity. Sometimes it may be due to voice quality or the manner of projecting a song, or the types of songs used. The audience is the great determining factor. Certain audiences like the soft, gentle type of song that captures the homefolks. Others prefer the robust baritone, who thrills the audience with his manly proclamations, or the sentimentalist, who pleases the romantically inclined, or the sob vocalist, not to mention the blues singers and crooners. It matters not what you elect to be, you will be popular provided you can interest listeners, and hold that interest indefinitely.

"As to the various kinds of voices, I think the high voices register best on the air, just as do the flute and violin among instruments. With respect to preparation for radio work, experience and practice are the essentials of a good performance which guarantees surety and confidence. Naturally, one must bring to the 'mike' poise and dependability. Affectation and nervousness spell disaster. I employ the same voice quality, the same technic and the same art that I use in public appearances. There is no call for any vocal distortions or unnatural methods of singing. The engineers take care of all dynamics, so all one has to do is to be calm and sing well. The one unforgivable thing is lapse of memory, and so we take no chances. We have the script or the music before us even though we may not feel the need of it; for it is a safeguard that eliminates fear and uncertainty. For the beginner, I advise attending broadcasts and rehearsals and, whenever possible, participation in sustaining programs, which bring one to the attention of agents and producers. Repertoire is a matter of pro-

gram requirements; but if you are on the air for any considerable time, you will be called upon to sing everything in line with the type of program, so one has to possess the ability to adjust art to situation. Of course there are many songs and arias of the concert stage that are never used in radio and *vice versa*.

"One almost fatal mistake is to change your name for broadcasting. I did it and discovered that my adopted name was better known than my concert name, so I dropped the former as soon as I could.

"I doubt if anyone who has not sung before the 'mike' can realize the thrill of singing to the vast and deeply critical audience of the air. At one time, before my stage debut, I thought the height of my ambition would be reached if I might successfully appear before a 'mike' audience in an opera rôle; and when I did it proved an experience I shall never forget. But that fades into insignificance before the satisfaction of knowing that people from coast to coast hear and like your singing.

### Radio Thrills

"RADIO CONSTITUTES the true test of a performer's ability and versatility. In the theater or opera house, certain types of performances are offered as an appeal to the well defined tastes of limited audiences whose preference is being catered to exclusively. With radio, where millions tune in, such is not the case. A performance of a star, who may appeal to a capacity house of some two or three thousand people, may fail utterly to win the acclaim of the tens or hundreds of thousands who listen to a broadcast. Thus radio demands not only a new technic—not vocal technic—but a greater and a more general type of performance. Perhaps the secret of this is variety.

"I often think what a pity it is that there was no radio in the days of Patti, Jenny Lind, Nordica, and other great singers whose glorious voices, in all the course of their years, could be heard only by a comparatively few in the large cities where they sang. To-day, an artist may sing not only to the whole nation, but even to the vast majority of the world's population at one time. Of course, we have no bravos or applause; but the mails do bring us volumes of written appreciation, such as was never dreamed of a decade ago.

"Routine is the basis of broadcasting. You get into the groove and stay there. Everything is order and system, and you cannot break it in the slightest way. I detest rehearsals, for they are apt to tire one; and I dislike the miserable feeling of fatigue; and so try to avoid these as often as possible. Some programs require more rehearsing than others. The ability to read, to learn and to grasp the director's orders instantly helps a lot. You have to be a mind-reader, a lip-reader and a hand-reader.

### Appearance and Dress

"ONE THING MORE—one's appearance. In these days, when large audiences are permitted to attend the broadcast in the studio, one prepares with as much care as for a concert. At night formal dress is indispensable, and your stage presence adds much to the success you achieve with your singing. The actual applause you evoke from this real audience carries over the air to the unseen audience and gives you just that much more benefit. As I am clothed, so do I feel. I always dress with the same care for a private affair, for a shopping tour, for a little supper at home, as I do for the opera or a reception. I like beautiful clothes, but I hate to shop. I like to have a complete wardrobe and to change often. People think that I am always buying something new, because I do not wear any garment often enough to have it become familiar to them. Naturally, under this code, one can not buy 'faddy'

## RECENT RECORD RELEASES

By PETER HUGH REED

IN THE PAST TWO YEARS, Sir Thomas Beecham has contributed many recordings that have been hailed as the best available phonographic editions of the works recorded. Sir Thomas has been making records for a great many years; but, like many other musicians, his artistry has been recently more fully revealed by the more sensitive modern technic of recording. Sir Thomas has an uncanny sense of the inner line, the subtleties of rhythm, and also of blended tone-masses and nuanced phrasing. Justly regarded as one of the foremost living interpreters of Mozart, it was fitting that he should have been chosen by the Mozart Opera Society to conduct its performance of "Die Zauberflöte" (Victor sets M-541-2).

Mozart's "The Magic Flute" is perhaps his greatest operatic score. Because of this it is unfortunate that its libretto was not based upon a clearer story. For the allegorical aspects of the libretto are often confusing, and much that goes on on the stage is not far removed from the nonsensical. Yet, as one of the composer's biographers says, this opera "contains elements of greater idealistic aspiration than any other stage work of Mozart's." The varied characters assisted the composer in the creation of musical diversity. Few composers have had Mozart's ability to delineate character successfully in music. "The Magic Flute" is not an easy opera to sing; it requires first-rate singers to do it anything like full justice. In this recording the singers are well chosen, with the exception of the tenor, Helge Roswaenge, to whom, vocally, it is not always pleasant to listen. Erna Berger, as the *Queen of the Night*, although vocally on the light side for this dramatic character, sings nevertheless with conviction and brilliance. Tiana Lemnitz, as *Pamina*, gives a most moving portrayal of her part; and Strienz as *Sarastro* sings with artistic dignity and restraint. Gerhard Hüsch, as *Papageno*, sings artistically and brings the right amount of comedy to his rôle. The recording, made in the Beethoven Saal in Berlin, is excellent. The orchestra employed is the Berlin Philharmonic.

Sir Thomas Beecham is also highly regarded for his performances of the works of Frederick Delius. It was through his efforts that the Delius Society was formed. Having already sponsored two albums of the composer's music, the Society recently issued its third, Columbia set 355. In it is featured Delius' "Appalachia" or "Variations on an Old Slave Song with Final Chorus." It will be recalled that Delius in his youth came to Florida to cultivate an orange plantation. There in the quiet, contemplative beauty of nature, it has been said, the composer acquired his creative aspirations that were decisive for his later career. An old slave song he heard the Negroes sing at that time later inspired him to write one of his finest works, "Appalachia." In this music Delius conveys to us his extraordinary ability to respond to the many moods of nature. The work is contemplative, rich in tonal beauty, and strong in its human element. With it come first recordings of the *Closing Scene* from the incidental music that Delius wrote to the poetic play, "Hassan"; a prelude from his opera, "Irmelin"; and a dance from his opera, "Koanga."

After Stokowski's recent sumptuous recording of Wagner's Paris Version of the "Tannhäuser" Overture and *Venusberg Music*, Beecham's performance of the original overture to the opera (Columbia set X-123) may seem somewhat tame. But the dignity and restraint that the English conductor brings to this music is both refresh-

ing and rewarding. The later version of the overture alone emphasizes the *Venusberg* element; the earlier version concentrates itself more with the presentation of conquering the forces of evil. Sir Thomas's performance is artistically one of the best and most sensitively poised versions of this music we have ever heard. It is back in the recording with a fervent reading of the *Polovtsi March* from "Prince Igor."

Turning its attentions recently to music of the sixteenth, seventeenth and eighteenth centuries, Victor brought out an album "Early Choral Music" sung by the highly talented Trapp Family (set M-535). "Suite for Strings, Horns and Flutes," derived from the music of Henry Purcell, Barbirolli and played by him and the New York Philharmonic-Symphony Orchestra (set M-533); and Bach's "Concerto in minor," for clavier, flute, violin, and string orchestra, played with Yella Pessl, Franz Blaisdell and William Kroll as soloists (M-534).

Not since the English Singers have had such balanced and well nuanced singing of early choral music as that offered by the Trapp Family. Their recordings are a delight, and the selections chosen are interesting. The music of Purcell may have been written in the seventeenth century but it is not "dated," for it is vital, fresh and full of a poetic beauty that is timeless. Barbirolli plays it with evocative affection. The Bach "Concerto" is not often played. Based on transcription sections drawn from earlier compositions, this work possesses a forceful first movement, a conversational second movement, and a brilliant, rapid *finale*. The soloists handle their parts well, but the balance of the recording is none too good. However, for the music's sake, the recording is worth owning.

Robert Casadesus, the eminent French pianist, is much admired for his clarity, sensitive *pianissimo* and his fine *legato*. In his recording of Mozart's deeply felt "Concerto in C minor," K. 491, these qualities of the pianist's artistry are faithfully produced (Columbia set 356). The underlying pathos in this music is more fully revealed in Casadesus' performance in that of Fischer (Victor set M-482). Both are telling interpretations of a great work.

In Mozart's "Divertimento in E-flat," 563, the genius of the composer is strikingly set forth, for he surmounts the limitations of the form and gives us in a string quartet a work as deeply felt and as earnestly conveyed as are his last quartets and quintets. The work followed on the heels of "Jupiter Symphony," and was written as an act of homage to a benefactor. Its gratitude attains a truly inspirational force. In Columbia's recording of this work (set 351), The Pasquier Trio performs with extraordinary sensibility and understanding.

Mendelssohn's piano concertos are too not played too often, but when one hears a work like his "Concerto in G minor," 25, played as it is in the new Columbia recording (set X-124) by Ania Dorini and the London Symphony Orchestra, wonders why! For the youthful elation and splendid vitality of this work make it most enjoyable one. Perhaps this recording may do much toward reviving an interest in it.

Kirsten Flagstad, turning to songs of Richard Strauss, reveals her splendid vocal artistry in *Seid dem dein Aug' und dein Mund* (Victor disc 1967), and Marian Anderson gives moving interpretations to the songs *Were You There?* and *I Can't Stop Loving You* (Victor disc 1966).

REVIEWING the procession of Great Masters of Music, from the 6th Century to the present, one comes to the conclusion that no one of them in all branches of the art to the extent with the ardent interest that did Robert Schumann (1810-1856).

Primarily, of course, Schumann is associated with his genius for composition; but his influence as a critic of music, in deeply influencing the development of music of his time has altered its perspective to the present. Likewise he distinguished himself as pianist, teacher, and conductor.

Schumann's interest in writing musical criticism was stimulated by one of his most characteristic mental characteristics—his sincere concern for the standards of his art. His solution to that problem was to assume editorship of the *Neue Zeitschrift für Musik* from 1834 until 1844. As expressed in a preliminary notice of its first issue, the *Zeitschrift* was intended "to assist in entering in a new poetic period by its valiant encouragement of the higher talents of young artists, and to accelerate their development." Schumann believed, then, that smoothing the paths of young artists, himself would inevitably benefit. The wisdom of this belief is no better demonstrated by its practical application to the case of Brahms; for it was the article in the *Neue Bahnen* by Schumann, which appeared in the *Zeitschrift* on October 28, 1853, which aided immeasurably the then twenty-year-old Brahms in acquiring recog-

nition. It was in this spirit of eagerness to help that Schumann wrote his "Hints to Young Musicians." His competence to set up standards for young musicians cannot be questioned when one considers that he was an excellent pianist after an unfortunate experiment ended his right hand during his twentieth year; his wife (Clara Wieck) was the greatest woman pianist of her time; he was for a while, professor of pianoforte and composition at the Leipzig Conservatory; he had considerable experience as a conductor, particularly at Düsseldorf. He was intimately acquainted with the great musical personalities of his day, many of whose ideas are undoubtedly incorporated in his own; and he had vast experience as a composer. Despite his later mental disorders, Schumann was extremely logical in his educational hints.

In some, these hints may sound in part "fashioned"; to some, they may sound pedantic, or even prejudiced. But it must be remembered that they were written in one of the most fertile eras in musical history and by one of the greatest exponents of musical romanticism. Surely the trend of musical thought and methods cannot have altered so radically that these suggestions for the acquirement of musical technique and technic are no longer applicable. It may be disputed that we can but speculate upon the technical abilities of the early middle 19th Century performers, and it may be argued that present day performers excel their predecessors, because of the standards and improved instruments; how can the vital elements of interpretation be legitimately altered in the hands of a Master? The acquirement of technical dexterity in the performance of an instrument being purely in the interest of interpretation of a score, these suggestions by Schumann remain advantageous to any young musician who would broaden his musical thought, sharpen his sense of technique and discrimination, and develop his technical equipment adequate to his needs. Although the "Hints to Young Musicians" were not originally presented in the order here given, this author has endeavored to reassemble and annotate the individual items under the heading to which most logically seems to belong. Undoubtedly many of them could have been conveniently included under various no-

# Schumann's Hints to Young Musicians

ROBERT AND CLARA SCHUMANN

## A Representation and Review By RAYMOND MORIN

### Sense of Hearing

"THE MOST IMPORTANT THING is to cultivate the sense of hearing. Take pains early to distinguish tones and keys by the ear. You must not only be able to play your little pieces with the fingers; but you must also be able to hum them over without a piano. Sharpen your imagination so that you may fix in your mind not only the melody of a composition, but also the harmony belonging to it. Reflect early on the tone and character of different instruments; try to impress the peculiar coloring of each upon your ear."

Schumann gives excellent advice in urging the young student to disassociate the qualities of musical tones and instruments from the visible score; since the compositions of most prolific writers are first conceived in their imaginations away from an instrument, this power of accurate determination is indispensable, particularly in writing for Orchestra.

"What is it to be musical? You are not so if, with eyes fastened anxiously upon the notes, you play a piece through painfully to the end. You are not so if, when some one turns over two pages at once, you stick and cannot go on. But you are musical if, in a new piece you anticipate pretty nearly what is coming, and in an old piece, know it by heart; in a word, if you have Music, not in your fingers only, but in your head and heart."

How many allegedly talented music students measure up to Schumann's standards? Many aspiring musicians, with unfortunately only a moderate adaptability, would avert the sorrow of eventual failure if they would consider with honesty, Schumann's opinion of true talent and its growth.

"Do not judge a composition on a first hearing. Masters would be studied. Much will come clear to you for the

first time in your old age. In judging compositions distinguish whether they belong to the artistic category or only aim at dilettanteish entertainment. Stand up for those of the first sort, but do not worry yourself about the others. Reverence the old, but meet the new also with a warm heart. Cherish no prejudice against names unknown to you."

Throughout his life, Schumann championed those compositions which he considered worthy; likewise he opposed those which he believed a detriment to the healthy development of the Art. Typical of all his judgments, however, was an inspiring tolerance towards those whom he believed to be sincere.

### Selecting of Compositions

"YOU MUST NOT GIVE CURRENCY to poor compositions; on the contrary you should do all you can to suppress them. You should neither play poor compositions nor listen to them, if you are not obliged to.

"Play nothing as you grow older which is merely 'fashionable'—time is precious. You must gradually make acquaintance with all the more important works of the important Masters. As you progress, have more to do with scores than with virtuosi."

In Schumann's day, there probably was relatively as much musical trash as there is now. Most of this took the form of interminable and boring variations upon well known themes. They were simply pieces of musical carpentry and can be best likened to the 'gingerbread houses' of the early Victorian Era. Since Schumann's day, however, a new group of writers of very delightful small classics and high class salon music has arisen, including Grieg, Sinding, Poldini, Schütt, Chaminade, and many fine American writers. These add greatly to the pupils' repertoire and interest.

### Aims in Performance

"NEVER DILLY-DALLY over a piece of music, but attack it briskly, and never play it only half through. Never trouble yourself about who is listening; always play as if a Master heard you.

"A player must be very glib with finger passages; they all in time grow commonplace and must be changed. Only where such facility serves higher ends, is it of any worth. Strive to play easy pieces well and beautifully; it is better than to render hard pieces only indifferently well."

Precision and thoroughness are requisites of artistic performance; no doubt Schumann's implication is that rigid standards should be set up by the student and meticulously observed before his performance approaches satisfaction.

### Practicing

"YOU MUST SEDULOUSLY practice scales and other finger exercises. But there are many persons that imagine that all will be accomplished if they keep on spending many hours each day, till they grow old, in mere mechanical practice. It is about as if one should busy himself daily with repeating the A B C as fast as possible, and always faster and faster. Use your time better. Likewise, children cannot be brought up on sweetmeats and confectionery to be sound and healthy men. As the physical, so must the mental food be simple and nourishing; the Masters have provided ample for the latter.

"Practice industriously the Fugues of good Masters, above all, those of Johann Sebastian Bach. Make the 'Well Tempered Clavichord' your daily bread. Then you will surely be a thorough Musician."

The untiring, yet intelligently moderated practice of scales and exercises, as advocated by Schumann, is to-day just as indispensable in the acquirement of an adequate technic as it was in his day. Any student who aspires to succeed without this routine is wasting his time, and any teacher who permits it is encouraging a grave fallacy.

### Composing

"IF YOU BEGIN TO COMPOSE, make it all in your head. When you have got a piece all ready, then try it out on the instrument. If your music came from your inmost soul, if you felt it, then it will take its effect on others. If you can find little melodies for yourself on the Piano, it is all very well. But if they come of themselves, when you are not at the Piano, then you have still greater reason to rejoice, for then the inner sense of Music is astir in you. The fingers must make what the head wills, not *vice versa*.

"Mastery of form, the power of clearly molding your productions, you will only gain through the sure token of writing. Write, then, more than you improvise. Learn betimes the fundamental rules of harmony. Be not frightened by the words theory, thorough-bass, counterpoint, etc.—they will meet you amicably if you meet them so."

According to Schumann, the essential factors of good composing are:

1. An inner source of inspiration.
2. A knowledge of the rules of musical construction.
3. A sincerity of treatment.

Although more than seventy-five years have elapsed since Robert Schumann's death, this theory is sufficiently comprehensive to explain the success or failure of all musical composition since his time; it might serve well to guide this uncertain age of impressionism when "the inner source of inspiration and sincerity of treatment" are so frequently questionable.

### Directing

"ACQUIRE AN EARLY KNOWLEDGE of directing. Watch good directors closely and form a habit of directing with them, silently and to yourself. This

habit will bring clearness into you."

Although not as gifted a conductor as his contemporaries, Mendelssohn, Hiller, and Reitz, Schumann always held the Art of conducting in the highest esteem. The "clearness" he refers to is that of accurate speed, determination, independence of voices, balance of tone, and so on.

### Interpretation

"PLAY IN TIME! Dragging and hurrying are equally great faults. Never try to acquire facility in what is called *bravura*. Try, in a composition, to bring out the impression which a composer had in mind; more than this is caricature.

"Consider it a monstrosity to alter or leave out anything, or to introduce any new-fangled ornaments, in pieces by a good composer. That is the greatest outrage you can do to Art."

Schumann's advice upon keeping time is most important. There are, on the whole, entirely too many sentimental lapses in our playing to-day. Schumann's caution regarding an overdiligent striving for a pyrotechnic is most applicable to this generation which so often permits its judgment of the authenticity of a performance to be eclipsed by its reaction to a sensational technical exhibition.

### Melody

"THERE IS NO MUSIC without Melody. Nothing passes for a melody with the dilettanti but one that is easily comprehended, or rhythmically pleasing. There are other melodies of a different stamp; open a volume of Bach, Mozart, or Beethoven, and you will see them in a thousand various styles."

Schumann unmistakably refers to the essentiality that the student delve into the study of counterpoint to acquire a facility in distinguishing melodic lines and in giving them proper balance of tone; also, that in music of a homophonic nature, the proper dynamic proportions be employed to subordinate a harmonic background to a prevailing melody.

### Singing

"ACCUSTOM YOURSELF, even though you have but little voice, to sing at sight without the aid of an instrument. The

sharpness of your hearing will continually improve by that means. But if you are the possessor of a rich voice, lose not a moment's time but cultivate it.

"Listen attentively to all songs of the people; they are a mine of the most beautiful melodies, and open for you glimpses into the character of different nations.

"Acquire in season a clear notion of the human voice in the compass of its four principal classes; listen to it particularly in the chorus; ascertain in what interval its highest power lies, and in what other intervals it is best adapted to the expression of what is soft and tender.

"Sing frequently in choruses, especially on the middle parts. This makes you musical. The highest manifestations in Music are through Chorus and Orchestra combined. Do not neglect to hear good Operas."

In writing the above, Schumann doubtless had in mind the fact that the greatest of pianists are those who have learned to sing at the keyboard. His approbation of a serious investigation into the realms of folk music is not surprising, for is there a medium of musical expression that is more stimulated by human emotion than folk songs and dances? This would naturally have a strong appeal to one of Schumann's sensitivity and love of melody.

### Organ

"TAKE ADVANTAGE of every opportunity of practicing upon the organ; there is no instrument which takes such speedy revenge on the impure and the slovenly in composition or in playing."

In contrapuntal composition of a not too complex nature, the relationship of the independent parts is clearly discernible by the interchanging of keyboards, and contrasting registrations. Although the Organ of Schumann's day was a comparatively clumsy instrument, our present day instruments aid the music student invaluablely in the study of dynamic contrast, and with problems of instrumental coloring.

### Vanity

"THE STUDY OF THE HISTORY of Music, supported by the actual hearing of the master compositions of the dif-

ferent epochs, is the shortest way to cure you of self-esteem and vanity. Be modest; as yet you have discovered and thought nothing which others have not thought and discovered before you. And even if you have done so, regard it as a gift from Above, which you have got to share with others."

Schumann very probably suffered from an inferiority complex. During his lifetime every step in his career was marked by an ultramodest attitude which prevented him from gaining the recognition due to him in his day.

### Attitude Toward Contemporaries

"IF ALL WOULD PLAY first violin, we would get no orchestra together. Respect each musician, therefore, in his place. Seek among your associates those who know more than you do."

Not only did Schumann tangibly express his deep admiration for such of his contemporaries as Mendelssohn, Chopin, Brahms, Henselt, and Gade, by his article in the *Neue Zeitschrift für Musik*, but his concern for the proper recognition of some of his predecessors instilled in him a desire to compile biographies of Bach and Beethoven; his devotion to the works and memory of Schubert is inspiring.

### General Reflections

"LOOK ABOUT YOU well in life, as also in the Arts and Sciences other than Music.

"Without enthusiasm nothing real comes of Art; by industry and perseverance you will carry it higher.

"Art is not for the end of getting riches. Only become a greater and greater artist—there is no end of learning—the rest will come of itself.

"Perhaps only genius understands genius fully."

None of his utterances reveal more clearly the reverence and lofty idealism Schumann held toward his Art. His was the belief that Music holds a message that must be recorded and interpreted without basic purpose of self-display or material gain; these, he believed, would result in a certain measure from good composition and performance. He believed that material gain from the Arts is the result of artistic success and, not the cause of it.

## Worth While Music in the Movies

By VERNA ARVEY

BECAUSE HE IS A MUSICIAN and not a politician, Nathaniel Shilkret (well known musical director of the RCA Victor Company and later musical director of RKO Radio Pictures) left Hollywood and returned to New York, with many of his progressive ideas regarding film music yet untried. Nathaniel Finston once remarked that he (Shilkret) was years ahead of his time in all his endeavors. Now word has come from the Eastern Service Studios at Long Island City, New York that none other than Shilkret has been signed to arrange and conduct the musical score for the film, "One Third of a Nation," starring Sylvia Sydney. The film was adapted from the stage play of the same name by Arthur Arent.

The colorful life of Stephen Collins Foster has attracted yet another producer. This time it is David O. Selznick, who plans a film to be named after one of Foster's most beloved songs, *Swanee River*. It will, of course, be a dramatization of the composer's life, as was the previous picture on the same subject. Many of Foster's famous songs will be worked into the story, along

with a few that are to-day not so well known. Nor is another creator of loved songs to be forgotten, for Paramount is now filming "The Star Maker," paralleling the life of Gus Edwards who wrote the memorable *Schooldays* and other songs. Some of these will be sung in the film by Bing Crosby. Incidentally, Louis R. Lipstone now occupies the musical place at Paramount that was left vacant at the first of the year by Boris Morros. The latter has recently finished teaching a course in Cinema Music at the University of Southern California.

Bing Crosby's new picture for Universal Studios, "This Side of Heaven," also will include songs, although the list of songs sung by Deanna Durbin in "Three Smart Girls Grow Up" (produced by the same studio) is far more imposing and more worthy of serious thought. Miss Durbin sings a special vocal arrangement by Charles Henderson of Weber's *Invitation to the Dance*; *The Last Rose of Summer* from Flotow's opera "Martha"; and *La Capinera* (The Wren) by Sir Julius Benedict. In addition, this picture will present a brilliant

piano paraphrase of the waltzes in Johann Strauss' operetta "One Thousand and One Nights," although the actual playing will be done by someone other than the actor (Robert Cummings) who is shown apparently playing the piano on the screen.

Another actor who is shown playing the piano, singing and dancing (when he is in reality proficient in none of those arts) is Clark Gable in "Idiot's Delight." Nevertheless, the musical novelty in this film comes from Norma Shearer's first appearance as screen singer: she is scheduled to sing an old Russian folk song. The incidental music—some dramatic, some jazzy, some old-time vaudeville tunes—was done by Herbert Stothart. Old songs are also used in a Twentieth Century Fox film called "Rose of Washington Square," based on incidents in the life of Fannie Brice and which marks Al Jolson's return to the screen.

Although the future may see M-G-M again teaming Jeanette MacDonald and Nelson Eddy in some of the musical plays now belonging to the studio ("The Chocolate Soldier," "Katinka," "Prince of Pilsen" and de Koven's "Robin Hood"), these two

players are now separated on the screen. Miss MacDonald sings in the film "Broadway Serenade," where she is cast opposite Lew Ayres. In the picture, "Dusty Roads," Nelson Eddy (cast opposite Virginia Bruce) sings many of the songs he uses on the concert stage. Drigo's *Serenade* is one of them; *My Country 'Tis of Thee* is another. This film was originally titled "Song of the West." M-G-M officials also consider the music for "The Wizard of Oz" the nearest thing to a Gilbert and Sullivan score ever done for Hollywood productions, with its sophisticated lines and ingratiating melodies sung by Judy Garland, Ray Bolger and Bert Lahr. Yip Harburg and Harold Arlen are the composers responsible for it.

## Some Vital Problems of the Clarinet

(The Problem of Staccato Playing)

By WILLIAM H. STUBBINS

INSTRUCTOR OF CLARINET, UNIVERSITY OF MICHIGAN

WHAT THE BOW is to the violinist, the tongue is to the clarinetist. This little phrase is an adequate one of the importance of the tongue in clarinet playing. The many effects on the violin through different bowing are analogous to the numerous effects possible in clarinet playing by means of the *staccato*. Of all the problems of clarinet performance the *staccato* is one of the fundamental and most difficult to be solved before the literature for the instrument can be essayed. Upon the tongue depends the attack, and upon attack depends the quality of the tone. A beautiful quality of tone can be ruined by an ugly attack, or for that matter, an ugly release, that the whole effect of the tone can be ruined.

Other problems of clarinet playing—physical activities involved should be considered. Then the mental conceptions necessary to the guiding and controlling of these physical activities should be discussed. It is well to say at this point that there are a great many conceptions of the *staccato* which are seemingly universal. However, the bases of most theories are found to be more or less in accord with one another, and are different paths leading to the same end. Despite what else one may call it, a *staccato* is a good *staccato*, and the determinant of results will be the taste of the performer. A discussion of the physical problems may lead the way to a better understanding of what is attempted to do physically in the playing of a good *staccato*, and definite images may stimulate a further understanding into the backgrounds of complete musicianship, but these will be peculiarly to the individual and subject to his own analysis of them. Artistic intuition lends the enchantment of various musical expressions as well as to the arts.

There are certain general principles to be in mind when we speak of the *staccato*, and the first of these is the theory of *staccato* as applied to wind instruments. A *staccato* note is a short long note, is not simply a short sound which has no other quality than that of a tone. It is a tone, and just as full, round, just as rich a tone as the full sound of a sustained *legato* passage. In playing a *staccato* note on a wind instrument, some interruption of the air is necessary in order to stop the tone. The interruption is a temporary modification and must be done with care so that the quality of the tone is unchanged. This is the important principle of the *staccato* on all wind instruments.

There are two classes of wind instruments—the brass wind and the wood wind. The brass wind is primarily concerned with the wood wind, certain differences between the two classes can be learned with profit to the study of the

*staccato*. The brass wind instruments and the flute must be considered in a further classification between instruments which directly modify the air column and the instruments which possess a reed as an intermediary in the production of the *staccato*. In the case of the brass wind and the flute, the modification of the air column takes place directly, and they are consequently designated as "direct-*staccato*" instruments. In the case of the reed wind instruments, a reed must be touched with the tongue, and the reaction of the reed in turn modifies the air column to the extent of producing a momentary interruption of sound. This latter type of *staccato* is therefore called *staccato* of the "indirect-type." It is vitally necessary that all players of reed instruments, and of the clarinet in particular, recognize this phenomenon, which we have

called the "indirect-*staccato*." The very recognition of the problem will enable the player to approach more intelligently the matter of correct *staccato*.

### The All Important Reed

THIS CONSIDERATION of the reed as an intermediary in the production of the *staccato* on the clarinet brings about the question of the principle of the clarinet reed. The clarinet reed works on the physical principle governing a vibrating bar clamped at one end. Its point of greatest vibration is at the free end, and in the reed this would be at the tip or thinnest part. An illustration of this principle is found in the fisherman's fly rod, which when held at the butt end and shaken will be seen to describe a greater arc or angle of vibration at the tip than at any other point along the rod. If

the vibration at the tip is stopped, movement of the whole rod ceases. This is true on the presupposition that an ideal situation prevails and that no other factors are considered except the vibration of the rod. The same situation exists in the case of the clarinet reed, and precisely because the ideal situation too often is nonexistent does there appear many an annoying "squawk." In view of this vibration principle, it will be seen that the point at which vibration of the reed is to be stopped lies at the tip. This fact gives rise to the axiom, "Tip of the tongue on the tip of the reed." As with so many axioms, this one requires some modification which will be explained later in the definition of "tip." The cessation of the vibration of the reed in turn causes a stop in the vibration of the air column in the instrument, and produces a momentary silence. If this principle is thoroughly understood, it is evident that the *staccato* on the clarinet becomes a problem of stopping the vibrations of the reed quickly, spontaneously, delicately and with an exact stroke of the tongue which will not prevent the reed from resuming its vibrations again without a break or unpleasant overtone.

In order to accomplish this end, it is necessary to develop the tongue muscles and the ability to use them in a very precise manner. If the tongue is observed resting in a natural position, as at the end of the pronunciation of some phrase, it will be seen that it is slightly curved in the oral cavity, with the middle of the tongue raised towards the roof of the mouth and the tip slightly lower and forward. This natural position is the basic position from which to start the *staccato* stroke.

The highest point of curvature of the tongue is called the axis, and all tongue movement should take place from this point forward. As the tongue is a long muscle which extends far down into the throat, many students make the mistake of using too much tongue and attempt to start the stroke from the base or root of the tongue. This is a mistake and will lead to a heavy, awkward *staccato*. The portion of the tongue back of the axis should be held tense, but not rigid; controlled, but still relaxed. This is not so difficult to do as it sounds, for the tongue is somewhat comparable to an angworm in its contractual possibilities. It can draw within itself or extend to its full length with a very slight effort.

With the tongue in the basic position, that portion in front of the axis should be extended until the tip of the tongue comes into contact with the tip of the reed. At this point we might well interpret the meaning of "tip." By "tip of the tongue" is meant the point of the tongue about a sixteenth of an inch from the end. By the "tip of the reed" is meant the portion of the reed about a sixteenth of an inch below the upper end. This explanation will prevent the mistake or trying to strike the end of the reed with the end of the tongue, which would result only in striking the end of the mouthpiece as well.

(Continued on Page 322)

THE DAUGHTER OF A FAMOUS FATHER

One of the most noted English composers of the past century, Samuel Coleridge-Taylor (1875-1912), whose "Hiawatha's Wedding Feast" has been sung around the world, was of part African descent. His father was a native of Sierra Leone, and his mother was an Englishwoman. After finishing his studies at the Royal Academy of Music, in London, he became a conductor, and later was a professor of the violin in the Royal Academy. His daughter, Miss Averil Coleridge-Taylor, whose picture is here shown, is also an able conductor. She is this year touring America and is scheduled to lead the Boston Symphony Orchestra.

# THE ETUDE MUSIC LOVER'S BOOKSHELF

By B. MEREDITH CADMAN

*Among the most significant evidences of musical advance in America have been the ever-extending market for books about music and the admirable manner in which the publishers of our country have met this demand. Therefore, in response to a widespread desire, THE ETUDE inaugurates this department. Its main object is in no sense a service of criticism but rather that of giving our readers constructive assistance in expanding their personal musical libraries and in selecting such books at libraries as will serve best for reference and research.*

## The Art of Singing

IN 1906, William J. Henderson, music critic of the *New York Sun*, and one of the most deft and "crisp" writers upon music we ever have produced in America, whose sparkling and "solid" musical style was as remarkable in his eighties as in his forties, wrote "The Art of the Singer." This immediately established him as one of the clearest and soundest contemporary writers upon the human voice. For years he was a familiar figure, with his red hair and his Scotch-American taciturnity, as he visited New York concert halls. With it all, he was extremely fair; and singers valued his criticism rather than dreading them.

When he was not engaged in his hobby, which was navigation, Mr. Henderson devoted a great deal of his time and energy to studying vocal problems. "The Art of Singing" is really Part II to his earlier "The Art of the Singer." It has been selected from his voluminous writings and very ingeniously put together as a book, by his former associate, Mr. Oscar Thompson, and Mr. Irving Kolodin. It is very fortunate that the canny wisdom of this experienced man has been preserved and made accessible in such excellent fashion.

In order that readers of THE ETUDE, interested in the voice, may gain a better picture of the character of this work, we list some of the chapter heads: "The Artist and the Public"; "Breathing and Attack"; "About Tone Formation"; "Registers of the Voice"; "Messa di Voce and Portamento"; "The Acquirement of Agility"; "Treatment of the Vowels"; "Wagner Singing"; and "The Singer's Musician-ship."

The second part of the book is devoted to Mr. Henderson's valuable critical observations of the singing of such great artists as Calvé, Tetrizzini, Viardot, Galli-Curci, Patti, Caruso, Farrar, Jean de Reszke, Lilli Lehmann, and others. From these, many vocal study readers of THE ETUDE, who are familiar with the author's style, from reading his numerous articles in this publication, will unquestionably gain much valuable information.

"The Art of Singing"; by W. J. Henderson; published by The Dial Press; pages, 509; price, \$3.00.

## What Records to Buy

AMONG the astonishing signs of the times are the "come back" of the fine records, and the very amazing manner in which thousands of collectors are springing up in all parts of the country. This can be very largely attributed, of course, to the radio. Listeners, who have perhaps heard the César Franck, Symphony in D minor and have become enamored of its loveliness, are not content to wait until it comes to them again on the radio but demand the privilege of having it in their homes to play on command. Recognizing this, the recording companies have evidently found it possible to appeal to a fast growing audience of cog-

noscenti and have been making collections of rare and beautiful sound engravings of unusual masterpieces, which the scientific refinements of modern inventions make more and more accurate every year. With this has come a long procession of useful books which are necessary parts of the collector's library as the list of records increases monthly. It is highly desirable to have expert advice upon the newer records. THE ETUDE has for ten years conducted a Record Department prepared by an expert, Mr. Peter Hugh Reed, which is widely employed and enjoyed. It is, however, desirable to have information in book form, and we are sure that our record "fans" will welcome the recently published "Music on Records" by B. H. Haggin. The book extends from Bach to Jazz, and it covers the foreign as well as the American field. It will be useful to the "beginning collector" as well as to the confirmed record addict. The author gives suggestions for building a comprehensive record library which may be bought for \$175.00. An appendix discusses the care of records. The writer himself has been a confirmed collector. He was for three years music critic of the *Brooklyn Daily Eagle*.

"Music on Records"; by B. H. Haggin; published by the Oxford University Press; pages, 164; price, \$1.25.

## How to Hear Great Music

HARRY ALLEN FELDMAN, who now teaches music in the New York High schools, and who has played in orchestras conducted by many of the most famous of leaders, has added to the list of books upon music appreciation. This, however, is not "just another book upon appreciation," because each chapter is focussed upon the work of one composer, rather than devoted to giving much space to retracing the work which every normal student should have learned in the first place from music lessons. We have often questioned the half baked musical superficiality which can be only the result of getting a smattering of musical knowledge. Mr. Feldman's work is informative, without being prosaic. Particularly interesting do we find his later chapters upon Strauss, Ravel, Stravinsky, Schönberg and others. His very lucid delineation of the influence of Chopin in leading the world from the ossified limitations of the diatonic scale to the chromatic harmonies of a new era is both impressive and enlightening. He also, very properly, treats upon the significance of sympathetic vibrations in piano playing, remarking, "This principle can be demonstrated by the little trick known to all pianists. If we press down one piano key, for example, Middle C, just enough to release its individual damper, and then, without pressing down

the damper pedal, strike another C on the keyboard, we hear the first C vibrating after the second has been released. These sympathetic vibrations are not confined to pitches with the same name, but they are most noticeable, because like pitches have the greatest degree of resonance. However, there are many other pitches which vibrate sympathetically, to a greater or lesser degree, depending upon the mathematical proportion between the vibrations-per-second rate of each. It was the tone coloring resulting from such sympathetic vibrations to which the ear of Chopin seemed to be peculiarly sensitive. Out of his constant experimentation of the overtone reaction of certain chord combinations and progressions, there came the very colorful harmonies with which he so beautifully tinted his melodies." The book should be genuinely useful to the listener who desires to get richer understanding from radio and concert programs.

"Music and the Listener"; by Harry Allen Feldman; published by E. P. Dutton; pages, 205; price, \$2.00.

## The Autobiography of a Violinist

DOWN ON SEVENTH AVENUE, New York, a little boy was born in 1866, in a humble home over his father's clothing shop. The parents were Polish Jews, who had come

David Mannes

to New York, six years before, on a sailing vessel. The family had had many interesting cultural affiliations in Europe. The boy was brought up in the heart of what was formerly New York's lurid "tenderloin" district, amid surroundings almost too terrible to imagine. He writes, "On three out of the four corners of every crossing of streets were saloons—the kind with swing doors, sawdust covered floors, and the smell of liquor and sweat coming out; whilst the number of drunken bums lying about was such a natural thing that one took it as a matter of course. Police raids, or evictions of our neighbors, were frequent; and I remember the scantily clad and disheveled women being herded into police wagons and driven off, yelling, and crying, and struggling against the policemen. Fights

between the street gangs were almost nightly experience; and we used to go in doors in terror of our lives."

What finer demonstration of the opportunities offered by a great democracy there be than the fact that this boy, David Mannes, became one of the foremost violinists of America; was later associated with Walter Damrosch, as first violin and then as concertmaster of the New Symphony Orchestra for over a quarter of a century; organized one of the finest of our string quartets; performed a noble service in developing settlement schools (for colored pupils as well as white); and then established one of the most esteemed music schools in New York City? As is generally known, he married Clara, a sister of Dr. Walter Damrosch.

Just as some people seem destined to lead a humdrum lives, others apparently are in some mysterious manner through a chain of picturesque and interesting circumstances. Such was the case of David Mannes. One of his early teachers, for instance, was a Negro, John Douglas, son of a slave, who had been sent abroad to study in Dresden with a pupil of Schumann. He was "a dear, gentle companion in a walk and a talk."

The author's frank tale of his determined ascent is both romantic and dramatic. David Mannes Hall is a long way from a "Honkey Tonk"; and, like all of the struggle leading to triumph, this usual narrative will thrill many students. His stories of the New York Symphony Orchestra, as well as his tours with Damrosch's Wagnerian Opera Company, are spontaneous in the extreme.

His dominating theme is humanity, ability to adjust himself to the best work in which he was engaged, whether it was at Koster and Biehl's Music Hall (Vaudeville), or as a soloist with a symphony orchestra, is always inspiring. For twenty years he conducted the Concerts at the Metropolitan Art Museum of New York city, which were heard by an aggregate of millions. It is a very remarkable work of this altruistic ideal as told in his own words. We enthusiastically recommend this book.

"Music Is My Faith"; an Autobiography by David Mannes; published by W. Norton and Company; pages, 270; illustrated; price, \$3.00.

## Research and Reference

THE EARLIEST musical dictionary, a brief affair, was Tinctore's "Terminologia musicae Diffinitorium," which dates from 1474. Tinctore, or, as he is sometimes known, Joannes de Tinctore, was born at Nivelles, Brabant, in 1511. He was in the same year as Christopher Columbus and lived four years longer than the explorer. Tinctore was a composer, an scholar. Having achieved the degree of Doctor of Jurisprudence and Doctor of Theology, he entered the service of Ferdinand of Aragon, who was then King of Naples, as the conductor of his chapel. Later he joined the Papal Chapel. The dictionary had only two hundred and one definitions. Since that time there have been compiled a large number of musical dictionaries and encyclopedias, the most widely used and commended being perhaps those of Sir George Grove, Hugo Riemann, Francois Joseph Fetis, Theodore Baker, Ralph Dunstan. Several smaller dictionaries of an excellent and concise character have been very popular.

During the past two or three years lexicographers have been very active in the preparation of new and comprehensive works, some of which have already appeared, while others are forthcoming as revisions of previous publications. David Mannes and Company are to be congratulated.

# THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Correspondents with this Department are requested to limit their Letters to One Hundred and Fifty Words

## Announcement Cards

In September I send out several hundred announcements of my teaching activities, and naturally I try to make the text each year, to keep it from becoming stereotyped. As I am already looking forward to next season, I wonder if you could suggest a "slant" for me.—L. M., New York.

Among several teachers' announcement and pamphlets which I have seen this year, one of the best (from a very successful teacher in Wenatchee, Washington) included the following statements which give you food for thought:

"Miss ———'s music education program is well organized for children and adults. It is the outcome of study of leading teachers in America and is revitalized by much teaching experience."

"Miss ———'s unceasing study of new methods, plus an increasingly well stocked library of music literature and best records, enable her to offer unusual, cultural opportunities to the children of parents who consider music vital to the best education."

"There is only one sure way to develop a child's capacity for musicianship. Give him adequate opportunity for musical experience under trained, artistic guidance, and then observe development."

"I give each season, September to June, the studio is the setting for informal, fortnightly musicales where parents make music for each other and friends to whom they choose to extend invitations."

"I value the dignity, clarity and common sense of these quotations. Hard boiled as I am, I would be strongly tempted to give children to a teacher who sent out such circulars."

## Those Long Nails

Thank you for arranging that *Ad and Butter* piece in THE ETUDE for January. The problem of long, pointed finger nails always has bothered me. I have solved it by giving a piece to their owners. After a few sandings, my pupils are forced to cut their broken nails.—R. S. G., New York.

"Say! *Bread and Butter* must be good helps to solve that pesky problem. You, I have often fervently prayed for. Oh Lord, how much longer will suffer from maddening clicks of nail tip tips?"

"Second thought, it might help material to write a short piece full of *trills*, double *glissandi*, which even the reddest nails could not withstand. Not try it?"

## "Elements Recital"

"Can you give me a suggestion relative to a pupils' recital which I am preparing? It is on the subject of the elements—Earth, Air, Fire and Water. The people on the program are to wear costumes representing each of the four elements; and every play selections carrying out this idea.—R. V. L., Connecticut."

"A 'Four seasons' program, yours offers possibilities for an interesting recital. Yet, the more I try to assemble a list of pieces for you, the more I am convinced—I become—for an endless number of compositions comes to mind; and, too, I find it almost impossible to select each piece in its proper element."

However, for better or worse, I give you here a few random suggestions.

The program might begin with Hamer's *The Great Spirit* (3), or with a simple arrangement of Beethoven's song—*Gloria to the God of Nature* (Ehre Gottes in der Natur), or better still, with the playing or singing of a stanza of one of those immortal hymns to the Creator, like "Holy, Holy, Holy! Lord God Almighty. All Thy works shall praise Thy Name, in earth and sky and sea"; or *The Spacious Firmament on High*, whose text would make a superb beginning; or "All praise to Him Who built the hills, all praise to Him the streams Who fills; all praise to Him Who lights each star that sparkles in the sky afar."

Now, for the elements themselves:

Presser's "Guide to New Teachers on Teaching the Piano" contains numerous other interesting titles for an "Elements" program of all grades; a copy of this invaluable booklet will be sent to readers of THE ETUDE, upon application.

## She Plays by Ear

I have a five year old pupil who is exceptionally talented. She plays a great deal from ear and can play a complete melody after hearing it played once. Is there not some method to use with a child of this type other than the one used with the average pupil? What would you do, and what books would you use in this case?—Mrs. C. E. S., Florida.

Treat her as you would any other child; give her "Music Play for Every Day," or Berenice Frost's "Book for Young Beginners," or Mildred Adair's "Play-time Book." Once you start to teach her, you will probably find her good ears counterbalanced by more than the normal aversion to sight reading, or by small hands, or laziness, or something else quite unforeseen. If you are sure she is talented, insist on as much sight reading as possible from the very first lessons. It is a mistake to allow a gifted child to rely too long on note or "ear" learning.

## On Piano Arrangements of Songs

I note that you have made many piano arrangements of songs by Faure, Brahms, Frantz and others. Is it necessary to do this? Are there not enough "singing" pieces already written for piano solo?—R. S. M., Maine.

I am glad you asked this question, for many students in my classes have expressed the same doubts. Yes, I strongly advocate the study of song arrangements for pupils of every grade. Why? A song never lets the teacher or student forget for a moment that the tune, the melody, is the important item for consideration and emphasis. If it does not sing, it is worthless. To help its expressiveness, the student always has the prop of the text; and we all know how poetic word phrases help to produce poetic music phrases. To even the dumbest student, a song says something more than gibberish. When everything else fails, the constant reminder of the melodic and text line is bound to create vital, spontaneous music.

Just for the fun of it, ask your pupils to play by memory the entire melody of any lyric piano piece they know. You will be surprised (and disillusioned) to learn that most of them cannot do it, to save their necks! Even advanced students have difficulty in playing through only the

theme line of a Chopin nocturne; and, as for managing the tune of the piece with the addition of simple left hand chord harmony, that is behind the beyond for them! Why? Since piano pieces are usually filled with a wealth of harmonic and contrapuntal material, weeks of study weld the texture so strongly together in the student's mind that the tune is often overwhelmed by the mass.

But a song is always a song; you cannot get away from its text and its melody—Therefore, I shall continue to espouse the cause of song arrangements, confident that they will bring joy to students, teachers and audiences as long as music lives.

## Scoffing Students

My teaching problem is that of holding the interest of the serious but sophisticated young adult pupils in their later teens. They have a superior attitude to all instruction, and even to the concerts given by world renowned artists. I realize that this is a normal phase in their development but feel that we lose much valuable time while the pupil is looking with a disinterested or doubting attitude at the usual Bach, Mozart, and Beethoven given to them. I would be grateful for any suggestions on this problem.—E. P. S., California.

All teachers with such serious, critical, talented young students should give fervent thanks daily—for they are indeed fortunate. Doubting Thomases are always a challenge, forcing the teacher out of his deep, narrow ruts.

Here is what I do in such cases:

Turn their critical forces on themselves by showing them the difference between facility and technic. Teach them the intelligent slow-fast, impulse way of practicing for control, versus idiotic mechanical repetition methods. Do not gloss over the necessity of systematic technical study. If you do, they will despise you in their hearts. All intelligent young persons see through sham and incompetence at once, and loathe it. Show them how to think musically and to practice economically; stir their imaginations, treat them as equals. Give them good doses of modern music; have them always work at one piece which is beyond them technically—the bigger and harder, the better! They love it, even if they cannot master it. Give them a good concerto "hunk" to chew on, and at once they feel important!

Let them criticize artists' concerts all they want—for it sharpens their wits. Show them how to listen intently and objectively to themselves. They will soon see how difficult it is to perform even the simplest piece beautifully. This will give them their first inkling that humility, love, and intelligence are the keys that open the portals of all true Art.

## Technical Studies

What technical training studies would you suggest for piano pupils studying in John M. Williams' "Grade 2, Piano Book"?

I find that Czerny's "School of Velocity, Op. 299" and Duvarenoy's "School of Mechanism" are too far advanced for these pupils, and would like something to precede this work.—E. V. P., Michigan.

Czerny-Lieblich's "Selected Studies, Book I"; John Thompson's "Keyboard Frolics" (Velocity Studies), or his "Selections from the Burgmüller Etudes"; or Florence Goodrich's "Preludes."

# MUSIC STUDY MEANS "MUSIC" STUDY

By MISCHA ELMAN  
Renowned Violinist

*A Conference Secured Expressly for  
THE ETUDE MUSIC MAGAZINE*

By ROSE HEYLBUT

THE first and most important thing for every student of music to realize is that he is *studying music*. You will say that such a statement is so self-evident that it seems curious to make it. I believe, however, that it is highly salutary, not only to make it, but also to impress it upon the minds of all students. Too often, alas, music study is contemplated, not in its own right but as a means to an end. Too often young people work at their music for the purpose of achieving something else—in most cases, greatness on the professional platform. And that is about the saddest mistake that can possibly be made.

All of us have encountered music students, even highly gifted students, who already assume themselves to be the future Paderewskis and Kreislers, who work with that sole goal in mind, and who frequently regard themselves as already belonging to the élite. It is that unfortunate attitude which I should like to discourage. One may venture to say that nobody—no teacher, no critic, no group of admiring relatives or friends—can predict the future status of a young student, regardless of his gifts. Musical eminence depends on something far more elusive than a gift and the ability to play or sing. To put it briefly, musical eminence depends upon the human and philosophic worth of what the musician has to say. He must, of course, command a fluent technic; and he must develop his gift in order to express what is in him. But mere technic and the mere possession of a gift are not nearly enough.

## *Work for Music's Sake*

BECAUSE NO ONE CAN POSSIBLY PREDICT the human and philosophical qualities which will unfold in the maturing character of the young student, it is much wiser to work at the material at hand and to allow the future to take care of itself. In my own case, neither my father nor I had the slightest idea of what my career would turn out to be, when I was a young student. I well remember that my earliest hopes concerned themselves with a routine post in a good orchestra. The development of my career paralleled, as everyone's must, the development of myself; and it was quite impossible to say, during my early years, just what that would be. For that reason, I was wisely kept at the material at hand, instead of being allowed to com-

port myself as a future artist. The material at hand was simply, music study. And such a procedure is one that I heartily advocate for other young students.

Music study need not and should not be envisaged in terms of future greatness. One can derive an immense amount of human joy from music, without ever approaching greatness. No possible disappointment can result from an eager, ardent pursuit of music. A great deal of disappointment and bitterness can result from planning deliberately for a goal which the circumstances of life may deny. It will be often discovered that the very people, who determined to become Paderewskis and Kreislers, later regard life and the world with bitterness. They fall short of their goal, and most of them do this; for a superlative for artistic expression is the exception rather than the rule. They talk of "luck" and "breaks" and "influence," and of a score of other matters which, in reality, have nothing at all to do with musical eminence. Instead, they should blame themselves for blinding themselves so completely by a goal that they overlook the means towards that goal. Let the music student progress normally, sanely, giving his full attention to the work at hand, and letting the mysterious future take care of itself.

## *Two Kinds of Criticism*

ONE OF THE GREATEST DANGERS to wholesome music study is superficial criticism. This, of course, can be of two kinds. One kind is eminently pleasant. It comes from the people who tell a student that everything he does is marvelous; who encourage him to believe himself a genius when, in all probability, the best of which he is yet capable is merely a good performance. The pleasantness of this sort of criticism does not wipe out its dangers. The wise student will realize that he is no genius; and, even if he is, there will be time aplenty to admit that delightful fact after he has asserted himself and convinced the world of its truth. He will be grateful for all praise; but he will place more confidence in the opinions of those people who can tell him, not how wonderful he is but how he can make his performance better.

The other sort of criticism proceeds from people who pick flaws without really understanding the thing they decry. Personally, I am very fond of the opera, and

I can tell you exactly what I like and what I do not like about singers and singing. But I should scarcely venture to voice my likes and dislikes as valuable criticism, for the reason that I have only an interested layman's knowledge of the vocal art and I respect my limitations. To a large extent the student is spared criticism of this sort. He is in contact, mostly, with his teachers; and they know what they are talking about. The test of competent criticism is not an ability to pick out flaws, but a constructive means of correcting them. To say, "He phrases badly," means exactly nothing. But to analyse a composition, phrase by phrase, to suggest the

Shun the externalism of passing fads. The best that any artist can do is to seek himself, to live in his own world of st and effort, to find out from within him what he has to do, and then to do it cording to the best of his ability. By su system of development true greatness emerge. The outside world cannot help emergence, by praise; nor can it hin this by superficial censure.

## *And So to Study*

How, THEN, SHALL THE STUDENT set al this business at hand which is simply m study? By regarding music as a means of personal expression, and b

MISCHA ELMAN

proper lines and emphases, and to give thoughtful reasons why they should be emphasized are helpful things.

No, the student first learns to know superficial criticism when he begins to appear before the public and finds himself attacked for shortcomings which may be entirely undeserving of censure. Even in the reviews of established artists one frequently finds the phrase "not in the spirit of the composer." What, exactly, does that mean? Who, to-day, can set himself up as being absolutely sure of what was in the mind of this or that great master at the moment when he conceived a musical idea? Indeed, it would be miraculously helpful if someone could do so. Until the spirit of Bach or Beethoven manifests itself with authoritative certainty, however, it is fair to assume that the artist who devotes his entire life to the study of the great works knows as much about the intentions of the composer as his critics.

The wisest attitude to preserve towards criticism, either pleasant or unpleasant, is to investigate its constructive worth, and disregard the rest. Develop self criticism. Set yourself an ideal and a standard and pursue it wholeheartedly, developing yourself and your perceptions at the same time.

plying himself to a steady deepening of own powers and expression. I am str opposed to the system of dividing st into music and technic. They are inseparable; one cannot exist without the other. One must develop technic, of course, spend much time working out purely technical exercises; but never as a goal in itself. The fleetest scale you can play has meaning in its own right. It is valuable only to enable you to express musical meaning. For that reason, it is often a good idea to select the difficult passage from a piece that you play and to work on it as a means to liberating the significance of the piece.

A good example of what I mean is concerned with the matter of tone. Often people ask me how to produce a fine tone. Such a question is impossible to answer. I can tell you clearly enough what a fine tone should be. It should be free, relaxed, unforced, firm, and without tremolo. It must involve a complete coöperation between the fingers on the strings and the bowing arm. It must, in essence, release perfectly even vibration of the tone, of all its overtones, without any vibrato assistance from the finger on the strings.

(Continued on Page 353)

## SEA DREAMS

VICTOR RENTON

A practical teacher will at once identify this as a fine study in what might be called "hand independence." That is, the right hand plays the melody and the accompaniment at the same time. There should be a distinct difference in tone, touch, and general effect, between the sustained notes and the arpeggio chords. The carol motion of the boat as it passes over undulating waters should be felt throughout. Grade 3.

Andantino amoroso M.M. ♩ = 138

The musical score for "Sea Dreams" is written for piano. It begins with a treble and bass clef, a key signature of one sharp (F#), and a 3/4 time signature. The tempo is marked "Andantino amoroso" with a metronome marking of ♩ = 138. The score is divided into measures, with measure numbers 1, 5, 10, 15, 20, 25, and 30 indicated. The right hand plays a melody with sustained notes, while the left hand plays an arpeggiated accompaniment. The score includes several dynamic markings: *mp* (measures 1-5), *mf* (measures 10-15), and *pp* (measures 25-31). There are also performance instructions: *Ped. simile* (measures 1-5, 10-15, 20-25), *poco rall.* (measure 20), and *rall. e dim.* (measures 25-31). The piece concludes with a final chord and a fermata.

# MAY BREEZES

A very taking caprice for piano. This is one of those compositions which must be played until the well-trained digits seem to fall into their places gracefully like the dancers of a ballet. In other words, it should be played automatically so that ultimately the attention can be devoted to the expression of the composition as a whole. Grade 3½.

# WILL O'THE WISP

Call it what you will, Jack-o-lantern, ignis fatuus, or will-o-the-wisp, the little phosphorescent lights that go darting over the marshes through the night always suggest the candles of the fairies. No wonder so many composers have written about them. The floating, darting character of the subject is fully indicated in this bright pianoforte piece by Walter Rolfe. Grade 3½.

The image displays a page of a musical score for the piece "Fiu mosso" by Franz Liszt. The score is written for piano (p) and violin (v). The piano part is in the upper system, and the violin part is in the lower system. The key signature is one flat (B-flat), and the time signature is 2/4. The score is divided into measures by vertical bar lines. Various musical notations are present, including notes, rests, and dynamic markings such as *mf*, *mp*, *p*, *f*, *cresc.*, and *rit.*. The score also includes fingerings (1-5) and articulation marks (accents, slurs). The piece concludes with a double bar line and the marking "D.C." (Da Capo).

ECLOGUE

No. 7. FROM ANNÉES DE PÉLERINAGE

FIRST YEAR—SWITZERLAND

Liszt spent many of the most romantic years of his life in Switzerland. This piece composed in 1835 is one of a series known as *Années de pèlerinage* (years of pilgrimage). One series is devoted to Switzerland; the other two to Italy. The word *Eclogue* is derived from the Greek *Ekloge* and signifies an idyllic poem embodying a dialogue, usually between shepherds. This very poetic composition is an excellent study in touch and the singing legato. The horizontal pressure marks over the notes, as well as the acute (*pointed*) staccato marks, deserve special attention. The pastoral effect is heightened by bell imitations.

## SOLO FOR THE HARPSICHORD

The radio fortunately has given students an opportunity to hear the delicate "wiry" but unforgettably lovely tone of the Harpsichord. As the tones of this instrument could not be prolonged to the extent of those of the piano which succeeded it, a great deal of the performance of this piece depends upon the fine motion, the swing of the rhythm with which it is played. Learn to talk with your fingers if you would make this fascinating composition live.

JOHANN SEBASTIAN BACH  
(1685-1750)

This page of piano sheet music contains eight systems of staves, each with a treble and bass clef. The key signature is B-flat major (two flats). The measures are numbered 15, 20, 25, 30, 35, 40, 45, 50, 55, and 60. The music features a variety of rhythmic patterns, including triplets, sixteenth notes, and trills. Dynamic markings include *f* (forte), *cresc.* (crescendo), *dolce* (dolce), and *legato*. Fingerings are indicated by numbers 1-5. The piece concludes with a trill in measure 60.

## THE PRIVILEGE OF PLAYING THE PIANO

WE HAVE just been talking with one of the foremost piano dealers in a large Eastern city. He related a story which is so dramatic that we want to recount it here for readers of THE ETUDE.

One day a fine Rolls-Royce car drove up to his door and a middle aged gentleman in ill health was assisted into the salesman's office by his chauffeur. He asked to be shown pianos, and finally bought one costing two thousand dollars.

"Now," he went on, "I shall need some one to teach me to play the instrument. Wouldn't you like to help me?"

The dealer was a pianist, but not a teacher. He did, however, secure a teacher who went three times a week to the rich invalid's home, until some years later when his wealthy pupil died. This teacher reported that his pupil made many attempts to learn, but finally saw that it was useless and then hired the teacher to play for him regularly, making comments upon the music played. He said, upon one occasion, "I wonder how many students realize what a wonderful privilege it is to be able to play the piano. Here I am, with money enough to buy anything I want, and yet I can not have the thing that, in my present unfortunate situation, would take my mind away from myself and give me the relief that I am sure could come in no other way. I play solitaire, I read, and do other things; but I find that my mind keeps turning back all the time to unavoidable misfortunes. That I do not play is not the fault of my parents. They knew that I was not robust, and they wanted to give me the best. Like so many children, I was foolish and did not take advantage of this opportunity. I spend a certain portion of my day with my secretaries, in managing my affairs. What a joy and a privilege it would be for me to be able at the end of my business day to throw all its cares over and immerse my soul in beautiful music that I could play for myself! The radio and the talking machine are a godsend to me; but I do not participate in the making of the music, and that is the one thing I want most to do."

We used to know a teacher, who had a little book like a bank book, which she gave to each pupil. In this she recorded, after each lesson, what the pupil had accomplished, and then initialed it just as a cashier in a bank would put down his initials in a bank book. In that way her piano pupils were gradually made to realize that they were accumulating musical riches. The pupils got in the habit of comparing their books with each other, and also of showing them proudly to their parents. It proved not only a fine advertisement for the teacher, but also a great stimulation for the pupils. The father of one of the pupils was a banker; and he was so pleased with the idea that he promised his daughter a new piano as soon as she had her musical bank book filled. Word got around that this teacher was doing this, and soon many idle pianos in the community were put to work again by parents who saw that putting music down as an asset brought pupils a new appreciation of its values.

## MUSICAL CULTURE QUIZ ON THIS ISSUE

1. What famous American actress is a fine violinist? (Page 290)
2. Name the daughter of a famous English composer of Negro ancestry who is now noted as a conductor. (Page 305)
3. What famous American Soprano died during March? (Page 290)
4. Where is the world's largest Carillon to be placed? (Page 298)
5. What College President composed the Chapel Song for his institution? (Page 291)
6. What was a Notenbüchlein? (Page 297)
7. How did Victor Herbert advise young composers? (Page 296)
8. Which great foreign nations will participate in the music of the World's Fair in New York? (Page 293)
9. What famous American violinist and teacher was born in New York's Tenderloin? (Page 306)
10. What did Robert Schumann have to say about chorus singing? (Page 304)

## MAY PARTY FOR MOTHER

"Call me early, Mother dear, for I'm to be Queen of the May!" is supposed to be a young girl's plea. But this time it is Mother who is to be the real May Queen and Dad and the children will be entertaining her. For Mother's Day comes most fittingly in the merry month of May and Maypoles. Here is a party designed especially for Mother on this, her day of days.

Many of you have undoubtedly thought and thought what unusual thing you could do this year to make her eyes shine, and to hear her say "Now *why* did you do so much!" But you're not to take this too literally. If your Mother is like my Mother, you'll know that she is secretly reveling in this moment in the spotlight and that later she will boast proudly of what her Jim or her Nellie had done. And if she's a typical Mother, she's earned it many times over in the things that she's done for you throughout the year.

Since a Mother's Day party necessarily starts on the practical side, let's plan an eventful meal. Perhaps a surprise family luncheon or supper (one that she is not allowed to cook) using the simply yet beautifully decorated table pictured above. The color scheme is a soft pink and violet blue, featuring Mother's Day carnations.

Cover your table with a pink crepe paper cloth, using napkins to match. To dress up these napkins a little more, paste a Mother's Day seal in the corner of each napkin. The centerpiece is a Jack Horner Pie whose top of paper carnations and tiny powder blue blossoms are surrounded by a lace paper collar like the one which encircled Mother's little Wedding Bouquet. Use dainty blue ribbons as the streamers. Each streamer can be attached to a gaily printed handkerchief which is to be pulled by each guest as a favor after Mother has made the first pull on a special wide ribbon which leads to her place at the table. If you prefer to include other small individual gifts which are to lead to Mother's plate by smaller ribbon streamers, this can add considerably to the gaiety of the party. At each guest's place is a nut or small bonbon cup disguised as a huge carnation. Place cards of pink paper written in gold ink will add greatly to the richness of this ensemble. Two tall candles, set in carnation holders and attached to the old fashioned center bouquet by a spray of blue flowers, complete the table, except of course for your very best china, silver and glass. A gold border plate adds to the general color scheme.

### MENU

Based on the assumption that Mother usually does the cooking herself, the menu has been carefully worked out so that even a novice cook can do it if the directions are followed carefully.

Madrilene (Hot or Cold Tomato Bouillon)  
Small Salted Crackers  
Shrimp Wiggle in Patty Shells  
Potato Chips  
Small Buttered Rolls  
Old Fashioned Strawberry Shortcake  
Coffee  
Pink and White Mints

This menu can be served either of fresh ingredients or already prepared. Those who would like to write me requesting recipes for either the prepared or specially prepared foods listed in the above menu will receive them by return mail. Please enclose a 3¢ stamp with your request. At the same time those who request them will receive full instructions for the table decorations.

You, of course, will know best what the little gifts should be both for Mother and for guests. As the gift Piece de Resistance, she would, I am sure (and so would you whether you are Mother, daughter and/or cousin) enjoy a book that will help materially with a major household problem, that of achieving simply, but beautifully set tables for all occasions. Elizabeth Lounsbury has written a book called "Let's Set The Table" which is by far one of the finest I have ever seen. The thing that impressed me most in this book is its recognition that most of us have to utilize the things we have on hand. With it you can set a table that will be the envy of your most fastidious guest. It should appeal to women in music more than any others; for musicians are looked to as cultural leaders in all things. If you cannot purchase this book locally, write me enclosing \$2.75 and I will have the publisher forward it to you promptly. Write to Elizabeth Fairchild, Room 610, 350 Madison Avenue, New York City.

## YOUR GUIDE TO THE NEW YORK WORLD'S FAIR

Long and eagerly awaited, the New York World's Fair is at last making its debut. As you receive this issue of THE ETUDE. We therefore present below a column of information to aid you in many practical details of a well-planned trip to New York. This is a column tailored to your specifications; for it is essentially a digest of answers to readers' inquiries received by the Travel Department. Write for any desired information to THE ETUDE Travel Dept., Room 610, 350 Madison Ave., New York.

**Music**—The World's Fair musical program will be centered in the Fair Music Hall (MH.), Metropolitan Opera House (MO.) and Carnegie Hall (CH.) Events scheduled are:

April 30—N. Y. Philharmonic-Symphony Orchestra, conducted by John Barbiroli (MH.)

May 1—Norwegian Concert (MH.) National Music Week begins.

2—"Lohengrin," with Melchior, Rethberg, Thorborg, Schorr and List (MO.)

3—N. Y. Philharmonic-Symphony Orchestra, Polish Concert conducted by Artur Rodzinski (CH.)

4—New York Philharmonic-Symphony Orchestra, Marx, Sayao (MH.) "Die Meistersinger," Rethberg, Kullman (MO.)

5—New York Philharmonic-Symphony Orchestra, with Georges Enesco, conductor and violin soloist (MH.)

6—"Das Rheingold," with Schorr, Gabor, Althouse, Thorborg and List (MO.)

7—Aeolian Symphony and Chorus. New York Philharmonic-Symphony Orchestra, Damrosch and Metropolitan Opera quartette.

8—"Die Walküre," Lauritz Melchior and Kirsten Flagstad as Siegmund and Brünnhilde (MO.)

9—New York Philharmonic-Symphony Orchestra, Brazilian program, Marcondes conducting, Sayao as soprano (MH.)

10—"Siegfried," with Kirsten Flagstad, Lauritz Melchior and Friedrich Schorr (MO.)

11—New York Philharmonic-Symphony Orchestra, Swiss program with Garofalo and Schelling conducting, Ziegler, pianist (CH.)

12—"Götterdämmerung," with Lauritz Melchior and Kirsten Flagstad (MO.)

14—Philadelphia Orchestra, Rumanian program conducted by Georges Enesco (MO.)

15—"Tristan und Isolde," with Melchior and Flagstad in the title rôles (MO.)

17—"Parsifal," with Kirsten Flagstad, Lauritz Melchior, and Friedrich Schorr (MO.)

23—"Tristan und Isolde," with Melchior and Flagstad in the title rôles (MO.)

28—Marion Anderson, contralto (MH.)

July 1 & 2—Mammoth national chorus (Court of Peace.)

The following artists will also be heard during the Fair: Kreisler, Pons, Heifetz, Thomas, Hofmann, Kiepur, Paris Opera, Hungarian Opera. The Leningrad and Paris Ballets will also appear. Many Fair musical programs will be broadcast on national networks.

Zoological Society, Lagoon of Nations, Court of Peace, Court of States, Science & Education Bldg., Democracy (in the Perisphère).

**Admission Prices**—Main Exhibit Area, adults 75¢, children under 14, 25¢, and day a week 10¢. Individual exhibits free, except for Amusement Zone concessions the following: Democracy, 25¢; theaters in the Railroads Bldg., 10¢ & 40¢ respectively; Contemporary Arts, 25¢; Gardens on Parade, 40¢. Music Hall prices vary according to the programs.

**Official Fair Guide Book**—Price, 25¢. 256 pages. Published by Exposition Publications, Inc., 33 West 42 St., N. Y. C. 10¢ mailing charge.

**Guide Books of New York**—"Every Place to See and Everything to Know About New York, 25¢, Supervue Map & Guide Org., Suite 608, 1545 Broadway, N. Y. C.; "Key to New York," by Slocum & Todd, 95¢, Modern Age Books, 432 Fourth Ave. N. Y. C.; "Here is New York," by Helen Worden, \$2.50.

**Sightseeing Tours of New York**—Gray Line, 59 W. 36 St., Blue Line, 208 W. 43 St., Commodore Sightseeing Corp., 1547 Broadway, Central Sightseeing Bureau, 55 W. 42 St.

**Bird's Eye Views of New York**—Empire State Bldg., 350 5th Ave., adults \$1.00, under 15—25¢, under 5—free; Chrysler Bldg., 405 Lexington Ave., adults 55¢, children 25¢; RCA Bldg., 30 Rockefeller Plaza, adults 40¢, under 16—20¢.

**Broadcast Tickets**—For admissions to N. Y. broadcasts, write to the networks carrying the programs you desire: National Broadcasting Company, 30 Rockefeller Plaza, N. Y. C.; Columbia Broadcasting System, 485 Madison Avenue, N. Y. C.; Mutual Broadcasting System, 1440 Broadway, N. Y. C.

**How to Get from New York to the Fair**—Long Island R. R. from Penna. Station 10 minutes, 10¢. Subways: IRT & BMT (5¢) and 8th Ave. Independent Line (10¢) from various points in midtown Manhattan. Many bus lines from points not served by rail.

**Transportation in New York**—North & South: Buses on Avenues B & C, 1st, 4th, 5th, 6th, 7th, 8th, 9th, Lexington, Madison and Columbus Avenues, River Drive and parts of Broadway. Subways on Lexington, 7th and 8th Avenues and Broadway. Elevated lines on 2nd, 3rd, and 9th Avenues. Street Cars on 3rd and 10th Avenues and parts of Broadway. Crosstown: Buses on Chambers, Grand, Houston, 8th, 11th, 23rd, 34th 50th, 57th, 64th, 72nd, 79th, 86th, 96th, 110th, and 116th Streets. Street Cars on 42nd and 59th Streets. Subway from Times Square to Grand Central Terminal.

**Transportation to New York**—Substantial reductions in transportation rates to New York are available for Fair visitors. The outstanding offer is a flat \$90 rate for a rail-coach trip from anywhere in the U. S. to both the N. Y. and San Francisco Fairs.

(Continued on Page 348)

1871; B. Braunschweig, 1876; d. there after 1876. In 1876 he was in Braunschweig; in Munich; and 1893-1894. Operas torios.

Arnold Trowell—B. New Zealand, June 25, 1887. Comp., violinist. Studied in N. Z. and with Hugo Becker in Ger. Debut in London, 1907. Has appeared frequently as soloist and ensemble player.

# THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES

An Alphabetical Serial Collection of  
THE WORLD'S BEST KNOWN MUSICIANS

This series which began in February, 1932, has included to date a total of 3828 celebrities. It will be continued alphabetically until the entire history of music is adequately covered. Start making a collection now. Nothing like this has ever hitherto been issued. Etude readers desiring additional copies of this page and pages previously published are referred to the directions for securing them in the Publisher's Notes Department.

Everett Ellsworth Trowell—B. Rockland, Mass., Mar. 14, 1861; d. Brookline, Mass., Dec. 18, 1933. Comp., organist, writer. Former ed., Org. Dept., THE ETUDE. A fdr. of A. G. O.

Florence Trumbull—B. Chicago. Pianist. Pupil of Leschetizky and for ten years one of his chief assistants. Has appeared in all prominent centers of Europe, also in many cities of U. S.

Trunk—B. Taubert, Baden, Feb. 1, 1861. Comp., cond., crit. of male choruses in and in N. Y. Dir. of of Mus., Munich, and chl. wks.

Piotr Ilyitch Tchaikowsky—B. Volkensk, Govt. of Viatka, May 7, 1840; d. Petrograd, Nov. 6, 1893. Famous comp., cond. Was prof. at Moscow Cons. Many orch. wks.; also chamber mus. and songs.

Wilhelm Tschireh—B. Lichteneau, Ger., June 8, 1813; d. Gera, Jan. 6, 1892. Comp., cond. Mus. dir. at Liegnitz, then court cond. at Gera. Vis. U. S. in 1869. Chl. wks. for male voices are notable.

Princess Tsianini—B. Muskogee, Okla. Indian mezzo-soprano, pnst., writer. Asso. with Cadman twelve years. His "Shanewis" written for her. Operatic and concert appearances in Eur. and U. S.

Teresina Tus—B. Turin. Violinist. Pupil of Massart at the Paris Cons. Debut in England at Crystal Palace, 1883. Toured America in 1887. Has concertized in all European countries.

Carrie Tubb—B. London. Soprano. Stud. at Guildhall Sch. of Mus. Sang in opera at Covent Garden under Beecham. Soloist at Promenade Concerts under Sir Henry Wood. Many festival appear.

Earle Tuckerman—B. Eaton, N. Y., Aug. 19, 1882. Baritone. Studied with Frederic Martin in New York. Has made many appearances in concert and oratorio under prominent conductors.

C. Albert Tufts—B. Centerville, Ill., 1883. Organist, dir., pedagog. writer. Studied with many prominent teachers. Has been active for some yrs in Los Angeles. Many appearances as recitalist.

Tully—B. Cornling, Dram. soprano. In Paris. Debut in N. Y. Has made many appearances in European cities and in U. S.

Franz Tuma—B. Kosteletz, Bohemia, Oct. 2, 1784; d. Vienna, Feb. 4, 1774. Gamba virtuoso and contrapuntist. Fr. 1741 Chamber comp. to dowager Empress Elizabeth. Wr. 30 masses and other wks.

Rosalyn Turek—B. Chicago. Pianist. Pupil of Olga Samoroff-Stokowski. Debut in N. Y., 1935. Winner of National Federation of Mus. Clubs Award. Soloist with Phila. Orch. in 1936.

Horace Elder Tureman—B. Virginia, Ill., June 5, 1878. Cond. Studied Paris Schola Cantorum. Cond. of Denver Civic Symphony Orch. Head. Theory Dept. of Denver Cons.

Joaquin Turina—B. Seville, Spain, Dec. 9, 1882. Comp., pianist, critic. Studied with Moszkowski and d. Ind. Debut as pianist, Seville, 1900. Ops., sym. wks., cham. mus., songs. Res., Madrid.

Alfred Dudley Turner—B. St. Albans, Vt., Aug. 24, 1854; d. there May 7, 1888. Comp., pianist, teacher. Studied, N. E. Cons. Taught there and at Boston Coll. of Mus. Ens. wks. and pia. pes.

Florence Turner-Maley—B. Jersey City, N. J. Comp., soprano. Pupil of Oscar Raenger and Jacques Bouby. Has made many concert appearances. Has written piano pieces and songs.

Edmund Hart Turpin—B. Nottingham, Eng., May 4, 1855; d. London, Oct. 25, 1907. Comp., organ virtuoso, writer, lecturer. Was ed. "Mus. Standard." Masses, oratorios, ens. & smaller wks.

Thas Turton—B. Eng., Ontario, May 15, 1937. Comp., cond., Fdr. cond., Eng.) New Chl. Soc. in Can., 1922. Soloist. Symph. O. Fdr. of Toronto Phil. Soc.

Fritz Tutenberg—B. Mainz, Ger., July 14, 1902. Writer, opera librettist, Dir. of operas in Kiel, Hamburg, and since 1934 in Chemnitz. Has written various literary works of value.

Luigi Tutela—B. Grottole, Italy, May 2, 1885. Comp., vlnst., pnst., tchr. Stud. at N. Y. Coll. of Mus. and Naples Mus. Acad. For some yrs. active in Newark, N. J. Songs, pia. & vin. pes.

Burnet Corwin Tuthill—B. N. Y., 1888. Cond., comp., clarinetist. Secty., Nat'l. Assn. of Schools of Mus. Was gen. mgr. Clin. Cons. In 1935 apptd. prof. of Mus. Bwn. C. Memphis, Tenn.

William Powell Twaddell—B. Phila., 1870. Orgnst., educator, chl. dir. Pupil of F. Maxson. A. M. Virgil, D. D. Wood. Orgnst. in Phila., Balt., Durham, N. C. Mus. dir. of Durham city schs.

Delphine Ugalde—B. Paris, Dec. 3, 1829; d. there July 19, 1910. Sopr., teacher. Debut 1848. Sang leading roles in Offenbach's operettas. Taught in Paris. Among pupils was Marie Sess.

Hans Uldall—B. Flensburg, Ger., Nov. 18, 1903. Comp. Was active in Berlin, then in Hamburg. His compositions include orchestra works, chamber music, cantatas, and songs.

William Ulrich—B. Bremen, Ger., 1891. Cond., teacher. Stud. at Royal Acad. of Mus., Berlin. Cond. of Women's Symph. Orch., Los Angeles and Glendale (Cal.) Symph. O. Head. O. Dept., U. of S. C.

Unger—B. Leipzig, 1837; d. there Feb. 18, 1886. Dram. tenor. Debut 1867. His creation of "Der Schokoladen" great fame.

Heinz Unger—B. Berlin, Dec. 14, 1895. Cond. In 1922 became dir. of the Cicilian Chorus; since 1924, dir. of the Society of Friends of Music, Berlin. Many appearances as guest cond.

Hermann Unger—B. Kamenz, Saxony, Oct. 26, 1886. Comp., writer, mus. critic. Pupil of E. Istel, J. Haas, M. Reger. Active in Cologne. Has written orch. mus., ensemble, choruses and songs.

Karoline Unger—B. Stuhlweisensburg, Hungary, Oct. 28, 1803; d. near Florence, Italy, March 23, 1877. Famous op. sopr. Sang in first perf. of Beethoven's "Missa Solennis" & "Ninth Symph."

Max Unger—B. Taura, Saxony, May 28, 1883. Writer, mus. critic. Studied at Leipzig Cons. Active for some years in Leipzig as chor. cond. Has edited Beethoven's complete letters.

Marie von Unschuld—B. Olmütz, Austria. Pnst., tchr., lecturer, writer. Studied at Vienna Cons. and with Leschetizky and Starobin. In 1904 estab. Von Unschuld Univ. of Mus. Wash. D. C.

Ludwig Unterholzner—B. Salzburg, Nov. 22, 1902. Comp. Active in Hanover and Munich. His writings include wks. for each; also masses, cantatas, chamber music, and songs.

George Putnam Upton—B. Roxbury, Mass., Oct. 23, 1835; d. Chicago, May 20, 1919. Music writer, critic. For more than 50 years in Chicago. A fdr. in 1872, and since then the Apollo Club.

Treat Upton—B. Wash. D. C., Dec. 17, 1917. Orgnst., pia. tchr., Studied at Oberlin Mus. Prof. emeritus at Oberlin Cons. Wash. D. C.

Ernest Urchs—B. New York, Aug. 10, 1864; d. there, July 12, 1928. Executive, amateur pianist, music patron. Many years associated with Steinway & Sons. Pres. of MacDowell Mem. Assn.

John Ulrich—B. Trinidad, Sept. 9, 1840. Comp. Pupil of Gounod. His operas have been produced in La Monnaie, Brussels; Monte Carlo; Cannes; Berlin; Zurich; Hamburg and other cities.

Jacques Urius—B. Hergenrath, Ger., Jan. 9, 1868; d. Noordwijk, June 6, 1935. Noted Wagnerian tenor. Debut at Amsterdam, 1894. Amer. debut, Bos., 1912. Fr. 1913-17 with Met. Op. Co.

Camilla Urso—B. Nantes, Fr., June 13, 1842; d. N. Y., Jan. 20, 1902. Violin virtuoso. Pupil of Massart. From 1862 to 1895 her tours of Europe and Amer. were a succession of triumphs.

Anton Urspruch—B. Frankfurt-on-Main, Feb. 17, 1850; d. there Jan. 11, 1907. Comp., pianist. Pupil of Raff and Liszt. Tchr. at Hoch Cons. & at Raff Cons. Wrote many large works & smaller pieces.

Viorica Ursuleac—B. Cernovitz, Dram. sopr. Opera appearances, Vienna & Berlin. R. Strauss ded. opera "Der Friedenstag" to her. Created title role in his "Arabella" (1933).

Gastone Usigli—B. Italy. Comp., cond. Stud. in Italy. For five years lived in Venice. In 1907 moved to Los Angeles where he died. Mus. Prof., composer, cond. Los Angeles Phil. Orch.

**FOR SALE:** Organ Building for amateurs by Mark Wicks. \$1.50. Arnold H. Schroeder, E. Jackson St., Ripon, Wisc.

## The Etude Music Lover's Bookshelf

(Continued from Page 306)

upon the publication of "The International Cyclopedia of Music and Musicians," edited by Oscar Thompson. In this large undertaking the editor was assisted by a corps of one hundred collaborators and associates, including many musicians and writers of high distinction in the musical world. The book, of twenty-two hundred and eighty-seven pages, is excellently printed and bound. Perhaps the highest compliment is that contained in the introduction by the noted critic, Lawrence Gilman, who refers to the book as unrivaled.

The primary difficulty in organizing a work of this kind is that of determining the relative amount of material or copy to be devoted to the individual subjects. This in itself is a tremendous task. The needs of the average purchaser must be foreseen and a wholly impartial estimate of the quantitative importance of each item made with judgment, fairness and precision. With thousands of different subjects, the difficulty of this appraisal may be imagined. The next obligation of the lexicographer, and one of equal importance, is accuracy—accuracy which can be obtained only when the copy and the proof have been checked and triple checked by competent people trained in doing this work and un-hurried in executing it. Third in importance is the art of defining musical terms so that the words employed are sufficient, not excessive, and employed with authority and nicety of expression. This Karl W. Gehrken did in remarkable manner, in his definitions of musical terms in the Webster International Dictionary.

In the new International Cyclopedia the requirements we have just mentioned have been, in so far as our observation goes, effected with far more than the customary rate of success. The work is not only a fine dictionary, from the standpoint of the clean cut definition of musical terms listed and the thousands of biographies finely presented, but it is also enriched by a series of valuable and authoritative essays from many distinguished writers and specialists. For instance, in the case of Anton Bruckner, nearly three pages are given to a signed article upon the great Austrian master, by Gabriel Engel. For Chopin, nearly nine pages are given to the great Polish genius. The biography of each of the great composers is followed by a representative catalog of his chief works. Nearly one hundred such major articles, each by an authority of note, make this book one of the outstanding volumes of its kind in the international field. There is a fine appendix with the plots of three hundred operas. Sixty-two pages are devoted to an excellent bibliography.

"The International Cyclopedia of Music and Musicians"; edited by Oscar Thompson; published by Dodd, Mead and Company; Pages, 2287; Price, \$12.50.

## Additional Suggestions for Good Reading

The following very useful books will be reviewed in later issues:

**The Victor Book of the Opera**, published by the R. C. A. Manufacturing Co., 533 pages finely illustrated—Price 70¢.

**Georges Bizet**—by Martin Cooper, published by Oxford University Press, 127 pages—Price \$2.75.

**The Making of Musical Instruments**—by T. Campbell Young, published by Oxford University Press, 190 pages—Price \$3.00.

**Your Child's Music**—by Satis N. Coleman, published by The John Day Co., 180 pages—Price \$1.75.

# Shopping for Charm

## FEMININE FRAGILITY

There comes a time in every woman's life when she would appear femininely fragile, delicately nurtured, wide-eyed and dewy, yet glow with a sophisticated glamour withal. But when the woman is a musician she must radiate *all* these qualities *every* time she steps on a concert platform. She must present the perfect appearance background to her music.

Perfume, like music, is a creation of inspiration, a symphony in odors, instead of in notes. So when I stepped into the magnificently appointed salon of *Lentheric*, creators of such favorite perfumes, as *Shanghai* and *A Bientot*, for my consultation with them on a new platform make-up for your May recitals, I was ready to appreciate the perfectly glamorous new make-up shade which they romantically call "Deep Orchid." Here is a combination of make-up colors that give your skin a fresh, glowing quality; that give you a wide-eyed, young countenance; that add the consciousness that you look your very vivid best. "Deep Orchid" can be worn with all pastel shades, black and white, but should never be combined with red, chartreuse, yellow or orange. It is particularly effective with the new violet and blue shades that Spring Openings are dictating. And of course you are just as anxious to know just how to apply this flattering combination as I was.

Lentheric makes a Cleansing Cream (#2) which contains a fine lubricating ingredient, and can be used as a mild night cream. This cream was carefully and *gently* spread over the entire face, but was not removed in the ordinary manner. It was *dissolved* with *Skin Lotion*. This was poured on dry squares of cotton and patted most gently until every vestige of cream disappeared. Then some more of the skin lotion was poured on a moistened square of cotton (the kind I showed you how to make in a previous issue), and patted on gently to stimulate the skin and leave it glowing.

Since most of us have dry skin, *Lait Onctueux* was designated as a powder base. This is so delicate a base that it must never be applied with the fingers since it absorbs immediately. The proper method of application is with a small square of cotton. (Use *Complexion Lotion* in the same manner if your skin is normal.) This powder base is neutral in color, so is fine for any shade of complexion.

When your skin is perfectly prepared, place 3 dots of *Deep Orchid*, a beautiful pinky orchid cast, in the center of your cheeks. After you have blended the rouge well up to the outer edge of the eyes, and have placed it properly, *blend from the outside in* so that the rouge does not spread where you do not want it, and the color remains toward the center of your cheek so as to highlight it from out front.

With *Rose Fonce Powder* (a good-enough-to-eat strawberry and cream color) apply in the following manner: First put a dab of powder on the following five highlights of your face, in the order given, your forehead, nose, chin and both temples. Now to powder, work around the contour line of your chin. *Do not touch cheeks*. Powder the forehead and work temple powder well back toward ears. Powder nose. Now without dipping your puff into your powder again, put what is left (a *very thin* coating) over the cheeks, so that they do not appear powdered, but are left young and fresh looking. (For street wear powder cheeks a little more.)

The next step is the use of *Violet* eye-shadow. Lentheric recommends lightly

shading the entire upper lid, from eyelashes to eyebrow, making sure no white line appears at either end. After trying this on my blue-eyed model, and finding that it made her eyes seem larger and of a quise hue, I tried it on myself. I have brown eyes, and the effect was most interesting, deepening the color of my eyes and making them appear more youthful. Now with black mascara (blue for street wear) cover the upper lashes heavily, and the lower outer lashes lightly. This adds the necessary outlines to the eyes. If you have light brows, brush them delicately with mascara, or use the smudged line, have spoken of frequently.

To complete the picture, *Lentheric's Deep Orchid* lipstick should be carefully used on the upper lip. When this is properly outlined, press against the lower, for contour and finish with the stick or your finger, depending on whether you need more lipstick, rouge, or not.

When you are wearing formal clothes cover your neck and arms with *Complexion Lotion* as a base and *Rose Fonce Powder* to give the proper complimentary tint to your new and lovely feminine fragility.

If you are unable to obtain this brand new shade, at your local cosmetics dealer write me for name of your nearest dealer. Theodora Van Doorn, 350 Madison Avenue, New York City.

## BOWS TAKE BOWS

"Bows" are logically enough the best catchers of beaux this season. Big girls, little girls, sophisticated girls, coy girls, cute girls, smart girls, all wear bows in their hair. Some are perched at the star of a cue in the manner of G. Washington. Others sit coyly on top of a mass of curls or seem ready to take off from the vertex center of an upswept "hairdo." Still others follow one another in an ascending pattern up a back or side part. And still others carry us back to the days when (when party bound) one reposed serenely over each ear. Still another is worn high on the head with ends sweeping over your page boy bob. The makers of the *Pinette Tu Combs* which were so popular in our August "sampler" have attached bows of various fabrics and colors to these marvelous hair holders and are selling them through the local chain stores in a price range from 5 to 25¢ each. The most popular colors right this minute are black, red, Kelly green, wine, fuchsia, purple, royal blue and American beauty. If you can't get these locally, write Theodora Van Doorn, 350 Madison Avenue for shopping information.

## ADMIRACION BRINGS ADMIRATION

When you are planning your new gown and make-ups for the coming busy season be sure you start from "scratch." That is to say, do a general spring housecleaning in all respects. Now the average good house cleaning starts with the attic, and I am going to start with the top of your hair. We almost never think of a shampoo as a means of beautification, but it actually can be. *Admiracion Laboratories* have developed three shampoos directed at individual hair and scalp needs. *Foamy Oil Shampoo* is for the average normal hair. *Non-lathering Olive Oil Treatment* is for the abused, dry scalp, and *Non-lathering Pine Tar Treatment* for the oily, stinging type. These unusual shampoos come in 50¢, 75¢ and \$1.25 sizes. If you cannot buy these locally, write me for the nearest dealer's name. You will be sure to win admiration with *Admiracion*.

The piano introduction consists of several measures of music. It begins with a treble and bass staff showing chords and single notes. The melody is introduced in the treble staff with eighth and sixteenth notes. A 'rall.' (rallentando) marking appears in the middle of the introduction. The introduction concludes with a final chord in the treble staff.

# NO ACCORDION SONG OF THE PINES

MILDRED ADAIR  
Arr. by Pietro Deiro

Slowly, with swaying motion M.M. ♩ = 144

The main body of the music is written for a single melodic line (treble staff) and a single accompaniment line (bass staff). The key signature has one sharp (F#), and the time signature is 3/4. The melody is marked with fingerings (1-5) and includes dynamic markings such as *p* (piano), *f* (forte), and *mf* (mezzo-forte). The accompaniment consists of chords and single notes, often marked with 'M' for middle finger. The piece concludes with a final chord in the treble staff.

# THE VILLAGE BLACKSMITH

(Handel - Verdi)

Arr. by PRESTON WARE OF

Moderato M.M.  $\text{♩} = 108$

SECONDO

("Harmonious Blacksmith," Handel)

The first system of the musical score consists of four staves. The top two staves are for the right hand, and the bottom two are for the left hand. The key signature is one flat (B-flat), and the time signature is 4/4. The tempo is Moderato M.M. with a quarter note equal to 108 beats per minute. The first staff has a treble clef and a key signature of one flat. The second staff has a bass clef and a key signature of one flat. The third staff has a treble clef and a key signature of one flat. The fourth staff has a bass clef and a key signature of one flat. The music features various dynamics including *f* (forte), *decresc.* (decrescendo), *p* (piano), *mf* (mezzo-forte), and *f* (forte). There are also markings for *a tempo* and *mf rall.* (mezzo-forte, rallentando). The system includes fingerings (e.g., 1, 2, 3, 4, 5) and articulation marks (accents, slurs).

("Anvil Chorus," Verdi)

Maestoso

The second system of the musical score consists of four staves. The top two staves are for the right hand, and the bottom two are for the left hand. The key signature is one flat (B-flat), and the time signature is 4/4. The tempo is Maestoso. The first staff has a treble clef and a key signature of one flat. The second staff has a bass clef and a key signature of one flat. The third staff has a treble clef and a key signature of one flat. The fourth staff has a bass clef and a key signature of one flat. The music features various dynamics including *cresc.* (crescendo), *ff* (fortissimo), and *f* (forte). There are also markings for *mf* (mezzo-forte) and *p* (piano). The system includes fingerings (e.g., 1, 2, 3, 4, 5) and articulation marks (accents, slurs).

## My Old Kentucky Home

(Continued from Page 299)

no record that My Old Kentucky Home and Massa's in the Cold, Cold Ground were performed, as has often been reported. The records indicate that as his remains were covered in the grave his friends played Old Fks at Home and Come Where my Love is Dreaming. The late Theodore Presser, too, as a youth of sixteen, witnessed the ceremony said that the scene was so affecting that the players in the band all but broke down several times in their playing.

### With Authentic Furnishings

OLD KENTUCKY HOME at "Federal Hill" in Bardstown, Kentucky, has been furnished with contemporary pieces, in the spirit of taste for the period, but how much this Foster ever saw is hard to indicate. The old Georgian house, built of red brick, stands upon a sloping lawn, the entrance from the road being at the side. Near the house is the family burial ground, with its rather beaten stones giving the genealogy of those who had lived in the old mansion. Somehow we have a feeling that these old family cemeteries bind a home to past generations of residents, with sentimental reminiscences which make the bald and bare apartment life of to-day seem grossly temporary and material. The Rowan home is as much a part of the Rowan family as the old Senator himself. It represented the fine spirit of a southern manor house of nothing else can. A small admission charge for upkeep is made. Guides explain many pictures, papers and documents relating to Foster's life. The rooms are large and high. From the kitchen, with its modern utensils, to the upper room on the second floor, with its quaint trundle bed, the home is a fine picture of the southern splendence of antebellum days. The parlor is handsome and has a beautiful old piano with mother-of-pearl keys. Mother-of-pearl is not in uncommon use for pianos in the early part of the last century. It was just like a piano as Foster might have played on.

Foster's wife was devoted to him but would not stand his profligate habits and therefore did not live with him in his later years. A very pretty picture of their wedding is given in a letter that her sister wrote to another sister, immediately after wedding festivities. The description of the serenade or "shivaree" given by a triumphant band after the manner of the times is very effectively told.

"Pittsburgh, Tuesday morning  
My Dear Sister:

"Jane is really married, and can it be possible. It seems so strange to me that she is married and gone, I cannot realize it still, and the wedding over. Jane and Stephen F. were pretty much frightened. Steve quite pale. They each had to repeat some part of the ceremony after Mr. Lyman which made it, I think rather embarrassing. Jane repeated her part in a different kind of voice altogether from her usual tone of voice. It was owing to her strain. She looked very sweet, her wedding dress fit her beautifully, gloves and buttons to match her dress, very pretty air of coiffure and collar. Steven looked

very nicely. I was brides maid and Morrison groomsman. I can assure you I felt rather squeamish, I had never been brides maid before. Something so entirely out of my line. I presume you would like to know what we had at the event in the way of eating.

"We had a bride's cake which was very nice, two or three kinds of wine, and ice cream. That was all, sufficient, too. All of Jane's dresses fit her beautifully and her other garments were made quite neatly. Sarah Kerr gave her a very pretty French work night cap. She had several others that she had purchased herself but none so pretty as Sarah K. Uncle Snaith gave Jane away. Mr. Lyman did not omit any part of the ceremony. Mr. Lyman had his white surplus on. You remember that at your wedding Dr. [name illegible] wore his black surplus. The white is much the prettiest. We got a very pretty lantern lamp for the hall. John fixed on the hook for us. I do wish you had been here. I think you would have enjoyed the wine. Ma is up to the eyes in fixing away the china, also numerous other things. I received your very welcome letter a few moments since. Mr. Scully brought it down to me.

"We had a most delightful serenade last night, a parcel of plebeians were the serenaders. They did not know the house exactly and they went up to Mrs. Townsend's, played for at least a half of an hour there and then they found our house out. I really think they must have played for two hours, most horrible music, at our house they got up on the steps, rang the bell, and said we were the meanest people that ever was, that we even did not give them vitnals. Before they went away, they said that they would bring tonight forces [?] to hovel for us and their sheet iron band to accompany the forces [?]. There is no cholera here, at all. I send you some brides cake to dream on. Kiss Jeanie and remember me to all inquiring. All send their love. Write soon.

"Your affectionate sister,  
"Agnes."

Agnes has confounded surplus with surplice. Ministers, generally speaking, are not burdened with surpluses.

The Fosters had one child, Marion, born in 1851. At the time they were boarding and paying five dollars a week. The "little blessing" raised the board to six dollars, much to Stephen's consternation. Marion Foster married Walter Welsh and had one daughter, Jessie Welsh Rose. The name was originally spelled Welsh. Later Marion changed it to Welch, but her daughter employed the original spelling. Marion was, for much of her life, a music teacher. She lived to an old age in Pittsburgh.

So many stories of great interest have been written about Foster that the bibliography of the subject is now immense and much of this is fortunately preserved in the magnificent Foster Memorial in Pittsburgh adjoining the University of Pittsburgh's beautiful Cathedral of Learning.

### The Tone Beautiful

"When pleasing and correct tone emission is thoroughly established, the voice is then responsive to every emotion and shows it in stress and inflection. Then, singing comes to be the result of automatically applied principles, all the more responsive because they are a part of the automatic vocal procedure. The truly responsive voice is one in which the correct tone is automatic, and has been placed beyond the point of thought or quibble."—E. C. Rowden.

# THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

## Registration for the Small Organ

By IRVING BARTLEY

**I**S IT NOT POSSIBLE that the mysteries of well chosen stop combinations cannot be simplified so that even the smallest organ can be brought out to its fullest advantage?

Many of the organ concerns are making an intensive study of small organs and are all the time trying to make their products more satisfactory. In this connection I would like to say that any church organ should contain at least four sets of pipes: Gedeckt (often called Stopped Diapason), Salicional, Dulciana (the very softest stop, which is indispensable to the quieter moments of the service), and the Open Diapason, which furnishes the real organ tone. The above mentioned stops fall into three different classifications, or families, of organ tone: Gedeckt belongs to the flute family; Salicional and Dulciana are both strings; and the Open Diapason is in a class by itself, often called "foundation stops." An organ of this size will probably contain only one 16' pedal, the Bourdon.

Smaller organs, containing not more than four ranks of stops, are nearly always made flexible, by having the range of their stops extended both below and above one octave, or even more. Thus the Gedeckt 8' furnishes pipes for the Flute d'amour 4', Flautino 2', Nazard 2 2-3' and probably Bourdon 16', both for manuals and for the upper range of the pedals. The range of the Salicional may be extended an octave higher, thus producing a 4' string tone called Violina. Similarly, Dulciana extended becomes Dulcet 4', and Open Diapason becomes Octave 4'. With such a set up, opportunities for effective registration are many. This type of organ is known as a unit.

### The Charm of Contrast

ONE OF THE FUNDAMENTAL RULES of contrast in organ registration is that the beauty of a string tone (Salicional or Viol de Gamba, a strong, biting string) is always enhanced by an accompaniment of a flute stop (Gedeckt or Melodia, for instance). In this connection it should be said that Melodia and Viol de Gamba are not found on unit organs. Even a strident string tone is pleasing, if used against the proper background. To illustrate contrasts in tone color: solo on Salicional and accompaniment on Gedeckt, or *vice versa*. In case both of these stops are controlled by the same swell pedal (as it would be on a unit type of organ), it might be that one of these combinations would not balance correctly; as doubtless the Gedeckt would be slightly too strong as an accompaniment for Salicional. Other combinations would be solo on Viol de Gamba, accompanied by Gedeckt; or Melodia accompanied by a soft Salicional.

It follows that a flute used with a string on the same manual is also good; as, for instance, Gedeckt with Salicional; or Viol de Gamba with Melodia. On the unit type of organ, Gedeckt can be used with Violina 4' to particularly good advantage.

For still softer effects, a solo on the Gedeckt accompanied by Dulciana is satisfactory. More striking yet would be an accompaniment of Dulciana with the 4' and

16' couplers, both solo and accompaniment having tremolo drawn. For solo work the tremolo is always good. It is equivalent to the violinist's vibrato, which transforms an otherwise dull tone into one that is full of beauty and richness. Even the Salicional against Dulciana is also good, although both belong to the string family. Since Dulciana is a very soft stop, it is sometimes difficult to think of it as being a string.

A sudden change from flutes to strings is particularly refreshing: for instance from Vox Celeste alone to 8' and 4' flutes with tremolo. Vox Celeste is a soft string stop and obtains its "celestial" quality by having its rank of pipes tuned slightly sharp with some string stop, generally Salicional. Even Gedeckt alone (with tremolo) is a welcome change from some of the more brilliant combinations. There is no reason why

Salicional or Gamba should always be sounding.

### Pipes of Regal Tone

AS TO THE DIAPASONS, they always should be used for congregational hymn singing. They are especially adapted to hymns and chorales and are the richest tones that are found on the organ. They are probably best in four-voice work, when both hands are playing on the same manual. If the Great Diapason is under expression (capable of being controlled by a swell pedal), a solo on the Diapason (with tremolo) is effective if accompanied by Gedeckt (or Gedeckt and Salicional, depending upon the strength of the Diapason). If the Great Diapason is unenclosed, almost the only way to use it is when all parts are being played in concert.

Thus far the essential stops have been

discussed. Another family of stops, known as the reeds, contribute a certain brilliancy or "fire" to the ensemble. Such stops are the Oboe, the Cornopean and Tuba, known as the chorus reeds. The Vox Humana is not a strong reed; and it is not designed to add brilliancy to full organ as do the chorus reeds. Furthermore, it should not be used for full organ effect because of the fact that the tremolo is generally drawn automatically with the Vox Humana, thus causing the louder stops to have a tremulous tone and producing a most undesirable effect.

### Beware the Sensitive Ones!

AS TO SOLO EFFECTS, the Vox Humana and the Oboe are both used in this capacity. Since the Vox Humana is a sensitive stop and easily affected by changes of temperature, it is often impossible to use alone because of some of its notes being out of tune. Gedeckt blends with the Vox Humana well and often improves the tone of the Vox Humana, at the same time covering up the notes that are not in perfect tune. The Vox Humana, aside from being a good solo stop, can be used in chords in the middle register. Incidentally, it would be always a good plan not to couple the pedal to the Vox Humana, as its low tones sometimes sound ludicrous. Use the Gedeckt 8' on the pedal, instead.

Gedeckt also may be used with Oboe, as a solo combination. It serves two possible purposes: it may succeed in some measure in covering some notes on the Oboe which are not in perfect tune, or it may take some of the harshness out of an oboe stop which is otherwise slightly too heavy. If the Oboe is of soft, smooth quality, however, the Gedeckt should not be used.

In general the heavier reeds, such as the Cornopean or Trumpet, should be used only when the Diapasons are drawn.

Other stops to be considered are the mixtures, such as Tierce (1 3-5'), Nazard (2 2-3'), and the Twelfth (2 2-3'). Tierce and Nazard are light in quality, but the Twelfth is of the Diapason family and should be used only when the Great Diapason is drawn. Mixtures serve to supply the missing harmonics in the series of overtones, thereby adding brilliancy to the diapasons and other stops. One must be careful that the higher pitched stops do not predominate, for it is an invariable rule that the fundamental (8') tone should be considerably stronger than the 4', 2' and 2 2-3' stops. If such is not the case the combination is said to be "topheavy."

The lighter mixture stops such as Nazard and Tierce can be used as synthetic solo combinations. Nazard and Salicional can approximate an Oboe, for instance; and Tierce combined with certain other stops can sometimes form a combination that sounds very similar to a clarinet. In many organs the flute 4', Nazard and Flautino are borrowed by the same set of pipes, and one must beware of playing in the lower register (below middle C) when Nazard or Tierce is drawn, as the intervals above the fundamental tone will often be overbearing and produce an unpleasant effect. In the louder combinations those overtones

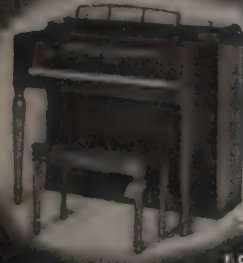

*A Silbermann Masterpiece is the Organ in the Muenster of Ebersmuenster, Alsace, which fortunately stands exactly as when built two hundred and twenty-two years ago. Its maker, Andre Silbermann, and his bother Gottfried produced undoubtedly the finest examples of the classic design of German organs. After moving from Saxony to Strassbourg, Andre was instrumental in blending the trends of the early French organ builders with those of Germany.*

## KNOW YOUR ORGAN!

A New Book by an Engineer, Organbuilder, Organist  
AN INTRODUCTION TO THE ORGAN  
By Leslie Leet

Member, American Society of Mechanical Engineers, Organist, First Church of Christ, Scientist, Plainfield, N. J., President, Leet Organ Company, Inc., Cranford, N. J., Formerly Works Manager, Skinner Organ Company and Technical Director, Organ Department, Aeolian Company.

This book will answer your questions about the history, construction, composition and intelligent use of the organ. Interesting and practical.

Send for descriptive leaflet and introductory reduced price offer.

E. S. TOWNE 351 Lincoln Avenue Cranford, N. J.

will scarcely be perceptible and therefore will not be objectionable; they will add "punch" to the ensemble.

### Watch for Duplexings

IF THE ORGAN IN QUESTION is a unit, it will be duplexed also. By duplexed is meant that most of the stops are playable from each manual. The organist would do well therefore to sound one note on the swell manual with any 8' stop, then sound the same key on the great manual and determine if some stop on that manual has the very same strength and quality. If the tone is identical, observe the names of the two stops. They may or may not be different, for organ manufacturers very frequently use a different nomenclature for the same stop (set of pipes) when it appears on a different manual. Thus Salicional and Viola. Bass Flute 16' and Bourdon 16', Salicet 4' and Viola 4' are often identical.

As to what pedal to use, it is always a good plan to have a pedal coupler along with the Bourdon 16', in order to clarify the sound of the bass, and to serve as a good support. If playing on the Great alone the Great to Pedal should be drawn; if playing on the Swell, the Swell to Pedal should be used. In the unit type of organ,

since there is neither Great to Pedal nor Swell to Pedal, discover from which set of stops the 8' stops on the pedal are borrowed and choose the stops which approximate the strength of the manual on which you are playing. For instance, if the Open Diapason on the Great is drawn, by all means do not hesitate to use the Diapason 8' on the pedal. For the softer combinations, use a stop marked Flute 8' or Gedeckt 8' along with the 16' pedal stop.

In the case of a solo and accompaniment, the pedal coupler should be drawn for the manual which provides the accompaniment, that is, the softer one. (This rule again applies to the "straight," as opposed to the "unit" type of organ.) For instance, if an Oboe solo on the Swell is being accompanied by a Great Melodia, the Great to Pedal is the desirable pedal coupler. Otherwise there would be two oboe solos, one in the soprano and the other in the bass part.

If your organ is fortunate enough to have a strong bourdon 16', or even an Open Diapason 16', on the Pedal, do not fail to use it occasionally. It really does not sound as loud to the congregation as to the organist, and it helps tremendously in rounding out the fuller combinations, and in supporting the entire musical structure.

## How to Understand the Pipe Organ

By ALBERT TUFTS

### Part II

JUST AS THE LOUDER EFFECTS are produced by coupling the manuals, conversely we get the softer effects by removing the loudest stops and the bright colors and by uncoupling the several manuals. By prescribed planning, the loudest organ may be instantly reduced by pressing down the crescendo pedal to the very softest stop, and by planned lesser volumes or colors (pre-arranged upon different manuals) we may quickly play the softest, sweetest effects. Not much variety can be gotten upon a one or two manual organ, because one cannot change stops as often; and the music and tempo suffer when we "take off" what we had in order to gain new combinations. When we play upon a three manual organ (possibly a two manual one, if the latter has many push buttons), we may pre-arrange new sounds upon new stops and hence can jump to another manual of different colors or wanted volume, so quickly that not a note is lost. The following key will explain fairly well the planning an organist does, always in advance of his present playing or sometimes instantaneously before the change, and yet previously planned. When we speak of "Positive," we mean volume, color and brilliancy. By "Negative" is meant much more quiet in color, and mood, and possibly less volume. *ff* means very loud and *pp* means very soft. *mf* indicates medium loud, and so on.

### A Colorful and Expressional Scheme

Positive: Reeds (red) both *ff* or even *p* in color and volume Strings (yellow) *mf* to *pp* are "positive" in color but not volume.

Negative: Diapasons (grey) *f* stops are positive in volume, but negative in color.

Flutes (blue *f*, *mf* or *p* are negative volume and color.

Positive Expressional Points are: strict human *a tempo*; staccato (touches) effects, *accelerando*, *crescendo*; two-four and four-four time; fast tempos.

Negative Points (certainly nothing weak but rather beautiful) are:

*Legato* touches; slow tempos, soft volumes and the duller milder colors. *Diminuendo*, *rallentando* (to be done rarely), changes of pace, and nine-eight, six-eight, three-eight and three-four tempos.

Dramatic music, brilliant music and fast playing come under a positive head; while beautiful, *cantabile*, lovely, sentimental, quiet, serious music is under a negative emotional spell.

Singers, orchestral directors, choir leaders, church congregations, and the general public, have not begun even slightly to appreciate the difficulties of good organ playing and the profound mechanical difficulties under which the organist labors when he plays this Emperor of Instruments.

### There Be Kings and Kings

IT IS NOT TRUE, in any sense of the word, that the violin is the most difficult instrument, or the oboe, the violoncello, or the French horn, difficult as they really are. That is but conversation among orchestral players who never have attempted to play an organ. The piano and all concert instruments do have very difficult digital maneuverings at times; but none of them can begin remotely to compare in mental preparation to the difficulties encountered in organ playing; and it is time the public should understand something about this fact and give especially the concert and advanced church organist his due regard! Reference is here made to the supreme logical work, not necessarily the digital feats which organ playing demands.

Singers have a great art of placement, timbre, diction and so forth; but after they are through singing a song, a solo in an anthem, or perhaps two or three solos in an oratorio, they have little else to do in a given program. The same is true with many instrumentalists; but an organist accompanies every single soloist, the choruses, tries to imitate the orchestral instruments (when accompanying an oratorio), turns his pages, pre-registers, plays with both feet (creating expression and bass tones), uses both hands not only to play the notes of the music, but also to do all of this while

(Continued on Page 348)

## A PIPE ORGAN

for Your home

An interesting disposition of console and organ chamber in a recent installation.

Organists thoroughly enjoy the tone and fast action of a Wicks organ

Inexpensive to own and operate . . .

Everyone thrills at the tone of a pipe organ. If your child is musically inclined, you can, at a reasonable cost, install a small, but one of the finest pipe organs made today

Installation is simple and usually involves no alteration in walls or floor, operating costs are but a few cents, and mechanical upkeep is low. Buy a Wicks organ and enjoy all of its exclusive features.

## CONSERVATORY OF MUSIC

A DIVISION OF OBERLIN COLLEGE

Graduates are prominent in the musical world as concert artists, music teachers and supervisors in public and private schools, directors of conservatories, deans of college music departments.

Thorough instruction in all branches of music . . . 46 specialist teachers . . . excellent equipment (over 200 practice rooms, 23 modern organs, including two large recital instruments) . . . inspiring concerts by world-famous musicians and organizations . . . weekly student recitals . . . for these reasons Oberlin Conservatory attracts talented and ambitious students from 39 states and 6 foreign countries Degrees: Bachelor of Music, Bachelor of School Music, and Bachelor of Arts, with major in music. Oberlin College, on the same campus, makes possible excellent combination courses.

## ORGAN AND CHOIR QUESTIONS

Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. I am enclosing a list of stops of a small organ. Will you kindly indicate a registration for March of the Magi; and also for Children's Choir, and for a four voiced choir singing a mass?—E. K.

A. We are taking it for granted that you refer to the March of The Magi by Dubois. For the sustained high note, representing the "Star," we suggest the use of Swell Flute Harmonic and Swell to Swell 4' coupler (Tremolo ad lib.). Since you have only three stops on the Great organ, we suggest the use of the Dulciana and Melodia, with the Open Diapason reserved for use in the louder passages (Swell to Great coupler ad lib.). Use both Pedal stops and Great to Pedal coupler. For Children's Choir, use whatever stops are necessary to support their work, omitting Vox Celeste and Great Open Diapason. This procedure may also be followed for the singing of the Mass by the four voiced Choir, adding Open Diapason for increasing volume, and 4' coupler for added brightness.

Q. I use a Vocation reed organ with two manuals—list of stops enclosed. Which are the best solo stops? What stops for hymns sung by a small congregation; also stops for accompanying a contralto soloist?—E. A. S. D.

A. Some solo stops that you might use are Violin Diapason, Stopped Diapason, Harmonic Flute (8'), Trumpet or Melodia. You might also try adding Harmonic Flute 4' to any of the mentioned stops. We presume your Great Dolce to be an 8' stop, which appears, from your list, to be the only stop available for accompanying the solo stops. However, we think some Great stops are omitted from the list of stops for that manual and are indicated in your list as not belonging to that manual. Any satisfactory combination may be used for solo effects, with proper accompanying stops on another manual. For singing by small congregation, use whatever stops you find necessary to support their singing, omitting Open Diapason 16'. Trumpet and Tremulant. Use Octave Couplers if brilliancy is desired. The stops to be used for accompanying a Contralto soloist will depend on the amount of tone desired, character of the passage to be played, and so forth. Your ear must become your best guide.

Q. I note your answer to L. H. B. in THE ETUDE. Kindly advise me of conditions for obtaining a copy of the Requirements for membership in The American Guild of Organists.—R. H.

A. Examination Requirements for The American Guild of Organists may be secured by addressing the organization at RKO Building, Rockefeller Center, 1270 Sixth Avenue, New York City. The 1939 Examination Requirements also appear in the July 1938 number of The Diapason, which is the official organ of the Guild. The Address is 1511 Kimball Building, Wabash Avenue and Jackson Boulevard, Chicago, Illinois. Persons wishing to take the Examinations must be elected to Colleagueship in the Guild. This is accomplished by the endorsement of two active members, and details may be secured from the headquarters office in New York, as already mentioned.

Q. Our church recently purchased robes for the choir. Is it proper and necessary that the choir director wear a robe when the choir is robed? He also leads the congregational singing, and our church services are not very formal. Should choir members, singing as a quartet, trio and so forth, be robed when the choir is not singing at the same service?—M. A. D.

A. While we are not aware of any rule governing the matter of the director wearing a robe, we should think he should wear a robe when appearing with the choir. The quartet, trio and so forth being robed when the choir is not singing is a matter to be decided by local preference and circumstances.

Q. I am playing an organ built in 1863. When this organ was installed in our church, some years ago, the Trumpet pipes were damaged and discarded. A young man is anxious now to install another stop on the Great to take the place of the Trumpet. What Solo stop would combine with the rest of the registration, a list of which is enclosed herewith?

A. The disadvantage of the use of an additional solo stop on the Great organ is that it is, no doubt, an unenclosed Great organ and the added stop would not be under expression. You might consider a Gamba, an English Horn or a Cornopean.

Q. Enclosed is a list of stops included in our church organ (reed-pipe tone). Please group them, very soft, medium full organ for chorus singing, solos, quartets and other combinations. Also, please give correct pronunciation of each stop and of your music magazine "The Etude."—J. H. H.

A. It would be unwise for us to judge the power of the stops without hearing them. We presume Dulcet Bass and Dulcet Pipe to be your soft 8' stops. A general explanation of

stops may assist you, 8' stops are normal pitch—same as piano, 4' stops speak one octave higher, 2' stops two octaves higher, and stops one octave lower than normal pitch. "Etude" is pronounced a'-tid'. The words B (base) and coupler (cupler) pipe, Perfecting Harp, Roman and Reed are pronounced according to customary usage. We give the following as the pronunciation of some of the other words—as included in Webster's Dictionary—

|            |                |           |
|------------|----------------|-----------|
| Dulcet     | dū'let         | (Dyah for |
| Diapason   | pi' zōn        | first two |
| For        | for' ta        | syllables |
| Viola      | ve' o' la      |           |
| Violina    | (not given)    |           |
| Acolian    | ē' o' li' an   |           |
| Vox Humana | vō'k hū mā' nā |           |
| Flutino    | (not given)    |           |
| Sackbut    | sak' bŭt       |           |
| Piccolo    | pik' o' lō     |           |
| Cremona    | krē' mō nā     |           |
| Celeste    | (not given)    |           |
| Cello      | chēl' o        |           |

The following key to the pronunciation may be useful:

|                 |                   |
|-----------------|-------------------|
| "ā" as in pay   | "ō" as in connect |
| "ē" as in end   | "ō" as in obey    |
| "ī" as in ill   | "ū" as in unite   |
| "ō" as in old   | "ā" as in arm     |
| "ū" as in up    | "ē" as in eve     |
| "ā" light "nh"  | "ō" as in Lord    |
| "ē" as in event | "ī" as in menu    |

Q. Will you please send me the names of the five lowest priced pipe organs and their builders and quote their prices; also if you know anything about an electric organ, which it is rumored, is priced about half that of two pipe organs, please send particulars.—J. R. V.

A. As noted at the head of this department, we cannot name any particular builders in these columns. We suggest your consulting various builders, advertised in our columns and other magazines, requesting prices and so forth.

Q. We have a two manual organ placed in a recess of the church, which is larger than the organ. We should like to eliminate the main space on each side and above the instrument. An architect suggests that drapes of some such material as velvet be hung above the organ and down each side. Will this muffle the sound? If this plan does not meet with your approval, will you suggest an alternative?—B. C.

A. We would not advise "drapes" or any cloth material, which might muffle the sound. Our suggestion would be wooden grill work decorated to match the case, with generous sized openings. The cost might be ascertained from your nearest mill man.

Q. We have a two manual organ consisting of Tubas, Flute, Violin, Diapason, Oboe and Vox Humana, and are concerned with its being kept in tune. The Flute stop remains fairly constant, but the others drop as much as a whole tone over a period of six months. The organ chamber is of 6" concrete and there is no humidity or speak of during the twelve months of the year. Our tuner claims that the seasonal changes in temperature affect the pipes. Regardless of the change in temperature the pipes always drop in pitch. If there is contraction it would seem that there should be a like expansion during the opposite season.—E. T. S.

A. The trouble you mention might be due to a faulty reservoir, or lack of wind due to leaks occurring at season when the organ is "dry." Otherwise, if properly tuned, it should contract and expand as you suggest, sharpening (except Flute stops) in summer time, and flattening in winter time. Since the reed and flute stops are not evenly affected by temperature, they will of course not be in tune with each other at all times, but they should not always drop in pitch.

Q. I have a one manual reed organ, containing stops included on enclosed list, which is extremely hard to pump. If the feet are not kept moving very fast the notes are blurry. Can anything be done to remedy this condition? Can you give me information concerning different combinations? Will you give me a list of books for the reed organ and prices? How much is an organ like mine worth?—D. H.

A. We suggest that you have the instrument examined by a practical organ mechanic, as a leak may be causing the trouble you mention. We presume your organ contains only 8' stops, with the exception of the Viola, which may be a 4' stop. We suppose Dolce and Dulciana to be your soft stops. Treble coupler couples treble notes an octave apart while Bass coupler couples similarly in the lower section of the keyboard. Forte I and Forte II increase the power of certain stops. Vox Humana is a tremulant. Books of music for reed organ include "Keys for the Organ," by Jackson (\$1.50); "Reed Organ Player," by Lewis (68 cents); "Original Pieces for Harmonium," by Francis (\$3.38); "Reed Organ Selections for Church Use," by Diltson (68 cents); all of which may be secured from the publishers of THE ETUDE. You might inquire of the builders of your organ as to its present worth.

# Have You Studied Harmony?

Music is a universal language like the language of speech its own grammar. The grammar of Music is Harmony—and you have not studied the subject should not delay any longer.

Learn to analyze compositions—to study the chords used and thereby gain intimate knowledge of the intentions of the composer. You get at a real understanding of the basis of phrasing, accent, which is interpretation, and a knowledge of the chords. A knowledge of Harmony helps satisfy the natural curiosity of every musician, which is "How did the composer do it?"

In the study of Harmony you learn correct errors in notation, which occur in the best editions of music; to know when apparent discords are correct.

Harmony will help you to memorize easily and more permanently. It will help you understand the reason for progression of chords used, and enable, therefore, more readily to grasp the composition in mind.

We give you free, a practical demonstration of the thoroughness of our University Extension Conservatory courses and how easily you can master our courses. Sample lessons are sent without obligation to you.

By making an examination of sample lessons can you form an informed opinion of the real merit of our remarkable method of music instruction. Let us send you these lessons. We will show you how quickly you can equip yourself for greater things in musical way and make more money from music than ever before.

Our Catalog and Sample Lessons of Harmony course or any of our other courses which interest you the most. As this will place you under no obligation whatever, you have everything to gain and nothing to lose. Please send us your name, age and course in which interested. Try the Lessons, then decide.

## THE ACCORDION DEPARTMENT

### The Accordion as a Suitable Instrument for Ladies

By PIETRO DEIRO

As told to Elvera Collins

IT SEEMS A REGRETTABLE FACT that there are not more lady accordionists. Perhaps this condition might be changed if more ladies knew that the accordion makes a particularly suitable instrument for them, whether they are quite young and interested in it for a vocation, or whether they are near middle age and looking for an instrument to serve as a hobby or pastime.

The first thing to consider in this discussion is a suitable instrument. We have an idea that some ladies may have become prejudiced against the accordion when they chanced to witness the performance of some woman of slight stature with what seemed to be a heavy and massive instrument.

The good news for ladies of small or delicate stature is that such performances are entirely unnecessary. Modern manufacturers have perfected a type of instrument for ladies which is not only light in weight but also small in size. By the process of special designing and the use of certain materials, this instrument is made to compare favorably with the large sized accordion, as to both quality and volume of tone. The bass section of one hundred twenty bass buttons provides the same wide range of accompaniment as the larger instruments. Also register switches for both hands have been provided. The carrying cases are durably built, although light in weight. Fortunately for the ladies, such instruments are available at popular prices.

#### Professional Possibilities

HAVING REMOVED the imaginary handicap of the weight and size of an accordion for ladies, let us consider its possibilities as a vocational instrument. Our first example will be that of a young lady who wishes to become a professional musician, but who has not had the advantage of early musical training. The accordion is particularly suitable here, because if the young lady applies herself diligently she can become a good performer in a fraction of the time it would take to progress to the same degree on such instruments as the piano or violin.

Lady accordionists are in demand as solo performers at social functions such as teas, receptions, musicales, dinner parties and banquets. The repertoire for such playing should include numerous light classics, as well as many standard well known selections. A few of the more difficult overtures should be kept rehearsed at all times, for there are many occasions when it is advisable to open a program with an overture. It not only adds distinction to the program but also reveals the musicianship of the performer. The rhythms of the tango, rumba and bolero seem exceptionally well projected on the accordion and always should be included in a program. Medleys of light opera selections are well received, and one of these often serves as appropriate material with which to close a program.

It is quite imperative in this line of playing that all selections be memorized. Naturally a lady accordionist appears more charming if she plays while standing.

Many of the foregoing facts apply also to young ladies who wish to become orchestra accordionists. The requirements for repertoire and memorizing are not so great in orchestra work, but other demands take their place. The orchestra accordionist must be a rapid sight reader. Her technique must be exceptionally well developed, and she must have a thorough knowledge of harmony. She must be also adept at im-

provising. Unfortunately, most modern popular song orchestrations do not include an accordion part, so the accordionist must be prepared to create her part at sight, from whatever sheet may be given to her, whether for piano, violin or other instrument.

The radio field also is open to lady accordionists, and those who do not care for either solo or orchestra playing may enjoy forming a ladies trio of accordion, violin, guitar or violoncello. Such a trio could provide entertainment at social functions, as recommended for the solo performer.

Young ladies who are vocalists, as well as accordionists, should have little difficulty in securing a position either as individual performer or in ensemble.

#### A Field for Piano Teachers

PIANO TEACHERS should be interested in the accordion as a second teaching instrument. They are well prepared for such teaching, because practically eighty percent of their musical knowledge can be immediately transferred to the accordion. Only a brief period of concentrated study would be required for them to master the manipulation of the accordion. There is an actual need for such instruction, because the demand for competent teachers is greater than the number available.

It is easy to understand why many pianists remained aloof from the accordion in the early days of its development, because most of the instruments were crudely made, and the reeds were so inferior that it was impossible for the entire instrument to be exactly in tune. The accordion of to-day is quite a different instrument, because the reeds are so perfectly constructed and tuned that they are capable of emulating the deep vibrant tones of an organ.

This article would not be complete unless mention were made of still another group of ladies who should be interested in the accordion. We refer to women who have studied music in their girlhood and then put it aside while they devoted their attention to their homes and families. After these responsibilities are over, there comes a time when a hobby or pastime of some sort may be sought. Reading and listening to the radio become tiresome, so what could be more fascinating than to recall the music learned in early life and to put it in actual practice by learning a group of accordion solos?

The accordion is the only complete portable instrument. It is convenient as a hobby, for it can be stored in the back of a car and taken to the beach or summer camp, or to the home of friends for an evening of music. Simple little tunes take on added charm when played on the accordion, even though the player is not an accomplished musician.

# THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

## The "New Deal" in Violin Teaching

By HYMAN GOLDSTEIN

THERE IS A NEW approach in violin teaching. The modern teacher is developing neither Paganini nor Heifetz, but he is bringing music closer to the average student. His procedure sounds a challenge to the struggling teacher of soloists, as well as to the violinist who has abandoned teaching for jazz, ensemble or symphony work.

In the pre-depression era, almost every fiddler had his eyes set on Carnegie Hall and the solo stage. Those who failed as soloists became teachers to show others the road to success. Fond parents visualized a Heifetz, an Elman, a Zimbalist, every time squeaks and scratches rose from the practice room.

This spirit made for nothing of deep value. Would be soloists listened to soloists—not to appreciate, but to imitate. The isolation bred by conscientious practice, varied by lessons, by concerts, had no good effect on mediocre fiddlers. True, with a few pupils of rare talent this system worked. Ricci, Menuhin and others were developed on a basis of lessons by Persinger, and constant practice (as much as five hours daily) supervised by an assistant teacher. Heifetz, Seidel, Rosen, Brown, Elman and other Auer pupils were developed from unusual talents.

Against that record, place the thousands of would be soloists who have failed dismally; who have given all they had—their youth—to the violin, and received from it a dim knowledge of violin music; or, at best, a disgruntled place in an orchestra, ensemble or jazz band—or a precarious living as a teacher of other soloists to come.

Violin teachers of the old guard were sincere. To their mind, the only way to teach violin was to teach it individually, with the aid of the standard etudes, concertos, and shorter pieces. For unusual pupils, this method had advantages. But to-day we must teach non-professional amateurs, adults and children.

From our own experience, and from that of friends, music teachers and school music supervisors in all parts of the country, we have come to the conclusion that ninety-nine out of every hundred violin students have no definite talent sufficient to warrant the sacrifice of time, money and energy that a career as soloist demands.

Obviously, for such pupils the usual routine of soloist training is futile. They will

not respond to Mazas, Pleyel, DeBeriot, Laoureux, Ševčík, Rode, Kreutzer. It is not their diet. That is why violin study has a high mortality rate. Pupils give up after a month, or a year, or five years, and never look at the violin again. They are not to be criticized; usually it is the fault of the teacher.

How many old fashioned teachers see violin lessons not as an end in themselves, but as an open sesame to music appreciation in all its phases? How many think violin playing should be fun, should be really playing?

Play is essentially a social activity. Other people are involved. Play is one of the necessities of a balanced life in adult or child. In the past, violin playing was largely an individual affair between teacher and pupil; imitating, interpreting, learning (perhaps); nothing of the real spirit of play. At home, the washboard drudgery of practice. Why should pupils practice? There was no motivation, no incentive.

### Playing for Pleasure

MODERN VIOLIN TEACHING takes these facts into account. It assures supervised practice. It develops music appreciation. It makes violin playing fun. And it limits technical studies to those pupils preparing for a concert career.

This is no haphazard series of class violin lessons. Nor is it merely ensemble or orchestra training. This is an attempt to teach violin by means of a graded ensemble violin group, which uses players at all stages of advancement, and develops orchestral flavor from violins alone.

This approach may be used by teachers who write their own material as they work with each group—an excellent plan. Established methods in common use include the Van Hoesen series and the Church-Dykema "Orchestral Training Series."

The excerpt in column III shows the new method in action. Group I of the pupils have never played a fingered note. They have been told about notes, time values, positions, bowing. Group II pupils have played quarter notes, using three fingers. Group III have played eighth notes, using all fingers. Group IV have played simple melodies in complex rhythms.

The melody is a hunting call, used by Mozart in a piano sonata, and by DeKoven in "Robin Hood." And so we have our

appreciation, right from the beginning.

The unit is played through, then corrections are made. The teacher conducts, teaches, prevents important mistakes. Units are graded in a continuous series: pupils progress from Group I work to Group II, and so on. Their progress is as rapid as their ability.

This type of class work enables every player to participate in a social group which actually makes music from the very first moment. Even the most clumsy beginner, navigating uncertainly on open strings, learns something about music, learns to play in a group. Coöperation, work with the group, is the purpose of modern education. Coöperation, and appreciation of music, are the purposes of modern violin teaching.

Melody No 1.

Group I

Group II

Group III

Group IV

The teacher should arrange his favorite melodies, taking care to grade them for his study groups. Four measure units are most convenient.

The same groups meet three times a week for ensemble playing. On the other two days, they study technical material, scales, time relationships, and so on. But there is music at every meeting of the groups. Music is reviewed frequently. Meet-

### THE SWEETEST VIOLIN IN THE WORLD

Do you doubt it? Then take a bite, as the instrument is made of sugar.

ings are planned; familiar music begins and ends each session.

Every pupil receives one hour of lessons supervised practice and playing for the nominal fee of twenty-five cents. For each group of eight, the teacher receives ten dollars a week.

Using this method, the teacher will have a fairly definite income. He will have prestige in the community. He will have time to develop exceptional talent—at rates the traffic will bear—in the approved manner for training soloists. Moreover, some of his mediocre students may surprise everyone, including the teacher, and develop new interest in the instrument, or possibly solo ability.

This method may be modified to specific needs. In emergencies, it may be adapted for WPA educational work.

This plan will help the teacher make music a vital part of community life. Violin playing will become fun—play—as it should be. Child and adult beginners will enjoy their spare time hobby. The violin teacher will have justified his right to existence in the new social order toward which we are moving.

## How to Teach a Beginner to Tune His Violin by His Own Ear

By BENJAMIN E. GALPIN

ANY PRIVATE or public school violin teacher who imparts to his student the ability to tune his instrument without the aid of piano or pitch pipe, will have added something not only of great value in the development of his pupil's musical hearing, but also of prestige to his professional reputation as a teacher who does a certain necessary thing which other teachers fail to do.

How pleased the young student and how proud the parents when "Johnny" can tune his instrument at home by his own musical "ear."

He will be encouraged to discover new powers put to practical use.

Every child can recognize the right pitch sounds in the little song by Mozart known in Europe as the a, b, c, song and in America commonly as "Twinkle, Twinkle,

Little Star" (do do, sol sol, la la, sol).

Using this ear training the very beginner is able to tell whether or not the open strings A and E are at such a relative pitch as will make the little song sound as it should.

Twinkle, Twinkle

A A E E

do do sol sol

In psychology of music the ability to

recognize pitch and rhythm without aid referred to as independent leadership hearing type, while that class which finds it necessary to have aid to "carry the tune, or pitch, is sometimes referred to as a matched tone type.

A few years ago we often heard the word, monotone (referring to that type who were supposed to be unable to sing or to execute on an instrument); but physical

ing, dramatics and public school music done wonders to eliminate the monotone that made monotone unnecessarily nt. ny violin teacher, by using his own ument and tuning the E string high, or correct, will have a surprise await- when he discovers how keenly all stu- can discern accurate pitch as they n for "Twinkle, Twinkle," or A A, , or do do, sol sol. seems unnecessary to add that it is a

disastrous effort, and very discouraging, when a young student attempts to tune a steel E without a tailpiece tuning adjuster. Using one makes tuning this string very simple. The open strings D D, A A sing the same little song by making D argue with its perfect fifth A. Tune the D string being sure not to disturb the pitch of A when once it is fixed with its perfect fifth E. In like manner the G and D may be tuned.

## Each Student to His Own Talent

By J. W. HULFF

RE ARE MANY young violin students consider practice periods and taking ns a waste of time. There are some will go to almost any lengths to avoid weekly or semiweekly visits to the ner. Many and varied are the excuses are offered: Want of time on account me school work; objections to study- the violin because one of the parents a young had a love and desire for a music, but could not purchase an ument or take lessons on account of ial reverses; dislike of the violin be- of an urge to become a saxophone r or a drummer; "not interested be- it is easier to turn on the radio and music without working for it," and n, and so on. ere is no need here to answer these tions. The fact is that instruments co-day be secured to "fit" any pocket and violin instruction can be secured asonable cost, or taken free of charge r public schools. The other objections e met with the truthful and convincing tion that every child should have some c in his or her life. it is the wish of the parents, every should willingly take up the study violin; and, if at the end of a year's ction, with regular and conscientious ice, the student absolutely does not to continue, another instrument should osen; then, in later years, the son or

daughter cannot say that they never had a chance to study music. No matter what instrument is chosen when the violin is laid aside, the first year's study will not have been wasted.

It so often happens that those who can best afford to secure violin instruction are the very ones who do not appreciate their opportunities, while many a poor child, hungry for music expression through the medium of the king of instruments, must be content with corn stalk fiddles or cheap machine made instruments picked up in pawnshops or second hand stores for a few precious dollars. It is these latter children who so frequently accomplish wonderful results within a short space of time. They soon discover that the violin is not difficult to play, for, after all, there are but four strings and four fingers that are called into use.

If you have had a few lessons and meet with some slight difficulties that can easily be overcome with a little extra practice, do not be quitters! You owe it to yourselves, your parents and your friends to make good—and you can make good if you are sincere. If the violin required no practice it would become so common that none would care to listen to it.

There is no more need for you to become a second Kreisler than there is for you to become the greatest mathematician because you study arithmetic.

## The Science of Bowing

By H. JOSEF KLIMPL

THE DAYS OF TARTINI to the present the movements of the right arm in rela- to bowing have been referred to as the of Bowing. Granted that the knack of olling and producing a beautiful tone her with absolute control of every type wing under every condition is surely t, what of the great amount of pre- rory work involved in creating this erful art of bowing? The science of g enters when we start to analyze the ments of the upper arm, lower arm rist. And what of the many intricate s across the strings which, when ized, produce all sorts of figures; s, circles, semicircles, lines and what Surely this is a science all of its own. en attempting to analyze the right do not become confused and wonder er too little or too much arm move- is being used, or too little or too wrist. Do not lose hope because your g does not conform to the standards re set by Mr. So and So. Remember owing is of such an individual nature o analyze, and, if it were possible, to te the bowing of the great artists of y we would be doomed to immediate

failure, simply because of the individuality of bowing. Does Kreisler bow as Menuhin, or Huberman as Elman? And to go further, the three violinists, Heifetz, Zimbalist and Elman are disciples of the same school of violin playing (the so-called Russian school developed by Leopold Auer) but they do not bow alike, nor could they, as the bow- ing technic of these three artists is as far apart as their respective personalities. This, in spite of the fact that they were taught bowing by the same teacher.

But perhaps the most important factor in the matter of bowing is, and always will be, instinct—the instinct to cross the string with the proper movement, at the correct angle, the right amount of bow, neither too little nor too much wrist or arm. Instinct will be your guide in the proper movements. Remember, as no two people have the same finger prints, no two people can bow alike and the sooner you begin to develop an in- dividual style of bowing, the sooner will the goal be reached. Analyze each and every movement of the right arm and wrist and remember that bowing is an art only when its science is perfected when applied to the individual.

\* \* \* \* \*

"We can do without fire in the house for half of the year; but we must have music the year round."—Sidney Lanier.

## Special 4 Weeks Teaching Engagement

World Famous  
Piano Virtuoso

# MORIZ ROSENTHAL

Known for 50 years as a "giant of ability—the perfect pianist—of all Liszt's great students he is the only one still active in concert."

**VIOLIN TONE IMPROVED**  
Most violins are improperly thickened. Many have defective bassbars, as well. Either shortcoming will be a damage to tone. As an expert violin acoustician, I guarantee to greatly improve the tonal quality of any poor instrument, cheap or expensive,—to invest it with a sparkling, resonant, melodious voice that will be permanent. The next best thing to owning a beautiful FRASER VIOLIN is the pleasure of owning another make of instrument which I have overhauled. Ask for my Revoicing Circular; it's free.

## VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

#### A Semböck Violin

O. B. R.—I cannot find the name of Gabriel Semböck in any of the lists of famous violin makers, but your violin may be an excellent instrument for all that. When you visit a large city take your violin with you, hunt up a leading dealer in old violins, and get his opinion on yours. In his business of selling old violins he may have come across some Semböck violins.

#### A Town Named Viola

T. P.—Yes, there is a town in the United States named Viola—Viola, South Dakota.

#### A Book on Viola Makers?

H. J. G.—I do not know of a work on the viola, listing the most famous viola makers, and giving a price list of their instruments. There may be such works, published in Europe, but I do not know of any.

#### Flicker from Markneukirchen

C. A. D.—Johann Christian Flicker was a violin maker who made violins in the Markneukirchen region in Germany, from about 1755 to 1800. As the label in your violin by this maker is dated 1753, it would be approximately one hundred eighty-five years old. The violin was probably made two or three years before 1755. Flicker had only a moderate reputation as a violin maker. I cannot find prices of the violins of this maker listed in any works on the violin. Take your violin to a dealer in old violins, and he can estimate the value. Violins made by Johann Christian Schoenfelder, another Markneukirchen maker, are valued at from one hundred fifty to two hundred fifty dollars, in late catalogs.

#### Violin Playing an Aid to Singers

H. L.—Many famous female singers have perfected themselves in their art by learning the violin. Marion Talley, the famous American soprano is an excellent violinist. She formerly sang with the Metropolitan Opera Company, and now she is a star of a well known radio program. She is said to learn her songs by playing them on the violin before singing them. Many other singers have made a practice of this.

#### Names of Famous Violins

S. T. G.—Practically all of the most famous violins of Cremona have names, which, however, were not given them by the makers of the instruments, but by the owners, collectors, or famous artists who used the instruments in their concert playing. Thus, of the Stradivarius we have, the "Doyen," the "Adam," the "Prince Uchtomsky," the "Derenberg," the "Conte D'Armaille," the "Archinto," and so on. Some of the names given to the Joseph Guarnerius violins are, the "Leduc," the "Doyen," the "Spanish Joseph," the "Jarnowich," the "Mario." Other famous Cremonas have been given various names. A famous Guadagnini, is known as the "Leonard," a famous Bergonzi as the "Bonjour de Paris," a great Amati as the "Roxas." As far as known none of the great Cremona makers named their violins. Collectors and violin dealers consider it an advantage, from the standpoint of advertising value, for such instruments to have names.

#### Vibrato and Bowing

W. G. V. 1. In the example you send, the four notes, each with a dash underneath and a curved line below the four notes, are played in one bow, with a slight stop between the notes. In other words, push the bow four times in the same direction, giving a short stroke to each note. 2. A prominent teacher says of performing the vibrato, "The violin's neck should rest lightly upon the middle joint of the thumb, also, the index finger's root-joint should positively not be in contact with the edge of the violin neck, as the hand could no more wave back and forth than a flag which was nailed on at the lower section of its pole."

#### The Famous Maud Powell

T. R.—The late Maud Powell enjoyed the reputation of being the greatest American violinist. She studied the violin in the United States and Europe, where she was the favorite pupil of the great Joachim of Berlin, and concertized with great success all over the world.

#### Another Stainer?

A. G. M. 1. No one can tell, without examining it, whether your supposed Stainer violin is genuine or not. You will have to submit it to an expert judge of old violins. There are thousands of imitation Stainers in the world, many of which are clever copies of the originals. A translation of the labels (written with pen and ink) in Stainers' violins would read; "Jacobus Stainer (made this violin) in Absam, near Innsbruck in (the date follows). 2. Some violinists prefer to have the strings higher above the fingerboard than others. Get the advice of a good violin maker on this point, or try several violins until you find one which you can play easily. Then measure the height of the different strings above the fingerboard. After you have ascertained this, you can cut

your bridge, so that the strings will be of corresponding height. Some players like the strings low and some high.

#### François Partelle

A. L. McA.—Sorry I cannot trace the history of François Partelle, Bologna 1770, or his violins. There are thousands of violin makers quite unknown to fame, some of whom, nevertheless have made excellent violins. If you visit Detroit at any time, which is near the city where you reside, you might take your violin with you and show it to some of the dealers in old violins, in that city, and they may know something of the maker.

#### A Popular Violin Solo

A. C.—The violin solo by Kellar Bels, "Son of the Pusztá," is pronounced, "son of the pooz-tah?" It means "Gipsy."

#### Cannot Judge Violins

J. H. T.—We are sorry but it is against the policy of THE ETUDE to express an opinion for or against the quality of violins sold by various dealers. Your best plan is to have your teacher or some violinist friend examine any violin you are thinking of purchasing.

#### An Older Beginner

M. W. 1. Just how any teacher can expect you, after but two months study, to be ready for the "Kreutzer Studies," fingered octaves, the vibrato, the "Concerto, No. 23," by Vieuxtemps, and other violin works of similar difficulty, is past my comprehension. Maybe he meant for you to study these works after two or three years of study. They would do you no good short of that time. The fact is, if you try to study these difficult works after only two months of playing, you will be wasting your time, and getting nowhere. Thousands of pupils, hoping to become good violinists, accomplish nothing because they are working on material years beyond their present ability. I would advise you not to spend too much time and money on your violin lessons, since you began at the age of twenty-eight, which is rather late for a violin student hoping to learn music of more than ordinary difficulty. If you have talent, you could, of course, learn pieces and exercises of moderate difficulty.

#### An Unknown Maker

S. A. L.—I am unable to trace the history of the maker whose name appears in your violin. According to the label the violin seems to have been copied from an instrument made by Carlo Bergonzi, one of the most famous makers of Cremona, Italy. You might write to some of the leading dealers in old violins in the large cities; who may know something of the maker. There are thousands of obscure violin makers scattered all over the world whose names are quite unknown to fame.

#### Seating Arrangement for Quartet

E. B. T.—There is some variation in the seating arrangement of string quartets, as some quartet leaders prefer one arrangement and some another. The arrangement used by the Flonaley and London String Quartets, two of the world's most famous quartets, who have made frequent concert tours in this country, are both excellent.

#### A De Beriot Work

G. F.—The "Concerto No. 1, in D," by De Beriot, is a very brilliant and effective work, which is often used in concerts. It has much effective left hand pizzicato work. It can be obtained with piano, or orchestra, accompaniment.

#### Steel Strings for Violoncello

E. M.—Some of the leading music houses in the United States can supply steel strings for the violoncello; that is, the A and D strings. One well known brand of these strings is described thus, "Aluminum A and D, of aluminum wire wound on first grade steel." The C and G strings are of gut, wound with silver plated wire. It is possible to get a string-gauge for a violoncello, so that you can select the thin strings you require. If not, the music dealer could no doubt select some very thin strings, which are of the size you have been using.

#### When Did They Begin?

H. K. F.—The exact date on which the most famous violin prodigies began to study the violin is not known, but in most cases it was very early. Heifetz, Elman, Zimbalist, and other virtuosi, at present before the public, are supposed to have begun at the age of four or five. Now comes Gulla Bustabo, Italian-American, who, at nineteen years of age, is just finishing a world tour, in which she has achieved remarkable success. Recently, in New York, she played the "Violin Concerto in D minor, op. 47," by Shubert, accompanied by the New York Philharmonic-Symphony Orchestra, and received an ovation. She is reported as having commenced to study the violin at the ripe age of two years, but whether this is the exact age or not we have no record. She has rapidly advanced and is now a world famous violinist.

# MOUS FOLIOS for SCHOOL BANDS ORCHESTRAS

Collection has books for Clarinets, Saxophones, and for Trombones.

**BAND and/or ORCHESTRA**  
**ALBUM OF MASTER CLASSICS**—Composed by such composers as Beethoven, Wagner, Tchaikovsky, Schubert, etc.

**CONCERT ALBUM**—14 selected numbers for either band or orchestra, playable in one. Lead parts for eight different instruments include Rakoczy March (Berlioz), Mazurka (Gottschalk), Amariyllis (Ghys), etc.

**ENSEMBLE**—A diversified collection of 14 compositions by various American writers, in combination, 41 separate books.

**ON THE ABOVE** (each collection): Band Book, 30c; String Books, each 40c; Piano Book, 75c.

**EVERGREEN COLLECTION OF Fifty Famous Songs**—Songs that will never die. Heart of the South, war songs, religious songs, for all band and orchestra instruments.

(S. A. B.) 15c; Piano Acc. (Conductor) other books, each 30c.

**BAND BOOK OF CLASSICS**—Contains 16 of such world-renowned composers as Verdi, Humann, Schubert, Massenet, Offenbach, Brahms. Excellent practice in interpretation. Each Book, 30c.

**BAND BOOK OF MILITARY MARCHES**—Published in two volumes, each containing 16 standard marches. Contains NATIONAL EMERGENCY (Vol. 1), and OUR DIRECTOR (Vol. 2). Each Book, 30c.

**F. E. BIGELOW AND COMMUNITY BAND**—6 original compositions, including 8 marches. Excellent for field, street, or concert. Especially effective. "The snappiest Band Print." Each Book, 30c.

**THE BAND BOOK OF HIS MOST FAMOUS**—R. B. Hall was one of the great march writers of all time, and here is the cream of his talent, the ever popular De Molay Command. Each Book, 30c.

**ORCHESTRA**  
**FOLIO OF CLASSICS**—Published in 3 each containing selections such as Kameny (Rubinstein), Polonaise Militaire (Chopin), March (Verdi), Angelus (Massenet), in both large and small combinations. Conductor, 75c; all other books, each 40c.

**FOLIO FOR SCHOOL ORCHESTRAS**—Published in 3 volumes. Easy to play. The melodies are tuneful and the arrangements for all instruments are effective, practical, and correct. Parts for all instruments.

Conductor, 65c; all other books, each 35c.  
**LOOSE-LEAF COLLECTION OF STANDARDS**—Published in 3 volumes, each containing standards as Our Director, National Anthem, and NC-4. Piano-Conductor, \$1.00; all other books, each 50c.

**PIANO COLLECTION OF PATRIOTIC AND HOME SONGS**—120 songs arranged in form for over 50 Band, Orchestra, and instruments. All parts interchangeable in combination many duet, trio, and quartet combinations possible. Piano book includes words and mixed quartet. Each Book, 50c.

**BOOKS FOR MANDOLIN ORCHESTRA**  
**BOOK OF FIRST BAND BOOK**  
**A UNISONAL Instructor**

## Bands and Orchestras

(Continued from Page 305)

The tongue should strike the reed with a firm, quick and well defined stroke and in no case should remain in contact with the reed. It must be drawn back very quickly both to permit the reed to resume its interrupted vibrations and to prepare for the next stroke. The lighter and more rapid the stroke, the more spontaneous and clean will be the *staccato*. The stroke must be thought of as a reaction rather than as an action. Drawing the tongue back is the most important part of the stroke. It is akin to the backswing in golf or the wind-up of a baseball pitcher. All too many beginners have the erroneous idea that a *staccato* stroke involves "hitting" the reed. The motion of striking the reed should be about the same as that of touching a red hot plate with the finger—most of the muscular force is used in getting away from it. This sort of mental image will prevent the very bad habit of remaining in contact with the reed after the stroke.

Above all, it should be remembered that the tongue alone produces the *staccato*. The breath should not be used except as a support for the tone, which, broken by the tongue into small sections, is thereby converted into *staccato*. An even pressure of the breath should be maintained at all times to supply the reed with the means for necessary vibration upon the renewal of the tone; vibration is on and off in a clear-cut manner. The jaw should not move while tonguing—"tonguing" is tonguing, and not "chinning." No outside aid to the tongue is necessary, such as moving the throat muscles, blowing the breath in short bursts, or moving the lower jaw.

### Theory Put to Practice

WITH THE FOREGOING SUGGESTIONS in mind, the student will be ready to try the *staccato*. Take a deep breath, remembering that the diaphragm must be depressed and forward for good support. Blow a long sustained tone such as an open G, for example. Bearing in mind the instructions as to motion of the tongue and its placement on the reed, pronounce the syllable "du." This syllable is merely a suggestion, as many other syllables may also be used with good results—the "du" syllable seems to work best, however, for most people. If everything has been executed correctly, the result of this procedure will be a clean *staccato* note.

The mental concepts which lie behind these physical activities are extremely important. As mentioned before, the main concept to be retained is that a *staccato* is a short, long tone. That is to say, the quality, pitch and intensity of a tone should be exactly the same in a *staccato* note as it is in a long sustained tone. In fact, the *staccato* passage is merely a long curve of tone interrupted by the intermittent stopping and starting of the sound vibrations. This does not mean, as is so often assumed, that a *staccato* passage is a number of tonal sections following each other consecutively. Such a concept is confusing, for, try as hard as we may, no two tonal sections will be exactly alike. It is only by considering the "whole" as an aggregate of its "parts" that we can correctly describe or produce the effect of the pure *staccato*. The *staccato* is an "effect"—an effect or variety in the long curve of tone. It is something done to the tone, rather than a series of entities. Tone is always a prime consideration, and without the tone there could be no such thing as the *staccato*. If *staccato* is produced awkwardly, it will lose its value rather than add to the expressive possibilities.

In the conception of *staccato* there are variations, and the two most recognizable are the "*staccato proper*" and the "*legato-staccato*." The *legato-staccato* is not, as

generally supposed, a product of a more sluggish manner of tonguing, nor is it the dragging of a lazy tongue. It is merely a softer stroke of the tongue as contrasted with the *staccato proper*, which is in itself a quick, light stroke. The very short *staccato*, or *picchettate*, should seldom be used and is simply a shorter and lighter stroke than the *staccato proper*.

When the correct *staccato* is produced upon the clarinet, a very pleasant effect is secured. It is as though a series of small bells had been struck, one after another. They ring with a mellow sound and give the effect of light, clear, cleanly rapid movement. The slight ring after the *staccato*, which is such a valuable and also such a difficult effect to obtain, is one of the most charming and fascinating of the clarinet's multitude of moods. Anyone who has heard it can remember it vividly as an inimitable and extremely pleasant sound. The *legato-staccato* has a more hazy, crepuscular effect. It is moody, languorous and caressing, much like activity on a summer day—not fast enough to be pressing, but simply movement arising out of the joy of living and moving.

In order to attain proficiency in the *staccato*, it is best to approach the problem by means of the *legato-staccato*, or soft stroke of the tongue. This will, of course, involve the use of the "du" syllable previously mentioned. *Legato-staccato* can be procured more slowly and with less interruption of the tone quality. Slow passages in the lower or chalumeau register are the best practice. Repeated *staccato* strokes on the same tone ascending and descending chromatically are excellent as well. Before trying a *staccato* be sure to establish the embouchure by playing one long sustained tone. Keep a steady breath support, and try to use nothing but the tongue in striking the reed. As proficiency is reached in this slow *staccato* work, speed will be found to be simply a relative matter. Strike the reed faster and with a slightly sharper stroke, and the *staccato proper* will be produced. Listen at all times for the bell-like ring after the *staccato*. It is the sure guide for measuring success with this effect.

There are many good exercises to be found for the development of a good, *staccato*. One of the very best is the *Staccato and Trill Exercise* in Baermann's "Celebrated Method for the Clarinet, Book III." The scales and arpeggios in this book are excellent also, particularly for the *staccato*. Do not try for speed at first—try for clarity.

One of the most difficult accomplishments is the playing of one clean, clear cut, perfect *staccato* note in any register, without extraneous sound before or after. This is possible only when complete control of the tongue has been attained. By working on the *staccato* by the principles mentioned, and by constantly experimenting, the student will at last accomplish good results. After a certain degree of proficiency has been attained in the use of the tongue, the student will find that his next problem is the correlation of the tongue and fingers. This constitutes another problem intimately associated with the problem of technic, and which must be treated elsewhere. The suggestions given here aim fundamentally at the acquisition of perfect use and control of the tongue. The Blancou studies from the works of Mazas are excellent in this respect.

For the solution of the problem of *staccato*, as well as in all other problems in clarinet playing, there is no substitute for practice and patience. The only limitations are the extent of his own ability to apply the method presented.

NO Instrument Offers  
*Richer Opportunity*  
Than The VIBRAHARP!

Photo shows Adrian Rollini, internationally famous Vibraharp star.

Whether you play for pleasure or for profit, no instrument offers greater opportunities for achievement than the sweet and mellow-toned Vibraharp.

For proof, spend an evening with the radio. Note the prominence of the Vibraharp in the arrangements of top-notch orchestras . . . its success in swing ensembles . . . its mounting popularity as a background for vocal groups.

**Easy to Own—Easy to Play**

History-making new Deagan Vibraharp establishes a new high in value, a new low in price. *Easy to play* (lessons furnished). Irresistible as solo instrument—indispensable to the modern orchestra. Particulars on request.

## JUILLIARD SUMMER SCHOOL

GEORGE A. WEDGE, Director

July 5 to August 11, 1939

Accredited music courses leading to diplomas, teacher's certificate, and Bachelor of Science and Master of Science degrees. Instrumental and vocal instruction for beginning and advanced students, repertoire classes, methods and materials, public school music, theory, composition, and musicology. Department for high school students.

Special one-week Forum Courses in all phases of music education.

Catalog on request

120 Claremont Avenue

Room E

New York, N. Y.

## FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

## The Care of Instruments

SOME YEARS AGO we were happy in the possession of a fine guitar that had just arrived from abroad. Its tone was superb, the workmanship beautiful. Four months later it was in the hands of an expert repairman, as the top had split in several places.

We had overlooked the fact that it had been made in a country where central heating plants in homes are still a luxury; and, while the wood used in its construction had been thoroughly seasoned, it was not prepared for a sudden climatic change.

Instruments of very light construction are easily affected by changes in atmospheric conditions and should be handled accordingly. To keep them for any length of time in a room with a temperature of seventy-five to eighty degrees is inviting disaster. During the winter season, whenever the instrument is not in use, it should be put in its case and placed in a room with a temperature between sixty-five and seventy degrees, with the case kept on or near the floor and not on top of the piano, and of course some distance away from a radiator. When traveling about in cold or stormy weather, it is advised to have the regular carrying case enclosed in a weather-proof covering to insure the safety of the instrument. While the guitars and mandolins with carved top and back are able to withstand greater wear and tear, on account of their heavier construction, it is well not to take too great chances with them, but to use the same caution as outlined above.

### Be a Good Housekeeper

MOISTURE AND DUST left to gather on the instrument will eventually clog up the pores of the wood, regardless of the lacquer finish; and an occasional treatment with a little furniture polish is strongly recommended, as this will help to preserve the wood, and in addition it will enhance the appearance of the instrument.

We have known players of the classic guitar who were of the mistaken opinion that the lowering the tension of the gut and silk strings before putting the instrument away for the night, would help to minimize their breaking; but long experience has taught us that keeping the strings at the same pitch will actually improve the tone of the guitar, as the wood of the sound board will gradually adjust itself to this string tension and on that account prove more responsive. The frequent lowering and tightening of strings make it difficult to keep them in perfect tune after returning them to pitch, and they will lose their brilliance of tone sooner than if kept at the same pitch.

Banjoists should keep a careful check on the "head" of their instruments, which, at all times, should be kept stretched as tight as possible. After a spell of moist and humid or rainy weather, it is well to wait until the head is thoroughly dry before beginning to tighten it again. On the night of a concert engagement it is advisable to arrive at least a half hour before the performance, to give the instrument a chance to adjust itself to the temperature of the auditorium. A pick guard made of aluminum or tortoise shell, to protect the head against the pick, and also against the moisture of the right hand, is a good investment.

### Selection and Care of Strings

NO MATTER HOW GOOD the instrument, unless the strings used are of a better grade, the guitar, mandolin or banjo will not give the player the satisfactory tone one might

expect from it. We have met players who have spent seventy-five, a hundred or even a hundred dollars for a guitar; but, buying strings, they will try to save cents and then wonder why the tone is brilliant and of as good quality.

Perhaps no string has given us as many headaches as the gut string for classical guitar. Until we finally find the right string, a great deal of experimenting is necessary, as some instruments sound better with thin strings and others require heavier ones, depending on the thickness of the sounding board. In the beginning is advisable to gauge the strings used after carefully deciding which gives the best results, stick to that particular brand.

While violin strings can be used for the second and third strings on the guitar, they frequently prove "false," especially in higher positions; and so we prefer a string made expressly for the guitar. String makers now offer these strings, guaranteed to be "true" in all positions.

As the fretted fingerboard of the guitar and the right hand action both contribute to the wear and tear, a string that is made of hard rather than soft gut and one of even texture without any yellowing is preferable. Occasionally rubbing the tire length of the string from nut to bridge with a bit of oil will lengthen its life.

When putting on a gut string it is customary to tie a knot at the end and insert this in the slot of the bridge. Instead, a small loop is made and the string is tied into it and then inserted in the slot. Breakage of strings at that point may be kept down to a minimum.

In selecting the wound silk bass strings the use of a gauge is again advisable. A thick heavy string will produce a dull, less tone, while a string too thin for the particular instrument will lack sonority and carrying power.

The life of strings depends of course on the amount of usage; but when once they begin to lose their brilliance it is time to replace them. In the matter of replacing strings, the worst offenders are generally found amongst players of plectrum guitar, Hawaiian guitars, the tenor banjo and mandolin, instruments, requiring more strings. These strings do not break easily and players will argue, "Why buy new ones?" The main trouble with plain strings is that perspiration of the left hand fingers, together with moisture in the air cause them to rust, and, in addition, wound wire bass strings do eventually gather dust, which after a time will deaden the tone. Wiping the strings regularly with a woolen cloth kept in the instrument case for that purpose, will help to delay the accumulation of rust.

On the plectrum guitar with carved top and back, also on the Hawaiian guitar, a heavy string gives the best results; the top guitar sounds best with strings of medium thickness. We are very much in favor of the polished strings used for so long time on Hawaiian guitars and now available for all plectrum instruments. Their facilitates plectrum technic and also helps to minimize the "squeak" often caused by some finger of the left hand gliding over one of the bass strings from a lower to a higher position.

During the past few years American string manufacturers have made great efforts to improve the quality of their product and we are thoroughly convinced that the best grades of American strings are superior to those from other countries.

## SCHOOL OF MUSIC OF THE UNIVERSITY OF MICHIGAN

Complete curricula leading to degrees in all branches of Music. Faculty of distinguished artist teachers. Concerts and May Festival by world's greatest artists and organizations in Hill Auditorium seating 5,000. Chorus of 350; student symphony orchestras, glee clubs, bands, etc. Recitals each week on \$75,000 organ.

Eight Weeks  
Summer Session  
June 26th to August 18th

#### Question of Rhythm

In the second measure of the following from La Paloma is the sixteenth note of the triplet in the right hand or the triplet?—Mrs. J. K.

It is played after the triplet.

#### Long is an Accidental in Effect?

1. In Moonlight Waters (July Etude) is a B-flat in measure 17. In the next measure a natural sign is placed before the B. Is this natural sign superfluous? I thought an accidental held good only one measure.

In Valse Joyeuse (October Etude), measures 14 and 15, appears a dotted line connecting the left hand with G in the right hand. This means that these two G's are to be played melodically?

In "Heller, Op. 47, Book 2," page 22, in this measure:

Do you release the first G to play the second—D. O. D.

1. You are right, but in this case, the user was afraid the player might play in the next measure, as such a note sound about equally well.

Yes, the G is repeated, the repeated G held through the rest of the measure.

#### Hand Trills in the Funeral March

1. How long does the ritenuto in measures 99 and 101 indicate the chord is arpeggiated?

Please write out any one of the trills occurring in the left hand part of the Funeral March from this sonata—Miss R.

1. I think Chopin means here to take for a deliberate roll of this chord. I do believe the five note motive should be rolled; at least, very little, if any. That is why Chopin has not marked an A.

## QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College  
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

2. This sign does not mean that the chord is arpeggiated although composers do sometimes use it in that way, especially in chords having a stretch of a tenth. However, in this case (four measures preceding the *ritenuto*) it is used to show that all notes so marked are to be played with the right hand.

#### Ex. 2

#### How are Diminished Triads Constructed?

Q. 1. How are diminished and augmented triads constructed?

2. How are diminished seventh chords constructed in all their inversions?

3. How would they be arranged in arpeggio form?

A. 1. Why, in Hanon's "The Virtuoso Pianist," are not dominant and diminished seventh chords shown beginning on the black keys?—Mrs. E. W. T.

A. 1. A diminished triad consists of a minor third plus another minor third, as D—F—A-flat. A-flat—D—F is a minor third, as is also F—A-flat. A diminished triad is thus one degree smaller than a minor triad which on D would be D—F—A-natural. Following the principle of putting one minor third upon another, diminished triads can easily be built upon any pitch, as:

#### Ex. 1

etc.  
An augmented triad consists of a major third plus another major third, as D—F-sharp—A-sharp. D—F-sharp is a major third, as is also F-sharp—A-sharp. An augmented triad is thus one degree larger than a major triad, which on D would be D—F-sharp—A-natural. Following this principle of constructing augmented triads by putting one major third upon another, augmented triads can be built on any pitch thus:

#### Ex. 2

etc.  
2. Diminished seventh chords are built by combining three minor thirds. In root position the root (tone on which the chord is built) would be the lowest voice; in first inversion the third would be the lowest voice; in second inversion the fifth would be the lowest voice, and in the third inversion the seventh would be the lowest voice.

#### Ex. 3

Root 1st 2nd 3rd  
Position Inversion Inversion Inversion

3. In arpeggio form this would be:

#### Ex. 4

To play the arpeggio in first inversion the notes would be the same, only begin on the third of the chord, F; for second inversion begin on the fifth of the chord, A-flat; for third inversion begin on the seventh of the chord, C-flat.

4. I do not know of any exact reason why Hanon did not give the dominant and diminished seventh chords beginning on black keys. It would seem probable, however, that he omitted them because had he begun them with the thumb on the black key, a somewhat clumsy fingering would have resulted when the arpeggio was carried for more than an octave; and had any finger other than the thumb started the arpeggio, the desired finger pattern would have been lost. To-day many piano teachers do teach the dominant and diminished seventh arpeggios beginning on the black keys. This can be easily done by playing the notes in Hanon a half-step higher or lower than they are written.

#### Rhythm in Schumann

Q. 1. In playing measure eleven of Enthusiasm in Schumann's "Carnaval," how is this complex rhythm played?

#### Ex. 1

2. In the "Symphonic Etudes" (Variation 11, measure 16) how is the following rhythm played?—Miss J. S.

#### Ex. 2

A. 1. In the two previous measures you are playing five notes on the first beat and three on the second. In other words, you have two beats in the treble, so this measure is really a two against three rhythm; but a very complicated one. The main thing is to feel the two beats in the right hand just as you felt them in the two measures before, and then to sense the triplet against them. Artists are often careless about this measure, and it would seem, judging from all the editions of this piece, that Schumann meant the last quarter note in the left hand to be played with the first note of the triplet in the right hand.

2. This measure from the "Symphonic Etudes" is not as complex as it looks. You probably are thinking that it is a two against three rhythm, but if you will notice you are playing triplets in the right hand throughout the entire variation. The C-sharp (32nd note) in the bass is on the "and" count of two, and the D-sharp (32nd note) in the middle is on the "and" count of three.

# CHICAGO MUSICAL COLLEGE

RUDOLPH GANZ, President

## ALEXANDER RAAB—

The eminent Hungarian-American pianist and nationally known pedagogue will return to the College for the first term of the Summer Master School beginning on June 19th.

In addition to private lessons in piano, Mr. Raab will offer his popular class for teachers and professionals again this summer. Many advanced students find it advisable to enroll for **Musical Literature, Technic, and Teacher Training** in combination with private lessons.

Mr. Raab will again bring with him the Moor Double Keyboard Pianos and will also teach the technic and theory of this new instrument; private instruction only.

SUMMER CATALOG NOW AVAILABLE

First Summer Term—June 19th to July 29th

Second Summer Term—July 31st to September 2nd

Outstanding American Child Specialist and Author of  
"The Bernard Wagness Piano Course"

These Classes Will Be Given Through the Courtesy of

### OLIVER DITSON CO.

1712 Chestnut St., Phila., Pa.

for the Convenience of Teachers In-and-About  
New York and of Teachers Elsewhere Who  
Plan to Visit the NEW YORK WORLD'S FAIR

In NEW YORK—June 26th to July 1st (inclusive)

" " " July 17th to July 21st (inclusive)

STEINWAY HALL, 109 WEST 57TH STREET

The classes begin each day at 9:30 A. M. and close at 12:30 Noon. Subjects covered: The Pre-School Child; The 7 to 12 year old Beginner; The Adult Beginner. The following essentials of teaching will also be discussed and demonstrated: Reading; Rhythm; Ear Training; Keyboard Harmony; Transposition; Technic; Pedaling; Memorizing and Teaching Materials.

IMPORTANT: There is no charge for these classes. It is important that teachers make reservations in advance to guarantee space. Upon receipt of each reservation an admission ticket will be mailed to each teacher.

Address All Requests for Reservations to:

SECRETARY TO BERNARD WAGNESS

1712 Chestnut Street, Philadelphia, Pa.

## Your Guide to the New York World's Fair

(Continued from Page 320)

back. To New York, there will be 30-day round trip railroad rates, the reduction ceasing as the distance to New York increases. First-class 30 day rates will be in effect from June 1 to Sept. 30. Coach rates from April 28 to Oct. 28.

**Rooms**—Here are some representative N. Y. hotels of various types:

Midtown transient hotels: New Yorker, 34th St. & 8th Ave., singles \$3.50 & up, day, doubles \$5 up. Wellington, 7th Ave. & 56th St., singles \$2.50 up, doubles \$3.50 up.

Uptown, semi-residential: Breton Hall, 2350 Broadway, singles \$2.50 up, doubles \$3.50 up. Narragansett, 2510 Broadway, singles without bath \$1.50 up, doubles with bath or singles with bath, \$2.50 up, doubles with bath \$3.50.

For women: Barbizon, 140 East 63 St., singles without bath \$2.50 up, doubles with bath \$4.00 up, singles with bath \$3.00 up, doubles with bath \$5.00 up. Martha Washington, 29 East 29 Street, singles without bath \$2.00 up, doubles without bath or singles with bath \$3.00 up, doubles with bath \$4.00 up.

For furnished rooms, write to Registered Rooms, Inc., 551 Fifth Ave., stating type of room you would like. For information on YWCA rooms, write to 129 E. 52 St., N. Y. C. For information on YMCA rooms, write to 420 Lexington Ave., N. Y. C. For rooms nearer to the Fair grounds, consult the Flushing, L. I., Chamber of Commerce.

**Eating Places**—Besides countless individual restaurants of every conceivable variety there is a number of chains with eating places all through the city. Inexpensive cafeteria chains include Horn & Hardart, Foltis-Fischer, Willow, Bickford's and Stewart's. Childs, Stouffer's and Schrafft's are higher-priced chains. The finest quality chain is Longchamps'. For rare and exotic foreign eating places, from Syrian to Japanese, consult the Travel Dept. On the Fair grounds, there will be at least 20 restaurants of every type and price level. A special Fair feature will be the eating places in the pavilions of foreign nations, where all sorts of interesting foreign dishes will be served.

PLEASE MENTION THE ETUDE IN PATRONIZING THE FIRMS LISTED

## Ten Years Before the "Mike"

(Continued from Page 302)

things, but one may buy 'individual' things. Some dresses I have let down and taken up countless times, according to the style of the season, before I could bear to part with them. I like jewelry, especially diamonds and rubies. Diamonds reflect light and are such cheerful companions. Rubies are red; and red is my color. I believe that I am always lucky when I wear red, though I do not carry this to extremes.

"To young singers, asking for help and advice, I reply that the more I see of life the more am I convinced that there is more real chance for happiness and contentment in the home town than in big cities like New York. Success, too often is dearly bought. Every ambitious singer or player should pause and think a hundred times before trying for a career in the big city."

## How to Understand the Pipe Organ

(Continued from Page 339)

preparing the registration of the next movement, always in advance and exactly on time, meanwhile accompanying those who, as a rule, have only one definite thing to do. The writer is certainly not decrying any artist who plays any other instrument, because music may be very difficult for any one of them, including the noble human voice with its many art problems, well understood by the author who used to sing; but the mental, digital, physical endurance and adroitness, and especially the pre-arranged logical planning necessary for good organ playing, all of these are so much more advanced and more difficult to do than efforts upon any other musical instrument, that there is no comparison.

Therefore, the next time that any of you hear an organist play solos, or listen to an accompaniment being done by an organist for a singer, do not go rushing up to the soloist and tell her only that she did a great job, meanwhile forgetting completely that the organist was not only the accompanist, furnishing the harmonic color for the singer's melody, but that he was successfully keeping up with the singer, maneuvering many complicated gadgets and at the same time was producing an aesthetically musical and proper volume background.

\* \* \* \* \*

## Tuneful Twaddle

### Impossible Choice

The very nature of a request often makes it impossible to grant it.

In a fashionable restaurant a new multimillionaire with no knowledge of French and no desire to expose his ignorance, pointed to a line on the menu and said to the waiter:

"I'll have some of that."

"I'm sorry, sir," the waiter answered "but the band is playing that."

\* \* \* \* \*

### Music Box Discovery

"Where's that mouth organ baby was playing with? Mercy! I hope he hasn't swallowed it."

"Blow into his mouth, mother, and see if it plays inside him."

## VOICE QUESTIONS

Answered

By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

**Tonsils**  
I am sixteen years old and have taken singing lessons. I have a wide bass-range, with lots of volume; and my ambition is to be an opera singer. My teacher has given me much encouragement in this. My tonsils are infected. Would it be wise to have them removed? What is the best method of doing this?—C. G.

You should consult the most famous doctor in your neighborhood; for, once they are out, no doctor can put them back. Your surgeon should have the knowledge to use your case and the technique necessary to remove the tonsils without injuring the muscles of the throat. Have the operation, if he thinks it necessary. There is no injury to your voice if the surgeon is, but rather the voice will improve. Be very young. Be careful that you do not strain your voice by forcing or by straining high tones. Be content to make haste

**Questions from a Very Young Girl**  
I am a thirteen year old girl and have started taking singing lessons. My range

are there different ways of going up the scale? Would you suggest taking from a different voice, who does not teach choirs? Is my range ordinary or extraordinary? I am too young to take singing lessons?—F. M. M.

Your teacher should explain and criticize your scale. She will endeavor to make you understand that it must have the same range from the bottom to the top, so that the notes will not be throaty nor the high notes strained.

Your teacher is a well qualified musician. There is no reason why she should not teach a choir in her leisure time. Your range of tones is long. The question is how many tones you have in your voice. Many of these tones are good in quality and are easily produced.

It is very young for serious vocal exercises. Be careful that you do not strain your voice by strenuous exercises. Learn to make haste.

### Uvula

A young lady friend of mine speaks of her uvula. She does not have enlarged uvula. It is not in the center, hangs a distance to the rear of the soft palate. Would this cause a nasal voice? Please describe in speaking and singing and tell me she should read.—Mrs. A. C. D.

Your description of the position of the uvula in relation to the soft palate suggests a slight malformation. You should see a specialist. Perhaps some straining of the uvula is in order, or even a slight operation. The uvula is able to return to its position.

The young lady learn to breathe deeply. The breathing muscles instead of just the upper chest, as she probably does. The pitch of the speaking voice should be low, especially in speaking. She should project the tones through the nose. Do not attempt to achieve the so-called "Resonance." Nor should she raise the head and toward the back, in an attempt to "breathe the throat." She should learn to project the action of the breath upon the vocal cords and to leave throat, soft palate, external muscles alone, so that they act automatically. Read Shakespeare's "Plain Words on Singing"; Clara Katharine's book, "English Diction" Vol. I; small brochure, "What the Vocal Student Should Know." The publishers of THE ETUDE furnish these.

### Baritone

A baritone twenty-four years of age, has taken lessons for one year and a half. His voice is full and vibrant and strong, but I have not been able, as yet, to breathe properly on the breath and to sing in such a way that I am unable to sing "Ah" correctly.

Can you suggest a remedy for this uncertainty? My teacher advises the use of a wide belt abdominal support. What is your opinion?—H. E. F.

Perhaps your feeling of uncertainty is a nervousness, or what the psychologists call an "inferiority complex." The singer is not at all either of these things, or immediately experience a lack of vocal power. The diaphragm may be considered to be the most important of many breathing muscles which include the intercostal, the abdominal and the abdominal muscles. The diaphragm is explained to you in detail in "The Art of Breathing" and Douglas Stan-

ley's "Vocal Science." Tone placement is a very vexed question. Read Shakespeare's "Plain Words on Singing" and Ellingworth's "Resonance in Singing and Speaking."

2. Sbriglia advocated putting a wide belt upon heavy, fat men and women. This was never suggested to a person of normal weight and good physique. On the contrary, he insisted that the clothing should be suspended from the shoulders, so that the breathing muscles should be unimpeded in their actions.

3. There is no average range for any voice. If you can sing a smooth scale from

and can say the words easily and distinctly upon all these tones you should be happy.

### The Young Vocalist

Q.—I am fourteen years of age and I have a well set voice. It is heavy, strong and musical, with a range from A below Middle C to E-flat above High C. I have studied piano for eight years, but my goal is to be an opera and concert star. There is no vocal teacher near here from whom I can take lessons, so I must study by myself.

1. Give me the names of booklets and solos that will help me.

2. Is there any library where I can borrow "Opera Books" so I can study one opera a month and its composer? I will pay the postage.

3. Should I go on with piano or voice?—M. G.

A.—You are very young to attempt the serious study of singing. Your letter suggests that you have a voice and are musical. Please be careful not to strain it by singing too loud, too long, nor too high. As you have studied piano for eight years, you know that one does not commence with Beethoven's sonatas and Liszt's concertos. So it is with the voice. Years of careful preparation are necessary before singing the difficult music of the operas. Read Shakespeare's "Plain Words on Singing" and many similar books. Commence your studies with simple exercises like Abt's "Singing Tutor" and Concone's "Vocalises." When you sing a song choose a simple one with comfortable words and not too great a range. Proceed slowly. The more haste, the less speed.

2. In every great city there is a library which will permit you to borrow its music free. Communicate with the librarian of the great city nearest to your home.

3. By all means study both piano and voice. You are too young to be sure which will be best suited to your talent in the future. Besides one never can know too much.

### Should She Sing as Well as Play?

Q.—I am a girl eighteen years of age, with a voice ranging from below Middle C to above High C. I never have taken singing lessons, but my friends tell me that my voice is extraordinary. I cannot afford lessons, for I am studying piano and preparing for a scholarship competition at a conservatory this fall. Please advise on self-training. Do you think my voice would be worth it?—L. A.

A.—Your range

is extraordinary; and if you can make a sweet and lovely tone upon all these notes and sing a smooth scale you should certainly go on with your vocal study. Try for beauty, clarity, and freedom of enunciation, rather than great power of sound. Quality is, after all, more important than mere noise. If you are successful in obtaining a scholarship for the study of the piano in a conservatory, ask one of the singing teachers to give you an audition and advice. Perhaps you might win a vocal scholarship also, for there are very few good voices in the world.

### A Singer With No Repertoire

Q.—I am twenty-four years of age, a lyric soprano, and I have studied for four years. My teachers never give recitals or take the same keen interest in their pupils as the ones who write to THE ETUDE seem to do. My voice is good and has been compared to Melba's. Can you tell me the name of a coach who gives vocal lessons, prepares his pupils for recitals, and whose lessons are moderate in price?—A. S.

A.—If your voice is really comparable to Melba's, you should have no difficulty in getting either singing lessons or engagements. Her voice was one of the really great voices of musical history, so ravishingly beautiful as to charm every audience. Added to this was a delightful personality, a wonderful technique, and good musicianship.

There are many fine, musical teachers in New York, who would be able to teach you how to use your voice, how to study the usual repertoire of songs, arias and operas, and how to act upon the stage. Seek diligently until you find such a one and then work hard for him.

# AMERICAN CONSERVATORY OF MUSIC

CHICAGO

53rd SEASON

Courses in piano, vocal, violin, organ and all other branches of Music and Dramatic Art leading to

DEGREES—BACHELOR OF MUSIC, BACHELOR OF MUSIC EDUCATION, MASTER OF MUSIC AND MASTER OF MUSIC EDUCATION; TEACHER'S CERTIFICATES.

Under Authority State of Illinois

Unsurpassed faculty of artist instructors, many of national and international reputation.

Thorough preparation for concert, radio, opera and teaching positions. Many special features, weekly recitals, concerts with full orchestra, lectures, school of opera, training in students' symphony orchestra, bureau for securing positions.

## SUMMER MASTER SCHOOL

Three Summer Sessions—May 11 to June 21, June 22 to August 2 and August 3 to September 13

Special Summer Courses in Public School Music, School of Opera, School of Acting, Children's Musical Training (Robyn System), Class Piano Method (Oxford), Theatre Organ Playing

Member of the National Association of Schools of Music

Send for free catalog. Address John R. Hattstaedt, President

AMERICAN CONSERVATORY OF MUSIC  
575 Kimball Hall, Chicago, Ill.

## NORTH PARK COLLEGE

E. Clifford Toren, Director

48th Year

Trains students for active musical careers in their chosen field. Progressive faculty. Conservatory occupies own building. Piano, voice, violin, cello, reed and brass instruments, church and choral music, theory, music education and expression. Summer School begins June 19. Write E. CLIFFORD TOREN, Dir. 3236 Foster Avenue, Chicago, Illinois.

## COSMOPOLITAN SCHOOL OF MUSIC

SHIRLEY GANDELL, M.A., Oxford University, England, President. 34th year. Accredited. Offers courses in all branches of Music. Certificates, diplomas and degrees. Desirable boarding accommodations. Located in downtown musical center. Box E, 306 S. Wabash Ave., Chicago.

A professional school in a university environment

## JOHN M. WILLIAMS

announces

**His First Course\***  
**For Training Piano Teachers**  
**To Conduct Normal Classes**

To be held in New York City  
For One Month—from June 3rd to June 30th

Applications will be accepted from piano teachers who wish to give Normal Training Courses in the JOHN M. WILLIAMS' PRINCIPLES OF PIANO TEACHING.

Teachers completing this course satisfactorily will be given a CERTIFICATE designating them as "ACCREDITED NORMAL TEACHERS OF THE JOHN M. WILLIAMS SYSTEM OF TRAINING", and will be permitted to conduct JOHN M. WILLIAMS' NORMAL TRAINING CLASSES. These teachers should be willing to travel.

Classes will be limited. Applications accepted up to May 15.

PRICE FOR THE ONE MONTH'S COURSE: \$100.00

For information address:  
Management of John M. Williams  
136 East 64th Street, New York City

\* This Training Course for Master Piano Teachers must not be confused with former lectures given by Mr. Williams

### THE DUNNING COURSE OF MUSIC STUDY

Creative—Pre-School—Intermediate—Junior—Senior Courses  
Mrs. Jean Warren Carrick, International Dean

#### NORMAL CLASSES AS FOLLOWS

Miss Allie E. Barcus  
2001 Hill Crest  
Ft. Worth, Texas:  
Chicago and Kansas City

Miss Minnie Cogbill  
2727 W. Grace St.  
Richmond, Va.

**THEODORE PRESSER CO.**  
1712-14 Chestnut St. Phila., Pa.

of that dancing melody and the pervading *rubato* gave him away. Before the number was out a week, he had to confess to its authorship.

*Rubato* is the outstanding characteristic of all his music. Without it, his music does not really exist. It peeps coyly out of almost every measure he ever wrote. The interpreter who fails to recognize this is unable to bring a Herbert composition to life. The fact that so many conductors and performers are unaware of this vital and all important thread in the pattern of every Herbert composition is the one thing that leads to so many dull current interpretations and threatens the longevity of the Herbert compositions.

This *rubato* is not only vitally essential throughout the body of his compositions; it is imperative in the up-beats to many of them, especially his marches. These very often start with an up-beat consisting of two notes:

Ex. 1

Do not, please, put heavy pauses on those first two notes. They should be slightly ritarded, but not stiffly so, reserving the regular tempo for the first full measure. Nearly every conductor today interprets incorrectly the *March of the Toys* from "Babes in Toyland." The whole thing becomes stiff and un-Herbertian, when heavy pauses are slapped on those four notes that immediately precede the first full measure of the march proper. Keep them free, and sprinkle on them a dash of *rubato*. Otherwise, it is a dull dish and fit to set before no one.

In the Herbert waltzes, give them the Viennese lilt he brought to their composition, and without which they are just numbers in three-four rhythm. Anticipate the second beat and delay slightly the third. In print, his accompaniments usually look like this:

Ex. 2

but always interpret them this way:

Ex. 3

Herbert made his fame and his fortune from his operettas, musical comedies and light orchestra pieces; but, deep down, he always regretted that his major works were not better known, especially his two grand operas, "Natoma," in three acts, and "Madeleine," a one act opera. The first was produced in 1911 and given thirty-eight times by the Chicago Opera Association; whilst the Metropolitan Opera Company gave "Madeleine" just six times. Herbert was especially proud, as he had just cause to be, of "Natoma"; and the fact that it was allowed to languish in silence always rankled him.

He was strongly outspoken against the attitude of operatic producers here, not only as they affected him but also as exhibited towards all American opera composers. He deplored the poor casts at one time assigned to works in English; and, in Herbert's day, do not forget, there were few American singers to do the leading rôles in native works.

"You cannot cast a grand opera in English with all American singers, he once said. "When my 'Madeleine' was produced at the Metropolitan Opera House, the baritone coughed his part in Spanish."

He often referred to those first dismal rehearsals of "Natoma." Each day would bring cries of "C'est impossible!" from conductor, chorus-master and singers.

"Do you recall that portion of the opera just before the sixth scene in the first act where *Alvarado* is on the stage with *Castro*? *Natoma* eyes the pair suspiciously. *Alvarado*, turning to *Castro*, sings, 'I never liked that girl. She broods too much.'

At this point, the rehearsal was stopped. "Broods," said the director. "What does that mean?"

"Then and there a great discussion was begun centering about that very, very strange word 'broods.' It simply meant nothing to the Italian director. Finally, Joe Redding, the librettist, had to change the word to one that jingled less queerly in the ears of the director. Would this trifling but annoying occurrence have arisen in a company of American singers?"

### An Expansive Versatility

HERBERT COVERED A VAST AMOUNT of musical territory in his day. Starting off with operettas of the old school, he later turned his facile pen to musical comedy, grand opera, revues, music for the movies, and finally jazz. He did not object to jazz, as such; only to bad jazz. His musical shows at the end, were light pieces of small worth and little from them has lived. Nor did he think much of them, as compared with such fine works as "Eileen," "Princess Pat," "Naughty Marietta," and "Babes in Toyland"; but the writing of them did keep his large coffers filled.

"What can I do?" he once asked, as he stood before the mantel of his room at the Hotel Belvedere in Baltimore. "The managers want nothing but shows with sentimental tunes that are easy to sing and easier to dance to. I have a family. They must live and I must live; so . . ." significant shrug finished the sentence.

One of the last things he wrote was "Suite of Serenades for Jazz Orchestra" (Spanish, Chinese, Cuban and Oriental), which was commissioned by Paul Whiteman and written especially for his historic making concert at Aeolian Hall, on February 12, 1924, when Oom Paul made a bold attempt to make a good woman out of jazz.

In the years prior to this, Herbert had been touring the leading movie theaters in the country. Those were the days when thirty to forty men in the pit of a picture palace was not an unusual sight. Herbert guest-conducted in nearly every large movie house from Montreal to Los Angeles. Those early houses had meager appointments, and there were no provisions for artists. Herbert was forced to change his clothes in everything from the manager's office to the check room.

### Subduing A Recalcitrant Orchestra

IN THOSE DAYS OUR PATHS CROSSED OFTEN and in all sorts of places. The background and conditions varied; but Herbert was always the same, and so were his results with any orchestra. To see him conquer an orchestra was always a thrilling experience for the spectator, if not for the musicians. We saw our first orchestral rehearsal under Herbert when he was making "Princess Pat" ready for its première at the Cort Theater in Atlantic City, in the summer of 1915; our last, in 1923, when he was at the Rivoli Theater in Baltimore.

In nearly every rehearsal at which we were present, the local orchestra started out with a chip on its shoulder the minute Herbert stepped into the pit. Why? The men knew he would make them work. Most of them preferred to take things easy.

**SUMMER MUSIC STUDY**—Have you noticed, lately, the advertising pages of magazines that number among their subscribers music teachers and students? How page after page is devoted to announcements of Summer Courses at leading educational institutions, of Summer Music Camps for boys and girls? It is heartening to see the interest displayed in these cultural activities, the ambitious youth of the nation turning aside from idleness and frivolity to devote generous portions of their vacation to musical advancement.

The Publisher's experience of the past decade, or more, reveals that not all Summer Music activity is confined to large schools or to the metropolitan centers. Many a teacher in small towns, and in suburban or rural districts, has profited by this thirst for knowledge on the part of American youth by organizing classes in various musical classifications, such as appreciation, history, theory, harmony, the opera; all pleasing subjects to study and easy for the teacher to undertake. Teachers, looking to next season's enrollment in their classes, to the future in their pedagogical careers, find that Summer Classes take up little of the teacher's or pupils' leisure time, yet they keep alive interest in matters musical and stimulate a desire for more musical knowledge, with the resultant determination to continue "taking music lessons."

Materials for use in Summer Study Classes easily are obtainable, some standard text books being especially adaptable for such use. James Francis Cooke's *Standard History of Music* (1.50) offers a splendidly arranged program for an intensive course in the subject; Preston Ware Orem's *Harmony Book for Beginners* (1.25) lays a solid foundation for future musicianship and advanced study. A most fascinating course can be arranged from Clarence G. Hamilton's *Music Appreciation* (2.50); younger students will enjoy study with *Introduction to Music Appreciation and History* (1.50) by Dorothy Tremble Moyer.

Space here does not permit more detailed listing of suggested materials but the Publishers will be glad to supply such information upon request, covering also other subjects for Summer Music Study like piano classes, violin classes, singing groups, opera, etc. Just address a note to Theodore Presser Co., 1712 Chestnut St., Philadelphia, stating the subjects in which you are interested.

**THE COVER FOR THIS MONTH**—It was necessary to combine two photos to place the young musician and singer depicted on THE ETUDE cover this month in an outdoor setting

suggestive of his solo singing of the favorite cowboy song, *Home on the Range*.

While the song may have a cowboy origin, we doubt if the number of cowboys who have sung it can equal anywhere near the number of "bathroom baritones," "banqueting basses," and "tuxedo tenors," who have vibrated their vocal chords with this number. It does have a real cowboy atmosphere and it is easy to sense behind the rhythmic feel of the number the long, slow lope of the range ridden horse.

The photographic material utilized for this cover came from the studio of Harold M. Lambert, Philadelphia, Pennsylvania.

**TWELVE MASTER ETUDES IN MINOR KEYS, For Piano, (Grade 6-8) by Franciszek Zachara**—Rarely is it our privilege to publish so important a work for advanced pianists as this latest opus from the pen of the young Polish pianist, Franciszek Zachara, whose pieces for piano appearing recently in THE ETUDE have attracted so much favorable comment.

Mr. Zachara's first public appearance as a soloist in this country was in New York City in 1928. Since then he has given numerous recitals in Town Hall, New York, and is a member of the faculty of Brenau Conservatory in Gainesville, Georgia. His press comments indicate a mature, highly skilled brand of pianism and interpretative ability noteworthy for its musical taste.

Like his countryman Chopin, his gift seems to flourish best in music of grace, intimacy, and minute detail. The *Twelve Master Etudes* constitute his Opus 29 and present a composition in each of the twelve different minor keys. These Etudes are first and foremost real music, from which, however, may be derived many technical phases of value to the performer. There are octave and chord studies for both hands, arpeggio and rapid scale passages, intricate rhythmic designs, and studies with chief emphasis on tonal production. Obviously the work is for none but the competent and ambitious pianist, the grade of difficulty ranging from 6 to 8.

Teachers desiring for their teaching materials library a reference copy of this important work, which will be brought out under the cover of the Music Mastery Series, may take advantage of the low advance of publication cash price, 20 cents postpaid, and order a single copy now, delivery to be made as soon as the work is published.

**ALL-CLASSIC BAND BOOK, For Young Bands, Arranged by Erik W. G. Leidzén**—When the non-musical person thinks of a classical music composition he is apt to think of something too involved for those other than musicians to enjoy. Such an individual misses much, because he will find some very beautiful and, at the same time, simple melodies tucked away in the works of the great classic masters.

It is to give the youth in modern school bands the opportunity to enjoy some of these melodies and to delight their audiences with them that this *All-Classic Band Book* has been planned. From Schumann, Martini, Schubert, Mendelssohn, Bach, Handel, Gluck, Verdi, Haydn, Beethoven, and Mozart, have been selected these melodies, in the main keeping away from those so often repeated in music circles.

These numbers have become splendid band selections under the musical craftsmanship of Erik W. G. Leidzén. Although the parts provide a variety of playing styles,—staccato, legato, soft tonguing, etc., there are no technical demands beyond the abilities of the average young bandman.

The instrumentation comes for the full school band set-up, but all the instruments are not essential since clarinets and brasses provide a full harmonic structure. The Conductor's Score has a playing piano score for study and rehearsal, together with a two stave compact short score for use in conducting.

The advance of publication price for the instrument parts is 15 cents each; where the set ordered runs 25 or more, 10 cents; Conductor's Score advance of publication cash price 25 cents.

**THE YOUTHFUL BARITONE, An Album of Songs for Studio and Recital**—In this age of advancement, opportunities for vocal culture are much more plentiful than was the case a generation or two ago; also, there are better teachers, and so many more of them that tuition fees for competent instruction are comparatively reasonable. Along with good teaching there always are chances for participation in group singing—chorus, choir, class, glee clubs, cantatas, operettas, etc. Increased poise and smoothness of singing come from these "song fests," proving their value.

Nature favors men with voices of different range—some high, some low, and some medium. Medium-range men singers (classed as baritones) are in the majority, and therefore, have a multitude of good songs from which to make selections when called upon for solos. But because of the steady demand for new material in collective form, we are preparing *The Youthful Baritone*, a group of especially fine material of interesting variety, containing numbers suitable for almost any occasion. The texts are particularly adapted for artistic enunciation, and the songs for effective rendition by men singers of limited experience in vocal solo work.

Those wishing to secure single copies of this book at the special advance of publication cash price of 35 cents may place their order now; the copies to be sent as soon as received from the printer.

**THE YOUTHFUL TENOR, An Album of Songs for Studio or Recital**—*The Youthful Tenor* is the title of a new collection of choice songs of moderate range, selected with much care. The aim has been to present as large a variety as possible in the size of the book, so that, from its contents, the singer might always be able to find something to fit his needs. The editors have omitted many songs whose main characteristics were a plentitude of high notes; at the same time the upper range has not been avoided if it has been reached melodically and in the line of effective climax. Melodiousness, interesting variety, suitability of words and music, opportunity for effective interpretation, and ample chance to use the rich middle tones of the voice, have been the aim throughout.

This work, while prepared especially for young tenors, will appeal also to more advanced and mature singers. The singer with a good, well-trained tenor voice always is likely to be a social favorite and in constant demand for any occasion where singing is featured. Such a singer should have a large and varied repertoire of suitable songs.

For the small cash price of 35 cents, postpaid, customers can now order single copies on our advance of publication offer, copies to be sent upon publication.

**THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES**—Another use which music educators put this remarkable series of portrait-biographies was discovered recently when a school librarian informed us that she is making from this page a vertical card index for ready reference. Four pictures, with accompanying biographies, fit nicely on the standard size (3 x 5) filing card, and 11 cards take care of each month's additions to the series. This seems to us a most practical idea for a ready-reference library for program maker or for anyone interested in those who have made noteworthy contributions to the art of music. And it isn't necessary to mutilate your copy of THE ETUDE to use the series in this manner, as extra copies of every page that has appeared may be obtained at 5 cents each.

**GRADUATION AWARDS AND GIFTS FOR MUSIC STUDENTS**—This is the season when parents, relatives and friends of graduation candidates are seeking appropriate gifts and remembrances to mark the happy occasion. For graduates of music courses nothing, probably, could be more appropriate than a volume of music, or book on some interesting musical topic. The Publishers will be glad to offer suggestions.

Teachers, who plan awards to graduates and honor students, will find a most attractive listing, with descriptions and illustrations, of diploma and certificate forms, medals, etc., in *Presser's Musical Jewelry Catalog V-15*. Send for a copy. It's Free.

There still is time to arrange for special lettering on diplomas, certificates and medals, but as the time of June commencement draws near, sufficient notice to us will be necessary to insure prompt delivery. The "Presser Service" this year.

**TEN STUDIES IN BLACK AND WHITE, For the Piano, by Mana-Zucca**—In keeping with the policy of including the *Music Mastery Series* only the most meritorious of piano studies

by contemporary composers, the Publishers believe that this addition in this new book of *Ten Studies in Black and White* by the distinguished American composer, Mana-Zucca.

These studies cover technical training needed by advancing pupils in the upper intermediate grades, four and beyond. Each is attractive and appropriately titled. Melody and accompaniment in legato style, octave study, crisp staccato, wrist attack, left hand arpeggio study with right hand melody, dotted notes, study in quick attacks, study in velocity and the stretch of the hand, some of the technical problems covered.

Piano teachers and advanced students planning a bit of extra study during the Summer Vacation season should order a copy of this book now while it may be had for only 20 cents postpaid, the special advance of publication cash price.

**16 MODERN ETUDES FOR THE ADVANCED TRUMPET PLAYER by John Huber**—No one can complain about the amount of study material that has been written for the trumpet, or cornet. The standard "cornet methods" made forty or fifty years ago, or more, certainly are voluminous.

But modern developments in trumpet playing, the demands made by modern orchestras and band arrangements, necessitate modern etudes to prepare the trumpeter for his part in the ensemble. Mr. Huber, a successful teacher, has prepared these *16 Modern Etudes* for ambitious trumpet students to improve their technique, especially in the coveted ability to play the brilliant passages in various compositions requiring triple tonguing. Helpful suggestions precede each study.

This probably will be the last month in which copies of this work may be ordered at the special advance of publication cash price, 40 cents postpaid.

(Continued on Page 352)

OUT OF THE SEA, *An Operetta for Children, In One Act, Music by Lily Strickland (Book and Lyrics by Ethel Watts Mumford)*—There are times in our

more mature years when we wish we once again were young and able to join children in their games, plays, and amusements. A feeling of this kind is almost inevitable when we read over the dialog of such a sparkling operetta as *Out of the Sea*; everything about it is so wholesomely natural for children to say and think. The idea of the story is that a company of children, summering near a rocky seashore, wanders into a group of sea people with whom they become instantly acquainted, as children will. Here are met King Neptune (majestic yet easily upset), Undina (a mixture of jollity and womanly sympathy), the Sea Serpent (a queer character, sometimes critical, sometimes "weezy"), the Oyster (how he can boast!), the Hermit Crab (very "crabby"), the Fiddler Crab (exactly the opposite), Davy Jones (sore at Mr. Beebe for drawing his locker up from the ocean's depths), and the Aviator (a cynical land person who has an occasional habit of "seeing things").

The resulting dialog sparkles and the situations abound in humor. The solos are easy and lie in a medium range; there are choruses and refrains, some in unison, some in simple two-part form; none of them hard to learn. At a comparatively small expense a good stage setting can be made so as to be both attractive and colorful. Full directions for staging, costuming, and dancing are included in the book.

Single copies, ordered at the special cash price of 35 cents, postpaid, if ordered now, will be sent to the customer as soon as received from the press.

**MANUAL OF FUGUE** by Preston Ware Orem, *Mus. Doc.*—A knowledge of this subject is important, even if one doesn't aspire to be a composer. For such, of course, it is indispensable. Understanding of the works of the great masters, especially symphonic works and chorus compositions in the larger forms, is so much enhanced by a knowledge of Fugue and methods of part-writing, that every well educated musician must necessarily include it in his course of study.

Sometimes Fugue is referred to as a "dry" subject; Canon, Imitation, Double Counterpoint, etc., have a rather forbidding aspect. Dr. Orem, in his own inimitable manner, makes the study "a pleasing way of making beautiful music."

The Publishers hope to have copies of this book ready before long, but advance of publication orders still will be accepted this month at the special cash price, 40 cents postpaid.

**CAUTION! SWINDLERS ARE ABOUT!** It is our unpleasant duty to warn all music lovers against swindling canvassers, both men and women. Beware of unauthorized bargain offers of THE ETUDE MUSIC MAGAZINE. Pay no money to strangers unless you are absolutely assured of their responsibility. Do not be swayed by the worn-out threadbare canvass of the "young man working his way through college." Not one in a thousand has the slightest intention of using commissions to pay for tuition. Sign no contract and pay no cash until you have read the receipt, or contract, which the canvasser offers you. Do not accept any ordinary "stationery store receipt" for money paid. Representatives of THE ETUDE MUSIC MAGAZINE always carry the official receipt of the publisher, Theodore Presser Co., authorizing them to collect money in our name. Help us to protect you from swindlers.

**ETUDE SUBSCRIPTION REPRESENTATIVES WANTED**—Many music lovers, teachers as well as pupils, add substantially to their incomes through securing ETUDE subscriptions. If you prefer cash instead of merchandise premiums, send a post card for full particulars. We pay substantial cash commissions on each \$2.00 subscription secured (not your own). Address the Agency Division, THE ETUDE MUSIC MAGAZINE, for further details.

**PLAY AND SING, Favorite Songs in Easy Arrangements for Piano, by Ada Richter**—In the education of young piano pupils one of the most effective means of creating and maintaining interest, of inculcating a sense of time and rhythm, is the assigning of exercises and pieces set to texts or verses that may be sung by children. Mrs. Richter, a most successful teacher of juvenile piano students, knows this and her previously published books and pieces prove that she is especially talented in writing and arranging such material.

*My First Song Book* (75c) is one of the best selling music books for youngsters; *Cinderella, A Story with Music* (60c) and *A Child's Journey, 16 Rote Songs for Primary School Activities* (75c) (less than a year old) already are established successes; *Ada Richter's Kindergarten Book* (1.00) is considered indispensable by many.

Youngsters who have completed these books are clamoring for more. Their teachers, needless to say, are glad to give such material to them, as evidenced by the unusually large advance sale of this forthcoming volume. It will be a bit more advanced than *My First Song Book* and will contain about the same number of familiar songs grouped under the headings: School Songs, Songs of Other Lands, Songs of My Country, Songs from Operas and Songs My Grandparents Sang Long Ago.

Single copies of *Play and Sing* may be ordered now at the special advance of publication cash price, 25 cents postpaid, copies to be delivered when the book is published. The sale of this book will be restricted to the U. S. A. and Its Possessions.

**ADVANCE OF PUBLICATION OFFERS WITHDRAWN**—By the time this issue of THE ETUDE reaches our readers, the Mechanical Department of the Publishers in all probability will have completed printing and binding two books, descriptions of which have been appearing for several months past in this Publisher's monthly bulletin. As is customary when these new books are placed on sale at music stores, the special advance of publication prices at which they have been offered are withdrawn and copies now may be had from the Publishers for examination.

*Fragments from Famous Symphonies* for the Piano, by William Baines is a book of easy-to-play piano arrangements of the best known themes from familiar symphonic masterpieces, immortal melodies brought within the playing ability of young players. Supplementing the now frequent performances of these works, in concert and via the radio, these pieces should do much to elevate the musical standards of American youth and should prove interesting and gratifying to the parents of the youngsters who play them. Price, 75 cents.

*Organist's Resource*, a volume of compositions and arrangements from the works of I. V. Flagler, will be welcomed by all organists, especially those church organists whose repertoires necessarily must be available in as compact form as possible and who cannot afford to have on hand volumes from which only a few numbers are suitable. Organists of a former generation knew the 5-volume edition of this noted American organist and composer's works called *Flagler's Organ Folio*. This volume contains the best and most frequently used numbers from the original work, making a compact collection at a most reasonable price. Price, \$1.00.

**THE TRUNK, THE BRANCHES, AND THE SHOOTS**—The moods of the times have their effects on creative efforts, and as a result things that are not deserving as growing out as true branches on the main trunk of music materials come into being, but they soon are identified by those having need for music materials and are quickly cut off.

Things having qualities giving them a place as a true branch or even as only a twig on a true branch are encouraged in their growths. Those publications which are encouraged in growth are soon found coming up on the Publisher's Monthly Printing Orders.

The following list gives some selected from the Printing Orders of the last thirty days. The Theodore Presser Co. will be glad to give any reputable worker in music an opportunity to examine complete copies of any of these numbers.

**FINE REWARDS FOR SECURING ETUDE SUBSCRIPTIONS**—Hundreds of music lovers have secured fine merchandise absolutely without cost as a reward for securing subscriptions for THE ETUDE MUSIC MAGAZINE. Your immediate circle of musical acquaintances will produce many an ETUDE subscription. One point is given for each yearly subscription, two points for each two year subscription. Following is a list of rewards offered which are sure to please you:

**Electric Toaster:** With this new style toaster you can toast as many as four slices of bread at one time. Lowering of the doors automatically turns the toast. The base, top and ends, are black enamel, while the doors are chromium plated. Awarded for securing two subscriptions.

**Hot Cake or Toast Dish:** This new design Hot Cake or Toast Dish will prove very useful as well as decorative. The plate is crystal glass, 8 1/2" in diameter, while the cover has a chromium finish with a convenient finger hole. Your reward for securing one subscription.

**Oil & Vinegar Set:** A very handy set for the table. The center handed tray, 6 1/2" x 3 3/4", as well as the clip-on-off holders are chromium finish. The tinted glass containers come in amber, blue, green and amethyst. Your reward for securing four subscriptions.

**Butter Dish With Knife:** The plate and knife of this attractive reward are chromium-plated while the container is fluted crystal glass. Size 6 1/2" square. A fine gift or prize. Your reward for securing one subscription, not your own.

**Relish Dish:** This handy dish for pickles or olives has a chromium finish base and fork, and a crystal glass insert. The base is 8 1/2" x 4 1/2". Your reward for securing one subscription, not your own.

**Crystal Glass Sugar & Creamer:** This set is a little different in that the Sugar and Creamer are crystal glass on a chromium base. The tray also is chromium-plated. Awarded for securing three subscriptions.

Send post card for complete catalog of gifts. There are many articles illustrated which you will wish; all are standard merchandise and are guaranteed by the manufacturers to give satisfaction.

**CHANGES OF ADDRESS**—When changing your address, please advise us at least a month in advance of such a change, giving both old and new addresses. Wrappers for THE ETUDE necessarily are prepared some time in advance of the publication date, so we should be notified promptly to prevent copies going astray.

## Building a Vocal Instrument

(Continued from Page 296)

OFTEN HEAR PEOPLE SPEAK regretfully of the passing of the "grand old days" of Lilli Lehmann, Caruso, Melba, Nordica, Nipper, the brothers De Reszke. These artists subjected themselves to a long artistic discipline.

Moderns appear to believe that a certain credit attaches to the speed with which a young beginner can assert himself in his career. I have heard young singers with pride that they learned a major scale after only three years of study. On the other hand, Lilli Lehmann once said in her opinion, no one should be allowed to sing even the simplest song, before the smallest public audience, without a minimum of five years of careful musical groundwork, and perhaps more. At the same time you have an entirely different approach. One school believes in quick results; the other held to long and careful preparation. I think that Lilli Lehmann's way is by far the safer one.

It cannot be sufficiently impressed upon young students that *there are no quick cuts into success*. No "methods," no clever tricks, no special exercises, can make an artist. Only hard work, conscientious study, and a thoughtful probing of one's own abilities can do that. And the time of study is during the normal study years. Once a singer has entered upon his career, there are demands which crowd out the sort of preparation that properly belongs to the studio. And the result is that much of the most necessary preparation is neglected. The moment the singer steps out on the stage, he carries with him a complete and visible record of his training. Nothing can remain hidden. If he is still learning to rub off the corners, his work shows it; if he has spent long and devoted time in perfecting himself, his work shows it, too.

### The Test of Small Things Tells

THE YOUNG SINGER should develop a concert style along with his operatic preparation.

tions—and the professional singer does well to keep both types of work well in command. These two styles of singing are entirely different. Of the two, I should say that concert work is the more difficult. Operatic work is calculated on a vast scale. One paints with big strokes and, except for the delicacies of Mozart, or the classic purity of a work like Gluck's "Orfeo," it is often possible to cover up certain vocal shortcomings. The orchestra supports the singer, and the audience has the entire stage play to watch, which takes its undivided attention from any one person in the cast. On the concert platform, however, the singer can depend upon no one but himself. There is no covering up of imperfections, and the proportions of the work are reduced from big, bold, epic strokes to the finest of miniature detail. Obviously, this is the more subtle test of the singer's grasp of his work, his musical concept, his vocal and emotional discipline. A song like Schubert's *Der Doppelgänger* builds a picture, a mood, a color, a drama in less than four minutes, and one person alone is responsible for the building. In "Lohengrin," the picture, the mood, the color, and the drama take nearly four hours to unfold, and a complete cast unites its efforts to accomplish it. This very bigness may make the opera seem more glamorous, but the artistic projection of the *Lied* seems to me to be the greater test of skill.

For this reason, I would advise all young aspirants to fame, to perfect themselves in just that form of their work which makes the greatest demands upon them. Only such work can reveal the real capacities of the singer. The easy road leads nowhere, because it does not exist. Only by searching and developing one's capabilities can she hope to bridge over the gap between the vocal technician and the mature artist. It is difficult enough to build a distinguished vocal instrument; its correct use is the work of a lifetime.

## World of Music

(Continued from Page 290)

"CYNTHIA PARKER," an opera with a libretto based on the abduction of Cynthia Ann Parker of the Texas pioneers, by the Comanche Indians, with her recapture twenty-four years later by the rangers, and with a musical score by Julia Smith, a Texas composer, had its premiere, with an all Texan cast, on February 16th, at the North State Teachers College of Denton.

SIXTY-NINE AMERICAN COMPOSITIONS, one on every public or radio program, have been played during the last two seasons of the Indianapolis Symphony Orchestra under the baton of Fabien Sevitzky. Zelig Solomon and his orchestra, of Chicago, have performed thirty-five American works in the same period. Wake up, other leaders!

### COMPETITIONS

PRIZES FOR WORLD'S FAIR: First, \$3,000; second, \$1,000; to best chorus of one hundred and fifty to two hundred voices singing the *Sanctus* (in Latin) from the *Mass in B minor* of Bach, and *By the Waters of Babylon* by Philip James. First, \$1,000, second \$500, to best chorus of sixty to one hundred voices singing *Lucifer in Twilight* by Bantock (unaccompanied) and *The Nun of Nidaros* by Protheroe. Also liberal prizes for men's choruses of sixty to one hundred voices; for women choirs of fifty to seventy voices; and for male and female soloists. Complete information from Dr. D. E. Jones, secretary, Scranton Tribune, Scranton, Pennsylvania.

THE EURIDICE CHORUS of Philadelphia offers a Prize of One Hundred Dollars for a Chorus for Women's Voices, in three or more parts, either a *capella* or unaccompanied,

and to words of the composer's choice. Compositions must be received not later than October 1, 1939, addressed to The Art Alliance, 251 South 18th Street, Philadelphia, Pennsylvania, to whom application may be made for further information.

PRIZES OF TWO HUNDRED DOLLARS each, for a composition for organ alone, and for one for organ, strings, horns, and tympani, or any part of this combination, are offered in the John Haussermann Prize competition. Compositions may be from five to twenty minutes in length; and they must be delivered by mail not later than June 1st. For complete information, address John Haussermann, 40 Scarborough Road, Briarcliff Manor, New York.

A PRIZE OF FIVE HUNDRED DOLLARS is offered by the Henry Hadley Foundation for the best composition in any of the major forms to be submitted within the autumn months. Full particulars may be had from the Henry Hadley Foundation, 633 West 155th Street, New York City.

A ONE THOUSAND DOLLAR HONORARIUM towards one year of piano study with Tobias Matthay in London, is offered by the American Matthay Association, Inc. The Contest will be held in May, in New York City; and candidates will take a preliminary examination in theoretical subjects, and play a *Prelude and Fugue* from "The Well Tempered Clavichord" of Bach, the *First Movement* from Beethoven's "Sonata Appassionata," and a composition of not more than six minutes in length, of their own selection. Further particulars from Miss Margaret Littell, 2600 West 17th Street, Wilmington, Delaware.

## Victor Herbert as I Knew Him

(Continued from Page 350)

Attack, bowing, phrasing were mere academic terms. But, before long, "Victor the Vigorous" had cowed them into doing his bidding. All of the men were sitting on the edge of their chairs, the violins were bowing in unison and the attacks were perfect. He would whip them into line by cajolery, he would shame them, tell them jokes, jump down from the conductor's stand to pick up the violoncellist's instrument and show them; but win them over he always did. For that night or week, the orchestra played better than it knew how. After Herbert left, it would slump down to its former standard; but, while he wielded the baton, things happened. He was always particularly, naturally hard on the violoncellists—having been first violoncellist of several of the world's best orchestras; and he was insistent that the flute parts be played just so, the latter interest harking back, in all probability, to his boyhood days when he studied the piccolo.

### The Ready Story Teller

SOMEWHERE DURING THE PERFORMANCE, in the case of his stage productions, or after the overture of Herbert melodies, during the years as guest conductor in movie houses, he would make a speech. The audience expected it, and so did Herbert! The spotlight would swing around to him and he would give one of his characteristic little talks. Two of his pet themes were the "Independence of the Irish" and "The Spirit of Puritanism" which he deplored and declared was rampant in this country. Ireland came close to him and he sometimes let his patriotism get the better of

his wisdom, especially during the war years. As for prohibition, it was a distinct pleasure for him to turn loose the full force of his wrath on what he felt was "the greatest imposition ever foisted on the American public."

No extended reference to Herbert would be complete without mention of the extremely important part he played in the formation of the American Society of Composers, Authors and Publishers. He was one of the rocks on which the organization was founded. With Gene Buck, its able president, and aided by Sousa, Berlin and others, Herbert launched one bitter attack after another before Congress, on behalf of his fellow composers, in a valiant effort to see that they received their just dues. Herbert was the leading composer of his day, and his support was invaluable. His sincere, determined leadership in the early days of the Society did much to vanquish the hostile hosts that gradually fell before it. Every composer of the present day is enjoying, to some degree, the benefits of the battles fought in those early days by Herbert and his band of musical musketeers. He was fearless and loved a good fight.

In putting these memories of Herbert to paper, for a little while we have felt once more something of the force of his electric, ebullient personality, the sparkle of his wit, the charm of his manner, his keen alertness, his terrific energy, and his sharp outspokenness. To have known Victor Herbert was a rich and memorable experience. He was a great man and musician—even if he was not a pianist!

## Music Study Means "Music" Study

(Continued from Page 308)

But I cannot tell you how to make a perfect tone, because the tone you draw is the result of what you create musically. It is inseparably bound up with the entire musical phrase and the interpretation of that phrase. It involves color, nuance, individual conception of the music.

All the helpful things about tone, that I have just said, mean very little if they are applied to a simple drawing of the bow across the G string. They would result, naturally, in an agreeable sound, as contrasted with a scratchy, disagreeable sound; but they would never stir a listener. Apply your findings about tone to the *Humoresque* of Dvořák, however, and an entirely different problem arises. Your tone, as tone, is subservient to the meaning you bring out of the composition. In the case of a great actor, you say that he has a stirring voice; when you mean that he declaims a certain passage in a tone that enters your heart, stirs it, causes you to feel something you did not feel before. If the man were to say "Ah," you would not feel stirred. His voice becomes stirring only when he applies it to the interpretation of a passage. It is exactly the same with musical tone. First and foremost must come the musical meaning. Tone, technic, anything and everything that you work at externally, take on meaning only when you use them as the means of expressing or liberating your musical interpretation. For that reason, the student cannot be too strongly reminded of the dangers of subdividing his studies into little compartments of which music is only one. Do not practice a little while at technic and another little while at tone, and then trust to Providence to let you get through a piece as a result. Practice music only!

WHEN YOU BEGIN to study a piece, read it through (or play it through, or get your teacher to play it for you), and look upon it as a musical whole. Think about it. What mood and meaning will you extract from it? Which phrases are the important ones? Which is the melodic line. Which is the chief theme, and which the secondary one? Which phrases speak to the heart and which are of a more transitional character? Build yourself a complete musical conception of the piece before you begin to practice it. As you practice, you may discover meanings in the work which did not occur to you when you heard it for the first time; and you may then change your mind about it. But never work without a clear picture of what you are working towards. Then, in second place, apply your technical resources to making your musical picture come to life. Is this passage of fingered thirds marked *presto*? Then practice fingered thirds until you can play them *presto* and bring out the meaning of the passage where they occur. Does this phrase require an unusually round, lyric, singing tone? Then work at that tone until the meaning of the passage can be expressed in the required way. But remember that neither the fingered thirds nor the singing tone are going to mean a thing until they are applied to the musical interpretation of some passage. That is what I mean by working at music. The student who trains himself to do this need not worry about the future. If greatness awaits him, it will come in good time. If he is destined, by the inborn fibres of his being, to develop into something less than a genius, he will still be able, through sound habits, to derive great joy from his music.

# THE JUNIOR ETUDE

Edited by  
ELIZABETH A. GEST

## ??? Who Knows ???

1. What does the title mean in Schumann's *Fraumerci*?
2. When was Schubert born?
3. Give five musical terms that can be applied to baseball.
4. What composer is this?

5. In what oratorio is the *Hallelujah Chorus* found?
6. Who wrote it?
7. What is the signature of the minor scale whose fourth tone is G?
8. From what country does the folk song, *Annie Laurie*, come?
9. Who wrote a famous *Air for the G string*?
10. How many sixteenth notes equal a dotted quarter rest?

(Answers on Next Page)

## Letter to Handel

DEAR MR. HANDEL:

Last month I wrote a letter to John Sebastian Bach and now I think I will write one to you because the first piece of music I ever knew was one my mother used to sing when I was little and I thought its name was "Handel-slar-go."

It was just awfully pretty but I never could imagine what the name meant until a long time afterwards when I found out you wrote it and that *Largo* means slow. Then I learned it on the piano. And our school orchestra often plays it.

Somehow I don't seem to know of many pieces that you wrote but my uncle sings a song that he says is from your oratorio "The Messiah." And next winter it is going to be given by our choral society and my uncle is going to take me to hear it. He sings in our choral society.

I have your picture in my scrap book and I often think about your handsome wig. I'm glad we don't have to wear those things now. They'd be a nice mess under a football helmet, wouldn't they?

My teacher says you became blind. That was too bad. Imagine hearing music in your mind and not being able to see to write it down. That was probably because you had to use candles instead of electric lights. We had to use candles one night when the electric power went off and they were terrible. I used my electric flash until it burnt out.

At our club meeting someone asked when you were born and I said 1865 instead of 1685, and was my face red! Well, I must go and practice now, so good bye.

From JUNIOR.

## Symphony

By ANNA H. HUTCHINSON

IT WAS TWO DAYS after Jack's birthday, and he was bored. He had finished the two books he had received for presents; the skis, which were his particular interest, could not be used until the winter; he was wearing the new necktie; and he had already mislaid the penknife.

Under one of the books, almost concealed, was an envelope he had put there when Aunt Jane handed it to him on his birthday; he had really forgotten about it, as he supposed it was just one of those fancy little greeting cards—such senseless things, he thought. At length he took a sly peep and discovered a ticket for the next symphony concert. Now, why had Aunt Jane given him that, anyhow? He could not play on any instrument, so he never had been able to experience the thrills of being in the school orchestra; and he had never cared much about going to concerts. Still, he thought, he would have to go to this one because Aunt Jane would surely ask him about it.

He went up stairs, with the ticket in his vest pocket, and as he passed his mother's door he asked, "Say, mother, why do you suppose Aunt Jane gave me a ticket to the concert? She knows I never go to such things."

"But she thought you would enjoy it, I suppose. You see Bob and Bill and several others from the school orchestra are going and she thought you would like to go, too."

"Well, maybe I would," answered Jack, doubtfully.

"Why don't you go down to the Public Library and see if they have any books about the symphonies?" asked his mother, interestedly, "Then you would enjoy the concert more."

Jack, thinking this was as good an idea as any, started down the street. In reply to his request for something on the sym-

phony, the young lady at the desk said, "Yes, we have some very good books; just wait until I find what is in now. They are so much in demand lately!"

Hearing that so many people were calling for these books, Jack was beginning to take more interest in the matter; and he felt quite pleased when the smiling lady brought him a book—a very good one, she explained; she was sure he would like it.

Thanking her, he took the book and settled himself in a quiet corner. Two hours passed and he was still absorbed. By hurrying home he got there just in time to sit down to supper. "Did you find a book?" asked his mother.

"Yes, I got something," he said, not ready to show too much interest; but his family noticed that he settled himself with the book in the big chair by the light and did not say a word until bedtime.

The night of the concert came and Jack was ready long before Aunt Jane called for him in her car. He discovered that it was a very good seat, and he saw many of his friends from the school orchestra here and there among the audience, as well as most of the faculty. From the moment the music started he was enthralled. The violins, violas and violoncellos interested him most, but he was thrilled at the runs on the flutes, the martial tones of the brass, and the quick movements of the percussion players.

As the last note died away, the loud applause brought Jack back to this world. After a pleasant ride and chat with Aunt Jane he reached home, and his mother brightly inquired, "Well, how was the concert?"

"Fine. O. K!" said Jack, enthusiastically.

"Aunt Jane has pretty good taste in birthday presents, after all. The book helped, too, as it gave me an idea of what was go-

(Continued on This Page)

## Franklin's Instrument

By E. A. G.

BENJAMIN FRANKLIN was a great old man and gave lots of time to improving the conditions of his fellow man in various ways. But not many people realize that he was also interested in music. Not, however, as a performer, so much as an inventor. For Franklin loved to invent things that had not yet been invented, and to improve things that were already in use.

GLASS HARMONICA  
Invented by Benjamin Franklin

In those days people sometimes put water in finger bowls of assorted sizes, and played tunes on them, so Franklin thought he would invent a better way of doing this and made an instrument which he called the glass harmonica. It "ran" with a little foot treadle, like an old fashioned sewing machine. Twenty or thirty glass disks, or bowls, were attached to a horizontal rod which was revolved rapidly by the treadle. When wet fingers were pressed against the glass disks musical tones were produced. The larger bowls produced deeper tones and thus a scale was made, the pitch depending on the size of the bowl.

Would you like to play on one of these queer instruments? You would probably be glad to come back to your piano or violin. Mozart and Beethoven each heard one of these instruments in Germany and wrote little pieces for it, and a German composer wrote six sonatas for the glass harmonica. There are a few of these harmonicas still in existence, mostly in museums.

## Symphony (Continued)

ing on. By the way, how much does a season ticket to the symphony concerts cost?

As his mother answered, naming a price well within some money he had been saving, she smiled to herself, well pleased.

"And," he continued, "how do you think it would be if I started violin lessons?"

"Fine," answered his mother, "and perhaps Uncle Fred will lend you his extra violin. You know it is a good one, and he always said someone should be using it. I'll call him up tomorrow."

"Won't Aunt Jane be surprised!" he said to himself as he hurried to bed with the symphony's themes ringing in his ears.

## The Violin Recital

By E. A. G.

One pussy cat said  
To another, one day  
"Oh, come, let us hear  
Our old ancestors play."

"Pray, what do you mean?"  
Number Two Pussy said,  
"For how can our ancestors  
Play when they're dead?"

"Well, that's just the joke,"  
Answered Puss Number One;  
"A fiddler is here,  
And the concert's begun."

"So let's go and hear  
What he plays on the strings  
Because they are made  
Of our ancestor's things."

# JUNIOR ETUDE—(Continued)

## Jack's Circus

By ERNESTINE and FLORENCE HORVATH

"THERE ARE so many things to watch all the time!" grumbled Jack, closing the piano. With a sigh, he put away the music that he was to play at Miss Eunice's recital. "Wrists, fingers, time, notes—who can remember everything?"

"Jack, Jack!" called his sister Arlene. "Uncle Tom is here to take us to the circus!"

"And was Jack excited! The difficult music was forgotten as he watched the animals and the clowns, the riders and the tumblers.

"I don't think you missed a thing!" laughed Uncle Tom, on the way home. "A few times I thought your head was going to turn completely around!"

"If there had been twice as much, I

would still have missed nothing!" boasted Jack. Then, suddenly, he was thoughtful. Could he not be just as alert and watchful with his music as he had been at the circus?

The next day, Uncle Tom was amazed to see a cut-out circus near Jack's piano. One cut-out clown had the name *Finger Action*. A tumbler was *Wrist Work*. There were also such performers as *Relaxation*, *Phrasing* and *Time*.

"It's my Good-Habit Circus," laughed Jack. "Every performer in it must be watched and drilled! When Miss Eunice says I've corrected a musical fault, that performer goes on top of the piano, in a place of honor. Circuses and musical faults both need constant watching."

## Rosemary's Combination Scales

By GLADYS M. STEIN

"WHAT in the world are you practicing?" Patricia demanded as she entered Rosemary's home one summer morning. "It sounds as if two people were playing scales and arpeggios at the same time, and on the same piano."

"Well, there's only one person practicing," answered Rosemary; "but I am playing both scales and arpeggios at the same time."

"That's impossible!" declared Patricia.

"No, it is not!" Rosemary replied. "Just you watch now while I play the C major arpeggio back and forth in one octave fourteen times with my left hand, and at the same time I'll play the C major scale up and down three octaves with my right hand. There will be a note in the right hand for each note in the left hand, and if I don't make a mistake I will end on the very same keys on which I began."

"Oh, please show me how to write down

that idea," Patricia begged after Rosemary had finished playing. "I don't want to neglect my scales and arpeggios this summer while teacher is at the University studying; but I do get so tired of practicing them over and over again in the same old way."

"Suppose we type out a scale and arpeggio chart for you on my little portable typewriter," Rosemary suggested.

It didn't take the two girls long to get the typewriter settled on a low table near the piano. Then Patricia typed the letters of the keys exactly as Rosemary played them on the piano. The letters for the right hand she typed on a straight line with tiny dashes between them. Then below these she typed the letters for the arpeggio which Rosemary played with her left hand. To help her in remembering that this hand went up and down only one octave she zigzagged the letters up and down. Try it.

DEAR JUNIOR ETUDE:

My mother thinks she has a very musical family, as I play the violin, my brother plays the saxophone, and my sister plays the xylophone. I also have studied piano lessons for six years. We have lots of fun in our family, by playing together.

From your friend,  
BEVERLEY BENY (Age 12),  
Illinois.

## Letter Box List

Letters have been received also from the following, which, we regret, space will not allow us to print: Lucile Oswald, Flora Lloyd, Dorothy DeBar, B. D. Burns, Bernice Beach, Carolyn Cunningham, Marion E. Morley, Maurine Perry, Peggy Kehoe, Ellen Matlack, Jane Melders, Irene Swanson, Hilda Bruner, Ardell Winters.

## Honorable Mention for February Essays:

Theda Maya Pearson; Harriette Hildson; Billy Claiborne Hooper; Dell Singer; Mary Donnelly; Wanda Mae Raselle; Dorothy Mae Jaeger; Donald Givens; Leonard Davis; Frances Brannan; Shirley Anderson; Marion Quinn; Betty Jane Christian; Lois Neimeier; Ann Barker; Lydia Pizlo; Teresa E. Carson; Martha Wallace; Mary East; Jack Nicko; Dorothy Lindsey; Lorraine Marie Della; Lois Gellers; Genevieve Young; Doris Hanger; Virginia Shmak; Melba Chehak; Bobby Snuffer; Patricia Boyle; Charlotte Condren; Alice Daniels; Roberta Anderson; Jim Leeman; Betty Jane Cooper.

## The Year Around Music Game

By Gladys M. Stein

TAKE THE FIRST letter of the current month and make a list of music terms beginning with that letter. The player with the longest written list wins.

Another month the list may be made of composer's names; still another month with instruments, or titles of compositions.

John Behren Prichard, Iowa  
Age six months

## Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month, for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "National Music Week."

Must contain not over one hundred and fifty words, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by May the Eighteenth. Names of prize winners and their contributions appear in September. The thirty next best contributors will receive honorable mention.

## RULES

Put your name, age and class in which you enter, on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper, do this on each sheet. Write on one side of paper only.

Do not use typewriters and do not

have anyone copy your work for you.

When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules will not be considered.

## Instrument Circle Puzzle

By Mrs. G. A. Risch

START with any letter in the circle, move clockwise always (never go backwards), jumping over some letters. How many musical instruments can you find?

## Answers to February Octagon Puzzle:

1-2. sopranos; 1-3. staccato; 1-4. Schumann; 1-5. singsong; 1-6. scholars; 1-7. Schubert; 1-8. serenade; 1-9. songster; 2 around to 9. songster.

## Prize Winners for February Octagon Puzzle:

Class A, Mildred Smith (Age 14), Texas.  
Class B, Dorothy Hartman (Age 12), Minnesota.  
Class C, Jim Leeman (Age 10), District of Columbia.

## Music in My Home (Prize Winner)

MY FAMILY has been brought up on music. My father teaches violin and harmony. My sister has taken piano lessons since she was five years old, and now she is studying at a conservatory. My other sister takes violin lessons. I have studied the piano since I was a little boy and I hope to be a fine pianist some day. I enjoy THE ETUDE pieces very much, and my older sister plays the hard ones and I play the easy ones. Sometimes my two sisters and my father play together, and I enjoy it very much. You can see that our home is always filled with music.

We also have a big library of music, including books on all subjects that go with music.  
ROBERT CASTRUCONE (Age 10), Class C, Massachusetts.

## Answers to Who Knows

1. Dreaming; 2. 1797; 3. Pitch, score, tie, bass, run; 4. Handel; 5. The "Messiah"; 6. Handel; 7. One flat; 8. Scotland; 9. Bach; 10. Six.

## Music in My Home (Prize Winner)

I AM VERY fortunately situated in my home, as my mother is a music teacher. She not only sings two-part songs with me, but she plays with me on our orchestral instruments. She has added to our collection of instruments for several years and now we can play on most of them in solo or duet form.

My home is my laboratory for experimental study. I have composed several melodies; and I have enjoyed hours spent in trying to make a scale for playing on common things, such as bells and water glasses.

My home is where I practice for the organizations I belong to, including our School Orchestra, School Chorus, the Junior Philharmonic Symphony, and the Chapel Singers. I also enjoy God's instrument, the human voice, and I sing with our radio, victrola, and the other instruments, as I play them.

GUINEVERE BYERS (Age 11), Class B, Texas.

## Music in My Home (Prize Winner)

MUSIC is the giver of happiness in our home. With music our family has found culture, joy and relaxation.

Four years ago, when I started taking violin lessons, we formed a string trio in the family, my mother playing piano, my father playing bass, and I the violin. Soon my brother began lessons on the violoncello, and hence we enlarged our trio to a quartet. Since then we have played many times at our church, and at Parent-Teacher meetings, as well as for friends in our home. We hope soon to make our organization a quintet by starting my youngest brother on another violin.

Each member of our family arranges his work so that we can practice the quartet together at least three nights a week. Thus our music has also brought to our family friendly cooperation.

JEANNE GILMORE (Age 15), Class A,

ST. CECILIA JUNIOR MUSIC CLUB  
Cudahy, Wisconsin

## Honorable Mention for February Puzzles:

Angela Luman; Rob Butterfield; Virginia McGrath; Lorraine DeBoe; Charlotte Penmar; Irene Brown; Marie Munsey; Elaine Wheatmore; Alice Nelson; Nellie Wilson; Adele Brownback; Eunice James; Etta MacNell; Roberta Riddle; Clara Wild; Louis Bonnell; Ilra Helsing; Dorothy Rice; Constance Birch; Rita Elaine Seagna; Sydney Andrews; Mary Belle Grayman; Dorothy Foust; Betty Jane Cooper; Wilnot Purcell; Joan Beverly Ford; Josephine Connors; Sally Goldman; Marian Cowen.

## More Recital Ideas

TO THE ETUDE:

I notice letters in THE ETUDE telling of ideas teachers have found for pupils' recitals. As I think the pupils should learn a little about musical history from the very beginning I thought of one way to accomplish this. First I chose a musician, and then selected pieces for some of the pupils to learn, written by that composer. The pieces were grouped together on the program, and I gave a talk on the composer's life and works, choosing the points of most interest and yet of importance. The children were to write at home what they remembered, and bring it in by a certain time to be marked. This proved interesting to them, as they were eager to know later who had been picked for the next recital.

A prize could be given for the best; or the marks could be kept from month to month and totaled at the end of the term.

Another short contest I used was to see who could write the longest list of musicians' names, in a certain period of time.

—D. MCKINLAY

## Do Not Delay Memory Assignment

Gestaltic Psychology

TO THE ETUDE:

Often a piano pupil may be spurred on to do quicker and more intensive work on a number if the teacher does not delay in having him to memorize it. For the average pupil memorizing requires practice by sections and intensive work from every standpoint. Of course the immature student needs to read the number over oftener before starting to memorize it, but as soon as the basic features—such as tempo, expression and general interpretation—are grasped memorization may well be begun. Since the pupil who is at all diligent will hate to fall down on the memory assignment, he will put in more time on practicing it than if told just to continue working it up to a higher level of perfection. In so memorizing he will also improve in execution and from other standpoints of perfection. In other words, he will "kill two birds with one stone." Besides, it will prevent the number from becoming stale to him.

This early memorizing process is based upon Gestaltic or configuration psychology. It is a school of psychology which maintains that the whole of the content of any perception is greater than its parts. Therefore, memorizing a piece soon after it has been carefully read is a means of getting an early concept of configuration.

—MADGE PARSONS STONER

## Musical Activity in Rural Schools

TO THE ETUDE:

"Shop work, supplementary activity to general musical development," read the headlines. In Winnetka, Illinois, David Dushkin, Director of the School of Musical Arts and Crafts, believes general music development more important than any proficiency on any given instrument, the article states. I believe in it for the general public.

Some of our rural schools in Waseca County are doing just that, and our city schools have begun it: cornstalk flutes, cigar box violins, xylophones of water glasses or bottles. One rural school teacher had drums made of tin boxes, the ends covered with old inner tubes. For drumsticks she had old organ stops. The old school organ was good for nothing else.

Of course the organ is found in most rural schools and is an ideal instrument for use with children's voices. Many of these organs have grown old and are practically useless; but one school has just purchased a new one.

Our 411 clubs gave a pageant one fall at the County Fair. These clubs have their musical and dramatic contests.

In one school is a wall map of instruments I obtained from an instrument company at ten cents. I also gave the County Superintendent one, with notes on their development written on it, to suggest further study of instruments.

The development of American music rests with rural America. There is our foundation, our beginnings.

—DOROTHY DEBAR

## The Audience an Inspiration

"If I were marooned on a desert island and were satisfied that it was impossible to be rescued from that position, I should not want to make music. Music, like all the arts, is a form of self-expression, and an audience is necessary for this self-expression to take form. When there is a large audience, a sympathetic one, I have a sensitive feeling down my back. The audience, in a collective desire for the best that a musical performance can give, plays an important part in bringing about that kind of performance."—Basil Cameron.

## Bach's Musical Helpmate

(Continued from Page 298)

early age. The Bach family was second to none in this respect. Johann Sebastian had more urgent obligations, so it fell to the mother to fulfill this duty; and she probably did it excellently. It was the dancing master's task to train his pupils also in good deportment, social usages, and refined manners. To aid this work it was necessary to furnish suitable music; and a minuet, march or polonaise was played either upon the klavichord, or a flute, or perhaps at times on the dancing master's violin. The children were expected not only to play well, but also to improvise and change the tempo of a composition, or to

Bach family; for, now that the *Notenbüch* had become somewhat of a family register, it was still more jealously guarded by Anna Magdalena as her very own. Her ability to write and copy music perfectly made her critical of other entries, and the book is a clean cut specimen of law and order.

Some of the contents of the cherished sheets prove the depth of the religious life of the Bach family, in spite of the fact that in the later years the pages were to receive some less inspiring contributions. And these again speak for the tolerance toward those of less serious taste and char-

## Next Month

THE ETUDE for June, 1939, Steps Out with New Features

### A SENSATIONAL OPERATIC ARTICLE

Millions have listened to the glorious voice of Kirsten Flagstad, the operatic surprise of the past ten years. Her article upon "Self Discipline and Self Help in Singing" is one of the most understanding that THE ETUDE Music Magazine has yet presented.

KIRSTEN FLAGSTAD

### PIANIST! KNOW YOUR FINGERS!

Arnold Schultz, an American teacher who has made a distinct impression throughout the West, writes upon a very practical subject for all pianists. Students, as well as pedagogs, will enjoy this lively discussion.

### THE DEMOCRACY OF THE RADIO

A new aspect of a very practical and captivating phase of present day music. Howard Barlow, Music Director and Conductor for the Columbia Broadcasting System, whose name is a household word in thousands of homes, brings out many new ideas for "listeners-in".

### THE VITAL INNER STRUCTURE OF MUSIC

Is Counterpoint merely dry bones or is it something which adds glorious richness to the musical fabric? Dr. Francis L. York of Detroit, distinguished American pedagog, and an authority upon theory, presents many new ideas upon this subject.

### GIUSEPPE VERDI IN HIS LETTERS

Verdi was one of the most modest of all composers. One of his friends, the late Commendatore Eugenio di Pirani, long a contributor to THE ETUDE, has selected from his various epistles characteristic notes indicating his extreme shyness.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 22 pages of delightful new music to play and sing.

## Music Study Means "Music" Study

(Continued from Page 353)

In order to be sure at all times of his musical effects, the student must treat his violin kindly. It should be kept clean, and in good repair, and must never be exposed to the inclemencies of the weather. It is a good practice to have a reliable violin maker look your instrument over for you, about once a year. Rosin should be brushed from the violin. Any foreign substance, which is allowed to enter the body of the instrument, interferes with the vibrations and hampers good tone. In this case, cleanliness is good not only as a principle but also as a practical means of insuring free tone. When not in use, the violin should always be covered and left in its case, in that part of the room where there is the least variation in temperature—not too near a radiator, for instance, or an open window. Violins are remarkably sensitive to temperature, not only in violent changes of climate but also in the same room, from day to day. My most distressing experience with temperature occurred in Java, on my most recent world tour. One night, after practicing, I put my violin away and retired. It was excessively hot. In the morning I opened the case and saw, to my horror, that the violin was in pieces! The terrific heat had completely unglued it overnight. Nor was that the worst of the affair. I took it to a local violin maker to be repaired, and found that the glue he used was of such a nature as to be suitable for that climate only. On my return to Europe, I had to take my violin to another maker, to have it unglued a second time, cleaned of the excessively heavy Javanese glue, and reglued for use in more temperate climates.

But even a fine instrument is valuable only for expressing the musical thought which ripens and deepens in the person who plays it. The student who would succeed—and it is relatively important whether that success demonstrates itself on a public stage or in the parlor of a modest home—must accustom himself to studying music.

## Pedaling Legato Chords

By Gladys M. Stein

WHEN TRAINING young piano pupils to connect chord progressions through the use of the damper pedal teachers will find the following plan helpful.

Copy a few measures from Schumann's *Chorale* (or any similar composition), but instead of writing it out in half notes, write it in quarters divided by quarter rests.

Show the pupils how to pedal this in the usual way by raising and lowering the pedal immediately after playing each chord (while the keys are still depressed). Then ask them to play the measures again, and on each rest to lift their hands as high as the music rack of the piano, but in the meantime keeping the chords smoothly connected with the pedal.

This practice quickly reveals any carelessness on the part of the pupils, and they soon learn not to release both the pedal and keys at the same time. Even the indifferent pupils notice how disjointed chord progressions sound when not pedaled correctly.

Work of this kind interests the children: develops keyboard freedom, accuracy in locating keys, and skill in pedaling.

acter than others. With the frivolous wedding compositions and the occasional march, the book is filled to capacity; and it is most important that the keynote throughout is love combined with music, which governed the home of Johann Sebastian Bach. This is, after all, the real charm of the great master's gift of a simple *Notenbüchlein* to his beloved wife, Anna Magdalena Bach, who survived him by ten years and then died as a public charge, on February 27th, 1760. She was buried by her husband's side in *Johannesfriedhof* (St. John's churchyard), and what is known of her has been largely contributed by her famous *Notenbüchlein*.

## A Series of FREE PIANO NORMAL CLASSES

Conducted in NEW YORK CITY This Summer by

### BERNARD WAGNESS

OUTSTANDING AMERICAN CHILD SPECIALIST

Author of

"THE BERNARD WAGNESS PIANO COURSE"

These Classes Will Be Given Through  
the Courtesy of

### OLIVER DITSON CO.

1712 Chestnut St., Phila., Pa.

for the Convenience of Teachers In-and-About  
New York and of Teachers Elsewhere Who  
Plan to Visit the NEW YORK WORLD'S FAIR

In NEW YORK—June 26th to July 1st (inclusive)  
" " " July 17th to July 22nd (inclusive)  
STEINWAY HALL, 113 WEST 57TH STREET

The classes begin each day at 9:30 A. M. and close at 12:30 Noon. Subjects covered: The Pre-School Child; The 7 to 12 year old Beginner; The Adult Beginner. The following essentials of teaching will also be discussed and demonstrated: Reading; Rhythm; Ear Training; Keyboard Harmony; Transposition; Technic; Pedaling; Memorizing and Teaching Materials.

IMPORTANT: There is no charge for these classes. It is important that teachers make reservations in advance to guarantee space. Upon receipt of each reservation an admission ticket will be mailed to each teacher.

Address All Requests for Reservations to:  
SECRETARY TO BERNARD WAGNESS  
1712 Chestnut Street, Philadelphia, Pa.

# THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES

An Alphabetical Serial Collection of  
THE WORLD'S BEST KNOWN MUSICIANS

This series which began in February, 1932, has included to date a total of 3872 celebrities. It will be continued alphabetically until the entire history of music is adequately covered. Start making a collection now. Nothing like this has ever hitherto been issued. Etude readers desiring additional copies of this page and pages previously published are referred to the directions for securing them in the Publisher's Notes Department.

Donald Nichols Tweedy—B. Danbury, Conn., April 23, 1880. Comp., tchr. Stud. at Inst. of Mus. Art. Fac. mem., Lastman School of Music, Rochester, Or. wks. and "Manual of Harmonic Technique."

Ferdinand Vach—B. Jazlovce, Czechoslovakia, 1860. Comp., chl. dir. Studied at Organ School, Prague. Prof. at Teachers' Sch. in Brno; prof. at Cons. Brno. Has written many chl. pieces.

Marguerite Valdi—B. Eng-land. Sopr. Pupil in Paris of Jean de Reszke. Debut at Nice in "La Bohème." Operatic appearances in France. Has concertized with success in America.

Erich Valentin—B. Strassburg, Nov. 27, 1906. Writer, music critic. Was active in Munich; since 1928 music critic in Magdeburg. Has written biographical and analytical works.

Alwina Valleria—B. Baltimore, Oct. 12, 1848; d. Nice, Feb. 17, 1925. Op. & oratorio sopr. Pupil of Arditi. Sang at La Scala, Milan; Her Majesty's Op., & at Covent Garden, N. Y. debut, 1879.

Francesco Antonio Vallotti—B. Vercelli, Italy, June 11, 1697; d. Padua, Jan. 16, 1780. Comp., noted theorist, organist. Teacher of L. A. Sabbatini and Abbé Vogler. Valuable theoretical works.

Alicia van Buren—B. Kentucky. Comp., singer, poet. Pupil in composition of Carl Schmidt. Has written songs, some of them being arranged for orchestra. Many activities in Boston mus. circles.

John Smith Van Cleve—B. Maysville, Ky., Oct. 30, 1851; d. New York, Dec. 28, 1917. Pianist, teacher, critic. Active in Cincinnati, Chicago, and N. Y. C. Many pla. lecture recitals.

Entered as second-class matter January 16, 1884, at the P. O. at Phila., Pa., under the Act of March 3, 1879. Copyright, 1939, by Theodore Presser Co. for U. S. A. and Great Britain.

\$2.00 a year in U. S. A. and Possessions, Argentina, Bolivia, Brazil, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Mexico, Nicaragua, Paraguay, Republic of Honduras, Spain, Peru and Uruguay. Canada and Newfoundland, \$2.25 a year. All other countries, \$3.00 a year. Single copy, Price 25 cents.

For thirty-eight years Century music has enjoyed the distinction of being one of the finest editions published, yet its price is but 15c a copy.

In the following list are featured some of our very latest issues, including the works of four of today's most popular composers.

Teachers, pupils and players will find them all of exceptional value, especially Ray Armour's "Modern Piano Method" and Walter Rolfe's "Book on Harmony." You can buy them at your dealer or direct from us.

Teachers who use and recommend Century music win the everlasting gratitude of parents who can't afford the high prices generally asked for teaching music. Century music helps you hold your old pupils and also aids in enrolling new ones.

Your money refunded without question, if not fully satisfied with your purchase.

## NEW and IMPORTANT

## A MODERN PIANO METHOD FOR BEGINNERS

by  
**KATHLEEN ARMOUR**  
PRICE 15c EACH PART

Here is something decidedly new and original. It is issued in five parts in sheet music form and each part sells at the regular price at 15c per copy, which enables the pupil to start the study of the piano with very little financial outlay. This modern work is based on the middle C approach and is so clear and step-wise that the pupil is playing little tunes almost at the outset. Profusely illustrated. Teachers, be sure to see this outstanding work.

- 3196—Part I—Learning Letters on the Keyboard  
3197—Part II—Notes, Bars, Time Signatures  
3198—Part III—First Finger Exercises  
3199—Part IV—The 2/4 Time Signature  
3200—Part V—Introducing the 8th Note

### CENTURY PIANO SOLOS, 15c ea.

(Capital letter indicates key-number the grade)

3193 Waltz in Ab (op. 39), G-2, Brahms-Rolfe

## ALSO THE CENTURY MANUAL OF HARMONY by WALTER ROLFE

A pocket sized simplified method of the elements of harmony, embracing the scales and their construction, the intervals, the triads in both major and minor keys up to and including the dominant 7th, and its inversions.

Everything is quoted in the simplest terms possible so that even a child with a year or so of piano study can easily "follow thru" with it. Be sure to see it. PRICE, 25c.

The Century Catalogue contains over 3,000 items consisting of PIANO SOLOS, DUOS, TRIOS, VIOLIN and PIANO SOLOS, TRIOS and QUARTETS, SAXAPHONE and PIANO, MANDOLIN and GUITAR and VOCAL.

Ask your dealer for Century music, and if he can't supply you, send your order direct to us. Our complete catalogue will be mailed you FREE on request.

# THE WORLD OF MUSIC

GEORGES  
BIZET

"CARMEN," what magic in that name! "Carmen," perhaps the favorite production of the largest number of opera-goers. *Carmen*, the lodestar or despair of the dramatic soprano—yea, and of the contralto! Yet the name of its creator remains scarcely more than a shadow that flits across the pages of musical history. How few can say more of him than that he was a French musician and wrote "Carmen"! His recent Centenary was largely a glorification of "Carmen." Such reward bath genius!

THE MACDOWELL COLONY, at Peterborough, New Hampshire, will not open this summer, according to a statement said to have been made by Mrs. Edward MacDowell, widow of the illustrious composer. A storm of some months ago did such damage that all available resources will be needed for restoration work during this season.

THE BAYREUTH FESTIVAL, from July 25th to August 28th, will include twenty-four performances, with two presentations of the complete "Der Ring Des Nibelungen."

SIXTY-FIVE YEARS OF SERVICE in the choir of Norwich Cathedral is the record of Mr. J. J. Manning; and the anniversary has been commemorated by a presentation by the Dean at a gathering of ecclesiastics and choir members. Mr. Manning founded the Norwich Choristers' Guild, the oldest organization of its kind in England.

MUSICAL FESTIVITIES have been a prominent feature of the celebration of the fourth centenary of the founding of Bogota, capital of British Columbia. Leading orchestral conductors of Brazil, Chile, and of Panama, shared honors with the baton.

THE MOZART SOCIETY OF SCOTLAND held a three program Mozart Festival on February 25th and March 1st and 3rd, devoted largely to performances of chamber music of "The Swan of Salzburg."

FLORENCE EASTON, our adopted "British cousin" who so long did valiant service in the Metropolitan Opera Company, is advocating the inauguration of a company doing opera in English, in a small opera house in New York, where there could be a season of eight to ten months in which young singers would have an opportunity to acquire the routine necessary to their engagement in one of the three great operatic organizations of America. Bravo, Mme. Easton!

A RECORDER RECITAL was given on February 1st at Wigmore Hall, London, by Carl Dolmetsch of the famous Dolmetsch Family of enthusiasts for instruments of the earlier centuries. The recorder, an early form of the flautolet, possesses a fascinating tone and technic, and at the same time is comparatively easy of adequate mastery.

A PROGRAM OF AMERICAN COMPOSITIONS was recently presented in the Shrine Auditorium of Los Angeles, to an audience of five thousand persons, by an orchestra of one hundred and fifty musicians and a chorus of three hundred voices, all led by Gastone Usigli. And Dame Rumor says that papers of the next morning carried not one line of mention of this significant enterprise. So is our native muse encouraged in this fair land!

## Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

THE METROPOLITAN MANAGEMENT announces that New York City will have a season of sixteen weeks by the Metropolitan Opera Company for next season, beginning on November 27th.

PROFESSOR BERNARD HEINZE, director of the University Conservatorium of Melbourne, Australia, and conductor of the Melbourne Symphony Orchestra, announces plans to perform in the near future "innumerable works" by American composers. And so, musically we clasp hands with our still "British Cousins" in the far removed antipodes.

THREE HUNDRED THOUSAND DOLLARS WORTH of instruments, with an aggregate age of near ten thousand years, were possessed by the more than fifty players in the string sections of Toscanini's all star organization of ninety-four musicians recently heard over the air.

MOZART'S "REQUIEM" was the chief offering on the program of March 22nd of the Schola Cantorum of New York, with Hugh Ross conducting. Fanny Cleve, soprano; Lorraine Eley, contralto; William Hain, tenor; and Mark Love, bass-baritone; were the quartet of soloists.

VLADIMIR  
GOLSCHMANN

THE BROTHERS GOLSCHMANN — Vladimir, conductor of the St. Louis Symphony Orchestra, and Boris, pianist—were respectively conductor and soloist of the Philadelphia Orchestra for its concerts in Philadelphia on March 3rd and 4th, and at Carnegie Hall, New York, on the 7th, when the "Concerto in C minor for Piano and Orchestra," by Mozart, was the *piece de resistance* for musical appetites.

## COMPETITIONS

PRIZES FOR WORLD'S FAIR: First, \$3,000; second, \$1,000; to best chorus of one hundred and fifty to two hundred voices singing the *Sanctus* (in Latin) from the "Mass in B minor" of Bach, and *By the Waters of Babylon* by Philip James. First, \$1,000, second \$500, to best chorus of sixty to one hundred voices singing *Lucifer in Starlight* by Bantock (unaccompanied) and *The Nun of Nidaros* by Protheroe. Also liberal prizes for men's choruses of sixty to one hundred voices; for women choirs of fifty to seventy voices; and for male and female soloists. Complete information from Dr. D. E. Jones, secretary, *Scranton Tribune*, Scranton, Pennsylvania.

PRIZES FOR BAND COMPOSITIONS: Instrumental or vocal solo with wind accompaniment; any form for symphonic band, except quick-step march; a work for small band or combination of wind instruments. Competition closes August 15th. Further information from Department of Music, World's Fair, New York City.

THE EURIDICE CHORUS of Philadel-

MME. AINO  
ACKTÉ

MME. AINO ACKTÉ, impresaria and director of the Finnish Opera at Helsinki, is perhaps the only woman holding a so important musical post of this nature. Having had a rather long career at the Grand Opéra of Paris, she is steeped in opera routine and is said to have a keen ability in the selection of the right operas and of a suitable interpreter for each rôle.

DR. HARL McDONALD, director of the Division of Music of the School of Fine Arts of the University of Pennsylvania, has been appointed Manager of the Philadelphia Orchestra of which he has for some years been a member of the Board of Directors. His compositions have been on a number of the programs of the famous organization.

phia offers a Prize of One Hundred Dollars for a Chorus for Women's Voices, in three or more parts, either *à capella* or unaccompanied, and to words of the composer's choice. Compositions must be received not later than October 1, 1939, addressed to The Art Alliance, 251 South 18th Street, Philadelphia, Pennsylvania, to whom application may be made for further information.

A PRIZE OF FIVE HUNDRED DOLLARS is offered by the Henry Hadley Foundation for the best composition in any of the major forms to be submitted within the autumn months. Full particulars may be had from the Henry Hadley Foundation, 633 West 155th Street, New York City.

THE PADEREWSKI PRIZE COMPETITION offers \$1,000 for the best work for Chamber Orchestra, and a second \$1,000 for a Concerto or other serious work for a solo instrument with symphonic orchestra. Works must not exceed fifteen to twenty minutes in performance, and must be received before February 1, 1940.

THE FIVE HUNDRED DOLLAR PRIZE, offered by the American Society of the Ancient Instruments, of Philadelphia, for a composition suited to their organization, has been awarded to Arthur Cohn, also of "Penn's Towne," for his composition "Music for Ancient Instruments." A. Louis Scarmolin, of Union City, New Jersey, received honorable mention for his *In Retrospect*.

THE ORIGINAL SCENES AND COSTUMES, used in the first production of the "Boris Godounoff" of Moussorgsky, were purchased by Gatti-Casazza for use by the Metropolitan Opera Company, at a price approximating twenty-five thousand dollars.

TSCHAIKOWSKY'S BIRTH CENTENARY will occur next year, in recognition of which a complete edition of his works is being prepared by Boris Asafiev, to be brought out at Moscow.

J. FISCHER & BRO., prominent music publishing firm of New York City, has just celebrated its seventy-fifth anniversary. Founded in Dayton, Ohio, in 1864, by Joseph Fischer, organist and choir director, it was moved in the following year to New York, where the founder became organist of the Church of the Holy Redeemer. For fifty years it was located in Bible House, Astor Place; and it is continued by two sons of the founder, George and Carl T., and a grandson, Joseph A. Fischer. Its scholarly and beautifully executed publications include the works of some of America's foremost composers.

MARIAN ANDERSON, internationally famous contralto, is to be honored by a mural painting of her to be placed in the Building of the Department of the Interior at Washington, D. C. This is an outgrowth of her concert before seventy-five thousand, at the Lincoln Memorial, on the afternoon of Easter Sunday, "which so wonderfully exemplified the progress of her race."

THE GOLDMAN BAND will begin its series of programs on the Mall of Central Park, New York, on July 9th—rather later than usual, because of its engagement at the San Francisco World's Fair.

A COMMEMORATION of the one hundred and thirtieth anniversary of the birth of Schumann on June 8, 1810, will be celebrated next year by placing a bust of this first of the distinctly romantic composers, in the Walhalla of Berlin.

AFTER FIFTY-FOUR YEARS' SERVICE to the Liverpool (England) Philharmonic Society, for more than thirty of which he was the efficient secretary, Mr. W. J. Riley has resigned, his work to close the last of May. It is such devotion that stabilizes British musical organizations.

THE BUSCH QUARTET arrived in New York on February 21st and gave its first concert, on February 23rd, in Carnegie Hall. Sponsored by Mrs. Elizabeth Sprague Coolidge, it gave five concerts in Manhattan, in addition to appearances in Boston and Washington.

A MONUMENT TO BEETHOVEN, a product of the sculptor Peter Breuers, was unveiled on last December 17th, at Bonn, his birthplace.

DR. FREDERICK STOCK, conductor of the Chicago Symphony Orchestra, received, during the intermission of the program of March 23rd, the Bruckner Medal of Honor, from the Bruckner Society of America.

THE PHILADELPHIA MUSIC TEACHERS ASSOCIATION, including on its roll five hundred of the leading teachers and music patrons of Penn's Towne, gave on the evening of March 14th its Forty-Sixth Annual Dinner, in the Grand Ballroom of the Ritz-Carlton Hotel, with Dusolina Giannini as guest of honor, and with Dr. Edward Ellsworth Hipsher, its president, as master of ceremonies. Following the repast and toasts Miss Giannini, assisted by Robert Elmore, pianist-composer, graciously contributed a half hour of their combined art, which thrilled the guests to demands for repeated encores. Philadelphia is proud to be the home of both these so talented and internationally known artists.

# Now That Commencement Is Here!

WHAT now, that commencement is here? Thousands and thousands of students have been working for a diploma, a degree, and that is about all that some of them ever will get from their four years of struggle. We have never heard this presented more clearly than in the masterly address given to the graduating class, by Dr. Alexander G. Ruthven, President of the University of Michigan, at the commencement of that great institution last June. Here is a thought which every high school, college or university graduate should consider carefully. Attend these facts, expressed with such unusual clearness and force.

"If a man is to be worth his salt he must realize that his education does not cease with the acquisition of a diploma: 'The wise and the good are they who grow old still learning many things, entering day by day into more vital communion with truth, beauty, and righteousness.' One must also remember that a college training, alone, cannot be blamed for a poor life, if an individual fails, after his college years, to try to grow in wisdom and in the favor of God and man. Some failures may be the result of faulty college training, but many are the consequences of later attitudes and influences.

"To be very specific, Michigan has among its graduates quack doctors, shyster lawyers, teachers whose development was arrested at Commencement, business men who short-change their customers and steal our natural resources, unethical dentists and pharmacists, ministers who are careerists rather than pastors of souls, vain, selfish, and gossip women, narrow-minded, bigoted, and intolerant men, and alumni who become less rather than more socially minded and cultured with the passing years.

"It is cold comfort that other schools have a similar record, and that we hope these failures of our educational efforts constitute but a small proportion of the total product of higher education. Neither can we get much satisfaction from the reflection that the defectives among our alumni are partly the result of ineffective guidance in college and that instruction and techniques in most fields are being improved. For we know, even though we do not readily admit it, that we shall continue to have alumni who fall short of our hopes and their promise as students, through sheer laziness, lack of knowledge of how to continue their efforts to become well-rounded individuals, or ignorance of the necessity for continuing study.

"You young men and women are to-day in a dangerous position. Experience permits us, your teachers, to realize that many of you still have the notion that the college exists to force youth to learn. Some of you have the impression that you are now beyond the period when study is required except, perhaps, in the techniques you will employ in gaining a living. If you have these beliefs, your development has been arrested and you already have begun to degenerate mentally and spiritually and perhaps physically. This Commencement does not mean for you,

as it does for your wiser colleagues, the continuation of an independent effort to have a clear, conscious view of your own opinions and judgments and to promote self-development in thinking, intellectual honesty, tolerance, kindness, and social mindedness.

"In college every effort is made to encourage study; and the failure is appraised and sent home. But the schools have no method of detecting failures after graduation;

although the improper yardsticks of financial success and social standing are, it is to be regretted, sometimes employed. Our schools have, however, two definite obligations to adults, even though they may not be able satisfactorily to discharge them. They must offer facilities in the field of adult education and they must continuously admonish each generation to understand life as at once a desire and 'a quarry out of which we are to mold and chisel and complete a character,' and to recognize the two aspects of life in each of us, the life of action, and that of the mind and the heart, both of which must be continually and properly cultivated if the individual is to be a healthy and respectable human being: 'To attain understanding or wisdom one must first thirst for it, and then it is acquired only at the cost of much labor.'"

Just how much your college or conservatory training really means to you can be determined only by what you do during the four years after graduation. At the end of this period, is it not fair for you to ask yourself whether you have made the same progress in that time as you did during your

four years in college? If your post college days have meant a collapse of effort, instead of an intensification, your diploma is hardly worth the sheepskin it is engraved upon; because you are merely one of the army of "examination passers" who, having gotten through a few academic wickets, sit down to admire their medals for the rest of their days. This surely is not the purpose of education. Commencement day is the beginning of the greatest race of all. Every graduate should be given a card with these words of Plato: "The learning and knowledge that we have, is, at the most, but little compared with that of which we are ignorant."

In no other calling is this more true than in music; because competition in the tone art is more acute than ever, and there is no profession in which more rapid advances are being made. Dr. Ruthven wisely added in the concluding paragraph of the shortest and best commencement address we have ever heard:

*"Only if you are willing to give, not only all that you are but also all that you can be, to the service of your fellow men, will you have any right to expect security from society. It is pure effrontery to ask God or your neighbors for your daily bread, if you do not try to deserve it; for, we are taught, 'Unto whomsoever much is given, of him shall much be required.'"*

DR. ALEXANDER G. RUTHVEN  
*President of the University of Michigan,  
Ann Arbor, Michigan*

## You Are Invited to Take Part in a World-Wide Birthday Surprise Party

**W**ILL NOT all of you join in this international surprise party? No matter whether you live in San Francisco, Hawaii, Nome, Melbourne, Shanghai, Cape Town, Moscow, Leipzig, Geneva, London, Paris, Buenos Aires, Vancouver, New York, Miami, Milwaukee, or the smallest cross roads town in the world, you may have the joy of participating in this celebration, at practically no expense.

This is the idea. The Etude proposes that a flood of birthday greetings be sent to dear Mme. Cécile Chaminade, who is now living at Monte Carlo, France, in her seventy-eighth year. Her delightful and able compositions are masterpieces of their type. She has given joy to untold millions, through their performance, through concerts, and over the air. Her works have become classics of the style and period they represent. They have an indelible charm of rhythm, melody, and harmony, which makes them welcome to vast audiences at this time.

Mme. Chaminade has been an invalid for years. It is now over a decade since we visited her at Tamaris, on the Riviera. As long ago as that, she was bedridden; but she was full of smiles, sweetness, and interest in life.

How can you join in this international birthday party to Mme. Chaminade? Mme. Chaminade was born August eighth, 1861, at Paris. Why not have the joy this year of sending her a birthday greeting, upon a postal card (a colored or special birthday card is not necessary; but, of course, this rests with you)?

Address your card to

Mme. Cécile Chaminade,  
34 Boulevard d'Italie,  
Monte Carlo,  
France.

Then just write on it some such greeting as,

"Happy Birthday Wishes to Mme. Chaminade, who has brought so much beauty to the world through the deathless art of Music."

Now sign your name, and give your address. Obviously the number of cards Mme. Chaminade will receive will be so great that she could not attempt to answer or recognize them, but that is not the point. The main thing is to give expression to the delight you have received for years from playing or listening to her compositions.

Be sure to add the proper foreign postage (two cents for postals from the U. S. A.—so just stick an additional one cent stamp on an ordinary postal; or use a two-cent stamp for a picture postal or a greeting card in an unsealed envelope. If sent in a sealed envelope, these greetings will require a five cent stamp).

Send the card so that it will reach Mme. Chaminade sometime during the first week in August. Allow at least ten days for overseas mail transit from our Eastern States, and two weeks from our Western States; friends in other countries should inquire of their postal officials as to the proper date of mailing.

The best time to write this postal is now; while it is on your mind, and then to keep the postal where it will be seen for mailing at the right time. Anyone may have the joy of joining in this birthday greeting. We can envision thousands of teachers having their pupils to send individual cards. Such an act has educational value, in bringing the personality of Mme. Chaminade and French musical art to them. We can see the students in colleges and schools in all parts of the country joining in this happy tribute. We can see officers of music clubs everywhere urging their individual members to participate.

Will it not be also a fine thing to have our fellow musicians in our sister country, France, to learn through this gesture how widely the works of Mme. Chaminade are admired and loved throughout the world?

The success of this birthday party will be due largely

to you who are reading this editorial. It will be due to your personal enthusiasm and activity in bringing this idea to others.

If you want to write your greeting in French, simply copy on your postal any one of the following:

1. A Madame Cécile Chaminade l'auteur charmante qui a donnée à l'art musical des nombreux ouvrages inoubliables, nous envoyons nos meilleur vœux à l'occasion de son anniversaire de naissance.

2. A Madame Chaminade l'aimable et charmante auteur des magnifiques oeuvres musicaux nous envoyons nos meilleur souhaits à l'occasion de son anniversaire de naissance.

## A Musical Quarantine

**P**PRIVATE advice we have received indicates that there is a great oversupply of professional musicians in Southern California, drawn there by the lure of the movies and the supposed opportunities which those who have migrated to that lovely country have imagined would be created thereby. Just as in the cases of the thousands of screen-struck young people who have poured in upon Hollywood, only the most brilliant, the most attractive, and the most able have any chance whatsoever. The others are merely pounding their heads against the granite wall of the law of supply and demand.

One ETUDE friend writes:

*"If ever you have an opportunity, do discourage newcomers from coming here to Southern California, for the field is so overcrowded! You have no idea of the struggle I have had to face in trying to get established—in the last few weeks three new violin teachers have come here to locate! And the list of singing teachers, all lured here by the glamor of the movies and their supposed opportunities, is endless."*

In any event, before the teacher contemplates invading this new territory, he should see to it that he is well supplied with adequate funds for the occasion, so his living in comfort and his initial professional expenses can be assured for at least two years. More than this, he should have a well-laid plan so that if retreat is inevitable, he may find another desirable location.

(Editor's Note: Before publishing this editorial, we submitted it to an established professional musician, located in Hollywood, who states that the need for such a "quarantine" is far greater than our statement would make it appear.)

## He Took His Bees to College

**W**AY DOWN in the heart of the Ozark Mountains of Missouri is the College of the Ozarks. Here youth of the eighth and ninth generations of fine sturdy pioneer stock, go to get an education. The college is Presbyterian and is splendidly conducted, especially to give opportunities to fine spirited young people, many of whom have very restricted means.

The President, Dr. Wiley Lin Hurie, told us the other day about Doyle Galloway. He landed on the campus with very little cash but a dozen hives of bees; and these bees just about worked their heads off to help Doyle get through college. With the first coming of the blossoms in spring, they zoomed forth to the fields and the orchards and came back laden with honey, which Doyle was soon to translate into learning. His stock of bees increased, and he bought a cow, and then another cow, and sold the milk. Think of the pride that was in his heart, when he graduated with an earned education, compared with the fellow who has had every cent paid for him during his college years. Which will win? We bet on Doyle. Incidentally, the College of the Ozarks is very proud of its fine and active Music Department.

# Learning How To Help Yourself

By

KIRSTEN FLAGSTAD

Prima Donna Soprano of  
The Metropolitan Opera Company

KIRSTEN FLAGSTAD

MY ADVICE TO STUDENTS of singing is not of a strictly pedagogical nature. In the first place, vocal problems are too individual to permit of general rules. And secondly, my own training has been so different from the accepted routine of study that I never have assembled a "method." I do not believe in "methods"! There is only one correct way to sing: the old, familiar style of pure *bel canto*. One must achieve firm breath support; one must learn to release one's breath so as to be able to master long phrases; one must allow the voice to come out naturally, without forcing. That is the only "method" I ever have followed; the only sort of singing of which I can speak.

However, there is much to be said about singing, without trying to teach "methods." Voice alone has never made an artist. Behind that voice there must be vitality, the ability to make quick decisions, a complete independence of spirit. Vitality is a natural gift, but the other qualities can be developed. The important thing to remember in developing them, though, is that no one can do it for you. A musical character must be entirely self built. One of the first important questions a young artist will have to decide is the best way of breaking into a public career. I believe there is a better one than the generally accepted way; that is, a long period of private study followed by an attempt to begin public work on a large scale. This is not advisable; it does not work out well.

## A Complete Equipment

PUBLIC PERFORMANCE REQUIRES much more than mere familiarity with arias and rôles. It is impossible for an untried beginner to offer satisfactory performances without years of routine drill. The wise beginner will realize this fact, and decide to find—or make—opportunities of his own. In Europe many of our operatic aspirants are perfectly contented to begin in the chorus. Nobody takes this to mean that they are going to remain in the chorus. But this is one of the best means of securing an open-

ing on an active, living stage, where singing routine can be supplemented by the discipline of the theater. The girl, who has dreams of singing Wagnerian rôles (I, myself, did not begin the study of *Isolde* until I coached it with my mother in 1932), would find it a distinct advantage to work in the chorus of a performance of "Lohengrin," let us say. Certainly, she would be far removed from the coveted stellar rôle; but she could observe coaching and rehearsing; she could watch to-day's *Elsa* at work; and she could take her own small part in the rounding out of an operatic pattern. If, after a season or two in the chorus, she progressed to small rôles of her own, with perhaps one line to sing, she would be serving her future interests far better than by waiting for major parts as an operatic start. And all the while that she is engaged in this small work she should continue her studies as carefully as in her studio days.

After all, it takes years to perfect a vocal technic. No recent graduate has attained the technical or artistic stature that will be hers in ten years' time. Thus, it is quite permissible to begin public work early—not in the sense of achieving "quick results," but in the determination of developing one's self in the drill of public work. Naturally one must never push one's energies to the point of tiring the voice; but the well used voice does not tire easily.

I made this sort of beginning. As both my parents were engaged at the opera, as conductor and coach, I was more familiar than most girls with operatic routine. I was barely eighteen when my mother, who was coaching a performance of d'Albert's *Tiefland*, asked me to learn one of the rôles for the performance. Because I learn quickly, I made my début in a solo rôle, without preliminary work in the chorus. A year later, I sang another solo part, after which, I went to Sweden, for further study. Had those first opportunities not

come when they did, I would probably have begun in smaller work, too, as so many of my fellow students did.

## The Finished Structure

THE ACTUAL METHOD of building a voice must be left with the individual teacher who understands it. I never had *vocalises*, although I know they are excellent for other voices. My practicing always consisted of working at selected passages from the rôles I sing. I was able to do this, because my original foundation was firm and sure. For the practice needs of inexperienced vocalists, the teacher should be the only one to suggest exercises. Only as one learns to judge of her own problems, with self-critical ears, can she decide what to practice and what to leave alone.

Singing, however, is not the only way of studying. A wise student can learn a great deal musically by working over scores and songs in silence. Facility in reading and a knowledge of piano playing are absolutely essential. A knowledge of the violin, while not absolutely necessary, is advisable as a means of improving ear accuracy and intonation.

I have always done much of my studying with tightly closed lips. It is good to familiarize one's self with the pattern and line of songs before singing them. Also, I believe in teaching (or learning) by example. It is not enough for a teacher to say "right" or "wrong." The teacher must be able to show his pupil exactly how the tones are to be produced. Much of my own fruitful studying came through imitation. It sometimes happened, in my student years, that I did not quite understand how to do a thing; yet I tried it, notwithstanding, in an effort to copy the results my

apart and show myself what was to be done.

My favorite idea of singing is that the ultimate result grows out of something far greater than vocalizing. This something is complete discipline—self discipline as well as the ability to obey directions. I believe in discipline. It is perhaps the most important factor in shaping a useful and happy life. I wish its advantages were stressed as often and as spectacularly as those of "freedom"—for freedom is impossible unless it is built upon discipline and control.

## The Value of Discipline

MY EARLIEST EXPERIENCES with discipline were met in our home; and this, I believe, is quite as it should be. The smaller community of the home is but a preparation for the wider activities of the world. I was made to practice the piano, though I hated it. I always loved music; but, because of the unique atmosphere of our professional home, I preferred the theater. Singing and acting looked much more attractive than sitting still at a piano, working at scales. To-day I can laugh at the excuses I made to escape from practicing. I was tired; my fingers were too short; the piece was not interesting. But none of this helped me. My orders were to practice, and I had to do it. If not, I was punished. We children were often whipped. We were sent out to the garden to pick a fresh, strong birch rod. We knew exactly what that rod was going to be used for, and the punishment sank in deeply. But we had one form of punishment that was far worse than being whipped, even though it did not hurt our bodies. If my brother and I had been teasing each other, or neglecting our work, our mother would open the formal parlor of our home, which was used only on

state occasions. We were brought down there, and then would come a plain, heart-to-heart talk. Our shortcomings were presented to us in the light of the pain they caused our parents, and we wept far more bitterly than

## A Conference Secured Expressly for THE ETUDE MUSIC MAGAZINE

By ROSE HEYLBUT

teacher produced. I learned the feeling of the tones and then, in second place, I came to understand what I was doing by analyzing the feeling in my throat. I do not advise such a way of work; I merely state that it has been my experience.

I was a grown woman before my voice reached its fullest power. Before that, it was a small voice. I was eager to make it larger, but my first two teachers were unable to help me. My third teacher told me that I had not yet learned how to close my vocal cords, with the result that too much breath escaped as unvocalized air. I was astonished to hear this, and had no idea of what to do about it. But by careful attention I learned the feeling. After that, it was easy to take this feeling

after the birch rod.

But our discipline did not take the form of punishments only. We were encouraged by small rewards, too. Although we were the children of theatrical people, we were hardly ever allowed to go to the theater, and then only to selected performances. My best reward was a ticket to the opera. My parents had all the tickets they wanted, of course; but they were given to us only as rewards that had to be earned. We were also put on our honor. My father never forbade us anything; he simply indicated what his preferences were, and let us know that he trusted us to carry them out. I remember that, although our bookshelves were always open, certain "advanced" books were not allowed me.

I would look at those books, from the outside, and wonder what they contained. When I was thirteen, I took a course in bookbinding; and, when I had mastered the work, my father gave me one of those "advanced" books to rebound. I took the book and bound it—but not once did I dare to read a page. Simply, it was not allowed.

To-day I am grateful for this early discipline. As far as the matter of piano study went, it proved an invaluable asset in my later work. Had I not been a fluent pianist, I never could have mastered my rôles and songs so readily. But more than any practical advantage of this kind, I was able to benefit from the further reaching results of discipline in assuming duties and responsibilities. No one goes through life doing exactly what he pleases. The earlier one learns to discipline himself, the better equipped he is for facing the battle of daily existence. And those early lessons stay with one all through life. To this day, I feel a wholesome awe of my mother. She no longer gives me "orders"; but if she did, I know I would obey them without question.

### Rewards to the Diligent

WHEN I ENTERED MY CAREER I again reaped the rewards of self-discipline. I was allowed a special clause in my operatic contracts, releasing me from the early weeks of solo rehearsal. As I learned very quickly, I promised to be ready with all my lines and music when the ensemble rehearsals began, if only I might be spared the long hours of solo rehearsal, which took time from my other studies and which I did not need. This request was granted me, on condition that I could prove complete mastery of the work. The least slip would have lost me this privilege, and the result was that I worked twice as hard by myself.

Another valuable habit for the student to develop is that of helping one's self as much as possible. I remember the first singing lesson I ever had. I expected to be allowed to sing at once, but nothing so pleasant took place. What my teacher did was to ask me how I breathed. This startled me. I had never thought about breathing. But now I must learn to think of it.

"You will have need of breath control if you mean to sing," said my teacher, "so you had better find out how it is done."

Then she told me that, when I went to bed that night, I was to lie flat on my back, to forget "lessons," and simply to watch what happened when I drew a perfectly natural, comfortable breath. I did this. To my surprise, I found my abdomen moving in and out. This was the first time I realized that breathing had nothing to do with the chest. It made a profound impression on me—far deeper than if I had been told, objectively, that breath support begins with the great abdominal muscles. At my next lesson, I told my teacher what I had learned.

"That is the principle you must now put into use," she said. And so the foundation of my work in breath control was laid.

### We Chart Our Course

I AM HEARTILY IN FAVOR of this kind of well directed self-help. To-day, I never draw a deep breath without, unconsciously, going back to those early lessons.

All breath must be supported by those strong abdominal muscles. In my own mind, I compare the breathing apparatus to a large rubber ball, divided into two connected halves. You draw in the air, and it becomes inflated. You release the air; and, as the breath passes into the upper chamber (the throat and chambers of resonance) the lower part (where the abdominal muscles lie) contracts. Then, when the air has been expended, the lower chamber pushes out again. In singing, one must accustom herself to this quick re-

versal of muscular motion, to be ready for the next breath. Again, I do not presume to offer breathing exercises; I simply tell of my own sensations. I found them out for myself, and this process helped me more than explanations.

The student must determine also for herself the field in which she means to work. Some singers choose to devote themselves to the dramatic aspects of operatic work; others, to the subtle expression of *Lieder* singing. Naturally, this choice must depend, first, upon the inborn abilities of the singer; and the student, who is accustomed to self-discipline, self-criticism, and self-help, will be at an advantage when the decision must be made. For my own part, I prefer a judicious mixture of both kinds of work. One helps the other. The dramatic work of the stage sheds unexpected light upon the development of *Lieder*; while the searching analysis of song interpretation brings greater flexibility

into stage work. The more you are able to master, the freer your mastery will be of any one thing.

You will understand, now, why I am inclined to treat the purely pedagogic aspects of singing as important but not all-important. A good teacher can show you how to produce good tones. But after that? The tones alone will not make you a polished, resourceful singer. That particular kind of training you must give yourself; because no one else can do it for you. One day we shall realize that, valuable as learned lessons are, they never can round out the development of the young artist. Complete development depends upon the driving force behind the lessons; it depends on what one gives out rather than on what is taken in. In this sense, then, the building of what I call musical character is, perhaps, the most important asset to cultivate. And the surest tools to use in its cultivation are self-discipline and self-help.

## FIFTY YEARS AGO THIS MONTH

**W. S. B. MATHEWS**, apostle of better teaching, and purveyor of musical knowledge for all time, contributed this fine treatise on sight-reading.

"Sight-reading is not work for beginners. To read rapidly at sight involves quick perception of musical combinations, and their ready recognition by the mind, the steady movement of time, and the spontaneous obedience of fingers. Each of these three things is a highly complex affair, which must be built up; an acquired aptitude, which has to be elaborated out of primitive elements before it is proper to ask for sight-reading. The first thing for a pupil to become is an *accurate* reader. This is a slow process, and as a matter of fact advanced pupils are more or less inaccurate. There are certain forms of analysis that are useful in promoting accuracy of reading, but this is not the place for them. The ready classification of combinations, rhythmic, melodic, and especially harmonic, involves a variety of special exercises. For example, the arpeggio forms in the accompaniment, and chord successions expressed through them, will be recognized by the pupil if the left-hand part is played by itself, and as chords, ignoring the arpeggio divisions. When the accompaniment is spread over a wide range of pitch, as when the first bass note is down in the bass, while the appertaining chords are in the treble or middle range, the harmonic relations will become apparent if one plays the bass with the left hand and the chords at the same time with the right hand, ignoring the repetitions and rhythmic figures, but passing directly from one chord to another, in order to bring out the harmonic progressions. This exercise is very useful wherever the harmonic perceptions are a little dull.

"Another difficulty of reading at sight-

is the irregular movement of untrained musical thought and perception. Music goes on in rhythm, steadily, like the ticking of a clock. The pupil's perception of it goes "hitchity-hitch"; now it goes, now it stops. Sight-reading is one of the best possible means of forming a correct habit of movement in time, but this rests upon a considerable amount of time-training, which can best be done through the accentuated and rhythmic treatment of scale and arpeggio forms, after Mason's system.

"When the groundwork of sight-reading has been laid, it will be found useful to exercise the pupil about an hour a week, if opportunity serves, in reading easy duets, the teacher playing the lower part. The playing must be in time, but the rate of movement may be slower, in fact, *must* be slow. Even at its best, the habit of sight-reading encourages inaccuracy, and it must not be carried too far. Any easy sonatas, or dances, will do. It is also a good practice to form classes of four pupils to play eight-hand arrangements upon two pianos, for a certain time per week. This, however, is not always practicable, both for want of time and for want of the two pianos. When such classes are formed, however, the teacher must beat time for the class, just as an orchestral conductor conducts a performance. Those who lose the place are to get it as best they can, the music going on all the same. The leaf turning will enable the lost one to come in after a little practice. The pupils will take pride in doing the work well, and in not being surpassed by the others. On the whole, however, my position in regard to sight-reading is that of the outset. It is not work for beginners. It is worth more to the pupil, in all the earlier stages of study, to form habits of accuracy and clear apprehension, than to gain the knack of mere speed and approximation. Hence, a little sight-reading will go a long way in the early stages, excepting in those rare cases where the pupil has abundance of time."

## Yes There Is a Musical Market

DAME RUMOR dropped in at an afternoon tea of a club of prominent musical women of Chicago and whispered into the ear of a particularly secretive dowager that Dr. Frederick Stock, conductor of the Chicago Symphony Orchestra, was said to be building a new one hundred thousand dollar residence. And didn't Dame Gossip's tongue lap her lips with delight as, ere the tea and cakes were no more, her ear at the keyhole caught twenty-seven matrons adjuring not less than half a dozen each to

perpetuate this palatable morsel of gossip.

After all, is there anything so strange about this affluence of a long time successful conductor, when Carrie Jacobs Bond, of the succulent airs, reigns luxuriously as the chatelaine of one of the show places in the Los Angeles suburbs?

And would not a few more Stocks and Bonds on the musical "Curb" add a bit of additional glamour to the bounty that lures the ambitious young artist to the end of the musical road?

## Radio Flashes

By PAUL GIRARD

THERE ARE A GREAT MANY short programs of good music in the airways these days, many of them local ones with which this department has no way of being familiar. No doubt you have your favorites.

There is usually a good chamber group to be heard over the Blue Network of the National Broadcasting Company on Sunday mornings from 10 to 10:30 A. M. EDT. And lately there has been an unusual instrumental program to be heard over NBC's Red Network on Sundays at 11 A. M.—Julio Martinez Oyanguren playing guitar music in the best traditions of the Spaniards.

The finest sponsored program of serious music this past year, according to the Women's National Radio Committee, was the Ford Sunday Evening Hour; and the best sustaining program of serious music was the New York Philharmonic-Symphony concerts on Sunday afternoons.

Lately, on Mondays at 3 and 5 P. M. EDT, there has been good music to be heard over the Columbia Broadcasting System. The 5 o'clock broadcast has been a program by the Columbia Chamber Orchestra; the other one has offered various fare. Tuesdays, we found lately the same network had good programs around 3:30, and 5:15 P. M. The 3 o'clock broadcast has been given over to fine chamber music; the 3:30, to a different singer each week in that interesting series known as "The Story of the Songs." The 5:15 period has brought to our home the Columbia Concert Orchestra under the expert direction of Howard Barlow. Always good.

On Wednesdays over the same network we have been listening lately to some fine programs at 3, 3:30 and 5 P. M. The first of these has been a continuation of "The Story of the Song," a subject which we hope will not be exhausted too soon; the second, a program again featuring the Columbia Concert Orchestra; and the third a concert by the United States Navy Band.

For those who like band concerts, there has been a half-hour broadcast on Thursdays at 3 P. M., EDT, Columbia network by the United States Army Band, and another on Fridays at the same time from the United States Marine Band. After the band concert on Thursday (at 3:30 P. M.) there recently has been a "Sonata Recital" by Dubois and Semmler, well worth hearing.

On Fridays Columbia's network lately has been giving us besides the band concert at 3 P. M., several other musical programs. A chorus from different universities has been heard at 2:30 P. M.; and at 3 P. M. a piano recital with a different artist each week. Again at 5 P. M. we picked up a worth while vocal recital at the same point on our dials.

The Spring festival of great operas, heard lately in the "Radio City Music Hall On the Air" series (Sundays 12 noon, EDT—NBC Blue Network), has been given in answer to the requests of many American music lovers. The success of a similar series last fall, when thousands of letters were received, prompted the revival of the talloid presentation of opera.

A new dramatic series, titled "The Romance of Oil," based on history and even in the petroleum industry, is a feature recently added to the City Service Concert Hour on Fridays at 8 P. M., NBC Red Network. The pattern of this program, otherwise unchanged, the musical part being still entrusted to Lucille Manners, soprano, Ross Graham, baritone, a mixed chorus of twelve voices and a thirty-six-piece concert orchestra under the direction of Dr. Frank Black. The dramatic sequences aim to portray the growth of the petroleum industry and the important part it has played in our everyday life.

Mr. Schultz's Studies and Theories of Piano Playing Have Attracted Wide Attention in Musical Educational Fields.

365

contract, and the swell of their tension can be felt under the finger in the palm. (Further comment on this swell is contained in Note 6.) The second finger, in other words, is stiffened—perhaps only slightly, but nevertheless stiffened—while the third finger is being raised. There is no other way of raising the third finger without also raising the second.

6. When the long flexors contract, the tendons AB and CD tend to form, of course, a straight line between the points of their origin and insertion. Because the tendons are bound up only loosely in the tissues of the hand, this tendency is partially realized. If the second finger of the right hand is pressed hard upon a table while the second finger of the left hand is placed on the right palm immediately below its hand-knuckle, the tendons will be felt to swell and bulge, sagging from a quarter to half an inch. This distance is extremely significant, for the depth of key descent itself is only three-eighths of an inch. The sagging means that the muscles lose time in applying their force to the second and third phalanges; it means that the muscles contract through a greater distance than the three-eighths of an inch of key descent requires; it means that the long flexors are at a great disadvantage for velocity.

7. If the long flexors and the extensors of the fingers are simultaneously contracted; that is, if the fingers are stiffened, also the wrist-joint, over which the tendons pass, must be stiffened. Proof of this fact can be secured by allowing the forearm to rest upon the knee, the hand and fingers dangling relaxed in space. If the hand be struck a blow, it will swing back and forth in the wrist joint, its movement entirely free and uninhibited. If, however, the fingers are stiffened while the hand muscles proper are kept relaxed, the hand will show no movement in response to the blow. The wrist joint has become fixed by the finger muscles.

8. In contrast to the long flexors and the extensors, the small muscles apply their force to the first phalanx directly, without an intervening sag. Moreover, they all have their origins within the *metacarpus*, and their contractions can have, therefore, no effect upon movements in the wrist joint.

### Excessive Use of the Long Flexors

THE SIXTH OF THE FOREGOING NOTES states that the long flexors show a marked disadvantage for velocity. As the part they play in the depression of the finger increases, the velocity disadvantage also increases. Unfortunately, a coordination one encounters very frequently among piano students involves particularly strong tensions of the long flexors. I refer to it as the stiff-finger coordination. If the long flexors and the extensor contract to fix (stiffen) the finger, and if then the flexors contract in excess of the fixation, the finger will swing downward as a unit. The first phalanx is caught between the opposing contractions; and its own muscles, accordingly, need contribute nothing to the descent. (The *interossei* contract, to be sure, to give a lateral (sideways) fixation to the first phalanx as the long tendons provide a vertical fixation—it is impossible to will the one fixation without the other. They need not, however, contribute to the downward movement.) The long flexors are strongly contracted; they must contract to a given degree, to provide the fixation, and then a still higher degree to depress the finger.

The reader may be certain, that this stiffened finger is not part of his approach to the keyboard, but the frequency with which the coordination appears can be judged by a simple experiment. Bring the tip of the relaxed second finger in contact with the edge of a table while the other fingers hang loosely under the hand. Move the extensor of the second finger to one side, as in one of the foregoing experiments. Now press the finger tip upon the table. In a number of trials the probability is strong that the

(Continued on Page 405)

## RECENT RECORD RELEASES

By PETER HUGH REED

FOUR VOLUMES of Haydn's string quartets, originally released in England as Society issues, have been placed upon the domestic market by Victor (sets M-525, 526, 527, 528). The performance of the works has been entrusted to the Pro Arte Quartet. The Haydn String Quartet Society was formed in 1932 to celebrate the bicentenary of the composer's birth. To date, seven volumes containing in all twenty-four quartets have been released. Since the first two of these are no longer available, Victor has issued the third, fourth, fifth and sixth volumes. The seventh, it is assumed, will follow.

Haydn was perhaps the most prolific of all the great composers. Owing to the fact that not all of his music is available in print, a complete survey of his genius has never been possible. He has been called the "Father of the Orchestra, the Symphony, and the String Quartet"; yet he did not invent the form of either. But to him may be traced the development of the form of all, and his influence on all composers that turned to either after him is indubitable.

Mozart was buoyant and light hearted, when he visited Paris in the Spring of 1778 with his mother, little dreaming that tragedy lay ahead to bring her untimely death. Invited by the director of the Concerts Spirituels to compose some music, he contributed among other works his "Symphony No. 31, in D major," K. 297, later nicknamed "Paris." The symphony reflects the gaiety of the French, and Mozart's sense of youthful freedom. Brilliantly performed by Sir Thomas Beecham and the London Philharmonic Orchestra (Columbia set 360), it is a pleasant addition to the recorded Mozart repertory.

Weingartner has been widely acclaimed for his recordings of the Brahms symphonies. Turning his attention to the composer's "Variations on a Theme of Haydn, Op. 56a" (Columbia set X125), he again displays his understanding of Brahms' music, giving us a richly sonorous and appropriately restrained performance. From the recording standpoint, he fares better than his predecessors in this work.

There is a bar and dance hall in Mexico

One of Liszt's most popular works is his "Hungarian Fantasia," for piano and orchestra. Based on the same material as he used in his "Rhapsody, No. 14" for piano, the work makes considerable use of the well known Hungarian folk song *Far Above Us Flies the Heron*. Edward Kilenyi, who has been highly praised for his performances of Liszt's music, records this work with the aid of a French orchestra under Meyrowitz (Columbia set X120).

### The Titan Contributes

TWO IMPORTANT PIANO WORKS, Beethoven's Waldstein Sonata, Op. 53, and Chopin's "Sonata in B minor, Op. 58," were recently given, we believe, their most compelling phonographic performances. In Columbia set 358, Walter Gieseking plays the "Waldstein" with notable plasticity and with extraordinary tonal sensitivity. He does not stress the boldness of spirit in this work but its underlying dramatic accent and its rhythmic vitality. In Victor set M-548, Alexander Brailowsky presents a thrilling performance of perhaps the best of the three Chopin piano sonatas, a reading that is marked for its poetic insight, its fine phrasing and its variety of tonal coloring. Both sets are splendidly recorded.

Less compelling is Columbia's recording (set 357) of Bach's *Ouverture à la Manière Française* ("Partita, No. 7"), for harpsichord, which Ernst Victor Wolff plays. Akin to the orchestral suites of the composer, this work, one of sheer beauty, is unjustly neglected. Although Dr. Wolff deserves credit for reviving interest in it, it cannot be said that he turns in a performance that succeeds in fully setting forth the music's possibilities. The recording is good but not of the best in harpsichord reproduction.

Myra Hess, who presented recently such a beautiful performance of Schumann's "Piano Concerto" does not emerge so successfully in her recorded reading of the composer's "Carnaval" (Victor set M-476). Perhaps this highly gifted artist had an off day. The old Victor recording by Rachmaninoff (set M-70) still remains the best phonographic version of this work.

Beethoven's "String Trio in G major, Op. 9, No. 1," belongs to a group of three works that the composer regarded as among the best of his early chamber compositions. In style it is similar to the "Opus 18" quartets. Divided into four movements, it opens with a long first movement, forceful in character, owns a fine *Adagio*, a rather tame *Scherzo*, and a skillfully devised *Finale*. Muscraft presents this work in a worthy performance by three young musicians from the New Friends of Music Orchestra, Messrs. Sebrinsky, and E. and G. Neikrug (set 28).

Two moderns, Poulenc and Hindemith, show decided romantic leanings in their latest recorded works. Poulenc's "Mass in G major," sung by The Singers of Lyon (Columbia set X127), is a work skillfully devised with many moments of lyric beauty. And Hindemith's "Sonata for Viola and Piano, Op. 11, No. 4," excellently performed by William Primrose and J. M. Sanromá (Victor set M-547), is a work for all who delight in melodic beauty.

Charles Martin Loeffler was once termed "the most distinguished creative mind in American music" (Gilman). That was several years ago, before the composer's death in 1935. Hearing his "Music for Four Stringed Instruments," as played by the Coolidge Quartet (Victor set M-543), one is reminded of this statement. This music is deeply felt, mystical and idyllic in character. Dedicated to an American aviator who fell in the World War, the work, which makes considerable use of a fragment of Gregorian chant from the Easter service, is said to depict the release and eventual flight beyond of the aviator's soul. Its program is metaphysical rather than specific, however, and need not be considered for enjoyment of the music.

## A MEDIEVAL WEDDING CEREMONY

By Harvey Peake

In all he wrote over eighty quartets and more than one hundred symphonies.

Space does not permit us to dwell upon Haydn's gifts as a string quartet composer. Now can we review other than the first album referred to above as we have not yet heard the others. Let it be said that the first has definitely whetted our appetite for more, and we believe that those readers who enjoy such music will be similarly intrigued. The first volume contains a delightful early work, "Op. 3, No. 5," the second movement of which may be familiar to some as the incongruously titled *Eighteenth Century Dance*, recorded by the Philadelphia Orchestra (Victor 7256); the "Quartet in G major, Op. 33, No. 2," notable for its breadth of style; the "Quartet in E-flat, Op. 64, No. 6," a work anticipating Beethoven; and a mature work of great beauty, the "Quartet in B-flat, Op. 71, No. 1."

Two other works of Haydn recently released, the "Symphony in D minor" (No. 80) and the "Symphony in F major" (No. 67), represent his genius during his middle period, when he was in the service of Prince Nicolaus Esterhazy. These works are fervently performed by the New Friends of Music Orchestra, under the direction of Fritz Stiedry, and excellently recorded by Victor (album M-536). Both works are representative of their composer's genius at its height, but of the two the one in D minor is the more striking because of its dramatic emphasis and depth of feeling.

City, where Mexicans congregate nightly for the wildest of music and dancing. Long an attraction for tourists, it took American composer-tourist, Aaron Copland, to extend its fame aurally beyond the borders of Mexico. Based upon Mexican popular tunes, Copland's *El Salón México* (called after the name of the dance hall) proves in the recording of the Boston Symphony Orchestra (Victor set M-546) to be a colorful and rhythmically vital score à la Chabrier's "España Rapsody" and Ravel's *Bolero*.

Those who admire ballet music will undoubtedly find enjoyable the dances from six operas by Grétry, the eighteenth-century Belgian-French composer, played by F. Ruhlmann of the Paris Opéra (Columbia set X126). Reminiscent of Rameau and Couperin, these dances nevertheless have a definite charm of their own.

Ludwig Spohr was a noted violinist and a prolific and highly esteemed composer in his lifetime, 1784-1859. To-day he is nearly forgotten. Albert Spalding, however, recording his "Concerto in A minor, Op. 47," with the Philadelphia Orchestra (Victor set M-544), reminds us that Spohr knew how to write fine melodies. Those who admire the Mendelssohn and Bruch concertos will undoubtedly want this work. Written in the form of a "vocal scene," it possesses florid Italian operatic characteristics. This is due to the fact that the composer created it especially for an Italian tour he made in 1816.

# The Democracy of Radio

By HOWARD BARLOW

Musical Director and Conductor of The Columbia Broadcasting System

**A**TALK TO THE ETUDE reminds me of an old debt. The debt was incurred more than thirty years ago, by a small boy in a small town in southern Illinois. I used to be that small boy. Music was my greatest source of enjoyment, and, as our town boasted neither music teachers nor music stores (except the place where dance records were sold), I was hard put to it to find the enjoyment I wanted. My only pieces were a book of Czerny exercises, Schumann's "Album for The Young," and a volume of baritone songs, published by Ditson's. I learned all of these on the piano, and then began all over again, practicing them on the violin and the violoncello. After that, I came to a stop. And then my parents got me THE ETUDE! No event in my life was so important as the arrival of the mail on Etude Day, and when the mail was delayed the atmosphere of our home grew pretty dingy. For, with THE ETUDE, came a world of new music—music that was printed separately for piano, voice, violin, and violoncello. I am sure I never gave proper attention to the fine printed matter in the magazine, but it is not too much to say that I got my musical start from the "middle pages" of THE ETUDE. Any information I am able to give to readers of THE ETUDE of to-day is but a small way of settling an old score of obligation.

Sooner or later, radio will be the goal of most of our music students. It is therefore pleasant to know that radio is perhaps the most democratic institution we have. It is not necessary to have a "big name," to secure a start in radio. The programs are dictated by the public alone. And our system of commercial sponsorship enables us to maintain this vital and healthy state of affairs. It is a mistake to think that commercial radio lowers the standard of our programs. Quite the reverse. Sponsors are not trying to force any one type of program upon the public. Their object is to make friends for their products, by securing the widest possible audience. To bring this about, they plan programs which, in their opinion, will interest the most people. If they fail to secure the audience they hope for, they change their type of program. Thus, it is the public itself that has the final voice in what is kept on the air and what is dropped. If our programs are no better than they are, it is because the public does not take vigorous enough steps to demand better. If you can conceive of enough people sitting down to write letters to their radio stations, criticising one type of program and demanding another in its place, you would see a completely altered program picture, in less than a month's time.

## Fan Mail and Singers' Chances

DO YOU KNOW WHAT HAPPENS to fan mail? It is most carefully analyzed, by a competent staff of researchers, who make minute notes on what is, and what is not, popular. These findings are then presented to the program directors. If enough people wrote in to execrate jazz and

## From a Conference Secured Expressly for THE ETUDE By STEPHEN WEST

demand symphonies, the air waves would vibrate to Beethoven and Mozart exclusively, while the hot swing numbers would rapidly become museum pieces. Whether or not this ever comes to pass, the important point is that the American public has it in its own power to dictate the quality of our air programs. This is a serious responsibility, and it should be accepted as such. If you have faith in an artist, or a composer, or a type of music, write to your station and make known your preferences. If a sincere enough effort is made in the right direction,

we shall have an even greater advance in the quality of our programs. It seems to me that the music students can lend an active and important hand towards working for this goal.

The music students themselves, however, will probably want to hear about other things. First, what are the requisites for securing opportunities on the air? Each department of radio work carries "musts" of its own, but one requisite applies to all. That is serious, thorough musicianship. Since radio has nothing but sound itself to fall back upon, each sound that comes over the air must be as nearly perfect as possible. And all sounds must have thoughtful purpose behind them.

As far as vocalists are concerned, the microphones can accept only the most purely produced voices, reinforced by purity of diction, and supreme breath control. Not every voice quality is "good" for radio. Indeed, a small, well produced voice that amplifies well is infinitely better than a big one. One of the finest contraltos I ever heard was not a great success before the microphones, because her voice was too big. It vibrated in the delicate reproducing mechanism and caused disturbance. A less gifted singer, who might even have envied this great voice, would have had a much better chance for radio work.

A voice that is very penetrating tends to blast out the microphones. I have in mind an internationally famous soprano, who can bring tears to the eyes of a tired conductor who has been rehearsing with her. One of her chief claims to artistry is the perfection with which her voice is placed well in the head, and sent out with a penetrating "ping." But before the microphones, alas, this very perfection of voice placement tends to make the tones so penetrating that the mechanism suffers. In bringing this artist before the "mikes," I have had to chalk mark the floor, actually roping her off five or six feet farther away from the apparatus than singers normally stand. What counts most in radio work is neither range nor power, but supreme and perfect purity of production, without a trace of nasality, throatiness, or breathiness. After that, each individual voice must be tested for its peculiar qualities.

## Instrumentalists, to the Fore!

THERE IS NOTHING SPECIAL to be said about instrumentalists. A radio pianist must be a good, all round pianist, able to draw fine, singing tones from his instrument, to read fluently, and to adjust himself to all types and styles of playing. The same is true of violinists, violoncellists, and wood wind players. Which brings us, in rather short order, to the conductor.

The radio conductor must possess everything that a symphony conductor possesses—scholarly background, musicianship, style, vigor, and the indefinable but all important ability to bring forth the best from the men with whom he works. In addition, however, the radio

Mother Goose and Jack

The Stage Entrance should be arranged to imitate a large book, through which the children will come upon the stage.

(Jack, on crutches, and his Mother enter.)

Mother. Here, my darling, is a nice quiet place where we will rest and watch the children play.

Jack. I don't want to see the children play. I can't run or do anything but sit in this old chair. Take me home.

Mother. But the Doctor says you must be out in the fresh air so that you will grow stronger.

Jack. I don't care what that old Doctor says, let me have my book.

Mother. I brought your Mother Goose book to-day. Shall I read to you?

Jack. Oh, that silly old Mother Goose! I wish I could see her. I'd like to tell her how I want to walk and run through this park, and to see and hear all the strange things.

(Loud crash on piano as Mother Goose enters)

Mother Goose. My dear little boy, I heard your wistful words. I know very well how you feel. When I was a tiny girl I was stricken just as you are, and for one whole year I was kept in bed, and could not even lift my head. But I was patient and was finally able to be out doors and to walk a little. One day I had a great adventure. Would you like to hear about it?

Jack. Oh yes, Mother Goose.

Mother Goose. This wonderful day my Mother and I were out in our yard at home, when suddenly I heard the most beautiful music—soft and sweet, then warbling and trilling. It was a bird in a low tree near me. I forgot everything else, for I had never heard such beautiful music.

Then the bird saw me and spoke to me in his own language, but I understood his meaning. He said, "My dear little friend, would you like to enter the lovely land of music? I will show you the way."

But I answered, "I cannot go without my Mother." At once I heard my Mother's voice saying "My child I will go, but not beside you, I will be back of you all the way. If you need me I will be there to help."

So we started. The path was narrow at first, with many stones and rough places; but the music in my ears made me forget the hard spots. On all sides was the murmur of the wind among the trees. Soon a beautiful garden was seen near the path, which was becoming wider all the time. I could hear the Trumpet Flower calling me, and then the sweet tinkle of the Canterbury Bells. By this time I was growing a little tired and decided to rest. I laid down near a little brook whose water, bubbling over the stones, lulled me to sleep.

Soon my Mother's voice spoke in my ear, "My dear, don't you think it time to continue your journey through Musicland?"

On again I trudged, when suddenly a group of children came from the distance and called to me, "Come with us, why do you want to go farther? It's a long, hard road ahead, and we are tired of it."

I was tempted to turn and go with them, but my Mother's face and encouraging smile made me decline their invitation. A long time I journeyed on, sometimes very tired and discouraged. One day I reached the shore of the ocean, with the waves rolling and breaking on the beach. The music they made was like a mighty organ, which thrilled me through and through. I then knew that I could never leave this beautiful Land of Music; and the strange part of it is that I have grown well and strong because of this wonderful new experience which would go with me through life.

Jack. My, that is wonderful! Do you think I could find my way through that Land of Music; and how could I start?

Mother G. That land is all about us. Open your ears and your heart and you will soon find it, as have many others.

Jack. I wish I could meet some other children who are going through Musicland.

Mother G. Well, you have all those friends in your book. I know them all and have helped them.

Jack. Why, do Little Boy Blue and Mary Quite Contrary, and all the rest know about Music?

Mother G. Certainly. You think of them as characters in a book; but all the time their real happiness and interest is in this world of melody and rhythm. Wouldn't you like to meet them and let them talk for themselves?

Jack. Oh, boy, would I!

Mother G. Which one would you like to see first?

Jack. Well, let me think. I guess Humpty-Dumpty and I are more alike, for we each have had a lot of trouble.

(Mother Goose calls Humpty.)

Humpty-D. Hello Jack! I sat on a wall for a long time watching the other people go through Musicland; then I decided I'd try it myself. It was a little hard at first; but I kept on, and here I am. May I show you what I have learned? (Plays *Ping Pong* by Mary Parnell, Grade 2.)

Mother G. Now, let's meet Little Bo Peep.

Little Bo Peep. Those bothersome sheep of mine are always losing themselves, so I found a pretty tune that makes them come back to me. (Plays *In Sylvan Shadows* by Hugh F. Bryson, Grade 3½.)

Mother G. Now meet Little Boy Blue.

Little Boy Blue. Little Bo Peep isn't the only one who has trouble. My sheep and cows are always going the wrong place, just like my fingers when I play, if I don't stay wide awake. (Plays *Mr. Woodpecker* by Sidney Forrest, Grade 1½.)

Jack. Look! Here comes Mother Hubbard. But, where is your dog, Mother Hubbard?

Mother H. I left my dog at home this time. He doesn't like music as much as I do. (Plays *Old Mother Hubbard*, by George F. Hamer, Grade 2.)

Mother G. Come, come Mary, please

don't be contrary, as very bad girls sometimes do.

Mary Quite Contrary. Whoever said I was contrary was mistaken. I'm always willing to work and play in my musical garden. (Plays *Dutch Tulips Dance*, by Lillie A. Hansen, Grade 2½.)

Jack. Who is that, Mother Goose?

Mother G. Come in Taffy, the Welshman, and shake hands with Jack.

Taffy. Somebody tried to spoil my reputation, but everybody knows the Welsh people love music, and I'll prove it to you. (Plays *March of the Men of Harlech*, by B. Richards, Grade 3.)

(Bang! Crash! As Jack and Jill come out of the book)

Jill. You know, Jack, I always said too much speed would cause a tumble.

Jack. Well, Jill, watch your step when you play that piece. (They play *Dance of the Rosebuds*, 4 Hands by Frederick Keats, Grade 3.)

Mother G. If you think Shirley Temple has pretty curls, just look at our Curly Locks.

Curly Locks. It's nice to sit on a cushion and sew a fine seam, but what I find in Musicland is much nicer. (Plays *The Fairy Swing* by Myra Adler, Grade 2.)

Mother G. And here's my little Tomboy. Soon you too can ride a see-saw, Jack, like Margery Daw.

Margery D. There are many ups and downs in my young life—ups when I have a good music lesson, and downs, well you know that answer. (Plays *Hop, Skip and Jump* by Renée Miles, Grade 1.)

Jack. Oh, I know him, that's Tom the Piper's Son. I guess they forgave him for taking the pig.

Tom the Piper's Son.

I am Tom the Piper's Son,

Now listen, folks, till I am done;

For when I play my pony friend

Comes up to hear me to the end.

(Plays *My Little Pony* by Hester Lorena Dunn, Grade 1.)

Jack. Oh, Miss Muffet, did you get away from the spider?

Little Miss Muffet. It wasn't the spider

made me run away, it was Mother's voice calling "Come, dear, and practice your music lesson." (Plays *Brown-Eyed Susan Nod Their Heads* by Berniece Rose Copland, Grade 2½.)

Mother G. Well, Mr. and Mrs. Sprat, I'm glad to see you getting along so well together to-day.

Jack Sprat. My wife and I are still traveling through this lovely Land of Music, and we like the same things, most of the time. (They play *Marigold*, 4 Hands by Frank H. Grey, Grade 1½.)

Jack. I wish Simple Simon had brought the Pieman, too. Boy! do I like pie!

Simple S. You have read about my friend the Pieman. Well, we went to the Fair and the band was playing gay tunes, something like this one. (Plays *The Billboard March* by John N. Klohr, Grade 3.)

Tommy Tucker. (Unannounced, comes out of the book singing),

Heigh-ho! Heigh-ho! how the winds blow!

Mother G. Well, Tommy Tucker, are you singing for our new friend, Jack?

Tommy.

I can sing and I can play, Songs which are both sad and gay; But since I have to earn my supper,

I'll practice hard for bread and butter. (Plays *Aquaplaning* by Ada Richter, Grade 2.)

Mother G. Before the *Three Wise Men of Gotham* leave our shores, I want them to speak to you, Jack.

First Wise Man. Why did you call us Mother Goose?

Mother G. Please tell this little boy why you are called Wise Man.

Second Wise Man. Because, like the three wise men of old, we are following a star which shines and beckons us on to a land of joy and happiness. (They play *Here Comes the Parade*, 6 Hands by M. L. Preston, Grade 2.)

Mother G. Well, Polly, since you no longer sit in the cinders, tell us what you have been doing.

## Is Counterpoint the "Dry Bones" of the Tone Art?

By  
DR. FRANCIS L. YORK

*The hand of the Lord carried me out and set me down in the midst of a valley which was full of bones, and lo, they were very dry. And He said unto me, "Son of man, can these bones live?" And I answered, "O Lord, Thou knowest."—Ezekiel xxxvii.*

STRICT COUNTERPOINT seems to be regarded by many teachers, and by most students of musical composition as a valley full of musical dry bones—very dry bones. At a recent meeting of representative musicians of America, the study of this form of writing was severely condemned by some of the speakers; and I, as the author of a widely used textbook on "Strict Counterpoint" was made to feel that I should be regarded as (musically) public enemy number one; because, in their opinion, my hand had carried out so many, more or less unwilling, students, by paths of futile effort and waste of time, and had set them down in a valley of musical dry bones.

But then I pondered.

Who led the prophet out into this valley of dry bones? The Supreme Architect, Artist and Composer of the universe. Was there a good reason for giving him this experience? Who shall question the wisdom of such a leader? Then again comes the query, "Can these bones live?" By reading a little farther in the Book, we learn that they were made to live, that they were clothed with living flesh, and became a mighty host. So, thought I, if the bones—musical or otherwise—remain dry, may it not be the fault of the treatment? You remember the statement that, if the noted educator, Mark Hopkins, sat on one end of a dry log and a student sat on the other end, the result was a university. Much then, depends on teaching ability, personality and treatment.

### The Dead Shall Live Again

BUT WHETHER DRY, or alive and clothed with flesh, the real question becomes, "Is the study of strict counterpoint necessary?" If it is necessary no matter how dry it may be, it must be done. Elementary work in any subject is likely to be dry. Students of any instrument find technical work none too interesting. It is the same with all the arts. It is told of a famous painter that, when a young student came to him for instruction, instead of canvas, brushes, tubes of paint and a model, he found a table on which was a pencil, a sheet of paper and a dry bone. When this student complained that what he wanted was living flesh and not dry bones, the master said, "If you do not know the human frame, how can you clothe it with flesh, or afterward, even

DR. FRANCIS L. YORK

with drapery? "If the student's ambition had been to make a statue instead of a painting, he would have had to start in the same way, with a dry bone. The well known mural painter, Paul Honoré, once said to me, "I can put any kind of clothes on the human figure, but the frame must first be right." Those of us who some years ago read DuMaurier's novel, "Trilby," will recall that the heroine was an artist's model, and that her perfection as a model was due, the artists said, to her "beautiful bones." Even in the art of pottery the beautiful porcelain of the Royal Worcester Ware is made largely of old bones.

I find in talking to prominent men, men of culture, of experience, men who "have arrived," that they are not in sympathy with what seems to be the trend of modern education—a wish to get results without effort, without fundamental training of stu-

dents' brains. These men believe that education in any line must be obtained by making the brain a good tool for work, and that this can be done only by concentrated effort and by a study of underlying principles. Students in our high schools are translating Vergil (very inadequately), who cannot conjugate a Latin verb, or, having no basic knowledge of English, are trying to write brilliant essays on all kinds of subjects. They are trying to be masters without serving an apprenticeship, they want the prize without running the race. Is not the objection to the study of counterpoint due to the same cause—haste to reach the mountain top without climbing the steep? No great composer has yet appeared who did not know his counterpoint. We can hardly argue that the great masters wrote well in spite of their knowledge of counterpoint. When Wagner was writing his earlier works the musical critics sneered at him for his alleged ignorance of counterpoint, but after he had shown his supreme mastery of this form of writing by the stupendous contrapuntal work in the overture to "The Mastersingers," they kept a discreet silence regarding his ignorance of the subject.

Let us then look at a few examples of the very driest bone in all strict counterpoint—adding single notes to the single notes of a simple melody called the *cantus*. Two-voiced counterpoint of the First Species. We will try to discover whether there may not be some vestige of life in it. The following example of this kind of writing is about as dry as anything to be found in the driest textbook on counterpoint,

but examine it and see how it is the real skeleton (dry bones) of the lovely little *Allegretto* from Beethoven's "Sonata, Op. 27, No. 2," which Liszt so appropriately called "A little flower between two abysses."

It is perfectly safe to say that, if the framework (bones) had not been good, the composition would not have been good. Notice, too, how little Beethoven has added to the framework—another voice or part, a little rhythmical variety, and the movement is complete in its beauty, showing, as Dr. van Loon has recently said, how few things are necessary for a master to achieve his effects. How much material did Brahms require to write the exquisite *Cradle Song*? Beethoven knew his counterpoint.

The following example,

when touched by Bach's master hand, is written mostly in counterpoint of the Second Species, two notes in one voice to one in the other. Here, with a few ornamental notes and one suspension, we have a passage from the *Fugue in A-flat major*, of the first book of the "Immortal Forty-eight." Bach has never been accused of ignorance of counterpoint.

The following,

when treated in counterpoint of the Third Species, four notes against one, with a few chords added in the Bass, gives us the opening measures of Chopin's *Etude, Op. 10, No. 4*.

Chopin certainly knew his counterpoint.

Counterpoint can be made interesting and very valuable, from the first start; if the teacher will show the pupil why he is studying it; show him the application of each species to the actual writing of music; show him how his exercises are like the steel framework of our modern buildings, perhaps not ornamental, but necessary. If he will take away the ornamental notes, appoggiaturas and passing notes of a standard composition, and show the student how they are simply artistic additions to the very kind of exercises he is writing, the student will inevitably become interested and even enthused. If he hopes ever to write in the larger forms, a symphony, an opera or an oratorio, let him consider well what Prof. Prout says in his work on Instrumentation: "A student, in order to write for the orchestra, should have counterpoint at his fingers' ends; and he may be sure that without this mastery the most brilliant orchestration will not save his work." This is also true of the smaller forms if they are to have any lasting value. Even if, in the future, he never puts his pen to paper in the hope of writing a worth while composition, he will be better able to understand and interpret the works of others; for now he knows how the master has made dry bones to live and become a mighty host. The great composers have always set a high value on a knowledge of counterpoint, often estimating a composer or a composition by the contrapuntal skill shown. Gounod, who certainly cannot be accused of being a composer of dry bones, said, just before he died, "I hope the good Lord will let me have some little corner in heaven where I may sit me down and study counterpoint for two or three hundred years."

So then, if all great composers have studied counterpoint as a preparation for writing, and if by stripping off the flesh from the compositions of such widely dif-

ferent composers as Bach, Beethoven and Chopin, we find the "dry bones" of counterpoint underneath, is it not sensible to believe that such a study of dry bones is necessary?

At a certain time it became my duty to buy the roast for the family dinner. The dealer in flesh produced for my inspection a piece of meat which seemed to me to be unnecessarily supplied with bones. When I objected, the salesman rather tartly replied, "The critter couldn't run without 'em." So, may I not conclude by applying the words of the dealer in meat to the contrapuntal dry bones of every good composition and say, "The critter can't run without 'em."

## Some Tuneful Towns in the United States

By ETHEL KING

THERE ARE THOSE who sometimes say that Americans are not traditionally a musical people. It is interesting to note, however, the number of towns throughout the country with musical names. Is your home town in this list?

Piper, Alabama  
Silverbell, Arizona  
Birdsong, Arkansas  
Jenny Lind, Arkansas  
Bell, California  
Pryor, Colorado  
Canon, Georgia  
Canon City, Colorado  
Harmony, Indiana  
Clarion, Iowa  
Harper, Kansas  
DeKoven, Kentucky  
Echo, Louisiana  
Loudville, Maine  
Alto, New Mexico  
Organ, New Mexico  
Fork, North Carolina  
Sound, North Carolina  
Lark, North Dakota  
Norma, North Dakota  
Gillmore, Ohio  
Muse, Oklahoma  
Fife, Oregon  
Range, Oregon  
Apollo, Pennsylvania  
Drums, Pennsylvania  
Waltz, Michigan  
Hoffman, Minnesota  
Purcell, Missouri  
Mason, Nevada  
Bow, New Hampshire  
Concord, New Hampshire  
Keyport, New Jersey  
Sharps, Virginia  
Siren, Wisconsin  
Big Horn, Wyoming  
Viola, Wyoming

All these names are self-explanatory. A few are proper names. Jenny Lind was a famous singer; Pryor, a band leader; DeKoven, a composer of light operas. Norma is the name of an opera. Gillmore (Gillmore) was a band leader. Apollo was one of the gods, a patron of music. Hoffman (Hofmann) is a pianist. Purcell was an English musician. Mason was an American, much concerned with public school music.

## A Musical Radical Reforms

"I'm an altogether different composer from the Stravinsky of 'Fireworks,' 'Song of the Nightingale,' and 'Sacre du Printemps.' You do not know me unless you have heard the music which I have written in the last two years. . . . I have gone back in the centuries and have begun over again, on a historic foundation. What I write to-day has its roots in the style and methods of Palestrina and Bach. To-day, I am not to be taken as a harmonist; I have become through and through a contrapuntist."—Igor Stravinsky.

# An Astonishing New Instrument

By WALLACE M. BURTON

WHEN BENJAMIN FRANKLIN, with his silken kite, brought down, in June, 1752, "electrical fire" from the thunder clouds, the whole world was astounded by the wonders of electricity. What would Franklin think if he could see electricity's newest development in music, the Novachord, as presented by another American electrical genius, Laurens Hammond, inventor of the well known electric clock and the Hammond Organ. Here is a new and wonderful instrument, which simulates in amazing fashion practically all of the instruments of the orchestra. More than this, it produces a surprising number of new and individual tone timbres we have never heard before.

Ever since the days of the Cahill "Telharmonikon" (about 1905), and the choralcello (about 1911), we have been acutely interested in the development of electric tone producing instruments. The difficulty with most of the instruments of the past has been their high, almost pro-

standard vacuum tube oscillators, tuned to the twelve half-tones in the highest octave of the instrument. These supply the original impulses from which all other notes are derived. Each octave, except the highest, uses "divider" tubes. The function of these tubes is to divide by two, exactly. The frequency of all the A's, for instance, is controlled by the A oscillator in the top octave. The Novachord contains no pipes, reeds, strings, hammers or vibrating

Ferde Grofé, Noted American Composer, at the Keyboard of the "Novachord"

Laurens Hammond, Inventor of the "Novachord," with John Hanert at the Keyboard

The "Novachord" in a Private Home

hibitive, cost and their bewildering complexity. The invention and stabilization of the industry of manufacturing radio tubes has changed all this, and in Mr. Hammond's Novachord, we have an instrument in which there are literally no moving parts except the single manual regulation keyboard of seventy-two notes, which is similar to that of the ordinary piano. The instrument has the regulation piano sustaining pedal. Volume is controlled by a swell pedal similar to that of the organ. There all similarity ends. Lift up the top and all that you see is a series of twelve

parts. The great variety of tones is achieved by simple controls mounted upon the front panel above the keyboard.

The volume of tone of the instrument is increased by an amplifying and speaking unit in the instrument itself. For large installations, where additional speaking units are required, the tone may be amplified to any desired extent. Although the instrument takes up much less room than a grand piano, the volume may be made tremendous—as powerful, in fact, as a big symphony orchestra. The instrument is self-contained and may be installed wherever

electric current is available. The only replaceable parts are tubes. While these carry a small amount of current and have an estimated life of many years, they are, however, all of standard make and, like Mazda lamps, may be easily secured. The instrument simulates the piano, the harpsichord, the guitar, the banjo, the steel guitar, the organ, horns, reeds and strings. It also has instrumental timbres, which are distinctly new. Its possibilities are so great that it is very hard to estimate them. It should be very exciting to all who have acquired a keyboard technic, as it is a revelation which may lead almost to revolutionary opportunities for the piano teacher and the organist.

Four instruments and a Hammond Electronic Organ will be installed in the Ford Exposition Building at the World's Fair in New York. These instruments are to be played by five performers under the direction of the well known American composer, Ferde Grofé, who is enormously enthusiastic over the invention. He has been engaged for some time in arranging a special library of scores for this unique group.

The instrument employs an entirely new principle in tone generation. The tones may be either percussive or sustained. Unquestionably, the Novachord will be widely and seriously discussed by musicians for years to come.

## "Beethoven's Best Clothes"

(An Anecdote)

By SYBIL JUSTINE

MANY INTERESTING and amusing anecdotes have come down through the years, in reference to that famous master musician, Ludwig van Beethoven. One of them, while little known, is still none the less true. It relates to the mother of the Princess Lichnowsky, one of Beethoven's pupils.

One day, while at a coffee house near his home, Beethoven was pleasantly and ambitiously approached by the mother of the Princess Lichnowsky. She told him that she was entertaining with a fashionable function in a short time, and that therefore she was quite anxious that he should be there to meet her guests, and also to interpret for them some of his compositions which were being so much discussed at that time. At first he declined, saying that his work took up so much of his time that it would be impossible for him to attend; but finally, he yielded to her persuasions and promised to attend and to interpret certain numbers, if she so desired. As she was leaving she seemed suddenly to recall something, so she retraced her steps and whispered in a low but appealing voice, "Of course, you will wear your best clothes?"

Beethoven hesitated, and then replied, "Madam, you shall see my best clothes."

On the evening of the occasion the mother of the Princess Lichnowsky was very much disappointed, in receiving her numerous guests, to find that Beethoven did not appear. Finally, on hearing what she believed to be the last ringing of the bell, she hastened down the great hall, swept past her attendant and opened the door for herself. There stood a messenger who handed her a large box. Upon opening it she found therein a man's full dress suit, with a card from Beethoven. It read:

"Dear Madam, these are my very best clothes. I wish you a pleasant and a successful evening."

\* \* \* \* \*

"Of all the wise men in music, he is the wisest. . . . What he is, he owes all to himself. . . . He has hitched his wagon to a star."—Frederick Stock (Speaking of Arnold Schönberg).

# A Great Master's Principles of Composition

Balakirev's Clear and Practical Ideas upon Musical Structure

By the Distinguished American Composer and Author

EVANGELINE LEHMAN

MILY BALAKIREV

By the famous Russian Artist L. Bakst

MILY BALAKIREV (*mee'-lee bah-lah'-kee-reff*) occupies a special place in the history of Russian music; not only because he was a member of the great group known as "the five" (Moussorgsky, Cesar Cui, Borodin, Rimsky-Korsakoff and Balakirev himself), but because he was the leader of this group of idealists and had been designated as such by Glinka (*gleen'-kah*) the very creator of nationalism in the musical art of his country.

Still, and strange as it may seem, comparatively little is known about Balakirev; while Moussorgsky (*moos-sorg'-skee*) won world wide repute through his opera "Boris Godounov" (*bor'-ees go'-doo-nawff*) which was popularized as a channel for the tremendous art of Chaliapin, (*shahl'-ah'-peen*), Rimsky-Korsakoff, also, with his suite "Scheherazade," has become internationally famous, though Balakirev's name is more familiar nowadays to the elite than to the public at large. The reason for this is perhaps to be found in the fact that his production was rather limited, and none of his works except the fantasy for piano, *Islamey*, has ever found universal acceptance on the part of symphony conductors and concert pianists who still remain unaware of many beautiful pages.

As a man, Balakirev is still less known than his music. To my knowledge there is no book in existence about him. The little that has transpired concerning his personality, represents him as a nervous, irritable, impatient character, easily wearied and excited. Although he lived to the ripe age of seventy-three, his activities took place mostly in his younger years; and in his middle age he turned toward mysticism, which removed him more or less permanently from public view. Several times he came again to the fore, but only partially; and toward the end of his life, he, who should by all rights have been the dean of Russian music, became an isolated figure almost ignored by a world with which he

was now quite completely out of sympathy.

## Creative Significance

BALAKIREV'S WORKS are of a towering quality, and there seem to be reunited in them all the outstanding features which make Russian music so profoundly picturesque and attractive, plus a genuine inspirational vein which does not appear in a similar degree in the works of other great names of that school; this applies particularly to such a work as the symphonic poem "Thamar," typically representative of his art.

When we think that Balakirev also helped in every way the advancement of music in Russia, that he founded the Free School of Music in St. Petersburg, then became the conductor of the Imperial

EVANGELINE LEHMAN

Musical Society Orchestra, the director of the Imperial Chapel, and a leader around whom there gathered a group of ardent enthusiasts, many of whom were older than himself, we can understand better the influence he exercised over the musical generation of his time, and over the one

that followed. His closest friend among the later was Serge Liapounov (*serge lee-ah'-poo-nawff*), and it had been expected that this eminent composer would become Balakirev's biographer. He had an intimate knowledge of his teacher, whose personal papers had come into his possession after the master's death in 1910. Liapounov was the spiritual heir of Balakirev, in the same way as Balakirev was the heir of Glinka (*gleen'-kah*). But Liapounov, like his teacher, possessed that characteristic Slavonic inertia which paralyzes many achievements for long periods at a time. Death finally took him without his having filled a number of artistic projects he had in mind, among others the orchestration of his own well known concert etude, *Lesghinka*, and precisely, the biography of Balakirev to which reference has been made.

## A Russian Boswell

IT IS THEREFORE PARTICULARLY INTERESTING for one to come in contact with another musician who keeps within his memories a vivid recollection of such highly important figures; one who for many years was closely associated with Balakirev and learned everything regarding his strongly personal way of imparting knowledge to his pupils; one to whom the tradition was handed down directly by both Balakirev and Liapounov. It has been my privilege to have this unusual experience, and, moreover, to be able to receive a share of this precious inheritance, through various circumstances which led me to becoming acquainted in France, with Alexander Bernardi (*behr-nahr'-dee*).

Maestro Bernardi has lived in France since 1913, when he came from Russia with Chaliapin to act as his conductor during his engagement at the Opéra of Nice. He was then the musical director and conductor of the opera in Odessa; previously, he had toured Russia with Chaliapin and another young musician, a violinist, the three artists forming a concert troupe traveling through large and small cities alike. When the World War came, maestro

Bernardi was unable to find transportation back to Russia, so he remained in Paris, subsequently opening a vocal studio. Many well known singers have come under his guidance, among others the Spanish soprano Elvira de Hidalgo and the distinguished basso of the Paris Opéra, André Pernet (*ahn'-dray' pēr'-nay*). It was in the Bernardi home on Rue Théodore de Banville that Serge Liapounov died in 1924. Leaving Russia because of the revolution, he had found a permanent abode, among adequate and inspirational surroundings, in his old friend's apartment.

Now, maestro Bernardi has retired to a small house located at Ermont, in the Parisian suburbs, only one mile or so from the famous resort of Enghien, well known to American tourists through its lake and Casino. The street is a quiet one, and the traffic so meager that two railroad crossings nearby keep their gates closed all day long, only opening when an automobile wanders along, which is an unusual occurrence. In front of the house one can see, beyond orchards which extend for some distance, the hills of Sannois which overlook the valley of the Seine. The studio is pretty much occupied by an aged grand piano of Russian make, and by shelves which ascend to the ceiling and are filled with an enormous collection of operatic and symphonic scores of all schools and lands. I doubt if there are many such collections in existence, apart from the specialized libraries. This contributes to making interviews with "Sacha" Bernardi exceptionally instructive. If one discusses a certain subject, a certain composer, a certain work, he always at some moment nods to his interlocutor, rises from his chair, and goes to one or the other shelf. After a few moments of search, there comes precisely the score which carries the point in discussion, or a book in which the matter is reviewed. If one converses on some phase of orchestration, the treatises of Rimsky-Korsakoff, Berlioz or Guiraud are promptly forthcoming, followed by scores of these composers, or others by Glinka, Borodin, Liapounov or

by interesting works of Bernardi himself.

And coming now to our subject, Alexander Bernardi has a wealth of information to impart concerning Balakirev, with whom he was almost as closely connected as Liapounov himself. It is just as unlikely, however, that he will ever set down to the task of committing his memoirs onto paper, although he has preserved, in his seventies, a remarkable accuracy and alertness of mind. But fortunately enough, I have been able to receive from him much of this intellectual legacy, and the principles of Balakirev on musical composition have struck me as being of the highest magnitude. Quite apart from the lengthy books which are apt to confuse or even discourage a student before he proceeds very far into them, they consist of a few general rules, or, rather, methods of dealing with the musical "matter," and they are as logical and illuminating as they are simple and easily understood.

### An Inspiring Pedagog

IN THE FIRST PLACE, Balakirev was not a teacher in the sense that one applies to this word to-day; he was very selective, and no one could come under his guidance unless he was judged as worthy of it. Besides, Balakirev was entirely disinterested and never counted his time in terms of hours, half hours, or currency. There was something decidedly enlightening about his instruction; it was not a question of buying books or memorizing texts. In a word, there was nothing about him suggestive of pedagogy. One might put it accurately by saying that his teaching was really a sort of informal "coaching in composition." Someone would present to him a recently completed work; Balakirev would sit by the piano, and listen. Then, according to his particular reaction, he would either come out with praise to the point of exclaiming his approval, putting his arms around the shoulders of the performer; or else, if not satisfied, he did not hesitate to show it, and expressed himself often caustically and even angrily. As one instance, a student brought to him a symphonic poem which had to do, in one of its parts, with the description of the ocean. He was only partially through when Balakirev, whose agitation had been gradually growing, stopped him abruptly.

"Have you ever seen the ocean?," he asked.

"Yes," the young man replied.

"Then are you not aware that its beauty comes from its calm, or its fury. Have you not been along the shore on some glorious day when it was peaceful and the sky was blue—or on a stormy day when the wind blew, when the waves rushed against the cliffs. Why don't you try to express this? Why, your ocean is nothing but a little lake—not even that, it is a puddle!"

### Banishing Monotony

ONE POINT WHICH BALAKIREV stressed very much was the all important subject of modulating. He disliked the monotony which a long adherence to a key or its neighbor keys always brings. He insisted on the fact that there always comes a time when the composer ought to feel that it is just proper to bring in a new coloring by going into another key (often a distant one). The matter of which key, of course, is of considerable importance; and accordingly he recommended not to be satisfied with the first result but, instead, to try all other available possibilities at hand. In the end, one of them will turn out as the desirable one, and the move can then be made safely because it proceeds from comparison and test. He advised the same process regarding the outline of melodic passages. For instance, if a melodic idea of sixteen measures in length consisted of four patterns of four measures, each repeating the same values, he suggested a slight modification here and there, in order to break the ensuing

monotony, so painful to the listener's ears.

Special insistence was given to the question of taking plenty of time. Balakirev would exclaim, "Why hurry? You go home now and ponder on that matter for a few days, or a few weeks. Then come back and we will see the result." He laid great emphasis on the structure, the architecture of a work. For example, even if he approved of it in a general way, there were instances in which something apparently was bothering him. He would look at the manuscript, scrutinize it, turn pages, compare passages, count the measures here and there, and sit at the piano and play. That complete absorption could last but for a few moments, when he would rise from the bench with, "Here we are. Why should there be those two measures. They are not only superfluous, but they spoil the whole thing, they destroy the logical proportion." Or he would say, "This lacks interest, because you keep the same formula of accompaniment running in eighth notes all the way through. Try changing it to sixteenths when the re-exposition comes, with perhaps, as a linking passage, some triplets during a measure or two. And remember that it is often advisable to introduce such a change before the conventional place where it might be expected." He called this the "anticipating" process.

All the preceding, however, was only a beginning. It could be compared to the work of the explorers who enter a wild forest and must first succeed in clearing their path. Once this is achieved, that is to say, when the question of proportion and tonality is determined, there comes the matter of working out all the details. Special attention has to be given to the part writing, which maestro Bernardi himself calls so picturesquely the *conduite des voix* (the conduct of the voices). Balakirev was absolutely uncompromising on that chapter, contending that no really durable work can be achieved if one does not rely fundamentally upon an orthodox realization which involves a minutely correct orthography. Therefore his recommendation of watching the motion of the parts and taking great care that their parallel mov-

ing takes place rationally, without any awkward or undue intervals, is most important and should be given consideration at all times.

Now comes another capital point—the harmonic arrangement of the chords. One of the most invaluable pieces of advice that can be handed to any composer comes from Balakirev when he states, "Do not overload your chords. Do not make them thick. Remember, it is not the number of notes that makes a chord sound well. It is the way in which these notes are distributed." Hence his recommendation to try out the chord formation in the same way advocated for modulating, and finally to make one's selection after several trials, when the ear is satisfied. As far as set rules are concerned regarding this, he had a few which were of the greatest simplicity. They had to do with the perfect chord built on the tonic, and its two inversions. "When you write a perfect chord," he said, "you can use the tonic any number of times. But not so for the two inversions. Here, one must abstain from repeating the basic note, as much as possible." The following figures will illustrate clearly what he meant:

He likewise stressed the importance of the inversions in connection with harmonization. "Try the inversions (or another inversion) here," he would suggest, "it may improve this passage greatly." And sure enough, it happened exactly as he said.

Naturally, as a visionary teacher would

do, Balakirev insisted that in art, music in particular, there is nothing can be brought under the yoke of a rule. All rules have exceptions. And it is the greater or smaller ability to handle principles and to adapt them to his particular needs, that made the student more or less worth while in Balakirev's eyes.

One more important subject was the matter of the key itself in which a composition was written. It was not uncommon for him to sit and listen, then again repensive, and in conclusion, to say, "Try play this in A-flat major instead of C major; it may be more in the character." But sometimes this would not satisfy him and he would suggest, "Now let us hear in B-flat major." Several keys might be tried, before hitting the right one.

Necessary also was a careful consideration of the register. If a passage, for some obscure reason, did not result satisfactorily, despite the interest of the musical conception and its harmonic working, he would recommend to try it with another disposition of the elements. For instance, to place the melody in the bass, with accompaniment in the treble, instead of melody in the treble with the accompaniment in the bass. Very often this treatment gave unexpected and most satisfactory results. This principle appears as valuable to-day, as it was during Balakirev's time. It is one of those ideas which will never pass out, because they are fundamentally right.

Balakirev was a great orchestrator. It is known that the Russian school has always excelled in that direction, from Tchaikowsky's time, through Borodin and Rimsky-Korsakoff, to Stravinsky. Here once more, Balakirev used simple precepts. In the handling of the instruments, he warned against anything too massive, and insisted on a clever distribution. There is no doubt that in this respect he influenced Rimsky-Korsakoff himself, whose "Treatise on Instrumentation" goes so far as indicating which are the "good notes" and the "less good notes" of each instrument, and shows us how to intermingle these instruments so that they

(Continued on Page 405)

## Music of Worth to the Movies

By VERNA ARVEY

SINCE THE DANCE always has been closely allied to music, and since history proves that it has inspired some of the world's most charming compositions, it may be well to consider briefly just what films are doing to preserve the art of fine dancing.

In this connection, one of the most significant pictures to date is the recent "Garden-festival in Vienna," a German production directed by Paul Martin. In this film Lilian Harvey (former star of "Congress Dances") portrays Fanny Elssler, famed dancer who had the theatrical world of Napoleon's day at her feet. In this colorful film based on incidents in her life, the dance scenes were created and directed by Hubert Stowits, former dancing partner of the divine Pavlova and now renowned as a splendid painter.

Of course, Hollywood's contribution to dance lore often has been of the popular variety. Bill Robinson, Eleanor Powell and Eleanor Whitney are some of those who have tap danced their way to success in films. But, on the other hand, Hollywood has often employed classic dancers like Vera Zorina (fresh from success on the Broadway stage); Jeannette MacDonald (it is not generally known that she won her first acclaim as a dancer before her lovely voice commanded the greater attention); and Steffi Duna (who is reported to have made her debut in the Hungarian Opera Ballet when she was eight years

old). Many screen stars realize the benefits to be gained from a study of dancing and have openly avowed their indebtedness to it. Screen short subjects have from time to time used classic ballets, while to Tatiana Tuttle goes the credit for producing, several years ago, the first screen ballet on a musical score by Joseph Achron.

Most significant of Hollywood's late contributions to the dance is RKO's "The Castles," based on the careers of Mr. and Mrs. Vernon Castle. This film stars Ginger Rogers and Fred Astaire, whose dancing always has seemed to this writer to be finer in concept and execution than the usual run of stage and screen dancing. It is more than tap dancing, for it has genuine pattern and form. The music used for "The Castles" consists almost entirely of songs that were popular in the period from 1908 to 1918 (*Waiting for the Robert E. Lee*, *The Missouri Waltz*, *By the Light of the Silvery Moon*, and others), many of them tunes to which the Castles actually danced. There is only one new song in the film, that written by Con Conrad, Bert Kalmar and Herman Ruby. The scoring for the picture was done by Robert Russell Bennett, Edward Powell, Hugo Friedhofer and David Raksin. The music is not scored for saxophones, nor for guitars. For the latter instrument, banjos have been substituted. Nor is the music modernized to the point of permitting sophisticated syncopation to creep in. In

"The Castles" Mr. Astaire and Miss Rogers re-create many of the old dances that made Mr. and Mrs. Vernon Castle the dancing idols of America. The film thus assumes a historical importance.

The work of Albertina Rasch, as ballroom mistress for films, long has been well known. Her next ballet for the screen will be seen in the Winfield Sheean production "Florian," starring Robert Taylor. This will be an elaborate Viennese ballet in the Imperial Opera House. Mme. Rasch should feel "at home" in this atmosphere, for study of her life shows us that she was once known as the youngest ballerina ever to be featured with the Vienna Opera, making her debut at the age of fourteen, only seven years after beginning her study in the Imperial Opera Ballet School of Vienna. Incidentally, much of the music to which Mme. Rasch's ballets dance is composed by her husband, Dimitri Tiomkin, composer of the music for such films as "Lost Horizon" and arranger of the Johann Strauss music for "The Great Waltz."

A recent screen ballet which won great favor was "The Dream Fantasy" by Ernest Belcher, an episode in Shirley Temple's "The Little Princess." In it, little Shirley Temple is seen as a ballet dancer. The graceful music for this ballet was composed by Sam Pokrass, a man once termed the "Irving Berlin of pre-war Russia," a modernist of the people.

# The Threshold of Music

By LAWRENCE ABBOTT

Assistant to Dr. Walter Damrosch

## The Art of Musical Voyaging: Modulation

### Part II

[ This article is the twelfth in a series on "The Doorstep of Harmony." The first appeared in The Etude for January, 1938, and an article will appear each month hereafter. ]

UPON EXAMINING PIECES of music which shift into related keys, we discover that in most cases the key-changing is achieved through use of dominant seventh chords. The reason why is not hard to fathom. As we have already found out, the crucial, tell-tale notes in any scale—the "pointing fingers" which call our attention to the second and third notes—are Fa and Ti. And really important is the dominant note itself, since the Bass Law sets it pointing at the tonic. Now all three of these notes are included in every dominant seventh chord. When a composer wants to focus the spotlight on a new key, by calling attention to a new Fa, a new Ti and a new So (dominant), what could be more logical than for him to harmonize the music at that point with an all-revealing dominant seventh chord?

No wonder the dominant seventh has earned an enviable reputation as a "trapeze artist" in the art of harmonic acrobatics." It brings us from key to key with perfect ease, for it contains the very notes which tell us absolutely what key we are in. So closely is the dominant seventh chord associated with Fa and Ti that these two notes, either paired or alone, often suggest themselves dominant seventh harmonies. We hear a chord on C followed by the solitary note F, our imagination will suggest a dominant seventh chord to carry us back to E—or, if we hear the single note F, our imagination will supply a dominant seventh chord to carry us up to C.

If, however, the note F-sharp is introduced after a C chord, our mind immediately links it with the note C to form the dissonant "augmented fourth" interval characteristic of a dominant seventh chord on D. This dominant seventh leads us into the tonic chord of G. A modulation to a new key.

If the note B-flat is introduced after a C chord, our mind imagines another dominant seventh. This time it is the dominant seventh belonging to the sister key, thus leading us to the tonic chord of F.

In each case a note foreign to the scale persuades the ear that it is part of a dominant seventh pattern in another key, thus pointing the way straight to that key. Look back at our two examples of key-

shifting, *Willow, Willow, Waly* and *The Love Nest*. You will see that in both cases the foreign note is part of a dominant seventh chord. The trapeze in action.

The process of modulation which lowers Ti into a "Fa personality" can go on forever. If we lower the leading tone of C we arrive in F. Once we are in F, we can lower its leading tone (E) to E-flat, and find ourselves in the key of B-flat. Then, by lowering A to A-flat, we progress to still another key, E-flat. Each time we explore a new subdominant key we add another flat. That is why F is the key of "one flat"; B-flat, the key of "two flats"; E-flat, the key of "three flats," and so on. Each time we arrive at a new subdominant key we have done it by adding another flat to the signature.

The "sharp" side of C can be explored in the same way. We found that by raising Fa (the fourth note of the scale) we transformed it into a leading tone for the note just above it. In the key of C we raised F to F-sharp, which became a leading tone bringing us into the key of G. We repeat this process. In the key of G, we count up four notes—Do, Re, Mi, Fa—to C. We raise C to C-sharp—a new leading tone. The new tonic, of course, is D (which was the dominant of G, just as G was the dominant of C). The notes G, A, B, C-sharp have lost their old characteristics as Do, Re, Mi and Fa, and have now become Fa, So, La and Ti in the new key.

Each time we explore a new dominant key we add another sharp. And so we move from "one sharp" (G) to "two sharps" (D), to "three sharps" (A), to "four sharps" (E), and so on.

Eventually, if we explore far enough, we discover we are traveling away from C, not in a straight line but in a circle. By the time we arrive at "six sharps" (F-sharp), we find that we are in exactly the key at which we arrived when we journeyed around by way of the flats to

"six flats" (G-flat). Take a look at your piano keyboard. These two notes are represented by the same black key. It is as if we had gotten to China by going east instead of west, but—not having set our clocks back—we are still calling it Tuesday instead of Wednesday.

We can continue around still farther into new dominant keys; but, since seven and eight sharps are too many for comfort, we simply re-adjust our viewpoint and consider ourselves as being in the "flat" country. For each new step dominantwards, we now simply take off a flat instead of adding a sharp. Eventually we complete the circle and are back at C.

And here is the same circle of keys expressed in musical notation, with C appearing at each end—like a map of the world which shows the Pacific Ocean at both right and left extremes.

No doubt you are familiar with the imaginary line which runs down the middle of the Pacific Ocean, called the International Date Line. When it is Tuesday to the right of the line, it is Wednesday to the left. Music has a similar notation line. To the right are sharps, and to the left flats. When composers modulate across the line they have to change their notation by means of "enharmonic changes"—that is, by writing the same note first as D-flat and then as C-sharp.

César Franck's "Symphony in D minor," during the course of its wanderings, finds itself in the key of B-flat minor (five flats), but wants to shift into B major (five sharps). This necessitates crossing the musical "date line."

This quotation is used by the kind permission of J. Hamelle, owner of its copyright.

Notice the spot (marked x) at which the music crosses the dividing line between sharps and flats. It is in the second full measure, between the first and second

chords, the first being written in flats and the second in sharps. The two upper notes in the left hand part are written first as D-flat and B-flat; in the very next chord they become C-sharp and A-sharp; yet in both chords they are exactly the same tones.

On paper the modulation appears to be a complicated affair, but it is really quite simple. Here is the way it works: The major triad on La (6) in the key of B-flat minor happens also to be the triad on So (5) in the key of B major, and this chord provides the common ground on which these two keys may meet. The only quirk is in the spelling; in the first case we write this common ground chord as a triad on G-flat, and in the second case as a triad on F-sharp.

As a matter of fact, César Franck does not actually use the common ground triad itself in this modulation; but, in the first chord after the point marked x, he uses a chord that is almost the same; the only difference being the E-natural which makes it a seventh chord instead of a triad.

### Traveling With the Stream

IF YOU PLAY twice over the series of chords, in Example 13, which illustrate the family circle of keys—the first time reading from left to right, and the second time from right to left—you will notice an interesting thing. In the first case, when you travel "flatwards" from key to key, you have the feeling of going downstream—of being carried along pleasantly in your modulations by the current. On the other hand, the trip "sharpwards" (playing the line of music backwards, from right to left) sounds less natural. Here you are struggling against the current—going upstream. The reason is that you travel into the flat keys by means of a series of perfect cadences—dominant to tonic—with one key moving down a fifth or up a fourth to the next in strict accordance with the natural urgings of the Bass Law. But when you travel into the sharp keys you reverse the process—tonic to dominant—and you have the less satisfying feeling of making a series of half cadences.

One of Mozart's best known themes contains a rapid succession of changing chords which might be bewildering but for the fact that they move in orderly fashion downstream, and slip along easily with the current:

It is from the *First Movement* of the master's "Symphony in G minor," which, with the "Symphony in E-flat" preceding it, and the great "Jupiter, in C, Symphony" with its triumphal fugue, following, form the transcendent trio of masterpieces in this form, which he created between June 26th and August 10th of 1788 (Baker says 1789), just a bit over six weeks. One of the most stupendous feats in all the annals of music!

# THE ETUDE MUSIC LOVER'S BOOKSHELF

## Hot and Hybrid

THE CITADEL of jazz has been assailed on every point, for the past quarter of a century. Dozens of books and methods have appeared; and yet, save for the very foggy conception that all jazz is a kind of exciting musical hash, the public has very little idea of what the word signifies or what relation it has to the new and prosperous orphan of the musical world, "swing." A few days ago the writer, while lunching at a club of business men possessed of large means, was asked for the best definitions of "jazz" and "swing" and was obliged to answer, "Jazz and Swing are the things you hear from your radio after eleven P. M."

The jazz methods tell how to do it. They are like swimming exercises taken out of the water. You learn how to go through the motions, but if you are suddenly thrown into the sea you may drown, nevertheless. Jazz and swing cannot be learned through a book. Many of the famous players have never read a book on jazz, and very few on any other subjects. Jazz is learned by playing in a jazz group; and swing is learned in a "jam session," which is "nite spot" slang for those meetings of jazz players in which each one confesses his sins on his particular instrument as the spirit moves.

Many of the recent books on jazz have been written for the jazz cultists and are, like books on book collecting or bug collecting, of principal interest to the collector type. Just as the entomologist may chortle when he finds a rare cockroach, so the jazz fan beams when he discovers a record of particularly noisome jazz.

A new jazz volume, called "Jazz, Hot and Hybrid," by Winthrop Sargeant, approaches jazz as a musical form and is possibly the first book on this subject, we have seen, that has very much interest to the general musician, largely because it is written in language he can understand. It is the first book upon the subject that has held the writer's interest without insulting his intelligence. The author is critic and music editor of "Time," and he is to be congratulated upon his keen, "no-nonsense" handling of the subject. Particularly to be praised is his sympathetic discussion of the "blues" of W. C. Handy, who is the most sincere and understanding of all Negro composers who have preserved this tragic reflex of the lives of the descendants of the black men who were brought to America in cruel slave ships. Mr. Sargeant goes in for "Aesthetics of Folk Music," "The Anatomy of Jazz Melody," "Hot Rhythm," "The Geography of Jazz Rhythm"; "The Scale Structure of Jazz"; "The Derivation of the Blues".

Whether jazz is good or bad, there are thousands of people who are emphatic in saying that they prefer it to all other kinds of music. Whether you agree with them or not will not affect their determined effort to dislike what you call fine music. The children of such parents naturally clamor for what they hear praised and supported in the home. Shall the intelligent teacher turn his back upon such students, or should he learn more about what he calls "this chaotic new style" and then, while teaching the pupils of benighted parents, proselyte them with the gospel of Beethoven, Chopin and MacDowell? The writer thinks that it is good sense to find the best things in jazz and employ them, when necessary, in this surreptitious manner, to make converts for the glory of music. Incidentally, the teacher may have a great many surprises by finding new and interesting musical aspects of jazz. For this reason it may be a very profitable experience for the teacher to read this highly entertain-

By B. MEREDITH CADMAN

Realizing that many of our readers may have difficulty in securing the books listed in this department, THE ETUDE MUSIC MAGAZINE will be glad to furnish its readers with these books at the price given, plus the slight charge for transportation and delivery.

ing and instructive book. Moreover, the book will indicate how jazz, like the budding of trees process in developing fruits, is being grafted upon our modern musical development with an unquestioned tonic effect to new music.

## A Message to Parents

Why listening to music, delightful and valuable as is the experience, can never be a substitute for the study of music, is a matter of honest wonderment, with many a parent. A very matter-of-fact, hard-boiled, cocksure man, who had made a fortune in the pork packing business, and therefore thought that this entitled him to a kind of general omniscience in all other things, once said to the writer, "I don't ask my boy to make his own shoes. I buy them ready made. Why should I ask him to make his music?" At first thought it sounds reasonable; but it is just about as sensible as saying, "I hire a specialist to digest my son's food, to do his exercise, or to save his soul." There are certain things that can be obtained only by personal effort; and music is one of them. In the process of securing musical knowledge in these airplane-television days, the radio and the talking machine are invaluable; but they

must, however, be intelligent and based upon the fundamental principles of pedagogy. The study is limitless. THE ETUDE has, of course, been stimulating the parental study guidance practice, in its issues, for years. Teachers usually get more interference than guidance from parents. It is for this reason that we endorse this book very heartily. Ask yourself how valuable your child's culture is to you, and then add the probable outlay for its musical education; and it will be obvious that the time and trifling cost of such a book as this must be a very fine investment. The book answers such questions as: "The fears of children in music study"; "The dangers of the exploitation of children"; "When should piano and violin study begin?" "How to stimulate practice"; "Health and music study"; "Emotional conflicts in connection with music"; subjects which all parents except the frivolous find matters of concern. Your Child's Music.

## Musical Appreciation Again

Aaron Copland's name upon the cover of the recently published "What to Listen For in Music" will be misleading to many, as this composer's activities are somewhat identified in the public mind with radical modernism. On the other hand, the book itself is a very practical and readable volume, quite as orthodox in parts as though it might have been written by the revered Dr. Percy Goetschius. Save for an occasional mention of Debussy, Stravinsky, Schönberg, Hindemith, Mahler and Sibelius, the work is so conservative that it might date thirty years ago; and to our mind this makes it all the more valuable. All of the modernists, even the most extreme with whom we have conversed, stress the need for just this kind of fundamental training before voyaging out to the nebulous unknown. The book is really a most excellent one for its purpose. His chapters upon "Rhythm," "Harmony" and "Tone Color" are especially informative.

Books of this kind are worthless, save to those who have already secured some considerable musical training. Then they do help to straighten out muddled minds. Even when such subjects are conscientiously illustrated in lectures, with extracts played at the piano, it is impossible to convey to the non-musical reader what can be secured only by regular, fundamental, elementary training. The author is thoroughly conscious of this and expresses the situation very definitely in the introductory chapter. We recommend enthusiastically this book to those who have had such training.

## The Story of Louise and Sidney Homer

"My Wife and I" is a truly well na book; for it is the sweet, warm, responsive story of the life of Louise Homer, beloved American contralto, and her devoted husband, Sidney Homer, well known composer. Some critics will term it "domestic"; but thank fortune, it is. Its theme of mutual respect and family pride of attainment, is refreshing after so many curio biographies.

Mme. Homer's voice has been of prime importance throughout her life; but of all have been her home, her husband and her children. She is the heart and pride of her family group. As the children grew older, they retained a mature delight in pride in her as an artist, but foremost as "Mother"—a companionship that brought great joy into their lives. Evidence of this was the joint recital with her older daughter, Louise, who never failed to delight audiences.

Mme. Homer As a Young Mother

There is much that can be gained from reading Mr. Homer's book, as a guide to the young student; for it makes very clear that success comes not as a matter of luck but as the result of constant and unfailing hard work, and of being ready when an opportunity presents itself, no matter how small a one. His account of his wife's great rôles, at the Metropolitan Opera House, New York, combining a glorious voice and marked dramatic ability, gives the student a real thrill. One can readily understand why she has been so admired and loved all, from opera stars to stagehands.

Now retired from active musical work she and her husband are happy together at "Homeland," enjoying the rich fulfillment of a life devoted to the art of music, unfailing service to others, and a great unselfish love. Here is a book of rare charm for any reader.

## Oh, So Long Ago!

Somewhere between the rivers Tigris and Euphrates, even before the mighty kingdoms of Babylon and Assyria, a language came into existence known as Sumerian, the tongue of a civilization so long a part of the dust of the universe that the very thought is staggering. In the latter part of the 19th century, tablets, engraved with the queer wedge shaped symbols of this language, found their way to the British Museum, where Sir Henry Rawlinson and

(Continued on Page 396)

Illustration from "Your Child's Music"

cannot take the place of music study. They do, however, make this study more exciting and delightful.

Questions like this, and many others, make up the body of a very valuable book by Satis N. Coleman, addressed to the parents who realize the wisdom of giving their children a musical training.

"Your Child's Music" is very well developed from a practical psychological standpoint, although the author has wisely avoided the jargon of that technical science. Parental guidance is a matter of great importance in music study. This guidance

FAMOUS BAND LEADER AND TEACHER  
CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

## The Responsibilities of a Cornet Soloist

By the Eminent Cornetist and Conductor

HERBERT L. CLARKE

HERBERT LINCOLN CLARKE, one of the greatest cornet and trumpet virtuosos of all band history, was born at Woburn, Massachusetts. He is descended from a New England family that in 1634 settled in America. His father, Dr. William Horatio Clarke, was a distinguished educator, organist, and compiler of many widely used organ books. Young Clarke first studied the piano and violin, at the age of four. At fourteen he began the study of the cornet. For many years he played and taught in Canada, at the Toronto Conservatory and the College of Music. He toured with Gilmore's Band, and for twenty years was soloist and assistant conductor of the great Sousa Band. He served as a Lieutenant in the United States Navy. Since 1923 he has been conductor of the widely known Long Beach (California) Municipal Band.

\* \* \* \* \*

ANY ONE WHO ASPIRES to become a success, either professionally or commercially, must have a great determination. To excel in any field, one needs a sense of perfection, which embodies a desire for perfection, especially in the elementary training or ground work. Too often this is sadly neglected by beginners. Attention must be backed up with proper study, combined with energy, tenacity, and patience. Of these patience is one of the greatest virtues for success. Contact an experienced teacher who has become a public success, and you will find in him the important characteristics.

From cumulative observations of many years, there are more than a hundred thousand cornet and trumpet players in America. There must be, if one can judge from the number of these instruments manufactured and sold. Records claim that there are some thirty-five thousand school bands and orchestras in this country, containing membership varying from thirty-five to a hundred in each organization. With an average of eight cornet and trumpet players in each unit, the school bands must possess nearly two hundred and fifty thousand. In small bands of twenty players we have noticed as many as four cornets, and school bands of over a hundred members usually contain twelve more.

Professional cornet and trumpet players, who are members of the American Federation of Musicians, add considerably to the total. With a thousand Locals, New York Local No. 802, alone, contains about a thousand and one hundred of these players, with a full membership of over nineteen thousand musicians. With the many thousands of amateur players who are ardent and enthusiastic cornetists, there is in this country the amazing number of cornet players whose proportions reach into the hundreds of thousands.

Truly, these figures are astounding, and it is almost incredible that out of this great number, one can count on the fingers of both hands the outstanding artists who have made an international reputation as cornet soloists. And there must be a reason, which we shall try to explain. In the first place, one must acquire a

pure musical cornet tone in all registers; that is, from low F-sharp below the staff to top C above the staff. The tone must be equal in volume throughout the entire scale, just as it is on a piano, with each note of the same quality. This requires much thought and practice in training the two lips to *vibrate equally* in the center of the mouthpiece, with the help of the muscles of the lips and face, and with the control of air necessary to produce this equal tone quality. The tongue muscles must be regulated to synchronize with the lips and lip muscles, contracting properly in ascending the scale, and relaxing in descending. Also, wind power governs these two elements, for proper wind control is ninety-eight per cent of correct cornet playing.

Rapid technic, or fingering the valves properly, is an exacting practice. Each of the three fingers must be controlled separately, with strength and facility, or flexibility, for very fast passages. Learn to play all the scales correctly and evenly. Scales in music may be aptly compared to the multiplication table in mathematics; for one cannot move into the higher arithmetical forms if all parts of the table are not memorized correctly. In like manner, the scale of six sharps should be played as faultlessly as the scale of C, or the way to better cornet playing is impeded.

To sum up this idea of "Preparation," we would advise that one should practice for a pure cornet tone, a mastery of scales, perfect technic and control of the air and wind, if he would attempt to become a great artist and soloist.

### Good Health and a Clear Mind

PROPER PRACTICE upon the cornet is conducive to health, if no strain is placed upon the individual. Such strain is entirely unnecessary. Maintain good health by out of doors sports. Eat and sleep regularly, and do a certain amount of daily exercise. Live moderately, and this moderation should extend to cornet practice, for one

HERBERT L. CLARKE

should never tire the lips or become exhausted. During practice periods, relax every few minutes, to "build up" not to "destroy." If you do not overeat, dieting will be unnecessary. The very best stimulant for one's system is deep breathing of pure fresh air, combined with moderate muscular exercise of the whole body.

It is hoped that these suggestions will encourage the development of a clear mind, which is the prime requisite for a successful career. It is the mind which really plays the cornet. The correct mental processes are the full determinants of the extent of perfect physical execution.

One of the most important factors in solo playing is the control of the left hand, which holds the instrument. The mind must consider this element of performance in the same way that it gives attention to lips, muscles, tongue and wind. To hold the cornet steady and firmly in an upright position, see that the knuckles of the right hand are above the valves, so that the fingers will *press* the valves down, not *pull* them down, which often is the cause for valves sticking. Exercise control of the fingers of the right hand, of the muscles of face and lips, of tongue and wind; all these are controlled by the mind.

In practice, always keep in a happy frame of mind, smiling, free from care, and positive.

### How to Memorize Thoroughly

SELECT A CORNET SOLO that you would like to play, one that interests you. (Never play a solo that you do not like, as it will never be played well.) Play the first four measures only, for ten consecutive times, being sure to play them correctly each time. Then play the next four measures ten times. Go back to the beginning and play all eight measures ten times. Then the next four measures after the eight—to twelve—ten times. Play all twelve measures ten times, and then proceed to the fourth group of four measures. Start again at the beginning and play all sixteen measures ten times.

This system applies to all solos, whether they are difficult or easy numbers; and if practiced properly, keeping the mind on each note played, the student will gain the most desired end—*confidence*. It also strengthens the muscles of the lips and tongue, and brings a command over wind control, and a gain in will power.

When memorizing a solo, always play softly, without "starving the tone" or tiring the lips. The lips always should be kept

fresh and pliable. After playing the first four measures a few times, glance away from the music, to ascertain that it is being properly memorized, before attempting to continue with the next four measures. Listen to your playing—concentrate upon what you are attempting, and do not allow the mind to become blank or disconcerted. Stop frequently for a rest, and especially when the elements of correct playing are not under full control. Do not attempt to play solos in public until they are thoroughly memorized in practice—then there is no stumbling or guesswork. A soloist never should use a music score when playing before an audience. This takes away from the object of entertaining people. The aim is to give pleasure; the musical message may be just as convincing as that of any celebrated orator; but the performance must not be marred by a mediocre rendition of the music.

One can do much by being determined and confident in everything that he undertakes. Be positive, by learning to memorize correctly at the very beginning. Strive to follow a slogan which we have personally used for forty years: "It is so easy to play right, and so difficult to play wrong!"

### The Secret of Perfection

ONE HUNDRED PER CENT is perfection. Ninety-nine per cent is imperfect by one

per cent. If the elementary foundation and all ground work have been acquired correctly, success is bound to follow. "Well Begun is Half Done."

When starting the first note in practice, be sure to fill the lungs and chest to full capacity. The lungs are a reservoir; expand the chest by throwing the shoulders back, extending the chest. Take a deep breath and start the tone. The physical set-up depends upon what part of the scale is used. If a moderately high note is to be played, contract the muscles of the lips properly and make a positive attack with the tongue. The tone should respond immediately, with the same result as when striking a note on the piano. Do not "push" the tone. Strike it positively. This is one of the first requisites of solo playing. The left hand should grasp the cornet firmly, as in a later stage of advancement it will be found that the left hand controls much in cornet playing. If the least mistake occurs during practice (either a slip or slight break is noticeable), stop immediately, and start again at the beginning. Continue this habit, until the specific exercise is played faultlessly. When a mistake is made, stop and think how and why it happened. Reason this out for yourself, and if thus discovered, it will not happen again.

Train the muscles of the lips and tongue to act together, just as they do in talking, when each word, regardless of the language used, is pronounced correctly. In practice, learn to control these completely. Master the technic for the fingers of the right hand; and learn the controlling factors in three necessary elements for the cornet:

*Air*, which is atmosphere.

*Breath*, which is respiration.

*Wind*, which is power.

Control of these forces gives confidence to the player, which enables him really to enjoy playing before an audience, instead of torturing both himself and them with his nervousness and anxiety.

Perhaps we can give an illustration of the meaning of control. Step into the driver's seat of an automobile. Remove the steering wheel and throw it out the window; then get out, and loosen the brake bands. Would you dare drive in traffic without a steering wheel or brakes? If you start the engine, it will function perfectly, but of what good is the finest engine without the control found in the steering wheel and brakes? So it is in cornet playing; you may be a facile performer, but the elements of control will determine the perfection of your playing.

Wind power is used for high tones to produce brilliancy. When ascending the scale, "step on the gas," so to speak, and depend upon wind power instead of the lips. When a soloist "breaks" on a high note at the conclusion of his solo, he may be likened to a motorist who, while driving his car up the hill, fails to "step on it," and as a consequence, he "stalls" in the middle of the hill.

When running down the scale from a high note, relax the muscles of the lips gradually, the same as "coasting down hill." To become accurate in solo playing, practice all solos a half tone higher than written; and when this has been accomplished, practice them a half tone lower, so that they can be played without a single mistake. Then it becomes very easy to play them in the original key. Many famous cornet soloists do this with much satisfaction and pleasure.

In summing up the secrets for attainment of perfection as a cornet soloist, one word is sufficient—control! And this means everything to reach success and the top of the ladder.

### Studying Famous Cornet Soloists

THE ADVANTAGE OF HEARING many great artists who made international reputations in their early days has meant much to the writer. Jules Levy, the pioneer of the cor-

net, was a wonder; Liberati was an equally proficient soloist. Walter Emerson, of Boston; Ezra Bagley, also from Boston; Walter Rogers; Herman Bellstedt; Alice Raymond, the celebrated lady cornetist; Paris Chambers—all these had an international record. I knew them personally for many years, and heard them perform many times. Then later on in this generation there were Walter Smith of Boston, Ben Rolfe, Del Staigers, Frank Simon, and others who made the cornet an outstanding solo instrument throughout the world. Also I have had the advantage and honor of meeting many artists in foreign countries, during my travels with the famous Sousa Band, and they were equally great in each country I visited. They were fine people all, and very courteous in their exchange of ideas, knowledge and commonsense views of all phases of correct cornet playing and the artistic rendition of solos. European critics are severe in their comments pertaining to musical performances, and it is well to strive for perfection in a musical way, in order to maintain standards that will command recognition.

An ambitious aspirant never should feel afraid to approach any great artist to ask a vital question, the answer to which may

change his whole life for the betterment of his career. I never met a real artist, in any part of the world, who was not courteous and willing to help the next fellow.

### Personality

WHEN APPEARING before an audience, self-control should be exercised in the dressing room before entering backstage of the concert hall or auditorium where the concert is to take place. Dressing rooms, of course, should be cheerful and attractive to everyone. After removing hat and coat, walk out to the back of the stage; and, if there is anyone present, such as the stage manager, helpers, or friends, start a conversation of some kind on any subject remote from the program about to take place, especially keeping your mind away from yourself. Remember that your individuality is left in the dressing room, where it should remain until your work is finished. Talk about the person you are meeting, asking some question from which you may derive relaxation and information. An interest in the other person will prepare you for a meeting with the audience; a few well placed compliments, or a conversation lasting until the very moment of appearance on the stage will do much for

(Continued on Page 415)

### TOLEDO'S CLASSIC PERISTYLE

Among the many beautiful auditoriums recently built in the United States is the peristyle in the Toledo Museum of Art. A special lighting system, ingeniously concealed, can flood the auditorium with any hue of the rainbow, at will of the electrician.

## Rhythm

By JANET NICHOLS

RHYTHM is the backbone of all musical composition, and frequently the young student encounters rhythms that are a little out of the ordinary.

Most experienced performers have acquired a rhythmical sense, but for the less experienced musician it may be well to make a few suggestions.

In looking over the new composition, there may be discovered a combination of rhythms such as

Suppose one may feel that his sense of rhythm has not been developed to the extent that it is possible to execute this composition smoothly, and perhaps there is doubt as to the best procedure.

Set the metronome at 72, and, with each stroke or beat, count 1, then 1, 2, then 1, 2, 3, then 1, 2, 3, 4; or, if you prefer, use words of one, two, three and four

syllables, such as dog, collie, terrier, cocker spaniel. A chart will clarify the idea.

To attain greater skill skip around from one to four to three to two, and so on.

Since the dotted eighth note (equal to three sixteenth notes) followed by the sixteenth note is the 1, 2, 3, 4 (or cocker spaniel) combination, there really are only two combinations with which to cope.

Now it should be possible to continue in the same manner at the keyboard. At first it may be necessary to set the metronome at a very slow tempo.

Young students are often completely

helpless when they come face to face with a problem like

It is not that this is any more difficult than the first problem, but the *dotted eighth* (dotted eighth or dotted eighth) is confusing to the student. In six-eight, nine-eight or twelve-eight rhythm there are normally three eighth notes to the dotted quarter note; and we have the abnormal division of a dotted quarter note into two eighth notes which must fill the full time of the dotted quarter note or of the regular group of three eighth notes; and so it is merely a combination of 1, 2, 3—1, 2 (or terrier, collie). As set your metronome at 72 and to each stroke or beat count 1, 2, 3—1, 2—1, 2, 3, 1, 2; or say terrier, collie, terrier, collie.

Additional methods of acquiring a feeling for all combinations of rhythms is to hold a pencil firmly and beat out the rhythm with good firm strokes.

Also the rhythm may be tapped out on a table, with a pencil.

Unusual rhythmical patterns are found in rather elementary compositions, and more especially if that composition is by Deems Taylor, Randall Thompson, A. W. Kramer, or other "moderns"; and they baffle the third year pupil, is it a wonder? However, if the rhythmical pattern as well as the harmonic pattern is little out of the ordinary, that may tend to make the composition all the more intriguing; and, instead of feeling discouraged about it, it is better to work out the problem in some systematic manner.

### Scratch Pads

By ETHEL VAN SICKLE FOOR

WHEN GIVING LESSONS, a pad of scratch paper is kept at hand, along with a pen and gold stars, and it is used almost often. If Alda has just been working in the key of A in her "Student's Book," then make a note on the scratch pad to look a piece in the key of A and have it ready for her next lesson. Rex says he is to play at their family reunion, so a reminder jotted down to search the Etudes for a brisk march which will wake the echoes of the schoolhouse where this family dinner will be held.

Helen "just loves" pieces in which the hands are crossed, so another sentence reminds me to hunt such a piece for her. And so on through the week's routine.

Then the scratch pad is called upon when I sit down to spend the evening with the new issue of THE ETUDE. It would be very easy to forget to tell Rex that there is a picture of Anton Dvořák on page so-and-so, but the little note will remind me. When the reading is finished, the scratch pad is apt to look like this:

July 1938.

picture of piano, p. 432  
picture page 437 to Palestine Music Club  
Old Wooden Clock—Lois  
Ellen—Mozart "Sonata" and Chopin Prelude (offertory)  
Ethelmae study phrasing of Laddie Boy on her violin  
Six-eight time in Loyal Legions for Helen Menuhin's hands, page 476  
For Music Club, make a game of "Tempo Twins." (We did, by printing the words on cardboard and standing them around the room, letting a person act them out while the rest of us guessed the word.)

# THE TEACHERS' ROUND TABLE

Conducted Monthly by GUY MAIER  
NOTED PIANIST AND MUSIC EDUCATOR

Correspondents with this Department are requested to limit their Letters to One Hundred and Fifty Words

## Appearance

The most severe critic of my teaching is my sister. She has often told me that my pupils sound very well, but that they look awkward when they play. I tried putting a large mirror next to the piano so that the pupils could see themselves, but it only made them self-conscious and did not help to cure the fault. I was also quite shocked when I saw how badly I looked when playing even the simplest music. Is there anything I can do to help my appearance.—B. L., Virginia.

That mirror idea was a fine one, but you should have used it only on yourself. If a teacher's playing is as exemplary a visual as well as aural model, it is not necessary to worry, for the students will unconsciously reflect both the looks and the sound. Yes, your sister is right. A pianist's hands should weave lovely, alluring arabesques to the eye as well as the ear. Your arms should make beautiful poems. And, curiously enough, if your physical approach to the piano is graceful, the resulting sound will be satisfying.

The chief causes of poor playing appearance are these: 1. "Pumping," or dropping the fingers on the keys instead of using a slight inward and outward elbow tip movement while playing. 2. Whacking the tone from the wrist, forearm or full arm. 3. Ungainly motions caused by excessively curved fingers, too high or too low wrist, elbow held close to body, and so on. 4. Stooped up, stiff neck or shoulders. All these faults can be quickly wiped out by: 1. Constant graceful approach; 2. much practice without stopping at keyboard; 3. contacting key before tone is played; 4. practicing the swift approach—release—often described on this page; 5. "Floating" elbow tip; 6. using natural hand position; 7. playing slow, short melodic phrase groups with circular or spiral movement of elbow; 8. much practice for rotary freedom.

Here's to better "piano looks" for us all!

## Around the World

I am interested in securing a list of pieces of all grades for a pupils' "transportation" program; I mean, pieces that illustrate different ways of traveling around the world. Could you also suggest a good title for such a recital?—E. B., Minnesota.

What a fascinating question! I could hardly wait to sit down to answer it. In it, I "dished" many important matters to you and it off to readers of THE ETUDE. First, I went to my sons, who are authorities on such matters, and asked them to list every possible method of transportation or travel. The result is: Hiking, running, ice skating, roller skating, skiing, snowshoeing, swimming, horseback, horse and buggy, dog-sled, rickshaw, stage-coach, monkey, elephant, yak, camel, (turtle and her "backs" purposely left out) row boat, canoe, gondola, sailing ship, motor boat, submarine, bicycle, motor cycle, trolley car, trolley car, subway, elevated, train, streamliner, balloon, dirigible, plane, glider, clipper ship (rocket and space ships omitted, since we plan to stick close to the earth). Aren't you amazed that there are so many ways to get around? The available pieces are, of course, endless. Here are a few that come to mind: *Early Grades:*

*Early Grades:* *Across the Sea* (very easy); Hibbs, *Ricksha Boy* I; Lehman, *The Skating Boy* I; Thompson, *Midnight Express* II; Weinstein, *Ship Ahoj*, II; Williams, *The*

*Boys Are Marching* II; Kern, *Down River* II; Santa Bonita, *Deep River Reverie* II; Barnes, *March of the Caliph* II; Risher, *Along the Way* II; *Marching Song* (from "Snow White and the Seven Dwarfs") II; Sullivan, *We're Called Gondolier* II.

### Moderate Difficulty:

Nevin, *Gondoliers*; Wendt, *Boat Song*; Waldteufel, *The Skaters* (Waltz); Ketterer, *On Skates*; Burleigh, *Coasting*; Lehman, *Morning Canter*; Delune, *On Donkey Back*; Schubert-Godowsky, *By the Sea*; Offenbach, *Barcarolle* (from "Tales of Hoffmann"); MacDowell, Selections from the "Sea Pieces."

### More Advanced:

Ibert, *The Little White Donkey*; Handel, "Water" Music; Mendelssohn-Liszt, *On Wings of Song*; Schubert-Liszt, *Auf dem Wasser zu Singen*; Liszt, *On Lake Wallenstedt*; Tansman, Selections from "Tour du Monde"; Chasins, *Rush Hour in Hong Kong*; Glinka, *Over the Steppes*; Rubinstein, "Barcarolles" (G Major, G Minor, or A Minor); Bach, *Arrival of the Stage Coach*; Fugue, and the Post Horn Call from *Capriccio on the Departure of a Beloved Brother*.

It goes without saying, of course, that I have omitted dozens of perfectly obvious compositions. This list is just a teaser.

As for titles, how about "Loafing Around the World", "Around the World in a Thousand and One Days", or better still, why not make your program a search for "Where the Blue Begins"?

## Special Exercises

After having been without a piano for a period of nearly twenty years, I now find myself the fortunate possessor of a very lovely instrument, and I want to take up my music again. When I was twelve years old I started studying music and took lessons for about seven years. At the end of that time I was able to play such things as *The Spinning Wheel*, by Mendelssohn; *The Butterfly*, by Grieg, and other things of the same grade. I now find that I can play some of these things quite well, but my fingers do not work the way I want them to. I have used a typewriter all these years, but I need special exercises for the piano. I am not able to take lessons until I have my piano paid for; and, in the meantime, I should greatly appreciate a few suggestions from you as to how to proceed so that I may really make some definite improvement.

As I said above, I have little time to practice, say an hour or an hour and a half each day, and that at night after a hard day in the office. But I love music, and it is a great recreation for me. I shall be very grateful to you for any suggestions as to both exercises and some not too difficult, but good music I might take up myself.—Mrs. L. A. L., Georgia.

By all means get a good teacher. If this is impossible, just remember that you will have to be extremely modest in your pianistic ambitions. Typewriting is of little or no help in piano playing, since its technical approach is quite different. Also, having been so long without an instrument, you cannot expect to develop much digital dexterity. If you want to get pleasure from your music, I advise you to stick to compositions which are built up of chord clusters or of lovely, simple melodies with easy accompaniment. Here are a few suggestions, some easy, others moderately difficult: *Moon Mist*, by James Francis Cooke; *Portrait*, by Walter Spry; *A Garden at Evening*, by Eckstein; *Prelude in E minor*, by Bach-Beard; *Marche Triomphale*, by Ketterer; *Calm as the Night*, by Bohm-Thompson; *Largo*, by Dvořák-King; *In a Starlit Garden*, by Federer; *Moonlight Scene* from "A

Kiss in Xanadu," by Taylor-Maier; *Shadows on Grand Lake*, by Thompson; *Reverie*, by Debussy-Wallis; *Liebestraum*, by Liszt-Rolfe; *Reverie*, and *In Heroic Style*, by Adams; *Autumn Colors*, by Clarence Jones.

For chord study you might delve into "The Eight Chordal Attacks," by Bernard Wagness. Although I am opposed to the word "attack" in piano teaching usage, I highly recommend the pieces in this book, for they are among the most delightful chord compositions I know.

For technic, try Florence Goodrich's "Preludes." Even if many of these are too easy for you, they are ideal as self-helpers. You can hardly go wrong with them, for each study is short, pointed, and musical, with all harmonic and technical details clearly indicated. But here again, beware that violent word "attack." It is, alas, often used.

## Encouragement

I am badly in need of some good advice and a little encouragement; and I have nowhere to turn but to THE ETUDE, which I subscribe to and read continually. I do not know if your advice extends beyond the United States; but, in case it does not, I beg you to make an exception in my case and help me. You cannot know what it means to go on from day to day, all alone, with no qualified opinion to guide me, just hoping I am not wasting my time. Do help me, Mr. Maier!

I want to play music as it should be played—with all the soul I can put into it. I want to do my very best; and, although I must humbly admit that I have helped myself a lot, I am not a bit satisfied. I will tell you a secret—I have even stuffed my ears with cotton wool so that I might judge what my playing sounds like at a little distance from the piano. And occasionally I would hear an effect that sounded better than usual; but, as I managed this particular effect only haphazardly, I realized that it was more chance than knowledge—so I want to know.

I have among my music the following: Czerny, "School of Velocity" and "Opus 740"; "52 Selected Studies from Heller"; other books such as a small "Grieg Album"; some well known pieces by Chopin, Liszt, Beethoven, and so on. I have lately decided to enter for certain certificates from examinations given by The London College of Music. These examinations are conducted in a nearby island, and it might be to my advantage to go in for what I can.

What I want to know is: Have I got enough material and is it the right sort? Are there any studies not mentioned above which I absolutely need? I want to make up for the years I have wasted, but am wondering if I am too old to accomplish anything? I am just thirty.—G. N., Dutch West Indies.

It was a delightful surprise to get such an interesting letter from the vicinity of Curacao in the Dutch West Indies. Up until now my only acquaintance with Curacao has been the familiar "beverage" named after it, and the fact that old Governor Peter Stuyvesant's leg is buried there (not the wooden one of course, but his good one, which the famous wooden one replaced). Peter Stuyvesant, as you know, was the energetic governor of Dutch Colonial New Amsterdam—better known as New York.

There are hundreds of aspiring pianists and teachers in remote corners of the world, far removed from music centers and good teachers. Armed with recent volumes on technic, latest editions of classics, newest Presser and other publications, musical life and progress should be far from despairing for you and others like yourself. Judging from your letter, you possess that most precious of all qualities, a true musical imagination, which ought to help you over many rough spots. Never before in my long

life have I heard of anyone trying to get perspective on his playing by such a unique method as yours—"stopping the ears." If all pianists would listen intently to their playing, striving every instant to project beautiful, colorful, vital sounds, what glorious pianistic results we would enjoy! And what a joy it is to produce that glowing, richly hued texture! I know how hard it is to achieve this without a teacher; but, with intelligence and concentration, it can be done.

The music studies and books on which you are now working, are good. Do not practice too many of the Czerny studies, "Op. 740," but choose a half dozen which take up the various technical points; memorize them, and stick to them for the rest of your life.

If you get Volume III of the Czerny-Liebling "Selected Studies" you will be relieved of the responsibility of choosing the most practical studies from this extensive opus. I recommend these Liebling selections without qualifications.

At your age you are by no means too old to accomplish a significant amount, especially if your hands are flexible. You should work regularly, in small doses, on octave technic. I do not recommend Kullak, but rather Doering ("Op. 24"). But you must be careful not to follow the old fashioned directions given on the first pages of the book. Use common sense in applying your own octave principles. Remember that octaves are scarcely ever "pure"; a pianist usually plays them with a combination of full arm, forearm, and wrist.

Your decision to take the London College of Music examinations is a good one. These tests have done much to raise musical standards throughout the world.

To you, and to the many others in far off lands who read THE ETUDE, my fervent good wishes for constant improvement and greater all 'round satisfaction in your playing. Remember that this can be achieved only through intense, concentrated listening.

## Religious Pupil

I have a new pupil, an adult, who has never had many lessons but who has quite a bit of talent and plays regularly for her church, which is a small, old fashioned one. Being a minister's wife, she desires to take only that which will improve her religious playing, as this is practically the only type of music she ever plays. For her first four lessons I have given her scales, arpeggios, some harmony and some Czerny. I have also included one number, *The Chapel in the Mountains*, which she enjoys very much. Am I giving her the proper type of material? What would you suggest. She is entirely capable of playing third grade music, in spite of scarcely any training. She practices very conscientiously. Your advice will surely be appreciated.—K. B., Indiana.

Yes, you are on the right track; but, for such a serious and conscientious student, I would recommend better music than the "Chapel" piece. How about some easy MacDowell, some Bach-Carrol or Bach-Thompson, some of the pieces in the Presser album, "Favorite Compositions of Mozart," or the delightful "Musical Visits with the Masters."

Try not to be too academic in her technical work. Give her plenty of rich, luscious chord exercises, with chord pieces to match. Have you thought of using the Heller-Philipp "Studies in Musicianship," Volume I? Such a book is better for her, I'm sure, than Czerny. It would help, too, to create a better musical taste—which she evidently needs very much.

WE MAY GATHER from these letters how averse Verdi was to every kind of advertising, how loath he was to accept honors, how fully exempt of any jealousy toward his fellow artists. We discern in these letters a man of unshakable probity, a kind heart, far from fraud and pretense as heaven from earth.

Verdi lived a great part of the year in Paris. He made his abode in the suburbs, far from the noisy city. He worked incessantly and did not seek the acquaintance of his famous contemporaries, such as Meyerbeer and Gounod. Apparently he never met his illustrious compatriot Rossini, whom he warmly admired. Rossini could hardly explain the reason why Verdi, who evidently strived to make a career, did not pay him a visit.

With the years, Verdi's aversion to trumpet-tongued publicity became almost a phobia. Of course he did not need to fight for recognition. It came freely and spontaneously to him. The public adored his melodies: there was never need to coax its affection. With many other composers, the case was quite different. Lacking true genius, they exerted themselves through an army of press agents and propagandists to influence public opinion. Like a fascinating woman, Verdi's melodies needed no advocates to prove their loveliness.

It is surely one of the most rare phenomena in the history of music that an eighty-five year old master was still possessed with vitality to be able to create works of such great import as those of Verdi. The Nestor of Italian composers did not share the fate of many aging artists, that of being forgotten before their death. Until his last years, in the plenitude of his creative power, he was always at the front; and, if a few younger musicians, through loud drum beating, could obtain ephemeral triumphs, they were soon obliged to relinquish the first place to the imperishable creations of Verdi.

His productivity, instead of weakening, increased with the years; and he produced works like "Otello", "Falstaff" and "Quattro Pezzi Sacri." The third movement of the latter, *Laudi alla Vergine Maria*, is perhaps the most genial. It is a tonal setting of the last canto of Dante's "Paradiso": "Vergine madre, figlia del tuo figlio" ("Virgin Mother, daughter of Thy Son"), for four women's voices, that faithfully mirrors the mysticism of Dante's poetry. I am sure the readers of THE ETUDE will be deeply interested to see the facsimile of a precious autograph with which Verdi honored me. It is the beginning of the *Laudi alla Vergine*. Also the picture of Verdi is a most cherished present of the immortal maestro.

#### Verdi's Letters

TO HANS VON BUELOW (who had previously written a disparaging letter about Verdi—E. d. P.),  
Genoa, April 14, 1892.

You have not even sinned in thought, and there is no need to speak about penitence and absolution! If your former views were different from the present ones, you have done quite right to admit it. I would never have dared to complain about them.

Who knows . . . perhaps you were right then. Be that as it may, your unexpected letter, the letter of a musician of your importance, has afforded me great pleasure. And that not because of vanity, but because I see that a true artist does not judge by superficial views of schools, nations or time. If Northern or Southern artists strive after different objectives, they may even be different! They must cling to the characteristics of their people, as Wagner so properly said. You are happy to be the artistic son of Bach. And we are the descendants of Palestrina. We were once possessed of a great art. Now this art has been adulterated and it is confronted with downfall.

I am sorry not to be able to come to Vienna for the Music Exhibition, where I might not only have had the good fortune to meet so many prominent musicians, but also to shake hands with yourself. I trust the gentlemen who were so kind as to invite me will take into consideration my advanced age. (Verdi was, at that time, 79 years old.)

To Gaetano Donizetti (the composer of "Lucia di Lammermoor," "Don Pasquale," and others),  
May 18, 1844.

It was a welcome surprise as I read your letter to Pedroni, where you made a friendly offer to lead the rehearsals of my "Ernani." I do not hesi-

# New Lights On Giuseppe Verdi As Seen In His Letters

An Insight to the Most  
Modest of the Masters  
By His Friend

EUGENIO DI PIRANI

GIUSEPPE VERDI

#### Editor's Note

These significant letters have been gathered from various sources and especially translated from Italian and French texts. They indicate the great simplicity and sincerity of this, the greatest of Italian composers, and his almost painful shyness and modesty. The compiler and translator, the late Commendatore Eugenio di Pirani, was known for years as an able contributor to THE ETUDE. Born at Bologna, September 8, 1852, he first studied at the Liceo Musicale. Later he studied, in Berlin, with Theodore Kullak and Kiel. He toured for many years, as a pianist, in Italy, England, France and Russia. For a time he lived in Heidelberg and then in Berlin, serving as a correspondent for Italian papers. In 1905 he came to the United States and settled in New York as the head of a music school. He was distinguished as a composer and as a teacher. A few years ago, he returned to Berlin where he died in January, 1939, at the age of eighty-six. He was very proud of his American citizenship. Commendatore Pirani was a fine type of the highly cultured Italian gentleman and will be long remembered by many friends and admirers.

tate a moment to accept, with sincere thanks, your generous offer, which, no doubt, can only be great advantage to my music. I may trust that this way the true spirit of the work will find expression. Will you kindly assume the direction in general, and particularly of the punctuation which may be needed.

To you, cavaliere, I do not need to add any expression of praise. You belong to the small lot those who are in the true meaning of the word genial. The honor you do to me is too great to need the assurance of my gratitude.

In deep admiration, I remain

Faithfully yours,

G. Verdi.

To The Deutsche Verlags Anstalt, Stuttgart

S. Agata, June 21, 1892

Never, never shall I write my memoirs! Enough that the musical world has accepted my notes. I never shall try to impose to it also my prose.

Thanking you for your friendly expressions, remain with deferential greetings, etc.

To Joseph Joachim (the noted violinist), President of the Beethoven House in Bonn,

S. Agata, May 7, 1888

Dear Sir: Although it is against my nature to take part in a celebration that implies so much publicity for my person, I cannot refuse in this special case the honor that is conferred upon me. It is for the sake of BEETHOVEN. Before this name, we all must bow down in reverence! Respectfully, etc.

To Maestro De Biosa, Cairo,

Genoa, Jan. 3, 1872

I received your favor of Dec. 22. Before I answer in detail, I would like to state that there could not be a "misunderstanding" between us. I had never the pleasure of having any connection with you, except two years ago on the occasion of the selection of a normal diapason (pitch) for Naples. I never mix in other people's business, and always speak frankly my opinion just to avoid misunderstandings.

As to the normal pitch, it is quite right that we did not agree, and I see that even now we cannot agree. I wish a normal diapason generally adopted; and you propose an adjustment, a measure which is worse than the evil. I advocate a single diapason for the whole world; and you instead would add to the many existing diapasons another one. It is true that I entrusted Muzio to go to Cairo and to put in scene "Aida," to which proceeding I am entitled by a clause of my contract. I do not see why his presence would be prejudicial to you. Allow me, maestro, to say right out. You see here something personal, while I see a purely artistic question. Let me explain. You know better than I do how many scenic and musical problems are involved in the composition of a new opera, which all must be considered in the performance, and I maintain that nobody should be offended if the composer, as soon as the first presentation of his opera is prepared, sends a man who has carefully studied his work under his guidance. I confess, had I the task to perform for the first time a work of a fellow artist, I would not consider myself humiliated in a similar case, but on the contrary, I would ask to be informed from him or others about his intentions.

It may be that this time, too, you do not share my opinion, but, with me, this is not only a question of opinion, but a deep conviction which I have won after twenty-eight years of experience.

Be assured, dear maestro, of my regards and devotion.

To Filippo Filippi (musical critic of the "Pensiero severanza").

S. Agata, Sept. 26, 1860

My dear Mr. Filippi: Should you gratify me with your visit, you would, in your character as a biographer, find very little to report about the wonders of S. Agata. Four walls in order to protect from the sun and the inconspicuousness of weather some dozen of trees mostly planted with my own hands, a pool that I would honor with the title of lake if I could fill it with water. All that without architecture, without order, not because I am not a friend of architecture, but because it would have been foolish to erect an artistic building in such a homely place. Do believe me and forgive for a moment that you are a biographer.

(Continued on Page 424)

## WALTZ THEMES

by Preston Ware Orem

FROM OPUS 88

MAURICE MOSZKOWSKI

1912 Moszkowski was persuaded by the Theodore Presser Co. to write a *Grand Valse de Concert*, with the hope that it would be as successful as his *Grand Valse de Concert* in E, Opus 34, No. 1. Many have felt that the *Grand Valse de Concert* which is in Grade 8 is one of the finest works from the pen of this delightful composer. However, its difficulty is such that the charming melodies contained were available only to the advanced pianist. This arrangement by Dr. Preston Ware Orem puts these entrancing themes within the reach of all. The first theme is as popular as though it had just been written by Rudolf Friml, Grade 4.

## PRELUDE, IN E MINOR

This piece, selected from a set of twenty-four preludes, published in four books, is a typical example of the style and musical idiom employed by this gift composer. The accents, as marked for the first four measures, are to be continued throughout the piece and special attention should be given to the crescendo markings and also to the sudden change from *forte* to *piano*. Grade 7.

# SUMMER SKIES

Every student needs staccato as well as legato study. Somehow, staccato thirds and chords are much more readily played than single notes. The main thing is to preserve uniformity of length as well as a uniformity of pressure. In this highly attractive piece by one of our newer composers, remember that uneven staccato notes give the impression of "stuttering" while clean, even staccato notes played without jerkiness are always most effective. Grade 3½.

Allegretto moderato M.M. ♩ = 126

STANFORD KING

The main body of the musical score consists of six systems of piano accompaniment. Each system has a treble and bass staff. The music is in 2/4 time with a key signature of one sharp (F#). The first system begins with a mezzo-piano (mp) dynamic. The second system includes a mezzo-forte (mf) dynamic. The third system features a crescendo (cresc.) marking. The fourth system includes a forte (f) dynamic. The fifth system ends with a mezzo-piano (mp) dynamic. The sixth system concludes with a mezzo-forte (mf) dynamic and a 'Fine' marking.

TRIO

semplice

The Trio section, marked 'semplice', begins with a piano (p) dynamic. It consists of two systems of piano accompaniment. The first system of the Trio section includes a mezzo-forte (mf) dynamic. The second system concludes with a mezzo-piano (mp) dynamic and a 'D.S.' (Da Segno) marking.

# SIR GALAHAD MARCH

Sir Galahad is one of the outstanding characters in the most impressive romance Europe produced in the Fourteenth Century. It is best known to English speaking people through the contemporary translation by Malory and through Tennyson's "Idylls of the King," published in the late eighteenth fifties. Sir Galahad was the enchanted son of Lancelot and Elaine. Through his immaculate purity he was destined to possess the Holy Grail, the vessel used by the Saviour at the Last Supper. This fine, dignified march with its interesting chromatic changes should be played in the spirit of Grail Knights entering a Fourteenth Century cathedral. Grade 3.

G. A. GRANT-SCHAEFER

Tempo di Marcia M.M.  $\text{♩} = 100$

The musical score for "Sir Galahad March" is presented in a standard piano format. It begins with a treble and bass staff. The key signature is one sharp (F#), and the time signature is common time (C). The tempo is marked "Tempo di Marcia M.M. ♩ = 100". The score is written for piano (p) and includes dynamic markings such as *f*, *mf*, and *mp*. The music is a march, characterized by its rhythmic patterns and chromatic changes. The score is divided into systems, each with a treble and bass staff. Fingerings and articulations are indicated throughout the piece.

Two systems of piano introduction. The first system consists of 12 measures, and the second system consists of 12 measures. Fingerings are indicated by numbers 1-5 above or below notes. Dynamics include *mf* and *f*. The key signature has two sharps (F# and C#).

## IN A STARLIT GARDEN

Here is a distinctive and mellifluous piano piece that many will take delight in playing over and over. Recite the melody with your fingers as u would a lovely elegy. The climax in measures 25 to 28 is an excellent one and gives a fine character to the piece. Watch the accents in the left nd and bring them out effectively. Ralph Federer is a new composer with unusual melodic gifts. Grade 4,

**Andante moderato e molto espressivo** M. M.  $\text{♩} = 126$

**RALPH FEDERER**

The main body of the piece consists of 28 measures, divided into four systems of seven measures each. The tempo is *Andante moderato e molto espressivo*. The key signature has two sharps. Dynamics include *p*, *mp*, *f*, *sf*, *cresc.*, *dim.*, *molto rit.*, *a tempo*, and *morendo*. The piece features a variety of musical textures, including arpeggiated chords, flowing sixteenth-note passages, and a climactic section of sustained chords. Fingerings are indicated throughout. The piece concludes with a final chord in measure 28.

# SWALLOWS

Allegretto M.M.  $\text{♩} = 96$

MATHILDE BILBR

Grade 3.

The musical score for "SWALLOWS" is written for piano in 6/8 time. It begins with a treble and bass staff. The first system contains measures 1-4, marked *mp*. The second system contains measures 5-8, marked *p legato*. The third system contains measures 9-12, marked *mf*. The fourth system contains measures 13-16, marked *mf* and *poco cresc.*. The fifth system contains measures 17-18, marked *mf* and *f*. The score is divided into a main section and a CODA section. The CODA section begins with measure 19, marked *mf*, and ends with measure 24, marked *f*. The score includes various fingerings and articulations throughout.

# MASTER WORKS

## \* VALSE BRILLANTE

This waltz has a wide appeal to students because of the lure and song-like character of the A-minor melody as it first appears in the tenor voice. The tempo is gradually quickened at the twenty-ninth measure and continued until measure thirty-three, where there is a return to tempo. The tempo is increased to measure thirty-seven, where the key tonality varies back and forth from C-major to A-minor. The A-major section should be played somewhat in the style of a nocturne and the bass notes should be well sustained.

FR. CHOPIN, Op. 34, No. 2

Grade 4. Lento M.M.  $\text{♩} = 50$

First system of musical notation, measures 1-8. The treble clef contains a melodic line with various ornaments and fingerings (e.g., 2 3 2, 4, 4, 2 3 2, 4, 1 2). The bass clef contains a harmonic accompaniment. A *dim.* (diminuendo) marking is present at the end of the system.

Second system of musical notation, measures 9-16. The treble clef features a melodic line with fingerings (e.g., 1 2 1, 5 4, 4 1 2 5 4 1, 5). The bass clef has a steady accompaniment. Dynamics include *pp* (pianissimo) at the start and *espressivo* (expressive) in the middle.

Third system of musical notation, measures 17-24. The treble clef has a melodic line with fingerings (e.g., 3 2 1, 1 5, 2 5, 1 4, 4, 2, 3, 3). The bass clef has a harmonic accompaniment. The system concludes with the instruction *poco a poco string.*

Fourth system of musical notation, measures 25-32. The treble clef contains a melodic line with fingerings (e.g., 3 1 3 1, 2 1 3 4, 13 1, 2 1, 3, 5, 2 1 4 5, 1 2 1). The bass clef has a harmonic accompaniment. The tempo marking *a tempo* is present. The metronome marking *M. M.  $\text{♩} = 66$*  is indicated.

Fifth system of musical notation, measures 33-40. The treble clef has a melodic line with fingerings (e.g., 5, 13 1, 2 1, 2 1, 2 1, 2 1). The bass clef has a harmonic accompaniment. Dynamics include *cresc.* (crescendo) and *poco rit.* (poco ritardando) at the end.

Sixth system of musical notation, measures 41-48. The treble clef contains a melodic line with fingerings (e.g., 3 5, 1, 3, 2, 3 1, 2, 3 1, 2). The bass clef has a harmonic accompaniment. The tempo marking *poco rit.* is present. The metronome marking *M. M.  $\text{♩} = 50$*  is indicated. The dynamic *f sostenuto* (forte sostenuto) is marked.

Seventh system of musical notation, measures 49-56. The treble clef has a melodic line with fingerings (e.g., 1 2 1, 1, 2 5 4, 4 1 2 5, 4 1 5 4 1, 5 2). The bass clef has a harmonic accompaniment. A *dim.* (diminuendo) marking is present.

The first system of musical notation consists of a treble and bass staff. The treble staff begins with a whole note, followed by eighth and sixteenth notes. The bass staff features a piano (*p*) dynamic and contains several chords and moving lines.The second system continues the musical piece. It includes a *dim.* (diminuendo) marking in the bass staff, followed by a *pp* (piano-piano) section, and then returns to a *p* (piano) dynamic.

The third system of musical notation shows further development of the melodic and harmonic themes in both staves.

Più vivo M. M.  $\text{♩} = 66$

The fourth system begins with a *dolce* (dolce) marking. It features more complex rhythmic patterns, including triplets and sixteenth notes, with fingerings indicated by numbers 1 through 5.The fifth system contains a *pp* (piano-piano) section and a *dim.* (diminuendo) marking. The bass staff has a prominent ascending line with many beamed notes.The sixth system includes tempo and performance instructions: *poco rit.* (poco ritardando), *1 h.* (1 half), *a tempo*, and *sotto voce* (sotto voce). The music transitions from a slower, more expressive feel back to a regular tempo.

The seventh system concludes the page with a final melodic flourish in the treble staff and a steady accompaniment in the bass staff.

# THE FORWARD MARCH of MUSIC

## The Etude Music Lover's Bookshelf

(Continued from Page 374)

scholars deciphered these odd scratches baked clay, and opened the pages of it to a rich civilization which has attracted the earnest interest of logists everywhere.

with characteristic British scholarship Francis W. Galpin, Litt. D., F. L. S., Emeritus of Chelmsford Cathedral, n. Freeman of the Worshipful Company of Musicians, has been delving into sources and has produced a most book dealing with what is probably the very earliest record of musical. The first records of the Sumerian age date from over fifty centuries ago. The explorations at Ur and other places have revealed evidence of a civilization which staggers the imagination. At the University, at the University of Pennsylvania, at the Staatliches Museum in Berlin, and at the Louvre in Paris, may be seen the actual relics of early musical instruments that played for ears so long in the past that it is difficult to look upon them without a shock. Dr. Galpin's valuable book concerns itself with Percussion Instruments, Autophones and Monophones, Wind Instruments (Saxophones), Stringed Instruments (Lutes), Scale and Notation, the Evolution of Music, and the Racial Elements in Music. There is also the score of the Sumerian hymn, six pages long, with notes, indicating relatively what this strange race sang two millenniums before Christ.

work is, of course, one that should be every comprehensive library. Incidentally, we advise all visitors to Philadelphia to go to the Museum of the University of Pennsylvania and there see what are probably the oldest musical instruments in the world, which have been secured through excavations made at Ur by the famous university expeditions. There is no finer thing could be more stimulating to the imagination than to look upon a harp

upon which some lover actually played his songs of the heart nearly five thousand years ago.

The Music of the Sumerians, Babylonians and Assyrians

By Francis W. Galpin

Price: \$7.50

Publisher: The University Press (Cambridge); Macmillan and Company, New York

## Drums, Tom-Toms, Rattles

From the large number of drum and fife corps springing up in all parts of America, and from the virtuoso importance given to the drummer, there are thousands in America interested in the drum, in its various manifestations. As the rhythmic backbone in many of the best known compositions, from the symphony hall to the "nite spot," drums have come into a new prominence in recent decades. Therefore it would seem that "Drums, Tom-toms and Rattles," by Bernard S. Mason, should have a large and eager audience. The book, however, is devoted very largely to the evolution of the drum from aboriginal sources and does not concern itself with the technique of playing the drum, in the modern sense. While the author derives most of his drum forms from American Indians, and devotes many pages to the distinctive decorations on drums, he also calls attention to the use of these drums in the picturesque educational work being done in the day schools of this time.

Drums, Tom-Toms, Rattles.

By Bernard S. Mason.

Pages: 206, with numerous excellent illustrations.

Price: \$2.50.

Publisher: A. S. Barnes and Company.

(Issued by a leading firm of educational publishers, its principal practical use will be for recreational and outdoor activities and for dancing teachers.

## Band Instruments for Everybody

SOME YEARS AGO we came upon an old instrument maker in a little shop in Italy. He was working with painful slowness upon what looked something like a French horn but which was an instrument of a different shape and style. He was an apprentice and apparently very young. We heard one of his instruments and thought the tone very poor indeed.

A few years later we visited the works of an American manufacturer of musical instruments. There, through costly experiments and scientific measurements, several workmen were turning out instruments so fine that they have become the pride of the world. With this has come a reduction of cost which puts a master instrument within the reach of a modest income.

More than this, science has brought unity; and whereas, in bands of other times, there might have been one group of instruments, there might have been also another group of indifferent ones. The average college band to-day has a finer, much more uniform equipment than many professional bands of just a few years ago.

The investment in an instrument should be a lifetime investment. Badly made instruments are always an annoyance. If the player has any ambition he will buy an instrument of superior quality; and it is

far better to secure this at the outset than to waste time and money with a cheap makeshift.

In school work it is very important for the student to own his own instrument. Entirely apart from the pride of possession he is at once given the impression that he is learning something for a lifetime, not for a few months or years.

A short time ago the writer attended a concert at a western university. The band was composed entirely of students. If P. S. Gilmore could have come back to earth and heard that band he would have been more amazed than he ever was with his chorus of 20,000 singers. The efficiency of the players, of course, contributed to this, but the vast superiority of the instruments, compared with those in Gilmore's day, was to say the least, amazing. All this has given the American public a new and higher interest in the possibilities of the modern band in the New World. The band in other days unquestionably suffered vicariously from inferior instruments.

The writer used to know a man who seemed to enjoy almost every kind of music but that of the band. He was questioned closely as to why he did not like the band. Finally it was discovered that the reason was that when he was a boy he had formed a great aversion to the little German bands

## WEDDING BREAKFAST

**Y**ESTERDAY, while walking in my old Connecticut garden, the budding leaves of my rose bushes brought to mind June and its lovely brides, garden weddings, and the sweet intimacy of the Wedding Breakfast, or Supper, where the newly created Mr. and Mrs. Benedict preside over their own table for the first time.

One of the loveliest Bride's tables that I have seen is from Elizabeth Lounsbury's book "Let's Set the Table", of which I spoke last month. Mrs. Lounsbury also discusses several other interesting tables in a short section devoted entirely to this most important entertainment event in a woman's history.

The table in question is covered with a lustrous white silk damask cloth, which glows pleasantly in the candlelight. Only white is used in china and glassware, which serves to accentuate the purity of decoration in the centerpiece; four crystal horns of plenty filled with Lily of the Valley, alternated with five tall white candles in their shining silver holders. This simple setting will be an enchanting foreground for the bride and her wedding party, and is possible with slight variations in practically any home. Perhaps you would substitute white lace for the cloth, glass bowls of white ramblér roses, crystal vases of freesias, and that brand new set of dishes that every bride receives (as long as there is a white background and the decoration is simple). Or you might even change the concept and serve your guests from a buffet table, using the centerpiece as a background for the lovely bride's cake and the tempting array of dainty sandwiches and cakes. In any event choose an all white table cover of Spartan simplicity to form the background for the loveliness of the new bride.

Now that we have set the table, let us consider what we could serve as a Wedding Breakfast or Supper, that could be easily prepared in our own kitchens, yet would have the air of being catered. If you plan a "sit-down" repast:

### MENU

|   |                    |
|---|--------------------|
| Grape and Melon Cup                     |                    |
| Chicken-Oyster Shortcake                | Green Pea Timbales |
| Mixed Salad Greens with French Dressing |                    |
| French Vanilla Ice Cream                | Little Cakes       |
| Wedding Cake                            |                    |
| Coffee                                  |                    |

Recipes: *Grape and Melon Cup*: Mix together white seedless grapes, diced honeydew melon, and broken white after-dinner mints, sugar and lemon juice to taste. Chill thoroughly.

*Chicken-Oyster Shortcake*: Saute fresh or canned oysters in butter for about three minutes. Add this and diced cooked chicken to a medium white sauce. Salt and pepper to taste. Serve this over and between hot, buttered, unsweetened corn bread.

*Green Pea Timbales*: (To make 6) Mix 1 cup green pea pulp, one teaspoonful of minced onion, 2 well beaten eggs, 1 tablespoonful of melted butter or bacon grease, ½ cup milk. Turn into small greased molds and bake as you would custard in a shallow pan of water. Turn out of molds when firm.

For a buffet table, you could have

|                                  |
|----------------------------------|
| Clam Bouillon with Whipped Cream |
| Assorted Tea Sandwiches          |
| Mixed Vegetable Salad            |
| French Vanilla Ice Cream         |
| Little Cakes                     |
| Wedding Cake                     |
| Coffee                           |

Some of your little sandwiches might be cream cheese combinations, minced egg mixtures, sandwich spreads, parsley-butter, watercress-butter, chicken, ham, tongue and so on. These could all be made early in the day or even the day before and kept in a damp cloth in the refrigerator. Be sure however to test and see how well sandwiches keep in your particular refrigerator before you attempt making them the day before.

If you have any other party problems, I will gladly help you solve them. Address Elizabeth Fairchild, Room 610, 350 Madison Avenue, New York, enclosing a 3¢ stamp. (No Canadian stamps.)

## FOR WOMEN WORLD'S FAIR VISITORS ONLY

### A Dormitory Service at the American Woman's Club

Just as the June issue goes to press, the Travel Department has discovered a won- bit of news for those of ETUDE's female readership who would like to stay in New York during their World's Fair visits, with a maximum of feminine protection at a minimum of housing cost.

Starting June 1, the American Woman's Club, whose regular rooms at \$3.00 to per day (single) and \$4.00 to \$6.00 (double) have been filling up so rapidly that had to do something to care for a still greater World's Fair rush, have decided to their huge gymnasium into dormitories, equipping this gymnasium with brand new Simmons beds and Beauty-rest mattresses, at \$1.50 per night! Women, young and old, who can enjoy a touch of the good old school dormitory days and nights in return a marked saving in hotel room rent, may now plan their trips to the New York World's Fair just that much more reasonably.

Think of it! For \$10.50 a week in a city where rooms have jumped to as high as \$10.00 a day (Fair-time rates), you can have housing in one of New York's finest, modern women's clubhouses, with its luxurious lounges, its three restaurants, a cafeteria, its lectures, its theatricals, its musical events, and its parties—all at your fingertips for every waking moment you don't want to spend at the Fair itself! And the location is superbly accessible to the musical center of things.

In size The American Woman's Club (which will be described in more detail in the July issue) is actually a big hotel. It is only one block from the Broadway Eighth Avenue Subways and the Fifth Avenue Bus, each of which provides transportation to the Fair. A transfer bus passes the door. The club is within a ten minute walk of the Penna. Station where you are whisked to the Fair in ten minutes for ten cents.

The exceptional protection that is available for women and young girls in the atmosphere of this highly-reputed New York women's club is of itself an asset which should convince many parents who wonder whether New York is safe for girls traveling alone, that they can safely allow young people to come, with full assurance of housing, in luxurious dependable surroundings. Write to the ETUDE Travel Department, 350 Madison Ave., for folders describing this famous club or for reservations.

### Musical World of Tomorrow

PROMINENT among the opening events of the New York World's Fair on April 30 was the New York Philharmonic Symphony Orchestra's first Fair concert, dedicated to the \$350,000 Hall of Music in the Fair amusement area.

Conducted by John Barbirolli, the program significantly featured an American composition, Charles Tomlinson Griffes' "The Pleasure Dome of Kubla Kahn." So, to see, for all its international emphasis, the gigantic six-month music festival of the Fair will not neglect American achievements, and their promise for the musical world of the future. As Olin Downes pointed out in last month's ETUDE, "American representation in this Fair is the most important part."

Soloist of the premier concert was the pianist, Josef Hofmann, who played Chopin's E Minor Concerto with the orchestra. The program concluded with Beethoven's Ninth Symphony, a fitting overture to this mighty exposition of man's potentialities as a musical, as well as world, progress.

During the rest of the first week, the New York Philharmonic began a parade of concerts devoted to the music of foreign lands. On May 1 a Norwegian program was heard, on May 4 a Brazilian concert, and on May 5 a selection of Rumanian works each under outstanding conductors of the respective nations.

### Tomorrow's Music Hall

THE OPENING CONCERT on April 30 revealed the excellent acoustics of the Fair's Hall of Music, already acclaimed for its striking and beautiful modern design, elaborate stage equipment and ingenious arrangements for audience comfort.

The interior of the Hall, whose outward appearance is shown in the accompanying illustration, is egg-shaped. Ceiling and walls are joined in an unbroken, sweeping curve. Seating arrangements are like those of an outdoor stadium. There is no balcony; tiers of seats rise behind the entrances. The entire design gives the effect of a vast, intimate theater, although the auditorium actually measures 171 feet by 116 feet and seats 2,500 listeners.

### New Romantic Opera

AN EARLY TEST of the up-to-date stage mechanisms of the new Music Hall will be the first operatic production, July 3 to 13. Between these dates are scheduled ten other productions. (Continued on Page 396)

# The Importance of a Fine Music Room

By  
RALPH BENHAM  
BAKER

LAST WEEK THE WRITER

talked with a man who was contemplating the erection of a new house. He was a man of both ideals and experience. The home was to be a two-story, the walls stone, the cellar concrete, the beams steel (like an office building). There was to be a health room (a kind of a small gymnasium), a "rumpus" room with an electric roaster for frankfurters, an office for "the boss," a library, a game room, and a music room. The house was to cost \$10,000, unfurnished. It was to contain all that is new and fine and practical in modern house construction. Now, the remarkable thing about this was that "the boss" went out of his way to say that he considered the music room one of the most important in the house, "not for my own pleasure alone, mind you, but I am sure that it will have an enormous bearing upon the social, spiritual and educational future of my children."

"Therefore," he said, "I don't propose to put in the house the best plumb-line; I can possibly find and then look around for the cheapest piano, radio, phonograph or television machine for my music room. The spiritual and mental health of my children means just as much to me as their physical well-being."

When asked just what he meant by that, he said: "Well, I have been making some pretty close observations. Last week I went down into the poorest section of the city and visited a music settlement school that has been running for forty-four years.

Thousands of students graduated from that school. I heard their programs and was very much impressed; but there was one thing that 'stuck in my crop' and I shall never be able to get it out. There in this district, where the children come from very poor families and are supposed to be underprivileged; in a district which has, as a matter of course, produced many criminals, it was astounding beyond all words to learn that in the four decades of its existence not one single pupil of this school had ever been hailed into juvenile court. This was something to think about. Then I learned from an expert in music and penology in the West that in the largest prison in the country (San Quentin, California), and probably the largest in the world, there were only two inmates in a vast number who had had any well ordered musical training in their youth. Surely, entirely apart from all of the delights of music and all of its obvious intellectual advantages, there is something very mysterious about the personal influence and training that it affords. Therefore, I decided that the music room was an imperative room and that it is necessary for me to invest as much as I could possibly afford in instruments and decorations and charm, so that it will be irresistible to my children and a joy to myself."

The writer has a very strong feeling that, if the sound, sane, practical business man's opinions were to be read in Rotary, Kiwanis and in church club meetings,

parents would come to a new realization of the value of musical investment. A \$1400 piano, lasting twenty years, figures only seventy dollars a year and that is very cheap social insurance for any man's family.

## How to Judge a Music Room

IN MAKING THE MUSIC room attractive, it might be well to summarize the problem in the form of a questionnaire:

Are the walls of your music room bright, cheery, and covered with fresh clean paint in an attractive shade, or a simple yet interesting wall paper?

What about the electrical fixtures? Do they date the room and its occupant by their elaborateness or their age? Handsome, simple fixtures can be bought for as little as \$2.00 each. The cost of attaching them is surprisingly reasonable.

Are the lighting fixture outlets strategically located? Would you be better off with indirect light? Is the ceiling immaculately done in a light color to reflect a maximum of light with a minimum expenditure for electric current?

Are the window shades fresh and clean? A room with dirty window shades is like a man with dirty collar

and cuffs, or a woman wearing down-at-heel shoes.

How about the drapes? Are they sleazy, faded or bedraggled looking? New cretonnes or rayon fabrics are extremely attractive and cost next to nothing as compared with their decorative value.

Is the floor covered with a good linoleum? If not, is it properly waxed or painted at least around the edges and covered by a comfortable rug or rugs in a pleasing and harmonious pattern?

Are there adequate cabinets so that all music, pictures, magazines, and so forth can be stored away comfortably, and yet be easily accessible and locatable as needed?

Are the walls sparsely covered with gayly colored prints with simple, framed, interesting photographs, or with modern pictures of old masters or present-day composers or artists? Or are the pictures faded and sloppy looking—with broken or dusty glasses? There is nothing more depressing than badly done, out-of-date pictures, carelessly strewn around smudgy walls.

Is the piano properly located to effect a minimum of interruption? To attain this the performer should be with his back to the entrance, where only his ears can detect the interruption.

Is the piano a good piano with a good finish?

Is the top of the piano free from all attempts at decoration? There is nothing that dates the decoration of the room more completely than the draping of a "throw," a shawl, or some other fabric over the piano, or covering it with ornaments, scattered music, and so forth. The modern line is clean, almost stark, with a minimum of festoon-like decorations.

Most of all, is the room free from clutter that may muffle the best playing?

**Remember,** you're not the only woman who is coming to New York for the World's Fair. And you're not the only woman counting on the comfort and convenience of this famous club to make her trip a success.

Already smart women from every State are writing in to reserve their rooms. We have 1,250 of them and each one is somebody's favorite. The facilities we offer under one roof cannot be found elsewhere in New York—they include a grand swimming pool, completely equipped gym, well-stocked library, sun-roof, delightful Garden Patio, beautiful lounges for entertaining. The club's central location puts you within a few minutes of everything—including the Fair. Three smart restaurants will suit your mood as well as your purse. And our regular program of social events will be augmented during the Fair period. Write NOW for attractive booklet ET—and if you're wise, you'll make a reservation at the same time.

#### RATES DURING THE WORLD'S FAIR

Single room with private bath: \$3.00, \$3.50, \$4.00, and \$5.00.  
Double room with double bed and private bath: \$4.00  
Double room with twin beds and private bath: \$5.00 and \$6.00.  
Double room with three beds and two baths: \$8.00  
Dormitory Accommodations \$1.50 Per Person

#### "EN PENSION" IN NEW YORK!

New York World's Fair "En Pension" tours of 5 to 8 days for \$18.50 to \$28.35, including all costs except meals and transportation—in cooperation with Registered Rooms, Inc. Also thousands of clean, comfortable rooms in New York hotels, apartments, residence clubs, woman's clubs, and private houses, available at reasonable rates. References.

You can obtain rooms at any Postal Telegraph office in your home town. Or, if you prefer, send immediately for descriptive folders on rooms and tours.

REGISTERED ROOMS, INC.  
351 Fifth Ave., New York City

#### Have You Met the "Yap"

An ill-bred fellow was attending a concert and jabbering away to his girl, to the great discomfort of his neighbors. At length he said to her:

"Did you ever try listening to music with your eyes shut?" and was proceeding to tell how charming it was, when a gentleman sitting nearby inquired:

"Did you ever try listening to music with your mouth shut?"

A dumbness suddenly fell upon the talker and the question was never answered.

## World's Fair Visitors

(Continued from Page 394)

formances of "Hary Janos," the famous Hungarian folk opera, never before heard in America, despite its immense popularity in Europe.

"Hary Janos" is a romantic comic opera of Napoleonic days. It is the story of a non-commissioned officer of the Hungarian Hussars who embarks on a remarkable series of adventures, mingles with royalty, but finally returns to his village sweetheart. The opera's noted composer, Zoltan Kodaly, who will come to the Fair for the production, incorporated many delightful Hungarian folk tunes in the score.

Some of the foremost Hungarian artists from this country and abroad will join to make the production authentic, representative, and impressive. A ballet of Hungarian folk dances, whose origins range from the Middle Ages to the Napoleonic era of the opera, will be included on the program. The opera itself will be especially presented for the enjoyment of American audiences, with dialogue in English.

#### At Your Service

IN RESPONSE to the exciting musical plans for the 1939 Fair season, well over 600 ETUDE readers have written to the Travel Department for the free literature on New York and the Fair offered in these columns.

Because of the great interest you have indicated in such material, we have arranged to make available to you literature on the cruises and transatlantic trips which so many vacationers are taking in combination with trips to the Fair. Moreover, the leaflets on the Fair, already forwarded to over 600 readers, may still be obtained.

Write for free copies of any or all of the leaflets listed below to THE ETUDE Travel Department, Room 610, 350 Madison Avenue, New York City.

1. "Vacation Tour and Cruise Guide," listing sea and land trips to the countries and islands of the Americas.
2. "Roads of Romance in France," a booklet which tells you how you may see France and the rest of Europe in your own car.
3. "France, the Rendezvous of the World," the many travel attractions of France.
4. "Facts About the Normandie," the story of a super-liner.
5. "Musical Map of Manhattan and the Fair," to aid music lovers visiting the New York Fair.
6. A leaflet describing arranged tours to New York.

#### Band Instruments for Everybody

(Continued from Page 393)

that used to play around in gutters in eastern seaport towns. These bands were made up largely of stewards from transatlantic ships. When the ship was in port the stewards would come ashore with their cheap, battered instruments and play, "Ach du Lieber Augustin," from corner to corner, until they were bribed with pennies to move on. This had so influenced this man that he refused to hear a band concert. When he did hear a fine modern band he was astounded and said, "Why, it is an orchestra in wind!"

In the last decade the amount of current music published for the band has increased many fold yearly. This has been due to the rapidly advancing technic of the players and to the fact that the art of arranging for band has taken on an entirely new and much more interesting complexion. The colorless tum-ti-tum of yesterday is a thing of the past and we now have a rich and brilliant introduction of new arranging genius which is accommodating itself to the possibilities of the superb modern instruments now manufactured in America.

# Shopping for Charm

By Theodora Van Doorn

#### LET'S MAKE UP

Many young people write me, bemoaning the fact that their complexions or their hands, or hair do not look just right for a recital that is to be the next week, and asking for some quick miracle that will produce "magazine cover" charm and attractiveness.

"Let's make up" our minds that we are going to start a regular beauty program, so that when the time for our recitals arrive, there will be no last minute scrambles to look well turned out, well made-up, and serene.

The very first step in any beauty program is cleanliness. By this is meant, cleanliness of thinking, person and dress. First clean out of your thoughts any idea that you will not look your best at the recital, or all the time; that you are too busy to clean your face, brush your teeth and hair, and apply a good skin cream each and every night.

As your usual nightly routine, brush your teeth thoroughly, then apply cleansing cream and allow this to stay on your face and neck, while you brush your hair vigorously for at least 100 strokes. Remove the cleansing cream carefully with tissue and skin tonic. Wash your face thoroughly with a bland soap and tepid water. Rinse in at least three different waters. Now apply your favorite night cream, pressing it gently into the corners near the eyes, around the nose, under the chin and other wrinkle centers. Rub a good nail oil into your cuticle, apply hand cream lavishly and slip your hands into a pair of thin, loosely fitting cotton gloves.

When you awaken, remove the last vestiges of your night cream with skin tonic. Your skin should now be thoroughly creamed to remove any dust that might have settled on it during the night. Again pat in skin tonic to exhilarate and tone the skin. You are now ready to apply your street or platform make-up.

When applying your make-up, you must take into account the lighting under which you plan to appear. For example, if your recital is to be in an ordinary living room, find out whether the lighting arrangements are bright, average or dim. Find out also if any colored lights are used, such as orange. If very bright lights, the various platform make-ups I have described in other issues are quite all right when modified in proportion to your distance from your audience. For average lighting, you will have to lighten the color a bit, using a clearer red and a lighter powder. For dim lights, use very light red and still lighter powder. For orange lights, which tend to fade out all features except your eyes, omit your eyeshadow and make your lips and cheeks a lighter and brighter shade, with a light powder that has a yellowish tan cast. This powder will make your skin look very fair under the orange lights. Be sure to remember that the orange light changes the colors of fabrics too. So find out just what your gown turns out to be under these lights. Let your own good taste keep these make-up modifications within reasonable limits. Don't hesitate to ask one or two others how you look and be guided accordingly.

You will undoubtedly say that New Year's the time for new resolutions, but I think that summer with all its demands on our good looks, but with the let down on our real careers, should be the time when beauty programs for the coming year should be inaugurated, and followed until they become as much a part of us as eating,

sleeping or practicing our beloved n. Let's make up our minds to make up leisure months in the interests of great musical platform success.

If you have any specific make-up problems, write Theodora Van Doorn, 350 Madison Avenue, New York, enclosing 3¢ stamp (no Canadian stamps, please).

#### BEAUTY IN THE MAKING

Going to the Fair? East or West? may be the determining factor in clothes you are going to take with you, but it does not change the type of cosmetics you will have to have, for you have your own particular beauty problem wherever you may be. *Helena Rubinstein* has created a small kit called *Beauty in the Making*, which contains five preparations that are basic and essential for beauty care and make-up, and is the compact, easy-to-pack pocketbook, complete with a handle. The kit comes in linen grain fabric in black, red or brown, is individualized for dry, normal or skin, at only \$2.00 for your type. It contains cleansing cream, which doubles as fine night cream, skin tonic, base cream, powder and a lipstick, so creamy that it can be used for the cheeks as well as lips, all keyed to your particular skin needs. If you cannot buy this kit locally, write for shopping information. Beauty will be yours for the making when you start with this stunning kit's contents. Theodora Van Doorn, 350 Madison Avenue, New York City.

#### DOROTHY GRAY HOT WEATHER CLEANSING CREAM

With summer just around the corner the idea of being prepared with all the essentials for keeping cool, should be uppermost when you make your summer preparations shopping list. *Dorothy Gray* has just created a new cleansing cream which liquifies completely and quickly, cleans thoroughly and leaves you with a refreshing feeling for almost an hour after use. The price of four ounces of this cream is only \$1.00. Then to further the cool feeling, *Dorothy Gray* is again offering *Hot Weather Cologne* in three odors, *Rose Geranium Bouquet*, soft *Jasmin* and that perennial favorite *Naiad* at \$1.00 each for twelve ounces of the perfect adjuncts to summer coolness. You cannot purchase these items locally. Address Theodora Van Doorn, 350 Madison Avenue, New York City.

#### ONLY THE FRAGRANCE LINGERS!

Summer begins on June 21st, and it—and even before it—begins the discomfort of every fastidious woman, especially that woman whose career, such as teaching music, brings her into very close physical contact with another. You have undoubtedly been near someone from whom an offensive odor seemed to emanate, only to find as you undressed that you yourself were the offender. All this discomfort and uncertainty can be easily eliminated by use of *Park & Tilford's Perfumed Odorant*, which not only keeps you perfectly safe for twenty-four hours, but leaves behind a most delightful fragrance, their *White Musk*. If you have not already tried this pleasant-to-use preparation, send 10¢ in U. S. stamps to Theodora Van Doorn, 350 Madison Avenue, and I will have the manufacturer send you a bottle promptly.

If you would like a booklet called "Beautiful Hair," published by *Ogilby Sisters* who are hair specialists, send a 3¢ stamp.

# BIRDS

phen McDonald\*

CHARLES HUERTER

Andante (circa  $\text{♩} = 69$ )

*a tempo*  
*pespessivo*

1. I live in hope some day to see  
2. A bird that sings and comes to stay

The musical score is written for piano and voice. It begins with a piano introduction in E-flat major, 4/4 time, marked 'Andante (circa  $\text{♩} = 69$ )'. The piano part features a series of chords and arpeggios, with dynamics ranging from *mp* to *f*. The vocal part enters with the lyrics '1. I live in hope some day to see' and '2. A bird that sings and comes to stay'. The score includes various musical markings such as *cresc.*, *rit.*, *a tempo*, *pespessivo*, *poco accel.*, *colla voce*, *rall.*, *ten.*, *l.h.*, *mp*, *mf*, *f*, *largo*, and *l.h.*. The lyrics are: 'A bird that sings high in a tree; And share with me the dark-est day; A bird to build a shel-tered nest, That comes as eve-ning shad-ows fall, And cra-dle song deep in her breast; greets me with a sun-rise call; A bird that stays all win-ter long To But a bird is just a song on ten. fill the drear-y days with song. wings, A gift from God that sum-mer brings, But a bird is just a song on wings, A gift from God that sum-mer brings.' The score concludes with a final piano section marked *largo* and *l.h.*.

## SECONDO

Tempo di Minuetto con un poco di moto

L. BOCCHER

The musical score is written for piano and bass. It consists of six systems of staves. The key signature is two sharps (F# and C#), and the time signature is 3/4. The score includes various musical notations such as notes, rests, and fingerings. Dynamics include *pp* (pianissimo), *f* (forte), *p* (piano), and *dolce* (sweet). Articulation includes accents and slurs. The score ends with a *Fine* marking and a *D.C. al Fin* instruction.

System 1: *pp* (pianissimo). Bass staff has fingerings 1, 4, 2, 4, 4, 2, 1, 2, 1, 5, 1.

System 2: *f* (forte). Bass staff has fingerings 4, 2, 1, 4, 2, 1, 4, 1, 1, 1, 1.

System 3: *Fine* and *p* (piano). Bass staff has fingerings 2, 3, 1, 3, 1.

System 4: *dolce* (sweet) and *p* (piano). Bass staff has fingerings 4, 4, 2, 5, 4, 3, 1, 4, 4, 1.

System 5: *dolce* (sweet). Bass staff has fingerings 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1.

System 6: *dolce* (sweet). Bass staff has fingerings 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1.

# TWO LITTLE BLACKBIRDS

The game that accompanies the rhyme, "Two Little Blackbirds," is given below for those who may have forgotten how to play it.

Moisten the index finger of each hand and apply two small pieces of paper, one to the back of each finger. While reciting the rhyme, keep time on the edge of a table or desk with these two fingers, alternating them on each word. When "Fly away, Jack" is reached, raise the right hand (which represents Jack) high in the air and turn under the finger with the paper on it and extend the middle finger in its place. If this is done quickly, the observer will not notice that there is now a different finger resting on the table. To all appearances, Jack has really flown away. Repeat the process for Jill. To bring the blackbirds back, raise the hands one after the other in the same manner and change back to the index fingers. With little practice, you can mystify almost anyone. Grade 1½.

ADA RICHTER

# EARN A Teacher's Diploma or A Bachelor's Degree IN MUSIC In Your Spare Time at Home

In every community there are ambitious men and women, who know the advantages of new inspiration and ideas for their musical advancement, but still neglect to keep up with the best that is offered. It is too easy for them to say "I am busy and haven't the time for more study myself."

The most successful musician, of course, is a very busy one. The demands upon his attention are never ceasing—yet he is the one who can find the extra time for something worth while. It is for such a one, chiefly, that the Extension Courses are the greatest benefit. For that teacher it is hard to give up an interesting class or position and go away for instruction.

Extension work is also equally advantageous to the beginner and the amateur. The work can be done at home in spare time, with no interference with one's regular work. In this way one can use the minutes each day which so often go to waste.

**The Increased Requirement for DEGREES has Resulted in Larger Demands for the ADVANCED COURSES offered by the UNIVERSITY EXTENSION CONSERVATORY. (Address Dept. A-150) 1525 E. 53rd Street, CHICAGO, ILL.**

**Look back over the last year.** What progress have you made? Perhaps you have wanted to send for our catalog and sample lessons before—just to look into them. That is your privilege. We offer them without obligation to you. We urge you to take advantage of the spare moments you are sure to find.

There is a greater demand all the time for the courses we offer, as they fit teachers for better positions. This is an age of specialization and the specialist is earning fully double or more the salary of a musician with only a general knowledge. Openings in the music field are growing very rapidly. There are big paying positions for those who are ready for them.

**Do you hold the Key to the best teaching position—a Diploma?**

**Our Diplomas and Degrees are Awarded by Authority of the State of Illinois**

It is up to YOU. On your own decision will rest your future success. Fit yourself for a bigger position—demand larger fees. You can do it! You can easily and quickly fit yourself right at home through Extension Courses.

This great musical organization now in its 36th successful year—has developed and trained many musicians and many successful teachers. And to you we offer the same advantages which have been given to them. Now is the opportune time for you to clip the coupon. Get it in the first mail. Don't waste any more time! The coupon will bring you information about the lessons which will be of untold value.

**This Is Your Opportunity—Mail the Coupon TODAY!**

UNIVERSITY EXTENSION CONSERVATORY, Dept. A-150  
1525 E. 53rd Street, Chicago, Illinois.

Please send me catalog, sample lessons, and full information regarding course I have marked with an X below.

## A Great Master's Principles of Composition

(Continued from Page 372)

erlock and thus produce a better sonority such as, for instance:

Balakirev's production for piano is quite important. The terrifically difficult original fantasy, *Islamey*, already mentioned, could not be taken as representative of customary writing. Many of his other compositions are of moderate difficulty and most attractive. To mention a few, the lovely *Au Jardin*, the brilliant *Vals de la nuit*, and the two colorful pieces inspired by Spain, *Sérénade espagnole* and *Modie espagnole*. Such numbers ought to be a valuable addition to the repertoire of the average pianist, even if one leaves *Islamey* to the care of the concert virtuosi exclusively. It is amazing to think that the latter was written in 1869; for, looking at this music to-day, it appears as beautifully modern and clever as the pianistic literature of Maurice Ravel himself. Balakirev's two symphonies are monumental masterpieces, and they constitute practical demonstration of his aesthetics. That gives him a place of honor among the Russian musicians is the perfect balance of his qualities. Whereas Moussorgsky was an almost illiterate genius, usually speaking (his "Boris Godounov" unplayable in its original form, and the arrangement by Rimsky-Korsakoff is always used); whereas Rimsky-Korsakoff as an extraordinary orchestrator whose musical ideas were sometimes not at par with their instrumentation; whereas Tchaikovsky himself, has often been accused of

lacking in national Russian character, and of having come under the sometimes pedantic Germanic influence; no such reproach can arise about Balakirev. His music is profoundly Russian; the musical substance of his thematic material is of great intrinsic value; and in brilliancy of instrumentation he equals his student Rimsky-Korsakoff.

To listen to Alexander Bernardi, when he unfolds the reminiscences of his conducting years in Odessa, is a real joy. He preserves so vividly in his memory many episodes concerning the great Russian composers. One of them refers to Tchaikovsky's visit on the occasion of the performance of his opera, "Pique Dame." Bernardi prepared the orchestra for him. Tchaikovsky stayed in Odessa for a week, delighting everybody by his sympathetic personality and his always perfect gentlemanly attitude.

In Paris the Bernardi home, I understand, continued to carry the Russian tradition of intimate musical round tables. The Wednesday evenings, there, were as regular as the Thursdays in Balakirev's studio. Many French and Russian composers of note used to be frequent guests. Alexander Brailowsky, Maurice Dumesnil, and other concert artists, were among those who came and often sat at the piano to read new works. Maestro Bernardi told me it was the latter who played Liapounov's third and last symphony, with the composer, for the first time, before a small circle of appreciative connoisseurs.

### A Man of Many Interests

BALAKIREV NEVER WROTE AN OPERA. Once, according to reports, he planned to set to music the subject of "The Fire Bird," but this was never done. Some of his songs,

such as the *Golden Fish*; *Selim's song*; and the *Georgian song*; are among the most beautiful ones that have come from Russia.

Like a few other Russian composers, Balakirev did not limit the scope of his activities to music. For some years he occupied an important position as supervisor of the railroads; but this was only a side issue.

It is to be hoped that some adventurous conductors will in the not too distant future look out of the beaten track and champion Balakirev's cause. When the actual neglect is ended, a great share of beauty will be revealed to music lovers. Certainly a musician who played such an important part in the evolution of the music of the world and, through his effective leadership, contributed so much to the development of Russia's art, cannot in-

definitely remain in the background. And, before closing, one cannot help but wonder at the fact that Balakirev had received very little musical instruction and was practically self-taught. "But you see," Alexander Bernardi readily explains, "he was so gifted that no one could teach him. He was a composer by the grace of God. He went to the piano and improvised as it came to him, and then he would write it down later, elaborating the details in his own way."

Unfortunately, his desire for ultimate perfection was so intense that this improvising and this research would continue for months or years before a note would actually find itself on paper. Even, when satisfied, he would still postpone. It is beyond doubt that many of his creations have thus disappeared with him and are lost to the world.

## Pianist, Know Your Fingers!

(Continued from Page 366)

of trials the probability is strong that the extensor will tighten and snap out from under the finger which holds it. Some experimenters cannot at first execute the movement otherwise. With extreme pressures, as a matter of fact, the tightening cannot be avoided. Very loud playing, accordingly, always involves stiffened fingers. The use of the *lifting* muscle during a downward action is explained by the coordinative picture just sketched.

The coordination is employed, no doubt, because it is easier to lock the three phalanges into a unit than it is to apply individual pulls to each of them; and also because it puts no strain upon the small muscles, the weakest in the playing organism. It is highly disadvantageous, however, for velocity; it is insensitive to key-resistance and therefore incapable of fine dynamic control (the downward acting muscles are not working directly against the key but

are pulling against upward acting muscles); and it interferes seriously, when employed for support, with the velocity and control of hand movements.

### The Small Muscles as Determinants of Technical Skill

THE DISCUSSION SO FAR no doubt has already implied the overwhelmingly important rôle which the small muscles must play in expert piano technic. The three chief aspects of technical skill which they promote are:

1. *Dynamic Control*. If instead of the stiff finger coordination, the small muscles pull upon the first phalanx while the long flexors are exerted against the second and third, the force of all these muscles is expended directly against the felt resistance of the key. Sensitiveness to key resistance, as I have already indicated, is the major

# THE SINGER'S ETUDE

Edited for June by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

THERE COMES A TIME when, in the changing conditions of the world and our life, there is necessity of taking stock of the various movements which touch the borders of our own work, or, indeed, which appear to impose new methods of approach to it.

World changes crowd us so closely on every hand that teachers of singing, and vocal students alike, may well inquire into what is going on about them in surface changes in the pattern of their art. Whether these changes go sufficiently deep to affect its ancient integrity is matter enough for serious investigation.

Perhaps the most important aspects of this question lie in the major vocal movements which modern thought and conditions have brought about; and these may be summarized to come under the headings of:

1. The application of practical psychology to methods of voice-study;
2. Correspondence courses in vocal training;
3. High-pressure tactics designed to bring about shortcuts to the vocal goal;
4. The entrance into the vocal teaching field of instrumental musicians untrained for such work;
5. Group teaching of vocal fundamentals in the public schools.

While it does not always follow that what was good enough for our fathers should be good enough for us as well, caution should still be used before too hastily accepting new methods before time has proven their superiority to what has gone before. The beautiful, proven methods of ancient *bel canto* have given the world for many centuries all that was lovely in vocal song. Have these newer methods, which have sought to show that they are bringing betterment to the art of *bel canto*, succeeded in proving their case? Will they stand before close examination?

## The Psychological Proposition

LET US SEE.

William James defined psychology as, "The science of mental life, both of its phenomena and of their conditions."

That psychology constitutes a most important element in the training, the production, and the artistic management of the singing voice, can not well be denied. "The mind is the man." Quite so. But whether the mind can be all, and accomplish all, unaided by the fleshly envelope which bears it, is a matter on which not all authorities are agreed. Carl Engle said, "The technic of craftsmanship is one and indivisible with genius." It is doubtful if any artistic gift, to whatever degree dependent on muscular coöperation, can function in the fullness of its ultimate beauty, unless the muscles on which its interpretation depend have had their just course of preliminary training.

## Point by Point

1. MANY PRESENT DAY TEACHERS of singing dismiss all the technic of the body in one sweeping gesture and rely only on the "science of mental life" for their results. Be it understood that they do not rely on any part of the physical system, but *wholly on the mind*. The claims of this group of teachers may be met with the undeniable

## Modern Vocal Methods in Comparison with Bel Canto

By HOMER HENLEY

fact that there is not now before the public a single singer of great reputation whose vocal method has rested on the "science of mind" alone. All have stated with definiteness that their careers are the result of the hardest kind of technical work based upon the physical laws underlying the art of *bel canto* as handed down by the great masters of the early Italian school.

2. The answer to the practicability of "Teaching Singing by Correspondence Courses" would seem to have its expression in the well known fact that the owner of every singing voice is the very worst judge of the sound of that voice. Singing cannot impinge upon the ear of the person who produces it as that same singing sound impinges on the ear of another, just as no human being can truly see his own face in a mirror as that face appears to another. Perchance overfamiliarity with ourselves atrophies the self-critical faculty; perhaps some other explanation would be more scientific; but, whatever the cause, the fact remains that we can neither see nor hear ourselves as others see and hear us.

## And Marvels Multiply

ONE OF THE WEIRDEST SCHEMES for such correspondence school voice teaching came quite lately to the writer's attention. It was called by its proponents "The Bel Canto Syndicate" and aimed to publish itself in regular sequence in a chain of daily newspapers throughout the country, spreading wisdom and light to countless thousands of the vocally ambitious. Truly enough the instructions and admonitions contained in the pages of this prospectus were as sane and sound as such instructions probably are in most other correspondence school courses. No fault could be found there. But the devastating fact remains that no one, however earnest, however intelligent, however intuitive, can by any human possibility learn to hear and judge his own voice without the aid of the trained ear of an experienced teacher constantly checking up on the results of his efforts.

3. "Short cuts to the Goal of Vocal Excellence" find their advertising in the dangerous studios of high pressure voice training salesmen, who, through either criminal ignorance, criminal ruthlessness, or criminal moronic fatuousness, promise impossible results in impossibly brief periods. Experienced legitimate teachers of voice, careful and conscientious in their methods, very well know that no voice receives its full training in any period short of from three to five years—and preferably that latter number. The reason lies in the slowness of the subconsciousness to absorb

in detail what the surface mind can quickly comprehend.

The old Italian masters of *bel canto* were fond of saying, "I can tell you all that I know about the voice in twenty minutes; but it will take you six years to learn and understand it." Therein lies the answer: the body learns slowly, much more slowly than the mind; and it takes indefinitely longer to put what it has learned into practice. In addition to which there must be taken into consideration the almost endless details pertaining to repertoire, tradition, style, musicianship, and acquaintance with sister arts of song, which must all enter into the finished product of the accomplished singer. These things are impossible of accomplishment in six months, a year, or two years. Actually a six year course in the perfected art of singing is none too long a period to be undertaken by the serious minded student, in order that he may be equipped at all points for a business which to-day has, in its more desirable aspects, a higher standard of perfection than at any time since the "golden age of song."

4. One of the most regrettable features of modern voice teaching is the entry of the instrumentalist into its field. Organists, accompanists, violinists, and so on, possibly by reason of finding their own branches of the profession overcrowded or less remunerative; or because of becoming too lately interested in the voice for actual study of their own in its difficult science; or because of convenient opportunities in their own instrumental work for an oblique entry into another field (as organists with choir

singers, or accompanists with those they coach); decide to take up a work in which they have had neither training nor experience, a work which may be justly characterized as the most subtly evasive and complex of all branches of musical art. It is to be hoped that means may sometime be adopted to prevent the teaching of singing by all persons not provenly qualified for that end.

5. As for that new departure, "The Teaching of the Fundamental Principles of Voice Production in High Schools," to large class groups of adolescents, its efficacy must remain in the "limbo of things unproved," until such time as its participants have reached their majorities and learned whether or not the experiment was for the betterment or detriment of their singing voices. Inasmuch, however, as the texture and disposition of each individual voice is quite as original, and, in its originality, quite as different from any other voice as is any human facial originality different from that of any other human face, it would seem that enthusiasm should not be allowed to outrun discretion in assuming that what might be good medicine for one should therefore be good medicine for all.

All these devices, then, for burgeoning the singing voice into that freedom and beauty which is its rightful dower, may scarcely be said to have established themselves fully in even the realm of the empirical, much less in the scientific domain of things proven. There remains to be considered the claims of that system of vocal procedure which, since the fifteenth century, has justified its principles in the singing of every great vocal artist since that period, under the general name of *bel canto*. This, in itself, should be sufficient proof for the doubter; but it may be added that the vast majority of reputable present day vocal teachers base their instruction unreservedly on those same principles. The art of *bel canto* has enjoyed so universal and so unflinching a success over the centuries that it has come to be recognized as the one system worthy of unquestioning confidence on the part of the vocally ambitious and those interested in their progress.

(To be Continued in THE ETUDE for July)

## Growing Top Notes

By EDWARD ELLSWORTH HIPSHER

JUST AS PROPERLY applied fertilizer insures prize dahlias; so correct exercises, intelligently practiced, will develop the upper register of the voice.

And, to begin, let us get rid of all fright about that bugaboo term, register. After all, if we are to discuss intelligently any subject, we must select certain keywords to unlock our thoughts. Along with this, all of us, who have made anything like a thorough study of the voice, know that there is a difference of tone production in its lower, middle and upper divisions. So we must have some way of designating this provision of nature; let it be by the term section, part, division, register, or any other apt word that normally expresses

the thought, if you will. And there you are! One is as good as the other.

Since register has become rather firmly rooted in the vocal vocabulary; it may rest there undisturbed, so far as one student and teacher of the voice is concerned. What difference by what names these divisions are called, so long as a prime object of the teacher and student is to close up any gaps and polish any roughness of the "No Man's Land" between them, till in the end the student may approximate those marvelous scales of Patti, Melba, Nordica, Albani, Maurel, Bispham, Reeves, Lloyd and Battistini, among the nightingales of their "Golden Era of Song."

With these conditions in mind, we pause

momentarily to suggest a means of overcoming a certain difficulty which besets most young singers, in their efforts to pass into that usually most brilliant upper division of their voices—that sometimes styled bugbear of the singing teachers, the head register.

As a beginning the singer must recognize that incontrovertible truth enshrined in the ages old parable of the "house built upon a rock." And, just so, no art project may be safely attempted excepting as the under-structure has been securely laid. The roof of a temple is not attempted before foundations and buttresses have been laid. And so, before we try those upper tones, let there be a test of a few of those lying only from two to four steps (degrees) above our lowest. Are they free, resonant, full, vibrant, and yet produced with such absolute ease as that they merely float, as it were, on the breath; whilst a hand resting lightly on the chest will feel its gentle quivering as a sounding board? When inhaling the breath, was the throat as open and thoroughly relaxed as in a good, healthful yawn? Did the tone begin with a velvety touch, entirely free of click or stroke of the glottis? Did it continue in a perfectly steady and evenly flowing stream? Yes, and were there many, many trials and testings and trainings of the ear till it will detect the slightest deviation from these mentioned conditions and will cause an uncomfortable feeling till these faults are no more. If so, then we are ready for a tussle with those upper tones.

And now comes a problem on which both teacher and student may try their keenest thought; for in every case it is solved only by the most careful experiment; and in no instance does mere hit and miss of effort win. What is essential as a beginning is to find an octave of which the lowest tone is not too near the extremity of the vocal compass, but yet retains a rather distinct sensation of the chest resonance; and of which the upper tone has at least a rather distinct direction towards the upper part of the masque (front of the face), if not quite directly towards the forehead.

For the average mezzosoprano or baritone this will be about,

But there can be nothing arbitrary about it, and the best octave, for the beginning of study and practice with each individual voice, must be determined by careful experiment. With this discovered, we are ready to begin active practice.

## The Vowels in the Singer's Diction

By WILBUR A. SKILES

ONE MAY TRANSFORM exhaled breath into sound through a physical organism, and to this sound one can give form. These forms are called vowels.

Perfect vowel forms (sounds) cannot be made with wrongly adjusted vocal organs. Each vowel has an exact sound which can be discovered by clearly speaking the word of which that vowel is a part. Whether the pitch be high or low, the vowel spoken is the one to be used in singing. In this way we create the necessary pattern or mental picture which can exist only when all vocal organs are freely acting. Hence one should always depend upon that pattern for proper adjustments. In other words, there should be purity of diction and unimpaired tones.

Faulty vowel formation and emission are

First, the figure, in notation, that follows, should be thoroughly fixed in the mind.

Take this phrase not too fast, but at a speed in which it can be comfortably done on a moderately full breath. Be very thoughtful of the low resonance of the first tone, and that, as this swings up to its octave, the resonance shall make a graceful glide to the upper masque or lower forehead. For the Italian *ee* production, the teeth should be open till the tips of two fingers side by side will enter between them; the middle portion of the tongue should rise and spread till its edges touch the upper teeth on either side; and it should be felt vibrating just back of the lower part of the nose. Which means that it will have a resonance sufficient to balance any of the other vowels, instead of the usual thin and colorless quality. On the first beat of the second measure let this *ee* change lightly to *oh*, with a quiet blending that will allow the change of vowel sound without altering the ease and beauty of tone. At the third beat of the third measure change back to *ee* with the same care as to tone quality; and this clearness should be carried as carefully into the *ah* of the fourth measure. From the high *E* of the third measure, as the scale descends tone by tone, the resonance will gradually glide down the masque; and, for the final *D*, it will be resting lightly on the chest. Properly and carefully done, this will bridge over every change of direction of tonal resonance till, with continued practice, the term *break* will have lost both its significance and its terrors.

When a fairly satisfactory control of the execution of this study has been gained, it may be started on its home pitch, then repeated on a scale a half-tone lower, and then transposed upward consecutively for three or four half-tones. There must be no hurry. Each additional half-step in either direction must be thoroughly assimilated by at least two weeks of practice before another is added; and, if there is felt the least of discomfort in this, drop it and go back to the old compass for another week or two. Master works are not done in a day; and undue haste in this enterprise will but leave somewhere a flaw that may never be eradicated.

A regular, careful and persistent practice of this study will be sure to lead towards the development of a free and well placed resonance in those upper tones, so grateful to every singer.

\* \* \* \* \*

"Study! Study! Study! This does not mean, as so many young students seem to think, to study singing only. It means to study singing, repertory, sight-reading, ear-training, harmony, history of music, languages, literature, and it means above all, to hear all the good music possible."—William Thorner.

# THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

## Making the Boy Choir a Success

By C. F. SCHIRRMANN

THERE IS PROBABLY NO OTHER SUBJECT in the realm of ecclesiastical music that is provocative of so much genuine disagreement and misunderstanding as that of boy choirs. The term "boy choir" is more or less of a misnomer. We readily understand that a children's choir is a singing organization composed entirely of children, and that a women's chorus is made up exclusively of adult female voices; likewise that a male chorus contains only tenors and basses; but in a boy choir, so-called, the boys are never responsible for more than two of the four parts, and frequently only one part, the soprano. However, the name boy choir has been so generally accepted that it has been chosen as the subject for this discussion.

Possibly the most natural question that rises, when considering the boy choir, is, "Why boy trebles in preference to adult female sopranos?" The best answer to this question has been made, to my mind, by G. Darlington Richards, organist and choir-master of St. James Church, New York City, who says: "The properly trained boy voice is the only musical instrument that is non-self-conscious, impersonal, without passion, and perfectly suited for the interpretation of fine church music." The outstanding characteristic of the best church music is its fidelity to purity of concept, approaching almost to severity. The employment of the boy's voice in church music was originally, no doubt, partly due to convenience; it was, and still is, a part of the equipment of all the great religious foundations to have a staff of singing boys, or choristers. But another consideration surely underlies the practice.

### The Resourceful Voice

THE BOY'S VOICE, so beautiful and expressive when properly trained, seems to be a gift direct from the Creator, to sing His praises in public worship. Nothing would be more likely to penetrate the hide of the evil doer than the pure tone of a boy chorister, or to bring peace and comfort to a troubled mind more readily than a really sensitive boy singer. If you are really ambitious regarding your boy, let your ambition be to make him more and more capable of fulfilling his mission.

One of the chief objections raised by so many people, who do not know the boy voice, is that because it disappears entirely at the beginning of the adolescent period it is not worth bothering with. Closely akin to this belief is the other, equally wrong, that having sung as a boy, one will never be able to sing after reaching man's estate. This is an error into which many parents fall. Nothing could be farther from the truth, in either case. The fact that nature steps in at a certain stage in the boy's development (and it is always at the time when he is at his best, vocally speaking) cannot be accepted as a valid reason for neglecting to cultivate his voice. Much that he learns during this most impressionable period, exercises in breath control, style, phrasing, acquaintance with the best music, all these he will find of very great value as a man; and, while it does not follow that

a good boy soprano becomes a splendid tenor or bass, it is a well known fact that most famous men singers did some singing as boys. Furthermore, having acquired the habit of regular church attendance while choristers, boys are much more likely to continue their church going after they leave the choir than if their attendance at services had been irregular and haphazard. And, if they have sons of their own, they will probably wish them to join a choir.

The best boy choirs have been trained in a simple natural method of voice production; good breathing, good resonance, good placement of tone, perfect control of all vowels, and splendid flexibility. No one should train on one vowel alone.

The boy's voice has great possibilities as to compass and tonal quality. As for compass the average boy can sing with good tone from low A (alto) to high C (soprano) and throughout this wide range, there should be no break. If there is a bad break, then it is the fault of the choir-master.

Start the first singing exercise downward from the highest line F, sung very softly to the syllable *ooo*.

The next scale is from the highest space E descending in the same way, and so on each scale until second space C is reached

which lets the voices stop on middle C. Then repeat the six scales, singing the syllable *loo*. It is practically impossible to sing with a coarse tone if the long *oo* vowel, as in food, is used. The next syllable is *mo*, sung to the same scales at first, but later extending the range upward by semi-tones until G-sharp (space above the staff) is reached. Then use the syllable *nah* and later *lah*, extending upward to the B-flat scale.

Two other fine exercises are,

This may be continued as far up the chromatic scale as the boy's vocal organs will allow without strain.

Carry this as high and low as can be done without vocal strain.

Some choir-masters discard the *oo* sound after the voice has been placed, on the ground that its too frequent use discolors all other vowels, producing the hooty tone one hears in some choirs. This danger is eliminated if all the vowel sounds are practiced. If your choir has the misfortune to sing in a non-resonant church, you will need to spend some time vocalizing on *ee*, as in *feed*, *ai*, as in *wait*, and on syllables ending with *ng*.

Everything that tends to increase the prestige of the choir and that enhances its standing and reputation in the community is of direct value to the choir and to the choir-master. It makes it easier to obtain new members, both boys and men, and gives the choir-master a firmer hold on the old members. One little thing that helps is to give the choir a name of its own, which distinguishes it as an entity. A great and famous cathedral or church does not need to do this; but a comparatively inconspicuous church does, if it is going to develop an outstanding choral organization. Publicity is a great help. The more general publicity you can get your papers to give to the doings of your choir, the better it will be for you.

### Building the Repertoire

CONCERTIZING BRINGS up two other considerations of much importance. The first is repertory. No one can expect to make a success of concert work without an extensive and interesting repertory. Many choir-masters, especially those of English antecedents, confine themselves almost entirely to English music, and very often things of the bombastic type which almost sing themselves, with the slightest attention to shading and the fine points of interpretation. This type of music will never build up a choir to a point where its services will be in demand.

A first class organization must include in its programs a wide variety of music. Palestrina and his type should be sung *à capella* and preferably in *Latin*; Bach should be at least represented; some polyphonic music should be sung in addition to the Palestrina; include carols and arrangements from French, German, Spanish, Norwegian, Negro spirituals, some of the best of the English cathedral school, and plenty of the works of our fine contemporary Americans; and do not fail to have plenty of the Russian, for there is nothing finer in the realm of sacred music than the best of the Russian anthems. Standard church music, and some of the old familiar numbers, should be planned to attract the cultured music lover, who is not in the least interested in ordinary anthems.

No choir can develop to any great extent without a thorough mastery of *à capella* singing, for two reasons. The first is that so much of the best church music is *à capella* music, and to do *à capella* music with instrumental assistance is wrong. *À capella* singing develops balance, blend, precision, independence, and all the other choral virtues. The second advantage is that freedom from dependence upon an instrument obviates many practical difficulties.

It should go without saying that the choir-master must be a kindly, but firm disciplinarian, or he will never be able to get the best results from his choir. He must make the boys (and the men as well) understand that there is a proper time for everything, that they and he attend rehearsals for the sole purpose of singing, and not of talking. Having once made this rule he must adhere to it, or he will soon find that he is wasting valuable time endeavoring to keep order when he should be giving musical instruction. Be a friend to every man and boy in your organization; and, having done everything you can to make your choir a success, you will have the satisfaction of knowing that you did your best.

THE  
EBERSMÜNSTER  
ORGAN

The Console of the Silbermann Organ at Ebersmünster, Alsace, the beautiful case of which was shown in our Organ Department of last month. Notice the graceful simplicity of the music rack; and also the distance to which the two stops are drawn. The entire organ remains as when the finishing touches of its illustrious maker, Andre Silbermann, were lovingly applied in 1717.

# A Simple System for the Music Cabinet of Busy Organists

By CARLETON F. PETIT

AS OUR LIBRARIES GROW from year to year, the old question of keeping in order one's sheet music, and collections of studies and pieces by one or several composers arises.

After several years of trying to keep music in a music cabinet in alphabetical order according to composers, working from the top of the cabinet down, with sheets of cardboard equipped with letters, as index cards, the most annoying problem that arose was that my volumes of Bach's works and other large publications were so heavy that searching for a piece of sheet music under such piles became an arm-breaking and trying exercise, especially when my cabinet door persistently refused to stay open (does anyone else have that trouble?).

## Chiefly About Books

OTHER COLLECTIONS of pieces, such as "Thirty Postludes," or "Masterpieces for the Organ," were embarrassing as to what alphabetical letter was suitable for them, and habitually turned up in unexpected places. Pieces of sheet music, volumes of the works of single composers, and miscellaneous collections, all thus became so intimate that minor excavation operations became necessary to recover many.

Necessity for greater efficiency and convenience resulted in the following successful method which requires no card index or cross files and therefore no hours of typing cards and bookkeeping.

## On the Hunger for Gospel Hymns

By William H. Buckley

IN CHOOSING music for your services, never lose sight of the tastes of your pastor and your congregation. If the pastor is of the evangelistic type, give him all of the gospel hymns that he requests, since the final responsibility is his. Even if he leaves the choice of music entirely to you, do not ignore the tastes of your congregation.

One Monday morning, an out-spoken member of my congregation accosted me with, "What was that 'tripe' you gave us yesterday morning?"

"You are referring to that gospel hymn, are you not?" I replied conciliatingly. "I am," he blustered. "Couldn't you give us anything better than that?"

"That was not given for you," I rejoined, soothingly; and he looked non-plussed. "There are more people than you in the congregation," I continued, holding my ground with gentle tread. "If you will but look around, you will see quite a number of elderly men and women who have been brought up on gospel hymns, and who become hungry for the old songs. They deserve to have their tastes gratified once in a while and yesterday morning was their turn."

"I never thought of that," he capitulated; and I never again heard him criticize our selections.

\*\*\*\*\*

"Of all great composers Beethoven is the one who was most steadfast in seeking neither fortune nor applause, but that fidelity of expression, that ideal beauty, which should be the lode-star of the true artist."

—Daily Telegraph.

The heaviest volumes being the works of J. S. Bach, they were consigned to the lowest compartment of the cabinet (no disrespect to the composer intended). Volumes I to V of my particular editions were stacked in order from top to bottom. It is not hard for most organists to remember in which volumes to look for particular works, so this classification seems adequate.

On the next shelf above are those books which contain works by a number of different composers each. On the shelf above this I can now find all collections of pieces by a single composer; for instance, Guil-mant's "Practical Organist" and Karg-Elert's "Improvisations," as well as symphonies, sonatas, suites, and so on, which are logically classed as groups of pieces by one composer. These are all in alphabetical order from top to bottom.

## And then the Sheet Music

ALL SHEET MUSIC occupies the next shelf, likewise alphabetically arranged. The top story houses all miscellaneous items, such as organ pedal studies, technical piano studies, Bach "Inventions," Suites, and the "Well Tempered Clavichord," along with some modern piano selections which provide necessary finger "limber-upers."

With this arrangement it takes the minimum amount of time for upkeep of a library and very little time to outline musical programs for weeks in advance.

A small notebook is convenient for this outline. Put one Sunday's date per page,

for a three month period; and then as you run through your music, mentally or manually, note down pieces suitable for pre-ludes, under successive dates. When you think of a good postlude or offertory, note these down in the same manner; and in a short time each page of your book will represent a particular Sunday with a full program outlined; and it can be seen at a glance that the musical diet is going to be well varied, each month having its proper proportion of Bach, Widor, and of the less heavy writers, according to the taste of your congregation; which effect a resourceful use of the library, and guard against unintended repetitions at too short intervals.

Such a three month program should be saved and will serve just as well a few months after, with substitution of newly purchased numbers.

\*\*\*\*\*

## Choir Boy Precocity

The roving blue eye of a cherubic lad in the Worcester Cathedral choir suddenly spied a pretty sight, so he sang the strophe of an ancient canticle in these words:

"Who's this coming up the aisle?"

"She's a regular snorter!"

An angelic imp on the other side of the choir immediately took up the strain without a change of face:

"Hold your tongue, you son of a gun!"

"It is the Bishop's dorr-ter!"

JUST ONE OF MANY SUCH TESTIMONIALS

MR. C. E. STUKES, shown above, writes as follows: "I want to say that in my eighty-six years nothing has given me so much pleasure as my Wicks pipe organ and I fully realize what I've missed by not having it sooner."

Hundreds of letters have been received from Wicks owners voicing their praise of this fine instrument. Wicks organs are found in many residences, in churches of every denomination throughout the country, and in public buildings and institutes of learning. Today's great organists, who know, unreservedly recommend the Wicks organ.

For the musical training of children from pre-school age through the progressive grades. In over twenty years THE ROBYN SYSTEM has proven a revelation to progressive piano teachers all over the country.

## 10 Day Summer Normal Course

July 6th to 17th, 1939

Fine Arts Building, Chicago, Ill.

Class-Conducted Under the Personal Direction  
of LOUISE ROBYN

The course consists of morning and afternoon sessions of two hours each, covering every detail of the musical education of the child from the pre-school age into seventh grade music study. This is an opportunity for teachers to obtain Miss Robyn's entire course in ten days' time.

Write for special circulars giving all information, including tuition rates and boarding accommodations. Address:

Louise Robyn, 300 South Wabash Ave., Chicago

Send for "Detailed Teaching Directions" on how to teach these four Robyn books: ROBYN ROTE CARDS, KEYBOARD TOWN, TECHNIC TALES, Book I, ROBYN-GURLITT ALBUM. Mail your request directly to Miss Louise Robyn at the above address.

# ORGAN AND CHOIR QUESTIONS

~ Answered ~

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. Kindly give me information about organ vibrators, their construction, and principle. Are they made for reed organs? Can an organ be amplified with electric amplifiers? If so, where can such amplifiers be secured?—A. C.

A. We are taking it for granted that the "vibrators" you refer to a harp stop. The harp bars are frequently made of steel, and we have known them to be made of glass. The tone of bars is weak and is augmented by means of resonators. According to "The Contemporary American Organ" by Barnes, all organ percussion actions, including harp, must follow the same principle that applies to the piano action. The book contains a chapter on "Percussion Tone in the Organ," which you might find interesting reading. Harps can be installed in reed organs, but the action of the harp would be electric. An organ can be amplified by electrical amplifiers, which can be secured through any good reliable amplifying company.

Q. I am interested in purchasing a used theater organ for my home. Will you forward me information concerning such instruments, at a price between five hundred and two thousand dollars? The organ must have a Tibia Clausa, Vox Humana, Viol, and a Dulciana, as this is the least number of ranks I will accept. However, I would also like to have a Clarinet and French Horn. A Diapason is not necessary. You may accept enclosed specification as a minimum.—An Amateur

A. We suggest your communicating with various organ builders, telling them what you wish. Your minimum specification, without case, and including unison couplers, can be furnished, new for approximately eighteen hundred and fifty dollars.

Q. I am director of a Junior Choir in our Church. There are twenty-four children, ranging in age from ten to seventeen years. Although I have been quite successful with the work, I feel that children over the age of fifteen or sixteen will not work well with younger children. What ages do you recommend for a Junior Choir? What do you consider the best seating arrangement for the two part chorus?—Dot.

A. You do not state the cause of your feeling that children of fifteen or sixteen years of age will not work well with younger children—so that we do not know whether you attribute the condition to disposition or voice conditions. If the latter, the cause may be the mixture of adolescent tones with the tones of younger children. We suggest your perusal of "Choral Music and its Practice" by Noble Cain. You might limit your Junior Choir to the age of fourteen, if you feel that you will secure better results. As to the age of admission, in "Junior Choirs" by Vosseller, we find "the best grade for admission into the choir is the fifth, and a year of previous training as a probationer may be undertaken with the fourth grade child." This, we believe sets the admission age at about eleven years. You might try the ages of ten to fifteen for your Junior Choir. If your present seating arrangement is satisfactory there is no reason for changing. Much depends on the relative balance of the parts. If you feel that change is advisable, you might try placing the sopranos on the left and the altos on the right, thus bringing the latter more to the fore.

Q. I am a piano teacher and have had several years' experience in playing a small reed organ for church services. As there are no organ teachers in this vicinity, I have numerous requests to give instruction to persons who must of necessity practice on a reed organ. Some have had no previous instruction, and some have a small beginning, but aspire to the acceptable playing of church music on the organ. Can you give me the names and publishers of any good, interesting instruction books? Any helpful hints will be appreciated.—E. M. P.

A. For the students who require instruction in the rudiments of music, we suggest your teaching this in your usual way. Following this instruction, and for those who have already acquired that knowledge, we suggest "Landon's Reed Organ Method," which includes a chapter on "Stops and their Management." This and books suitable to follow it, may be secured through the publishers of THE ETUDE.

Q. I play a reed organ in our Sunday School, which includes the stops named on enclosed list. Please arrange five groups of stops for me. What is the use of the right knee lever? On the right side of the organ is a small lever which goes up and down when air is supplied to the bellows. What is its use? Our church organist uses two medium soft stops with the Viola for the bass, for any group of people (six or sixty). Is this enough organ for the purpose?—J. R. C.

A. The groups of stops to be used depends on the character of the passage to be played, amount of tone desired, and so forth. You do not give the pitch of the stops, and some of the names we think are not spelled correctly

—for instance—"Bemshorn" is probably "Gemshorn." Instead of trying to suggest combinations, we will endeavor to explain the pitch of the stops in a general way and you can experiment for various effects. 8' stops speak at normal pitch (same as piano). 16' stops produce a tone one octave lower than the piano, and 4' and 2' stops one and two octaves higher, respectively. The Vox Humana is a tremulant. The right knee lever increases the power of the stops being used. We presume the lever on the right side, to which you refer, is the blowing lever, to be used when the organ is blown by a person other than the player. Perhaps it can be disconnected so that it will not be apparent when the organ is being supplied with air by the person playing. We should think that sixty voices might require the full power of your organ, for support.

Q. It is the custom in our church for the ushers to come to the altar for the collection plates and minister's prayer. My teacher taught me to begin playing softly just as the minister began his prayer. Now our minister says the ushers come "Tromp, Tromp Tromping" up the aisle; and that, to hide this, I should, begin playing the Offertory immediately, while they are coming. I choose numbers that have a quiet, prayerful introduction, and it would seem that they are not to be used for marching purposes. Then the ushers could add to the sacredness of a worship service by quietly doing their duty. Another problem is tempo of hymns. It seems each member of the congregation has his own tempo (or none at all), and it is very difficult to play correctly. We have a chorister, but he sings with the piano and the others sing as they please.—E. R.

A. The arrangements for playing the Offertory are, of course, subject to the desires of the authorities of your church. No doubt you are right in feeling that the ushers should do their duty quietly. A regard for the atmosphere and sacredness of the service should dictate that condition, but unfortunately these feelings are not always shared by all concerned, and the authorities of the church have the final say as to what shall be done. There is no set tempo for all hymns—different hymns requiring different tempos. If you and the chorister are giving correct time to the hymns, our suggestion is that you both continue to do so—which means that you are doing the correct thing—whether the congregation is right or not.

Q. I am playing in a small church, with a reed organ, and as I have never studied that instrument I am rather puzzled with the stops. I enclose list of stops. What should I use for different effects—solo work—accompanying a solo—grand effect and so forth? I am playing Masses, and so forth, for a Catholic service.—T. D. D.

A. The stops for solo work, accompanying solos and so forth, vary according to the passage being played. For a "grand" effect, we suggest the use of "full organ," obtained by opening both knee swells—that on the left side giving "full organ" and the one on the right side increasing the power of the stops included in the "full organ" swell. You do not include the pitch of the stops in your list, but we will try to give you information that will help you. 8' stops produce normal pitch (same as piano). 16' stops speak an octave lower than the piano, and 4' and 2' stops one octave and two octaves higher respectively. We presume your Dulciana Treble and Dolce Bass to be your soft 8' stops. The Vox Humana is a tremulant; and Bass coupler brings into effect notes one octave from notes being played on the left hand side of the keyboard.

Q. It has been noted that you and others prefer the arrangement of choir singers with the sopranos and tenors at the left, and the altos and basses at the right. I sang in the Moody Church choir for a long time, in Chicago, under Dr. D. B. Towner. He always had the higher voices at his right. My experience with the sopranos and tenors at the right has always been satisfactory, and preferable. My reason is the melody most often is in the soprano, with the other parts coming in, repeating, and so forth. With the leading voice on the left, does a broken rhythm not necessitate a confusing crossing of the hands? Is this simply a matter of opinion and training, or is there a scientific reason for the plan you favor?—H. D. L.

A. Since your practice of having the soprano and tenor singers on your right has been successful, we see no necessity for your making a change. It is our custom in choral work to use the opposite plan, for which we have no reason except convention, and perhaps the fact that in first class symphony orchestras the first violins appear on the left hand side of the conductor. The conductors of these orchestras apparently do not find the objection you name; but there is no specific reason why you should change, as long as you are successful. Conductors make deviations from the conventional ways, if they feel that better results may be accomplished by the change.

## THE ACCORDION DEPARTMENT

### How to Encourage a Child to Practice

By PIETRO DEIRO

As told to Elvera Collins

**T**HERE ARE SOME CHILDREN who enjoy practicing their music lessons and need never be told to do so. We must admit, however, that they are in the minority as most children need frequent reminders, much coaxing, and even some bribing, before the necessary practice has been accomplished.

What is the reason? Who is to blame? And how can this problem be solved? Many parents have asked these questions, so we shall try to help them by bringing to light some of our observations made during the past years, while teaching children. Our suggestions will apply to average children from five to fourteen years of age. We shall assume that they like music but are not musical geniuses. Home practice generally falls under the direct supervision of mothers, hence our remarks will be addressed especially to them.

Parents should not give the impression that the child is doing them some special favor when he practices. Nor should they feel that they are doing their duty when they fret and scold and remind their child of how much they have been deprived, themselves, in order to afford music lessons; or how the child will regret it when he is older, if he does not practice. These methods make such an issue of the business of practice that the child automatically sets up a resistance. It is far better to save that energy and to use it to find out why the child has lost his interest; for it is quite apparent that, if he were really interested, he would not have to be coaxed to practice.

Children are no different from adults, in that if anything interests and fascinates them they consider it recreation, otherwise it is just plain work. The duty of a parent is to see that the game of music is kept interesting. Responsibility does not cease with merely paying for music lessons and being sure that the child reports for these lessons according to schedule.

Some children lose interest in their practice because they are not receiving the proper instruction. They may not be old enough to comprehend just what the trouble is; but they know only that the lesson does not appeal to them. Poorly assigned lessons are naturally monotonous to practice; and even adults must admit this.

#### Select a Good Teacher

IT FOLLOWS THEN that parents, who are truly sincere in their desire to have their children become fine accordionists, will take the necessary time to find a competent instructor. It is not sufficient that a friend or neighbor happened to recommend a certain teacher. Before entrusting a child to any teacher, time should be taken to investigate his system of teaching and his rating as a teacher. Find out what other students the teacher has and how they are progressing. Also ascertain where he received his musical education; and, if possible, hear him play the accordion. The American Accordionists' Association has rendered a valuable service to parents of accordion students, as competent instructors are now available in practically every part of the country.

Modern teachers make a study of child

psychology, so they can apply it to teaching music to children. The old stern system of pedagogy has become obsolete. Lesson assignments can be arranged so that all the important phases of accordion instruction are included in each lesson, but in such a way that the practice will be interesting rather than monotonous. It is important that a child's instruction be arranged on a steadily progressive plan. Many children become discouraged because they are expected to play music far too difficult for them. Of course, each new lesson assignment is a bit more difficult than the last; but skipping about from one grade of music to another is a different matter and is not helpful to the child. The ascent to difficult music should be gradual, so that it will be built upon a firm foundation.

And now a few suggestions on home practice. An accordion student has a distinct advantage over a piano student, for his instrument is portable and may be taken to any room. If a child has a room of his own, it is advisable to have him practice there, where he can be by himself and concentrate upon his music. Pity the poor children who try to practice in a crowded living room, while other members of the family are going in and out or engaged in conversation. Set aside a corner of the child's room, and call it the music corner. First of all, think of the child's comfort. The mind is free to work at its best when the body is physically comfortable. Provide a comfortable straight chair of the proper height, also a music stand of the proper height so the eyes of the child are in a direct line of vision with the music. Be sure that the child sits erect during the practice period, as improper breathing from a stooped position causes quick fatigue. The music stand should be placed so that it receives good daylight; and it should also be equipped with a regulation lamp for evening practice. A magazine rack, placed conveniently near, may contain the music not being used.

#### Value the Regular Schedule

IT IS IMPORTANT to have a child practice at the same time each day. No doubt this will bring forth a lot of excuses why this is not possible nor convenient, and in reply to these we refer you back to the question of whether or not you are sincere in your desire to have your child accomplish much in his music. If so, you will arrange your daily program to coincide with a definite practice schedule for the child. One schedule can be arranged for school months and a different schedule for vacation months. A child cannot progress if his practice periods are irregular, depending upon when his mother happens to think of them.

Practice without concentration is of little value, so we suggest that the practice time be divided into short periods several times a day rather than one long period. It is difficult for a child to concentrate longer than fifteen minutes at a time; after that his mind begins to wander. A child's mind is particularly receptive early in the morning and fifteen minutes devoted to practice before school is worth twice that amount after school. Another

(Continued on Page 418)

## Let's Face the FACTS

about Music

• Do you agree, as a parent, that it is part of your responsibility to impart to your children a genuine appreciation of music? Then ask yourself these questions: What instrument is more appealing to young and old than a fine accordion? What single instrument gives richer expression to every type of melody? What instrument provides greater opportunity for real musical pleasure? . . . The BRINDISI is a fine instrument available at popular prices. The coupon will bring you interesting particulars.

# THE VIOLINIST'S ETUDE

Edited by  
ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

## The Essential Elements of Bowing

A Scheme for Their Development

By BURRELL STEER

**B**OWING IS THE QUITE UNNATURAL drawing of a cluster of horse-hairs across strings to produce sound. The word "unnatural" explains the need of studying quite objectively the physical effects of such an action. The singer, with a throat naturally intended to produce sounds, can use it much more instinctively to modify them.

Tone, as produced by a bow, is affected by the following factors:

1. Direction of bow (parallel with bridge);
2. Distance from bridge;
3. Speed of transit (including uniformity);
4. Pressure.

These are the important physical constituents of bowing. The violinist who aspires to tonal eloquence must set up before himself these aims:

1. Absolute parallelism, including maintenance of exact distance from bridge while on the same string;
2. Extreme rapidity of transit;
3. Extreme slowness of transit;
4. Extreme uniformity of transit;
5. Adhesion and suppleness, concomitants of Aims 3 and 4.

With the foregoing ideals in mind, he must practice and perfect as nearly as he is able:

- a. Long *détaché* (fast and slow);
- b. String crossing;
- c. Short *détaché*, with and without stick inflection.

These three things are really all a bow is required to do. Slurred *staccato*, for instance, is derived from short *détaché*, with the bow movement all in one direction. Even then, *a* and *c* are really one element; *b*, the other. *c* includes, in practice, a bending of the bow on each stroke, leading to suppleness and to legitimate *spiccato*—again a lateral movement, wherein the bow executes a portion of this movement in the air. *Legato* bowing (slurred scale) embodies *a* and *b*.

Before outlining a scheme of bow practice, the proposed phraseology should be made clear.

*Détaché*, then, will mean change of bow on each note, but may be either  $\downarrow \uparrow$  or  $\uparrow \downarrow$ . Short *détaché* will mean less than an inch to a stroke.

First third (for instance) will mean the third of the bow nearest to the frog.

Parallelism, besides its obvious meaning, will imply also the distance from bridge remaining the same; that the bow shall descend or ascend an imaginary line continuing the stick in the direction in which it is about to move. This may sound unnecessarily cumbersome, but it is well to take no risk of misunderstanding.

### Scheme for Bow Practice

THE ELEMENTS:

- a. *Détaché*;
- b. String crossing;
- c. Short *détaché*.

The material for left hand practice. For

*a* and *c*: single notes; scales in two octaves without shifts; scales in three octaves; arpeggios. For *b*: two special exercises at first; later, slurred scales.

But for really startling progress a day of pure bowing; that is, on solitary notes, should be tried. A good time for this is a third day, after two days of strenuous ordinary practice when the violinist feels he has over practiced. It is the left hand that needs the rest.

To proceed with the scheme: At first—for a week or ten days—practice *a* exclusively. There will be a notable improvement—also touching other phases of technique—in two days (Yes!). Afterwards for a long time (even years) *a*, fast and slow, may occupy about sixty per cent of bow practice, with fifteen per cent each for *b* and *c*. *b* may be discarded when its advantages are well absorbed into the general technic (after, say, three months). Its quality can be thereafter maintained by the practice of slurred scales.

### *a*—Long *Détaché*. What to do

USE THE UPPER third of the bow. Make a conspicuous chalk mark on the stick at the beginning of this section of the bow. Use neither more nor less than this section for each stroke. Practice before a mirror at a moderate tempo (M. M.  $\text{♩} = 92 - 132$ ).

First, simply make strokes; then, later make a decided accent at the beginning of each stroke. This accent must be elastic; that is, devoid of all hardness. The bow stick bends visibly in making it.

Practice a third of the time with a swift stroke and abrupt stop between strokes; a third without gaps; and a third with accents and no gaps.

In doing the above observe:

1. That the movement is made by the forearm only, the hand moving forward and away from the body toward the mirror. This will necessitate—more or less, according to the length of the arm—the elbow coming slightly forward as the whole arm straightens. There is a visual impression of the arm "telescoping" at the elbow.
2. That the wrist does not fall—at tip—forming a shallow V. Do not worry, however, if the V is there. Keep bowing perfectly, and everything will come into line—the word "line" being used both literally and figuratively. Keep the wrist passive.
3. That the elbow does not rise, a tendency that will appear when the accents are emphasized.
4. Focus the attention on the passage of the bow hair in the glass; but switch it sometimes to the elbow and sometimes to that knob on the outside of wrist joint, which should seem to execute a straight line, like the bow, and not sink and rise and writhe about.

After three days the same work may be done in the upper half of the bow. After improvement, proceed to the first third.

Do the same work as already done, in the upper third and upper half.

Observe also, that 1. All of this move-

ment comes from the shoulder; 2. Again the wrist does nothing active (even if eventually it must); 3. The wrist is bent just enough to insure starting the bow straight; that is, in the line it is to follow. Bow straight and this curve will be right.

After three days extend this practice to the first half of the bow. After good improvement proceed to whole bow. Note that improvement probably will be attained much sooner than in the upper third.

For the whole bow the same work again as for the upper third is practiced. This develops the grand *détaché*, a stroke as swift as possible from end to end with an appreciable gap between. This work is valuable in securing absolute parallelism and rapidity of transit (Aims 1 and 2).

For Aim 2 a good exercise is the following:

That is, a sharply accented note, using the smallest possible amount of bow, followed by a dart through the air above the string, but near, and observing parallelism. This seems a pointless exercise and is annoying to practice at first; but the point is soon appreciated. It is useful; but, human nerves being what they are, five minutes are a good portion.

### Wrist Exercise

By JOHN J. O'BRIEN, JR.

THE IMPORTANCE of a strong and flexible wrist is often stressed in baseball, tennis, and oratory; but it is to this very pressing need in regard to good violin playing that our attention needs to be continually directed.

Time and again we see so many instances which serve to remind us of the need of a strong wrist in pitching a baseball; in effective handling of the tennis racket; for graceful gestures in oratory; that we readily accede its great importance in the technic of these respective fields, but we may not be so sure of its importance in violin playing.

Very early in the training of a violinist the teacher generally endeavors to explain to the student the very great need of a strong yet flexible wrist in the proper execution of good bowing. Perhaps the reader remembers the unusual weakness experienced when he first began to correct any defect as to stiffness of the wrist in bowing.

Later, when the student becomes so proficient in the first position that the teacher thinks he is ready to do the work of the other positions, the student may begin to feel the effect of a weak wrist of the left hand. This may assert itself, especially

For Aims 3, 4, 5, divide the bow stick with chalk marks into eight equal sections. Practice sustained whole bows with the metronome set at 60; first, four ticks to a section, then, later, eight. This is, of course, the old and universal "spun-tones" practice for tone, for Aims 3 and 5, in fact. The idea of the eight marked sections, however, is not usually advised. With this addition Aim 4 is cared for.

### Element B—String Crossing

MATERIAL SUGGESTED: two exercises by Capet\*, the second with some variants by the same master. The student can invent further variants.

All four are to be practiced slowly; and then at increasing speeds until this is attained

Then take up this exercise

(Continued on Next Page)

when playing for the first times in the fourth, fifth, sixth and higher positions on the G string.

The frequent occurrence of experiences identical to these, or much the same, must have caused some thought to many sincere teachers and students. While the author does not claim to have found a "cure all" for this trouble the exercises here suggested may help, or at least provide an incentive for other experiments along this line.

Relax the arms at the sides, as much as possible; then extend the arms and hands from the elbow and flip them up and down for a short while. Then again relax the arms at the sides. Extend the arms from the elbows again and flip them from side to side. In both these exercises the wrist and fingers should be as limp as possible.

Now take the relaxed arms and hands and clench and unclench the hands a few times. In this exercise the hand should be drawn into a tight fist. Now take the hands, clench them into fists, and move them at the wrists in a circular motion.

A few minutes each day, devoted to the above exercises, or similar ones adapted to the students demands, should prove to be very beneficial.

with its variants.

Further useful variants can be made by shifting the slur onward, thus

Practice all the above in different, definite bow sections.

Observe 1. When practicing Exercise 2, that the bow, while on the middle string, tilts gradually on successive notes towards the string on which it is going to play next. To this end, practice sounding the last note on one string with the first note on the next; the one fading out as the other swells in; 2. bow division, consequently Aim 4; 3. that the bow continues to move laterally as well as to tilt at the moment of crossing.

The practice of Element *b* does not require the Spartan exclusiveness of *a*. On the other hand, results are not so quickly apparent. Fifteen to twenty minutes a day

are enough. In six to ten weeks great suppleness should have been acquired.

### Element C—Short Détaché

MATERIAL: SAME AS for *a*, plus exercises of the *moto perpetuo* type, such as Kreutzer, No. 2, and other similar exercises.

To practice this, place the bow on the string at the third eighth. Play each note with a marked inflection of the bow stick, using very little bow (one inch or less) at slow tempo (M. M. J = 72).

The inflection, making a strong, supple accent, occurs *after* the bow has started moving. There is thus no hardness, no click. Movement is almost as much an up and down one as sidewise.

Preliminary exercise

each stroke at most two inches.

Later, the same work should be done at higher speed for the right hand, each note being repeated in the fourth eighth of the bow. Later still, similar work with each note repeated three or four times in the fourth and fifth eighths of the bow. With repeated notes conscious accents are abandoned—the speed is too great. Be sure that there is a spongy, cushiony inflection; also that the wrist is never rigid and is well relaxed between accents.

This work will lead to a true *spiccato*; only do not try to hasten it. Let it develop gradually.

\*From "La Technique Supérieure de L'Archet," by Lucien Capet, published by Maurice Senart, Paris.

## A Cork Helps the Adult Beginner in Violin

By MARY E. McVEY

THE ADULT, who wishes to learn the violin, needs all the encouragement possible. For this reason, many modern methods, unlike the old ones which alternated exercises on major and minor seconds, thirds, and so on, stress the importance of continued practice on identical diatonic progressions. For the first lessons, they include a variety of tunes and exercises based upon the four major tetrachords, consisting of two whole steps and a half, which may be played with the open string and the first three fingers of the left hand on each string.

These four tetrachords which form three complete major scales—G, D, and A—are the basis for a wealth of tuneful material which may be played with identical finger spacing for each string. Familiar tunes are especially valuable as an aid to the student, as he "learns to listen."

The beginning student often has trouble with the third of the major tetrachord, as he is apt to play it flat. A cork, measuring from one-half inch to three-quarters of an inch at the larger end, inserted at the

knuckles between the first and second fingers of the left hand, is a helpful device for the mastery of this particular problem in intonation as it will help to keep the second finger at the correct distance from the first, to play a major second, or whole step. The cork should be used in all practicing—bowing on open strings, tetrachords, five-note scales on each string employing the fourth finger, complete scales, other exercises, and "pieces"; until the finger position or "spacing" is muscularly fixed, so that the fingers automatically fall upon any string for its particular major tetrachord.

When the student starts work in other keys, such as F, C, and B-flat, he will merely need to allow the second finger to move closer to the first for the "low" position of the third tone of each tetrachord, and so on, for other lower intervals. While he is learning and developing his ability to judge intonation, he needs this muscular mastery of a particular practical diatonic progression from which he can locate any other diatonic or chromatic interval.

Students, who have used the cork device as an aid in learning the violin, have found it a time saver, and therefore, have been encouraged to continue their study.

### When Ysaÿe Stopped

The famous Spanish born piano virtuoso, Alberto Jonás, whose active life has taken him to all parts of the musical world, once heard in Brussels a concert played by the noted French pianist, Pugno, and the Belgian violinist, Ysaÿe. Ysaÿe stopped in the middle of a passage while the pianist was playing, stooped down, apparently picked up some small object from the floor, walked to the wings and, after a few seconds, returned to play.

"What happened?" questioned Jonás, after the concert.

"Nothing happened," calmly replied Ysaÿe. "I just forgot and I went back of the wings to look at the notes."

# SUMMER COURSES

Begin JUNE 27th

Combine Vacation and Study in Cool, Lake-side Chicago

There's still time to enroll for Sherwood's low cost summer courses! Join the hundreds of ambitious students and teachers who come to study under Sherwood's artist teachers and enjoy the varied recreational and cultural opportunities of this resort-metropolis. Chicago's sandy beaches, parks and playgrounds invite to all land and water sports; there are also many beautiful theaters, art galleries, museums, performances of the world's finest music "under the stars" at Ravinia and in Grant Park.

Special short-term courses in 50 subjects, including piano, violin, cello, voice, organ, theory, composition, public school music, conducting, dramatic art. Accredited. Write today for catalog and all-expense estimate.

410 S. Michigan Ave., Chicago, Ill.

Institutional Member of the National Association of Schools of Music.

## VIOLIN QUESTIONS *Answered*

By ROBERT BRAINE

No questions will be answered in THE ETUDE unless accompanied by the full name  
and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written  
descriptions, photographs and labels of old violins. On the basis of these, the writers  
ask us to tell them if the violins are genuine, and their value. We regret to say  
that this is impossible. The actual violin must be examined. The great majority  
of labels in violins are counterfeit and no indication of the real maker. We advise  
the owner of a supposed valuable old violin to take or send it to a reputable ex-  
pert or dealer in such instruments. The addresses of such dealers can be obtained  
from the advertising columns of The Etude and other musical publications.)

### An Ambitious Student

M. L.—Honolulu. 1. Starting at the age of eight, and having studied the violin for four years, you have done well in being able to play the "Concerto in A Minor," by Accolay; that is, if you play it really well. Judging from your letter you seem to possess one of the most valuable requisites for success in music—that is, a great love and enthusiasm for the art. Without love for music, no one can hope to get very far. 2. You seem to wish to become a professional musician. Your first step should be to ascertain if you have great talent. Eminent violinists occasionally visit Honolulu. When they do, you should visit them, and ask them to hear you play. Then ask them if they think you have sufficient talent to become a professional. A really good musician will advise you honestly. 3. I am sorry your parents disapprove of your studying music. Having given you four years of lessons it may be they take more interest in your music than you think. 4. The best way to become a symphony violinist is to enter a first rate conservatory of music in one of the large cities, New York, Philadelphia, Chicago or San Francisco. Choose one with a large pupil's orchestra, which studies symphonies and other important works. When you are sufficiently advanced, you will be qualified to apply for membership in a symphony orchestra.

5. You ask what good there is in popular music. Well, at the moment, about the only good I can think of, is that it enables a big army of jazz and swing musicians to make a living, principally on the radio and playing for dances. 6. You ask how you can get your parents to like good music. The best way is for you to play melodious, interesting music at home, and on the radio, and try to get your parents to attend good concerts. This often has the desired effect.

### An Interesting Anecdote

R. T.—It is astonishing what effect supreme violin playing has on the most primitive people. The anecdote you send is a striking case in point. It seems that Ole Bull, the famous Norwegian violinist, once visited Egypt. He wanted to see the Pyramids the first thing, and set off with a retinue of servants, and of course taking along his favorite violin. He climbed to a lofty shelf on one of the largest Pyramids, a Redoubt Arab carrying his violin. He braced himself firmly, then took his violin from the case, and commenced to play. Now, Egyptian, Bedouin and Oriental violin playing is very different from European; but the lovely tones of the great Norwegian struck a responsive chord in every breast. These sons of the desert called on "Allah, Allah" (their God) and could never get enough of the beautiful music. Ole Bull had to play until he was exhausted.

### Callus on the Finger

J. C. S.—Without examining your hand and your violin, I cannot decide definitely what causes the callus at the base of your forefinger. Probably it comes from holding the neck of the violin too tightly between the thumb and first finger. You might consult an experienced physician, and also a good violinist, about this trouble. Such things must be examined closely, often under the microscope, to decide definitely. As you live in New York state, and no doubt visit the city occasionally, you could have the examination made there.

### Baton and Podium

H. P. 1. The podium, in orchestral parlance, is the name of the platform, placed on the stage in front of an orchestra, on which the conduc-

tor stands while he conducts the playing. It is not high, but just enough so that all the musicians can see him, and the motions of the baton. 2. The baton (French word for stick) is the wand or stick with which the conductor of an orchestra or chorus beats time, thus securing uniformity of rhythm. The performers are expected to keep strict watch of the motions of the baton, so that they will play with great accuracy.

### The Maker Camilli

H. G.—The maker you no doubt refer to is Camillo Camilli who made violins in Mantua (a town in Italy), from 1714 to 1761. A well known authority describes him thus, "Fair worker, after the models of Amati and Stradivari."

### For a Left Handed Player

M. W.—In changing the violin for a left handed player, the sound post is changed to the left side of the violin, and the bass-bar to the right. Commencing at the right the strings would be restrung as follows, G-D-A-E. Thus, you see, everything would be in reverse order to that of a violin arranged for a right handed player. The top will have to be taken off the violin to change the bass-bar. Any good violin maker or repairer can do this for you. You will note that in this reverse order, the E string will lie at the left, with the sound post under it, and the G string at the right with the bass-bar under it. Of course the bridge also will be reversed.

### When a String Breaks

Y. T. K.—You ask why violinists and other performers on string instruments in an orchestra, seldom or never break strings during a performance. As a matter of fact this often happens, although not so frequently as one would expect. For one thing, performers on string instruments use the greatest care in the selection of their strings. They examine them very carefully before a performance, and if a string is frayed or imperfect, they remove it, and replace it with one in which there are no defects. In a concert performance of the New York Philharmonic-Symphony Orchestra on January 22, of this year, Nathan Milstein, the famous Russian violinist, was playing the very difficult "Viola Concerto" by Tchaikowsky. Suddenly, in one of the most difficult technical passages, a string snapped. The audience gasped. The hearers foresaw a long wait, until the difficulty could be adjusted. They did not, however, count on the versatility of the modern orchestral performer. The concertmaster of the orchestra quietly handed his own violin to Mr. Milstein, who took it, and resumed his playing, as if nothing had happened. The concertmaster borrowed another violin from one of the orchestral players and the solo and orchestral accompaniment went on as if nothing had happened. The audience gave Mr. Milstein an ovation, and marveled that a breaking string failed to mar one of the most difficult concertos ever written.

### The Most Famous Violin

J. H.—It is generally believed that the most famous violin in existence is the Stradivarius violin, named, "Le Messie (The Messiah)." Who named it, I do not know. It is supposed to be worth \$50,000, and is generally considered as the masterpiece of Stradivarius. The color is a light orange, and the tone is of tremendous power, and exquisite quality. It has been owned by many famous violinists and was especially prized by the great violinist, August Wilhelm, who used it in practically all his concerts.

## FRETTED INSTRUMENTS DEPARTMENT

## The Mandolin

By GEORGE C. KRICK

"WHAT METHODS AND EXERCISES do you recommend to a young student, seventeen years of age, anxious to become a real mandolinist with ability to play all the high grade mandolin solos especially written for this instrument by the prominent classic and modern composers." This paragraph from a recent letter addressed to this department shows that we still have players that take the mandolin seriously, but are somewhat in the dark as to its literature.

It is a deplorable fact that many people have only a vague idea of the artistic possibilities of this romantic instrument, being of the opinion that it is limited to the performance of popular melodies, marches or serenades; and while it is true that, on account of its fretted fingerboard, a fair amount of technical proficiency in the first position may be acquired in a comparatively short time, this should be considered only a beginning. An ambitious student, wishing to acquaint himself with all the beautiful music composed for the mandolin, will find this a most interesting task, and, having reached his goal, may well be proud of his achievement.

In commencing the study of instrumental music, it is most essential to have a good instrument. You cannot get a good tone from an inferior, cheaply constructed mandolin; and the production of a beautiful tone should be the aim of the student, right from the beginning. The most widely used American mandolin to-day is the flat model with carved top and back; while in most European countries the so called classic model, pear shaped, is still the favorite. There is a decided difference in tone quality, that of the classic type having more of a piercing, soprano voice, while the flat model reminds one of a contralto, the tone round and full with good carrying power. A fair instrument may be purchased for twenty-five to fifty dollars, an excellent one for seventy-five or a hundred dollars, and the cost of superior instruments is anywhere from one hundred dollars upwards.

Mandolin "Methods," treating all phases of mandolin technic, starting with the fundamentals and leading in progressive stages to the advanced courses, are now published and we shall mention here a few of the well known ones. Amongst those by foreign writers the "Methods" of Branzoli, Christofaro, Munier and Calace have enjoyed great popularity. The "Mandolin Schools" by Pettine, four Books; Bickford, four Books; Odell, three Books; Stahl, two Books, and others, are published in this country and contain splendid study material.

As each composer of teaching material for the mandolin presents his own ideas and experiences in a different way from others, it is advisable to incorporate in one's library every book of instruction by a recognized authority and thereby gain a most comprehensive knowledge of the subject.

Along with these books, at the proper time and in progressive order, it is imperative to make an exhaustive study of the "Concert Etudes" in three volumes by Jules Cottin, "La Scioglidita" (velocity exercises), in four volumes by Carlo Munier, together with "Grandi Studi di Concerti Op. 200," by the same writer; also "Etudes," by Bertucci and "Preludes and Etudes," by Raffaele Calace. Most of the "Methods" mentioned contain chapters deal-

ing with the "duo style" of mandolin playing, but these should be supplemented with the special courses on duo playing as contained in the "Duo Methods" by Pettine and Stauffer, and others.

This phase of mandolin technic is one of the most effective characteristics of the instrument and requires a great deal of preparatory practice. One must be thoroughly familiar with the entire fingerboard, and must have a complete knowledge of all chords in the principal positions, and a perfect control of the plectrum.

Much time and great care should be given to the right hand fingers and wrist, in the early development of the various plectrum movements. A good tone, a smooth and even tremolo, speed in scale passages; all these depend on the proper manipulation of the plectrum. Nearly all mandolin authorities now seem to agree that the curved wrist motion of the right hand is preferable, as in this position the hand and wrist are entirely relaxed. It goes without saying that the plectrum should be carefully selected, that it is of sufficient flexibility, beveled on both sides, and that it is kept always in good playing condition. When the student is sufficiently advanced to begin building up a concert repertoire, each number should be carefully analyzed, practiced and memorized, before beginning the next one. He should not make the mistake of selecting numbers too difficult for his stage of technical development. There are numerous concert solos of medium difficulty by Pettine, Mezzacapo, Arienzo, La Scala, Leonardi, Marucelli, Munier, and Calace; these to be followed later by the more ambitious compositions of these masters; and finally the mandolin concertos by Pettine, Calace, Munier and Ranieri.

We are putting the emphasis on original mandolin compositions written by masters, who are well aware not only of all the possibilities of the instrument but also of its limitations; as we believe that its artistic future is bound up with the music written for it.

It is also permissible and, from the standpoint of further musical development, advisable to delve into the violin literature; as many classic and so called semiclassical compositions may be adapted to the mandolin. However one should make these selections rather judiciously, as something more than technical proficiency is necessary to render a musical composition to the satisfaction of listeners. To play the famous Mendelssohn "Concerto" on the mandolin, before an audience that perhaps has been accustomed to hear it played by some of the outstanding violin virtuosos, is sheer folly and undoubtedly would be judged primarily as a technical feat. There is quite a supply of fine mandolin music available to the ambitious soloist, music that will agreeably surprise an audience by its sheer beauty and novelty of invention.

## Mandolin Questions Answered

Q. What instrumentation do you suggest for a group of four or five players, also for one of about twenty, most of whom play mandolins.—W. M., Birmingham, Alabama.

A. The so-called "Romantic Quartet" is made up of first and second mandolins, mandola and guitar. The "Classic Quartet" substitutes a mandocello for guitar. Adding a mandobass will give you the ideal quintet in either case. A great variety of excellent music has been published for these combinations.

An orchestra of twenty players should have six first mandolins, four second mandolins, three mandolas, two mandocellos, four guitars and one mandobass. For the sake of variety, two tenor banjos may occasionally be substituted for two of the low voiced instruments.

# BANDS AND ORCHESTRAS

## The Responsibilities of a Cornet Soloist

(Continued from Page 376)

ou. Maintain this sort of diversion to the last moment, even if you may be a few seconds late; then walk out on the stage calmly and naturally. Smile in response to the applause, as though you are silently thanking them for the cordial greeting. Do not appear stiff or rigid before commencing your solo. Glance smilingly to the accompanist or to the leader of the orchestra or band. Have full confidence in yourself and in your ability, and his will react on your listeners. Remember that they are your friends, and have no thought of any fault finding pessimist's presence.

Keep a natural posture throughout the performance, and put across the idea that you are enjoying the entertainment quite as much as those present in the audience. Bring the solo to a brilliant finish, with a happy smile, so that your listeners will demand another solo. For an encore, be sure to select something to give a complete contrast to the first number, and in a different key. This has a psychologically good effect upon the audience, and frequently wins a call for a second encore or more. This spells success, and means a great deal of happiness and satisfaction to yourself and, incidentally, a box-office raise. The study of dramatics and elocution is a great help to the soloist, teaching him to be free and easy when standing, and not awkward and stiff.

### Interpretation

THE CULTURAL DEMAND made of a real artist, whether an instrumentalist or a singer, is interpretation, and this brings out every resource of the musician who has really mastered all the elements pertaining to the proper practice for control.

Every composition has a title, usually indicative of the style of the number to be played. Study the name of a selection, no matter in which style it is written. Select a solo with a florid bit of "fireworks," with

all sorts of cadenzas, variations, double and triple articulations, astounding technic, and with a high brilliant finish! Imagine for yourself a sort of story for such a number, after having learned it properly. Do not just play notes. Use inflection of tone with all sorts of shadings. When you play a solo you are making a declamation—telling the audience a story through music. You should be able to sway an audience of varying minds, just as some great orator would. When this is accomplished, success will crown your efforts.

Other styles of solos should be carefully studied, especially operatic arias. If possible, attend the opera from which the aria is selected, witness the whole production, note the action on the stage, and hear the artists sing the aria. Then study the interpretation you wish to give it.

Study songs, ballads and romanzas, each different from the other, and with a different story to tell, according to the sentiment of each. Learn the words perfectly, so as to give a rendition that reflects the proper sentiment, and interpret them just as a great artist would. Sing this through the cornet, as it were, with all the emotion possible, and you will enthrall your listeners.

It is difficult to see how anyone can play a song musically, if the sentiment is not observed. The result, otherwise, is just a succession of cold brass notes coming from the bell of an unresponsive cornet. Play naturally, with expression that will please all who hear you. Then you yourself will have pleasure, and you will love to practice, and love your work.

It is with these conditions of perfect health, perfect practice, progressive personality, and a really artistic state of mind, that you can become an outstanding artist throughout the whole world. Each player has an equal chance with the other, if he pays the same price in conscientious preparation and study.

## "C" in Music

By GEORGE B. THORNTON

WE HAVE HEARD much about the note C, till we sometimes wonder why it is not A that causes all the commotion, A being the first letter of the alphabet. Then it has been also observed that a certain C is made "open" on three-valve instruments, such as cornets and other horns; and that, when in unison with a note on the piano, it determines the character name of the instrument, such as "B-flat," "E-flat," and so on. The following example will show how this determination is made, the notes shown here being in unison:

### Ex. 1

When C on the instruments named above sounds like B-flat on the piano, the instrument is said to be "in B-flat." Note the change when the instrument is "in A":

### Ex. 2

When C on the instruments named above

sounds like A on the piano, the instrument is said to be "in A," and would play "in A" if by so doing a better key would be provided. It will be observed that the soprano saxophone was excluded in Example 2, there being no saxophones "in A."

The examples following will illustrate the unison notes of some of the other instruments:

### Ex. 3

### Ex. 4

These examples show why cornets, clarinets, soprano saxophones, trombones, and baritones are called "B-flat instruments"; also why alto horns, other saxophones, and basses are called "E-flat instruments." It will be observed that the "C" was the governing note; and, if for no other reason than this, "C" would be a note of primal importance in music.

SEVENTY-SECOND YEAR

# VOICE QUESTIONS *Answered*

By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

### The Young Tenor

Q. 1. I am supposed to be a tenor although my range is only from B on the second line of the bass staff to G on the third line above it; and I am sixteen years old. Am I a tenor?

2. Can the voice be built higher by vocal training?

3. Is sixteen too young to start singing lessons?

4. Are pieces like La Danza by Rossini, and Celeste Aida too difficult for the untrained voice?

5. What is the range of a lyric tenor? Of a dramatic tenor?

6. Is it right to imitate other singers?

7. How long should a singer study the piano? Is five years enough?

8. What operas will John Carter appear in at the Metropolitan Opera House this winter?

—J. M.

A. 1. Tone quality determines the classification of a voice almost as much as range. If your voice has a real tenor quality, you are a tenor in spite of its limits.

2. A well schooled singing teacher, who will teach you how to stand, how to breathe, how to free your throat, jaw and tongue, how to form your vowels and consonants, will, if you seriously practice, in time help you to increase the range of your voice.

3. At sixteen the tenor is seldom entirely developed. Consult the best singing teacher in your neighborhood, and abide by his advice.

4. La Danza by Rossini and Verdi's Celeste Aida are both extremely difficult pieces of music. Until you are older and more experienced it would be safer to content yourself with easier and simpler songs.

5. Range: Lyric Tenor, C on the second space of the bass staff to B-flat on the third line of the treble clef (or fourth added line above the bass; Dramatic Tenor, range almost the same, but the tone quality is heavier and thicker.

6. It will do you no harm to imitate good singers with voices similar to your own. Be careful to imitate their good points and ignore their faults. As soon as possible develop your own individuality.

7. Study of the piano is always an aid to a singer, and most singers are not musicians enough. How long one should study the piano is a matter of opinion. However, a singer can never know too much about music.

8. Write directly to Mr. Edward Johnson, General Manager of the Metropolitan Opera Company, New York City, enclosing a stamped and self-addressed envelope; and perhaps he will reply to you.

### The Singer of Fifty

Q. I sang in a choir as a girl but never had a chance to study until now. I am fifty, I have a mezzo-soprano voice and I sing in the Mother's Choir. It embarrasses me, because I cannot make my voice sound beautiful and full in the way it should. Am I too old? I am in good health, though fairly stout. Please recommend some books for me, and tell me where to get them.—Mrs. W. L. R.

A. It would not be quite honest to tell you that a woman of fifty can hope to have as good a voice or to improve as rapidly as a girl of twenty. But, at fifty, and if she is in good health, she still has a few of her singing years left, and she should lose no time in taking advantage of them. Perhaps your embarrassment when you sing comes from fear, an inferiority complex the doctors call it. Sing then as often and as boldly as you can, and do not forget to practice every day.

The publishers of THE ETUDE will get for you and send you any books you desire. I would suggest Shakespeare's "Plain words on Singing"; Shaw and Lindsay's "Educational Vocal Technique"; and my small book, "What the Vocal Student Should Know."

### The Letter R—to Roll or Not to Roll

Q. I should like to have your opinion as to the correct diction in regard to the singing and pronouncing of the letter R. It seems to be the fashion for vocalists in Canada to roll the R on every conceivable occasion. The R is rolled in the middle of words such as harmony, mercies, and even in heart and Lord. It seems to me that the unnecessary rolling of the R is very much overdone and often a gratuitous display of ignorance rather than an evidence of correct singing. Some time ago I dared to ask Sir E. C. Bairstow's opinion; and his view that the R should be rolled only before vowels and not before consonants is certainly interesting and instructive.

I must confess, as an Englishman of wide experience in choir directing, over a long period of years, that the abuse of this rolling has disgusted me almost beyond endurance.

—T. A. M.

A. There are certainly two ways of sounding the consonant R in English. First, the trilled or rolled R, in the production of which the tongue rolls or trills in the front part of the mouth; and Second, the sturred or burred R, in which the motion of the tongue is much less pronounced and, as a consequence, the sound of the R is not nearly so long nor so vigorous. I know of no rule which will meet every case. Sir E. C. Bairstow's rule that the rolled R should occur only before a vowel and never before a consonant is an excellent one, as you point out; but it does not go quite far enough. Perhaps to it might be added that

the meaning of the word and the smoothness or the roughness of the musical phrase must also be taken into consideration. For example in the songs *Rolling in Foaming Billows*, by Haydn, or *Revenge, Timotheus Cris*, by Handel, the rolled R seems to be extremely effective and dramatic. Without it the musical phrase loses accent and virility. On the contrary, to roll the first R in Schumann's setting of Tom Moore's lovely poem, *Row Gently Here My Gondolier*, or the first R in Spohr's verlegato song, *Rose Softly Blooming*, would spoil the beauty of the verse and upset the serenity of the music. And yet the R must be very clearly audible, or the effect would be *Woe Gently Here*, or *Woe Softly Blooming*, which would be quite ludicrous. Again, in a smooth tender phrase, such as *Read Me a Lovely Poem*, the rolled R would be simply unthinkable. "Our Fatherrrrr which arrrrrt in heaven," would not sound very reverent, nor would "Lorrrd nor "For Thy tenderrr merries sake," using the strongly rolled R in each instance. The rarest of all things, "Common Sense," as well as rule, must be our guide; and, if we combine them, we will not go very far astray.

### Is One too Old at Thirty?

Q. I am thirty years of age and have taken singing lessons six months. Since childhood have sung as an alto in a choir, but my teacher insists I am a soprano. My voice has grown much larger, but I fear the tones above F yet I have a wide range when I vocalize. When singing in the alto range I am at ease, but uncomfortable when I sing soprano. If I am too old I would rather devote myself to the piano.—M. Z.

A. Thirty years of age is rather late to start singing lessons; you should have commenced when you first joined the choir. There is no use in crying over spilled milk. Star right away, if you really want to do anything.

Perhaps you are nervous when you sing the upper tones and stiffen when you sing them. As you are able to vocalize upon these tones it is likely that your tongue, throat, and jaw actions are too forceful and hard, especially when you form vowels and consonants. You live in the greatest city in America, famous for the number and skill of its singing teachers. Have an audition with one of these well known men, and abide by his advice.

### The Poor but Ambitious Singer

Q. On Sunday, April 25th, 1935, in the afternoon at the age of forty, God called me to sing for Him. Since then I have been struggling along, trying to take voice lessons, which I realize I need very much in order that I may advance quickly, so that Christ can put His message over through me. I cannot understand why God called a poor uneducated woman; yet James 2-5 tells us, "Hath not God chosen the poor of this world, rich in faith?" Do you know of any person of wealth or any strong organization whom you think might give to the poor to send me to school? From the depth of my heart, I thank you, praying that the spirit of Christ shall lead you.—Mrs. C. T.

A. Anyone who has such a sincere and earnest desire to sing, and who feels herself divinely inspired to deliver the sacred message through singing, should be encouraged in every way possible. Have you no generous persons of wealth and no strong charitable organizations in your own city and your own state? It is scarcely within the province of the Editor of the Voice Questions to find such a person or such an organization for you. Believe me, when I tell you that we sympathize deeply with your ambition and wish you every sort of good luck and success.

### Catarrh and Inflamed Turbinates

Q. I have been told by a physician that my turbinates are unusually large and that my nose should be operated upon. Since I have been studying singing, I have been wondering if their largeness could be responsible for some of my vocal difficulties. If I get a tone that seems to flow through my nose, the tone is clear and has timbre; but I feel a pressure inside my nose, which lingers for hours. Do you think this is caused by my enlarged turbinates? Should they be lessened by operation or shrunk by cocaine or ephedrine? I also am troubled by catarrh, which interferes with my singing. What can I do to cure myself of this condition?—J. G.

A. I think you put the cart before the horse. It is the catarrh which has caused the enlarged turbinates, not the enlarged turbinates, which causes the catarrh. By this time the entire mucous membrane which lines the cavities of the nose and the frontal sinuses is probably involved. Have you sinusitis? Has the continual dropping of mucus, which takes place while you sleep, made the vocal cords yellow and interfered with the resilience of both cords and the muscles that move them? It would be dangerous for you to try to cure yourself. Nor do I believe that the application of either cocaine or ephedrine would bring you more than temporary relief. Go to the most famous throat doctor in your neighborhood and have him treat you. It will take some time and cost you some money and some inconvenience; but it will be worth it. You can sincerely hope to sing well with your throat and nose in their present condition.

# QUESTIONS and ANSWERS

A Music Information Service Department  
Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College  
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## To Count Or Not to Count.

Q. My teacher insists on my counting out loud and I count to myself all of the time. Do you think it is necessary to count out loud, or pat your foot?—M. D.

A. Counting aloud is a time honored device for enabling an elementary musician to keep his rhythm steady. It is done mostly by pianists, for the player on a wind or a stringed instrument accomplishes the same end by beating time with his foot. The singer often "beats time" with his hand, but the pianist needs both his hands and his feet in his business, so his only resource is to use his throat muscles.

Rhythm is the movement in music, and rhythmic training always involves some kind of a muscular movement. This is true even in the case of that most elaborate of all rhythm training systems, "Dalcroze Eurhythmics," the fundamental principle of which involves expression of the music by means of muscular movements.

Your teacher is right in asking you to count at the beginning of your study, while your rhythm is not yet steady. But if he asks you to continue to count when you can play steadily without this device, he is like the doctor who asks his patient to continue to use a crutch long after his lame knee has been completely healed.

## Clarinet Question.

Q. Could you let me know of any books dealing with clarinet playing, tone, and so on, and also any studies that would help me to improve my playing.—R. W. P.

A. "The Langenus Clarinet Method, Part I," is a very fine book for building tone, attack, phrasing and other musicianly qualities. The explanations are fine and the completeness of fingerings and examples of where to use them are unequalled perhaps in any other book.

For advanced etudes and duets I highly recommend "Virtuoso Studies and Duets" by Langenus.

A fine book of medium difficult etudes of both slow and lively character is "Thirty Two Etudes" by Rose. Any of these books may be procured through the publishers of THE ETUDE.

## A Queer Sign—What Does It Mean?

Q. What does "zu 2" mean when placed over a note? It occurs throughout Tschalkowsky's "Fifth Symphony," that is, in the conductor's score.—R. A. J.

A. I wonder whether you have not misread this abbreviation. I have gone carefully through the Tschalkowsky score and I do not find any such sign. However, there are many places where Tschalkowsky writes a2 or a3, or 1 1/2 a2 to indicate that two instruments, as for example two flutes, are to double on a certain part. Sometimes he writes a3 and this (in the flute part) would indicate that all three flutes are to play in unison.

## Why Transposing Instruments?

Q. What is the reason of having instruments in various pitches? For instance the clarinet in B-flat, saxophone in E-flat, cornet in A, and so on. Is it only for quality of tone? Why are we taught the wrong names to notes on such instruments that are not in C? When we play, on the saxophone, a note with the middle finger of the left hand, why is it called C (third space) when in reality it is E-flat (fourth space)?—T. K. H., U. S. S. R.

A. The matter of transposing instruments has always troubled the student of music. Briefly, a transposing instrument is one that plays different pitches from those printed in the score. Thus a clarinet in B-flat actually sounds pitches a whole step lower than the notes indicate, a clarinet in E-flat sounds pitches a minor third higher, a horn in F sounds pitches a perfect fifth lower, and so on.

The two reasons that are given for the existence of transposing instruments are 1. that a certain size of instrument is the ideal, so far as tone quality is concerned—a clarinet in B-flat, for instance, sounding much better than a clarinet in C (just as a full sized violin sounds better than one of three-quarter size); and 2. that writing for a transposing instrument often makes it possible to write in an easier key, as for example when the composition is in E-flat major and the clarinet part is written in F.

## How to Play Bach.

Q. Please send me information regarding literature giving analyses and suggestions as to playing the "Preludes and Fugues" of Bach. Also inform me as to the most reliable edition of Bach.—O. H. W.

A. There are many books that give the analyses of the "Preludes and Fugues" of Bach. A good one is that of Ebenezer Prout: "43. S. Bach's Forty-Eight Preludes and Fugues." You can get this book through the publishers of THE ETUDE. However, none of these books give instructions as to playing them. The late Mr. Samuels, English pianist and great interpreter of Bach, was once asked to give instructions on playing Bach. He said, "I can tell you how to play Bach in two words—sing it." This is very applicable to this particular fugue. A short version has been found and it is thought that Bach used it as a lesson in cantabile playing.

## What Is L'istesso Tempo; and What Is An Octave?

Q. 1. In the last line of Caprice Viennois by Fritz Kreisler, there is this direction, L'istesso Tempo (J = J.). Does this mean to divide the group of four J into a group of six J and keep it in the time of the preceding two measures in three-eight Vivo?

2. Please give me the correct definition of an octave? I have always used the following: An octave is the interval between a given letter and its repetition in an ascending or descending series. It includes eight staff degrees. One of my pupils used this in school, but her teacher said it was wrong, giving this instead: "If one note has eight vibrations, the same note above has sixteen vibrations." This is true, but suppose the pupil does not know the law of string vibration?—S. K.

A. 1. The term L'istesso Tempo is used when the same basic tempo or bar beat is to continue even though a different kind of note is used to represent the beat. The most common change of this kind is when six-eight changes to two-four, or vice versa. In this case the beat note is either J in six-eight, but J in two-four, or the reverse, the direction L'istesso Tempo indicating that the basic tempo or rate of speed of beats is to remain the same, regardless of the change in notes filling these beats.

2. Both answers are essentially correct, yours considering the musician's viewpoint and the other teacher's, the physics or acoustics one. The Elson Music Dictionary defines an octave as an interval of eight diatonic sounds, or degrees.

## Syllables for Chromatic Tones.

Q. 1. What are the names given to the notes in sight singing, both natural, sharpened, and flattened, that is for the movable do system?

2. Also the accents in the following kinds of time: nine-eight, twelve-eight and three-two.

3. Can you explain syncopation to me in these times: four-four, three-four, six-eight, two-four and four-two?

4. Can you explain what is meant by mingling of double and triple divisions of the beat?—T. K.

A. 1. The syllables usually sung to the ascending and descending chromatic scale are: DO—DI—RE—MI—FA—SO—LA—TI—DO—TI—LA—SO—FA—MI—ME—RE—RA—DO, with the vowels sounded as in the Italian language—ah—aye, ee, oh, oo.

2. In nine-eight the accents are on one, four and seven; in twelve-eight they fall on one, four, seven and ten. Three-two measure has only one accent, on the first count.

3. Syncopation always involves the accentuation of a beat or a part of a beat that is ordinarily not accented. This principle is the same in all kinds of measures.

4. In four-four time, a beat may be divided into 1/2 or 3/4; and, if you sometimes have one and sometimes the other, this is a mingling of duple and triple.

## How to Pronounce Pianist

Q. 1. Must the word "pianist" be pronounced "pee-anist" with the accent entirely on the first syllable, or is a more conservative pronunciation all right?

2. Is there necessarily a different pronunciation for a lady or gentleman pianist?—M. E.

A. 1. Either pronunciation is correct, but the majority of people accent the second syllable.

2. No.

## Information About the Dulcimer.

I noticed in the February issue of THE ETUDE your answer to E. G. W.'s question about the dulcimer. I would suggest that this party write to Mr. Eric Torrey of Allegan, Michigan, who has manufactured a number of these instruments and is familiar with the playing of one at the present time. Mr. Torrey and his wife played, several years ago, for the pleasure of Mr. Ford. Mrs. Torrey has played the dulcimer for fifty years.—W. H. C.

## SCHMITZ MASTER CLASSES

June 19 to July 29

E. ROBERT SCHMITZ

World Famous Pianist and Teacher

Author of the book, "CAPTURE OF INSPIRATION"

A great artist who combines the finest classical traditions and the best contemporary achievements.

MASTER CLASSES in Piano Technique and Interpretation.

Private lessons for adequately prepared students, teachers, and artists.

Address the Director of the Summer Session.

COLLEGE OF THE HOLY NAMES

LAKE MERRITT, OAKLAND, CALIF.

# OBERLIN

## CONSERVATORY OF MUSIC

A DIVISION OF OBERLIN COLLEGE

Graduates are prominent in the musical world as concert artists, music teachers and supervisors in public and private schools, directors of conservatories, deans of college music departments.

Thorough instruction in all branches of music . . . 46 specialist teachers . . . excellent equipment (over 200 practice rooms, 23 modern organs, including two large recital instruments) . . . inspiring concerts by world-famous musicians and organizations . . . weekly student recitals . . . for these reasons Oberlin Conservatory attracts talented and ambitious students from 39 states and 6 foreign countries. Degrees: Bachelor of Music, Bachelor of School Music, and Bachelor of Arts, with major in music. Oberlin College, on the same campus, makes possible excellent combination courses.

"Let us rejoice and yet ponder over the new day the radio is ushering in, not a new kind of music, but a new opportunity for all to hear stimulating works both simple and complex."—Jessie Stillman Kelley.

# WHERE SHALL I GO TO STUDY?

# How to Encourage a Child to Practice

(Continued from Page 411)

fifteen minute period should be inserted at noon and the remaining practice later in the day. If these periods are systematically arranged and maintained there will still be plenty of time for a child to have sufficient outdoor exercise and recreation.

Some mothers find it occasionally advisable to sit in the room while their children practice, so they can see if the teacher's instructions are being followed. At such

times it is well to remember that suggestions and criticisms are often necessary but encouragement is equally important.

All of this advice places much responsibility upon parents, if they wish their children to succeed in music. A solid partnership between parents and children must be formed and never dissolved until the children have reached the zenith of their parents' expectation.

## Mother Goose, Mus. Doc.

(Continued from Page 368)

*Polly F.* I am learning a beautiful new language. They call it the "Language of the Soul," but I call it *Music*. (Plays *Dream Song* by Mrs. R. R. Forman. Grade 2.)

*Jack.* I see you didn't bring your wife with you, Peter. Are you sure she will stay at home?

*Peter, the Pumpkin Eater.* I really did have a hard time keeping my wife at home, until I bought her a piano; but now my troubles are over. (Plays *The Big Bass Singer* by Walter Rolfe. Grade 1½.)

*Jack.* Oh, Georgy Porgey, won't you tell me how you came to kiss all those pretty girls? Did you like it?

*Georgy Porgey.* Even if I do like the girls, there is something else I like and that is *Music*. (Plays *Balloons in the Air* by Bertha R. Frick. Grade 3.)

*(Old Woman in a Shoe comes out of book followed by her children, from large to small, dressed alike in Dutch costumes. She counts them, fusses with their caps and dresses, gives a sigh and speaks.)*

*Old W.* It means hard work to care for so many children, but I brought them here to-night to show you what they have learned in one year.

*(As each one approaches the piano she calls)*

*Old W.* Now be sure to count. Watch that second measure. (Selection of pieces for the children may be made from list that follows this playlet.)

*Mother G.* Even Jack Horner has come out of his corner to meet you, Jack.

*Jack H.* I won't make a speech but just play my piece. (Plays *Pelican's Promenade* by William Baines. Grade 3.)

*Mother G.* Old King Cole has cheered us up many times. What are you going to do to-night?

*Old King Cole.* My Fiddlers Three are not with me to-night, so I shall have to entertain you myself. (Plays *Cheerfulness* by Daniel Rowe. Grade 2½.)

*Mother G.* The Queen of Hearts has left her tarts to travel through Musiland.

*Queen of H.* Mother Goose with her magic key unlocked the door to this wonderful Land of Music; and the more we travel and explore, the more we find new charms and beauties. (Plays *The Queen of Hearts* by Mari Paldi. Grade 2½.)

*Mother G.* Late again my Ten O'clock Scholar.

*Ten O'clock Scholar.* (Enters slowly, lazily yawns and speaks),

Always tired, always late,  
That is such a cruel fate.  
Teacher says that I must be  
Wide awake, but hully gee!  
All the world is topsy turvy  
If it thinks that I can hurry.  
But there is one thing I do,  
Which is not the least bit new;  
I can play, if I just try,  
A nice slow, gentle lullaby.

(Plays *Little Attic of Dreams* by Frank H. Grey. Grade 2.)

*Jack.* My, that's great. Mother Goose, I feel so happy and strong. I believe I could almost walk.

*Mother G.* That is the marvelous experience of everybody who really knows

music. It makes us forget our troubles, our weariness and pain; and for the time we enter an enchanted land full of good cheer and lovely dreams.

*Jack.* I'd like to try it myself if you'll help, Mother Goose. (Plays *The First Lesson* by C. W. Krogmann. Grade 1.)

*Jack.* Now, Mother Goose, it is your turn. Show us what you found in this enchanted country.

(Mother Goose plays *Swaying Daffodils* by A. R. Overlade. Grade 3½.)

*Mother G.* Little Mother, you have not said a word for a long time. What do you think of this great adventure of ours?

*Mother.* My heart is full of joy for this little boy. He has found a new interest, and through it I am expecting great things for his health, strength and happiness. These lines I once read express my thoughts:

*Music exalts each joy, allays each grief—  
Expels diseases, softens every pain.  
There's music in the sighing of a reed.  
There's music in the gushing of a rill.  
There's music in all things, if men had ears,  
Their earth is but the echo of the spheres.*

*Mother G.* My children, our work for to-night is finished. Let us now return to our home, inside the corner of our book, where we will wait for the call from other boys and girls, to whom we can bring our message of cheer and helpfulness.

(Finale March—*Spirit of the Hour* by Wallace A. Johnson. Grade 3½.)

*(As the march is played all the characters leave. The Ten O'clock Scholar, who has fallen asleep, awakens with a start and slowly follows the last one. Jack and his Mother silently watch their departure and then leave, with the crutches left behind.)*

\*\*\*\*\*

*Stokes Wonder Book of Mother Goose* will give suggestions for the various costumes.

## Other Appropriate Pieces Which May Be Used on This Program

- The Little White Lamb—A. Bennett. Gr. 1½.
- March of the Wee Folk—J. L. Gaynor. Gr. 2.
- The Winding Road (Right Hand Alone)—P. Bliss. Gr. 3.
- Hallowe'en—Cecil Burleigh. Gr. 3.
- The Frogs' Concert—F. B. DeLeone. Gr. 2½.
- The Giant and the Elf—A. W. Dortch. Gr. 2.
- Little Jack Horner—G. W. Hamer. Gr. 2.
- Jack and Jill—G. W. Hamer. Gr. 2.
- A Dream Journey—Marie Hobson. Gr. 1½.
- Toyland Parade—H. P. Hopkins. Gr. 1.
- Taffy Was a Welshman—C. Huerter. Gr. 2½.
- Puss in the Corner, Galop—W. A. Johnson. Gr. 2½.
- Little Lame Lucky—R. N. Kerr. Gr. 1.
- The Donkey Trot—C. F. Koehler. Gr. 3.
- The March Hare—Mari Paldi. Gr. 2½.
- The Jolly Clown—R. R. Peery. Gr. 2.
- The Witch Goes Riding—L. C. Rebe. Gr. 2½.
- The Clown—A. P. Risher. Gr. 2.
- Old Mother Hubbard—J. H. Rogers. Gr. 1.
- Tripping Along—A. A. Thompson. Gr. 1½.
- Little Miss Muffet—F. A. Williams. Gr. 2.

## PRIVATE TEACHERS (Western)

### Mr. and Mrs. Abby De Avirett

Teachers of Piano  
Telephone Whitney 7340  
Residence Studios, 267 South Arden Boulevard  
(Corner Third Street) Los Angeles, Calif.

### EDNA GUNNAR PETERSON

Concert Pianist—Artist Teacher  
229 So. Harvard Blvd. Los Angeles, Calif.  
FE. 2597

### LAZAR S. SAMOILOFF

Voice teacher of famous singers  
From rudiments to professional engagements  
Beginners accepted. Special teachers' courses  
610 So. Van Ness Ave., Los Angeles, Cal.

### ELIZABETH SIMPSON

Author of "Basic Pianoforte Technique"  
Teacher of Teachers, Coach of Young Artists.  
Pupils Prepared for Concert Work. Class Courses  
in Technique, Pianistic Interpretation, Normal  
Methods for Piano Teachers.  
609 Sutter Street, San Francisco, Cal.  
2833 Webster Street, Berkeley, Cal.

## PRIVATE TEACHERS (Mid-West)

### NINA BOLMAR

Teacher of voice  
Endorsed by L. S. Samoiloff  
612 Fine Arts Bldg. Chicago, Ill.  
Phone: Web. 4937

### ROY DAVID BROWN

Pianist and Teacher  
assistant and successor to Emil Liebling  
612 Fine Arts Building, Chicago, Illinois  
Telephone Webster 4937

### ELAINE DE SELLEM

Mezzo-Soprano  
Youthful voices developed. Mature voices  
rejuvenated  
Major Teacher of Voice  
American Conservatory Kimball Hall  
Chicago, Ill.

### RICHARD DE YOUNG

Teacher of Singing  
Teacher of many famous concert, radio and opera  
artists. Associated teachers in languages, har-  
mony, solfège, classes in operatic repertoire under  
famous conductor. Phone: Delaware 2338.  
721 North Michigan Ave. Chicago, Ill.

## PRIVATE TEACHERS (Eastern)

### BARBARA BLATHERWICK

Recital - Coloratura Soprano - Opera  
Teacher of Voice  
The Italian bel canto, founded on the  
principles of Manuel Garcia  
43 Fifth Avenue New York Tel.: GRamercy 5-6392

### KATE S. CHITTENDEN

Pianoforte — Repertory — Appreciation  
THE WYOMING, 853 7th AVE.,  
NEW YORK

### (Louis) (Betsy) DORNAY — CULP

Only teachers of Lucille Manners  
Cities Service Radio Star  
344 West 72 St. New York City  
Tel.: Trafalgar 7-4999

### EVERETT ALBERT ENGSTROM

Voice Consultant—Teacher of Singing  
Correct and Corrective Voice Training  
(Special Course for Chorus and Choir Directors)  
Steinway Hall—New York City  
Editor: Voice Dept., Music Teachers Review. Pres.  
Associated Music Teachers League. Member:  
N. Y. Singing Teachers Assn.; M.T.N.A.  
Write for summer schedule and special rates  
452 Fr. Washington Ave., N. Y. C. Tel. WA 7-8552

### ALBERTO JONAS

Celebrated Spanish Piano Virtuoso  
Teacher of many famous pianists  
19 WEST 85TH ST., N. Y. C. Tel. Endicott 2-2084  
On Tuesdays and Wednesdays in Philadelphia, as  
Director of Piano Department in the Combs College  
of Music, 1331 S. Broad St.  
Pupils accepted during Summer. Credits for degrees.

### (Frank) (Ernesto) LaFORGE-BERUMEN STUDIOS

Voice—Piano  
Frank LaForge teacher of Lawrence Tibbett since 1922  
14 WEST 68TH STREET, NEW YORK  
Tel. Trafalgar 7-8993

### RICHARD McCLANAHAN

Representative TOBIAS MATTHAY  
Private-lessons, class-lessons in Fundamentals  
Summer Class—July and August  
806 STEINWAY BLDG., NEW YORK CITY

### FRANTZ PROSCHOWSKI

Vocal Teacher  
200 W. 57th St. New York  
Tel: COLUMbus 5-2136

### Study Modern Popular Piano Playing with HENRY SCOTT

Famous Screen and Radio Pianist—Teacher  
Courses in Swing—Harmony—Orchestrations.  
PROFESSIONAL PREPARATION  
Telephone Columbus 5-6894 or write  
315 West 57th St. New York City

### EDWARD E. TREUMANN

Concert Pianist—Artist-Teacher  
Recommended by Emil Von Sauer, Moritz Moszkowski  
and Josef Hofmann.  
Studio, Carnegie Hall, Suite 837, 57th St. at 7th Ave.  
Tel. Columbus 5-4357 New York City  
Summer Master Class—June to Sept.—Apply Now.

### ANNE YAGO (Mrs. W. H. McGuffey)

A Teacher of Voice  
With Years of Experience as Contralto Prima Donna  
with the Leading Grand Opera and Light Opera  
companies of The United States.  
Pupils prepared for Radio, Concert and Opera  
Studio—1708 N Street, N.W., Washington, D. C.  
Phone District—4079

## Making Songs by Magic

Abide With Me, the music of which Dame Clara Butt stated that Mr. Samuel Liddle wrote for her in two days, is not the only famous song composed in double-quick time. Boucicault took the words of Killarney one morning to Balfe, who merely glanced through them, then sat down at the piano and excitedly played the melody which all the world was soon singing. Tito Mattei had a similar inspiration in regard to Dear Heart, striking out the air on the piano immediately after reading the words; while the music of The Holy City came in a flood of inspiration to Michael Maybrick (Stephen Adams) on the receipt of Mr. Weatherley's poem. Trottere, too, used to tell how he was walking home from the Aquarium one evening, when the idea of In Old Madrid came to him. Not having paper handy, he rushed into a shop, seized a paper bag, and in two minutes scribbled down the whole melody. More startling still Schubert is recorded as having written his immortal Hark, Hark, the Lark! on the back of a menu sheet in a Vienna restaurant, and as rapidly as he could make the notes.

# Publisher's Notes

A MONTHLY BULLETIN OF INTEREST  
TO ALL MUSIC LOVERS

## Advance of Publication Offers

—June 1939—

All of the books in this list are in preparation for publication. The low Advance Offer Cash Prices apply only to orders placed Now. Delivery (postpaid) will be made when the books are published. Paragraphs describing each publication follow on these pages.

|  |        |
|--|--------|
| ALL-CLASSIC BAND BOOK—LEIDZÉN                      |        |

| YOUTHFUL TENOR, THE—SONG ALBUM                     | .35    |

**THE COVER FOR THIS MONTH—**When the representative of Alber Studio Associated Artists, photographers in Philadelphia, Pa, submitted the "Bride and Groom" photograph to us, immediately we wanted it for the June issue.

Miss Verna Shaffer, a Philadelphia artist well-known to ETUDE readers, supplied the necessary artwork and air-brushing to give us the musical background and the little decorative sketches which we added to the photograph to make it individually an ETUDE cover.

Music and weddings go hand in hand. Wise indeed are the "newlyweds" who see to it that music continues on into their lives after the wedding day.

**ALL-CLASSIC BAND BOOK, For Young Bands, Arranged by Erik W. G. Leidzén—**The approval with which educators, everywhere, have greeted the announcement of this forthcoming publication is best evidenced in the flood of advance orders that have been placed for copies. Bands of junior or senior high ages, after a few months' preliminary training, can take up these numbers as a first repertoire. The contents will be similar to the arrangements in Presser's *Little Classics Orchestra Folio*.

The value of a collection of this type readily can be appreciated by the sincere school band director who realizes that in order to keep pace with the development of the orchestral and choral groups in the school, his organization, too, must early be taught to appreciate the better type of music. Tuneful excerpts from the writings of the great music masters, such as these, offer the best possible introduction to good music.

The instrumentation will cover every instrument of the modern school band, but so well has Mr. Leidzén made his arrangements that smaller groups, consisting mainly of

clarinets and brasses, can get quite satisfactory results in the playing of them. The Conductor's Score book has a playing piano score for study and rehearsal, together with a two-stave compact score for conducting.

In advance of publication the price for the instrument parts is 15 cents each; where the set ordered runs to 25 books the price is 10 cents each. Conductor's Score, 25 cents. Copies will be delivered when the work is published, at which time these introductory prices will be withdrawn.

**TWELVE MASTER ETUDES IN MINOR KEYS, For Piano (Grade 6-8) by Franciszek Zachara—**The talent of certain composers seems best suited to music of grace and intimacy. An outstanding example from classic sources is the great Pole, Frederic Chopin, whose works are described as having the utmost delicacy and refinement. It is therefore not surprising to find these characteristics in the music of the young Polish pianist, Franciszek Zachara, whose public appearances as a soloist in this country have been eminently successful.

Compositions by Franciszek Zachara are not unknown to ETUDE readers. Recent issues have contained recital pieces by this artist which have attracted much attention. The present work constitutes miniature *EtuDES* in each of the twelve different minor keys. For study purposes, many technical phases are presented, such as octave and chord studies, arpeggios, rapid scale passages, and intricate rhythms. Beyond and above this, however, is genuine music of a high order, with an immediate appeal to the competent and ambitious performer.

We are indeed pleased to be able to announce the forthcoming publication of so important a work for the advanced pianist. A single copy may be ordered now in advance of publication at the low price of 20 cents, postpaid. The work when published will appear under the cover of *The Music Mastery Series*.

**THE YOUTHFUL BARITONE, An Album of Songs for Studio and Recital—**One of the most encouraging results of the development of vocal music in our schools is the number of really talented young folk who have been "discovered" to possess solo voices. A knowledge of musical notation and an appreciation for good music having been acquired in the earlier grades, many a lad of high school age, upon joining the glee club, finds it comparatively easy to do solo work; consequently he is called upon for school presentations in assembly or concert, and perhaps he is in demand also for solo work at the church he attends.

Baritone is the natural voice for young men of this age, although quite a few tenors have been developed, of course, and an occasional bass. The solo repertoire of the professional baritone is made up, as a rule, of many numbers that have a rather wide voice range; too wide, in fact, for the young singer whose voice will not fully mature until years and study assist in its development.

To guard against injuring the voice of ambitious young singers is the desire of every thoughtful teacher, and if the truth were

generally known, many hours have been spent by them in reference libraries and in music stores searching for appropriate material. The compilers of this volume, aware of these conditions, have examined many, many songs before selecting its contents. Great care has been taken to include only songs that have a reasonable voice range, yet all of them are songs of the type that young men like to sing, songs with texts and tunes suitable for use at public appearances of the youthful baritone. There is nothing juvenile about the songs, either, and our guess is that some more experienced baritones will be glad to include the book among their possessions.

While this helpful volume is in preparation copies may be ordered at the special advance of publication cash price, 35 cents, postpaid.

**PLAY AND SING, Favorite Songs in Easy Arrangements for Piano, by Ada Richter—**This new collection of easy song arrangements in piano form is on the same pattern as Mrs. Richter's earlier work, *My First Song Book*, but is arranged to meet the requirements of second grade players. The earlier book has already become a standard of its kind, and this second one has all the elements that made the first such a favorite.

*Play and Sing*, containing over forty selections of a varied character, has its contents conveniently classified under the following headings: School Songs, Songs of Other Lands, Songs of My Country, Songs from Operas, and Songs My Grandparents Sang Long Ago. While young people will appreciate this grouping, it should appeal also to a vast number of adults who may want to recall music in one or more of these classifications, or who might enjoy going over some of the music they knew in their younger days.

Another reason why the book should become popular is the simplicity of the accompaniments. Many of these pieces, in their original form, had accompaniments that were too difficult for musicians in the early grades. These have been simplified while retaining all of the original harmony, thus losing none of their intrinsic worth. Many of these song melodies are now popular on the radio.

Single copies of this new book may be ordered now at our special advance of publication cash price of 25 cents, postpaid, copies to be forwarded when printed. Copyright restrictions compel us to confine the sale to the U. S. A. and Its Possessions.

**THE YOUTHFUL TENOR, An Album of Songs for Studio and Recital—**The rapid advance to prominence of a number of contemporary young tenors of the radio and the movies has been a stimulus to the ambition of high school lads throughout the country, it has attracted the attention of their parents, teachers, friends and companions. Whenever a young man's voice, in changing from boyish treble to manly tones, shows evidence of becoming tenor in quality, immediate interest is aroused.

Sensible parents or guardians of these fortunate young men realize that the initial step is the engaging of a competent teacher. To allow a talented young singer to go his own way, attempting to sing songs way beyond his range and capabilities, might prove ruinous. The school music director who discovers a promising young tenor voice will surely recommend instruction with a voice culture specialist.

It was with these thoughts in mind that the editors began the compilation of this album. Considerable research has been necessary and many vocal solos have been scrutinized in selecting for the contents of *The Youthful Tenor* the songs that best will serve the purpose for which the book is intended. Particular care has been taken to eliminate any song from consideration in which the tessitura is unusually high. An occasional upper note, reached logically, can do no harm if it is within the young tenor's range. But a succession of high notes, constantly practiced, might place a strain upon the voice that would prove harmful.

The songs in this album will provide a valuable first repertoire for the youthful tenor, and more experienced singers will find them excellent for use as *a* and *b* recital numbers or as encore songs. The price of the volume in advance of publication is 35 cents, postpaid.

**SUMMER READING AND STUDY—**Leading educational institutions in all parts of the country, especially in the great metropolitan centers, offer special Summer Courses that annually attract thousands of students. Just glance at the advertising pages of this journal for an idea of the scope covered by the foremost music schools. Young teachers and students who take advantage of these opportunities are the progressive ones who can look forward to additional successes in their chosen profession.

But not all are privileged to attend the special courses offered. Distance, finances and, very frequently in the case of many teachers, lack of time prevent earnest students from availing themselves of summer educational opportunities. Some teach throughout the vacation months, with curtailed enrollment, perhaps; others accept profitable part-time engagements with small ensembles supplying music at nearby summer resorts.

Most music folk in the U. S. A. do enjoy many leisure hours in the months of July and August and the wise among them profit by furthering their advancement in their profession; some by reading good books on music, some by self-study in harmony, history or some musical instrument other than their chosen specialty; others engage in intensive practice of some technical point on which they seek to attain greater proficiency.

Anyone who makes music his life work will enjoy reading books such as *Musical Travelogues* (Cooke) (\$3.00); *Life Stories of Great Composers* (Streitfeld) (\$2.25); *From Song to Symphony* (Mason) (\$1.50); *Musical Instruments* (Kelley) (\$1.50); *The First Violin* (Fothergill) (\$1.50); *Notturmo* (Schmidt) (\$1.50). Really instructive, as well as interesting reading, will be found in *American Opera and Its Composers* (Ilipsher) (\$3.50); *Standard History of Music* (Cooke) (\$1.50); *The Music Supervisor* (Tapper) (\$1.50); *School Orchestras and Bands* (Woods) (\$2.00); *The Structure of Music* (Goetschius) (\$2.00). Self-study may be undertaken with *Harmony Book for Beginners* (Orem) (\$1.25) and its successors by the same author—*Theory and Composition of Music* (\$1.25); *The Art of Interweaving Melodies, First Studies in Counterpoint* (\$1.25) and *Manual of Fugue* (75c); *Musical Essentials* (Maryott) (\$1.00); *The Shortest Way to Pianistic Perfection* (Leimer-Gieseking) (\$1.50) and its "follow-up" book, *Rhythmics, Dynamics, Pedal* (\$1.50), recently published in an English translation.

These are but a few suggestions of outstanding books. There are many others that the Publishers will be glad to recommend for singers, violinists and the players of other instruments.

With the wealth of material available no earnest student or ambitious musician needs be deprived of opportunities for musical advancement during the summer, even if prevented from attending special classes. Be sure to tuck some educational book in your luggage when packing for vacation holidays. Your thoughtfulness may pay big dividends in the years to come.

**TEN STUDIES IN BLACK AND WHITE, For the Piano, by Mana-Zucca—**One of the most successful of contemporary composers is Mana-Zucca, whose *I Love Life, The Top o' the Morning, Nichavo* and

*Because of You* are known to singers, everywhere, and their audiences and whose larger works for piano and orchestra have been programmed by leading symphonic organizations. But this distinguished American musician's talents are not confined to composing—she has achieved personal triumphs as a concert pianist, and as a teacher has had notable success. Her published teaching pieces in the earlier grades are much sought after by her fellow teachers, who readily recognize their educational value.

In this new work for advancing students the Publishers believe they have a modern technical work that will vie with the familiar studies of Clementi, Cramer, Heller, Loeschhorn and other composers of a bygone day who had the knack of blending material of value in technical development with tuneful music that students really enjoy playing. It will be issued in the reasonably priced *Music Mastery Series*, a collection of copyrighted study works that has proved most helpful to piano teachers.

(Continued on Page 420)

# The Democracy of Radio

(Continued from Page 367)

conductor needs something more. He needs absolute, convincing sincerity. Science has not yet furnished us with the "reason why"; but there is something about reproduced music which makes it quite impossible to bluff. It is not advisable to bluff before an audience; but, it can be done. Mannerisms, gestures, even length of hair, can have their share in making-or marring the reputation of a visible conductor. On the air, these things simply do not exist. No one cares what you look like. You can conduct sitting down, provided you are tall enough. You need no gestures whatever, so long as you give your men the proper signals. But what you must do is to believe, absolutely, in what you are playing. In radio, a less gifted artist can advance himself through an unshakable sincerity, which a better, more intelligent artist may lack.

I am not advocating the cause of jazz, but it would be a good lesson to any performer to watch the jazz singers while they perform their numbers. The words may be cheap; the music may match the words; and the entire conception of the songs may be of a low standard. Yet the singer who devotes himself to these songs seems absolutely convinced of their truth and beauty. When he tells you that "I loves mah baby," or that "the night was made for love," he means it. And he means it so completely that he is able to carry thousands of hearers along with him in his conviction. A better, more musical, more intelligent artist may make a complete failure of popular songs, simply because he does not believe in them. Being a better artist, he sings them with his tongue in his cheek, and this always shows up on the air. To carry conviction, one must believe in one's self. If a conductor is really out of sympathy with a piece, or a type of music, he will do better not to play it, no matter how great a success another conductor may make of it. Somehow, those queer waves of radio penetrate into the hidden being of the performer, and show up what is true and what is false.

## Conducting before the "Mike"

ONCE HE IS PLAYING before the microphones, the conductor's chief duty is to keep the music vital and entertaining. Occasionally there comes a long held passage which might cause interest to flag. The radio conductor must work against this. There may never be the least waning of interest, simply because it is so dangerously easy for the listener to switch his dials around to something else. Complete sincerity goes a long way towards maintaining this vital interest. When the conductor has sketched out his program, according to his honest choice, he should save the most interesting piece for the last. This does not necessarily mean the novelty of the program; it means the piece which has the most color and vital interest. In grouping the program numbers, he must always keep attention alive by following a difficult piece with an easier one. And he must never forget that he can be turned off.

But there is an even greater opportunity in radio than the giving or getting of jobs. Because of its inherently democratic nature, I believe that radio can be used to explore the vast field of native American music. The American performer and the American composer must be given a full, free chance to show what they can do, in taking their places beside the foreign artists. So far, we have done this in only a limited way. We have progressed beyond the point where Americans were refused a chance in the arts and had to change their names—from Norton to Nordica!—to be heard at all. But there is still vast room for improvement.

The general public has but little idea of

the tremendous musical interest that thrives outside the accepted art centers. We are all familiar with our star orchestras; but how many of us realize that there are more than two hundred excellent symphonic organizations in our land? Not long ago I had the privilege of conducting the Duluth Symphony Orchestra. Half its players are well grounded professionals; the other half are students and workers. One of the oboe players is a night clerk in a hotel, some eighty miles outside Duluth. We had five rehearsals, and before the concert night this gifted performer had made six round trips, in the bitter Minnesota winter, and after his work, to take part in the concert. The bass viol player operates a paint gun in a refrigerator factory. If you like glamour stories, think of the inner ardor it requires to hold your arm out straight all day, in the operation of a paint gun, and then to play the bass viol at night. Stories like these ought to be made known and made much of. Our nation must be stimulated to the point where it will take the time from admiring the histories of foreign musicians to begin realizing the truly stirring sacrifices that are being made now, every day, all around us, by our own people.

## Open a Way to Our Composers

THE SAME IS TRUE of our native composers. The one thing the American composer needs to-day is, not a finishing year abroad, but a chance to be heard at home. Last season, I made two very brief and unspotlighted announcements that I would be glad to look at new American works of a non-jazz type. Within a very few weeks, I had received over two hundred compositions, fifty percent of which were eminently musical and playable. None of them was below the average of new, untried works anywhere in the world. We have an immense amount of creative talent, earnestness, and vitality; and if the quality of these new, native works is less than that of finished products, the fault is not that of the composers. It is the fault of the American public that is still willing to offer practically any European the chance it denies its own sons and daughters.

The European composer is materially assisted by the attitude of his public. If a local boy writes a symphony, the local orchestra will play it, if only from a sense of local pride. And, once the work is performed, the composer can detect its strong and weak points, by sound, in a way he can never achieve by studying the score with his eyes alone. He hears, and learns, and improves. The American orchestras do no such thing. Instead of giving their own local boys a chance, they ransack the European capitals for novelties—and native compositions are left to remain "music on paper." Foreign conductors come over here and bring with them the works of their compatriots and friends, and we listen to them, regardless of the fact that we have as good material—possibly better—going to waste for lack of just this opportunity.

How shall we rectify this condition? Let our schools and our studios, our teachers and our students, enlist themselves in the cause of breaking down this deplorable hesitancy in the face of American music. Let us create prejudice and propaganda in favor of a native art! Of course it will not be as good as Beethoven. But how many of the new works, out of France, Russia, or Austria, are as good as Beethoven? Let us demand, not that capable foreigners shall be crowded out but that equally capable Americans shall be given an even chance with them. If a foreign orchestra player is ill, he invariably sends as his substitute a friend from his own home town. Let us fill our orchestras with more players from our own home towns. Let us shake off our worship of the leg-

endary artist type, with his long hair, his foreign gestures, and his Paris attic atmosphere, and realize the romantic devotion that lives in the hearts of clean cut, everyday Americans, like my night clerk and paint gun friends from Duluth. Radio has done and is doing much to bring about a healthier, more reasonable situation. In radio, if a man can do his work well, his hair and his gestures and his name do not count. And Americans are being given a chance. I got my chance, and there are chances for other young people from Illinois.

I should like to further still more the cause of the American composer, by organizing—somehow, somewhere—a radio hour devoted entirely to new works by native composers. I would play anything playable, of a dignified type, of course. And I would invite the audience to write in its verdict, not to the conductor, but to the composer himself, telling him just what was good, and bad, and why. This would be, in truth, an amateur hour; and it would do a great deal of good. Some local station might be willing to give the idea a trial.

## 'Tis Talent Counts

FINALLY, LET ME SAY that "pull" is not the essential thing in finding good radio engagements. That essential thing is ability. Not so long ago I gave an audition for a bassoon player. I was told to look out for a promising young man who had a beautiful tone and was also well regarded. I gave a blind audition. That is to say, the candidates played into a microphone and I sat in my office, on another floor of the

CBS building, with a sheet of paper on which the performers were listed by number only. I had no means of knowing who was who. When the list got down to Number Eight, I suddenly heard the tone I wanted. When the audition was over, I asked to have Number Eight. He was not the well recommended young man. He was an unknown young friend of his, who had come to the audition solely on a long chance. But he had the material I wanted, and he got the job. I engaged another boy out of a WPA orchestra, because he, too, had the material I wanted.

When I arrived in New York, myself, my only letter of introduction was to a cheese merchant. There is opportunity aplenty in radio, for the right sort of young people—people who take their art seriously, who live decently, who believe firmly in themselves and work to the utmost of their ability to make others believe. Most of these, I find, come from the small towns. And they seldom need letters of introduction.

We cannot, all of us, perform before the microphones. But we can do radio work of another kind. Radio can prove the means of leveling stupid distinctions between foreign art and American unmusicalness. Radio can correct a taste for the shoddy; and it can spread the gospel of the best in art. Happily enough, the radio can do all this by democratic means. Let us all, every last one of us, accept our share of this radio work, by letting our voices be heard, and demanding that we get what we want. Let us keep the democracy of radio alive.

# The World of Music

(Continued from Page 360)

FOLLOWING TRADITION, most of the leading lyric theaters of Italy open their grand season on December 26th, St. Stephen's Day. For this occasion, Verdi operas also are becoming a tradition: for this winter, La Scala of Milan presented his "Macbeth"; the Carlo Felice of Genoa gave "Don Carlos"; the Petruzzelli of Bari offered "La Traviata"; and so on.

AN UNKNOWN "FAUST," by I. Walter (1759-1822), and probably the first of the "Faust" operas, has been discovered at the State Library of Bremen, Germany. Its score dates, presumably, from 1797.

THERÈSE PAGEAU, who in 1936 received her degree of Bachelor of Music, from Laval University of Quebec, and in 1938 was among the successful candidates for the Prize for European Study, is now continuing her studies in the Paris Conservatoire.

IN CAIRO, EGYPT, the grand season of the Theater Royal opened on February 21st with a brilliant performance of Verdi's "Otello," with Pertile in the title rôle, Mario Basiola, a baritone formerly well known in America, as Iago, and Mme. Juanita Toso as Desdemona.

HENRY BOEWIG, oldest member of the New York Philharmonic Orchestra at the time of his retirement several years ago, and for forty years its librarian, died on March 31st, in Brooklyn, at eighty years of age.

THE WOMEN'S STRING ORCHESTRA of London gave in December a program devoted to the works of Mozart, Bridge-Britten, Sibelius, and Elgar.

THE PHILHARMONIC-SYMPHONY ORCHESTRA of New York ended its season with a two hundred thousand dollar deficit. This, however, was covered by a fee of fifty thousand dollars for its Sunday broadcasts, forty-nine thousand dollars contributed by the Auxiliary Board, and sums from other sources including dividends from invested endowments.

DIDO AND ÆNEAS, by Henry Purcell was given a concert performance on April 24th, by the Department of Music Education of Temple University, Philadelphia, with Miss Marjorie Jones conducting.

ANNAMARY DICKEY, soprano, of Decatur, Illinois, and Mack Harrell, baritone, of Greeneville, Tennessee, have been awarded first and second places in the fourth series of Metropolitan Opera auditions of the air.

USELMA CLARKE SMITH, organist and composer, of Philadelphia, passed away on April 10th, aged sixty. Having graduated from the University of Pennsylvania, and studied in London and Paris, he had been for many years the organist of the Church of the Redeemer, of Bryn Mawr; was the author of several books on music; led several choral societies; and was once dean of the Pennsylvania Chapter of the American Guild of Organists.

THE "MESSIAH," COMPLETE OR "CUT" is a question rending the musical hearts of dear old London Town. Near four hours of choral and solo music is a rather large deal; and yet it would be an occasional pleasant experience, just to hear this great work as "The Old Saxon" conceived it.

LOTTE LEHMANN began, at Melbourne, on April 11th, a second concert tour of Australasia. It is with regret that we mention the recent death of Mme. Lehmann's devoted husband, Otto Krause, who had lent so much of encouragement and assistance to her career.

ALL PREVIOUS PIANO SALES RECORDS are reported to have been broken when, in January of this year, the Rudolph Wurlitzer Company of DeKalb, Illinois, showed an increase of one hundred and sixty-seven percent over the sales of same month of 1938.

AN AMERICAN WOMAN, Lucille Thompson, has been instrumental in promoting, as a pioneer, concert courses in Cape Town and in half a dozen other South African cities.

HARRY BRANT, American composer, of New York, has won the Prize of One Hundred Dollars offered by the Professional Musicians Society of that city. Mr. Brant, twenty-six, was successful over composers from fourteen states. He has studied at the Juilliard School, and is the winner of the Morris Loeb award and of the Coolidge and the Seligman prizes.

## Musical Bridge

By Frances Gorman Risser

Build a bridge of music,  
Shape it straight and strong,  
Stately as a prelude,  
Lovely as a song.

Anchor it securely  
To bed rock below,  
Built on daily practice,  
Watch the arches grow.

When you're tired and fretful,  
Cross the magic span—  
For it leads to music's  
Magic Fairyland!

## A Letter to Haydn

By E. A. G.

DEAR PAPA HAYDN:

I think it is nice of you to let us call you Papa, because it sounds so nice and friendly. I am more used to saying "Daddy," myself, but I guess Daddy Haydn would sound funny, wouldn't it?

My teacher says they call you Papa Haydn because you were the father of the symphony. Is that true? Anyway, I know you did write a lot of symphonies. I think my teacher said, "That must have kept you terribly busy."

Then I read about you in my History of Music, and I saw your picture. It must have been funny to be born in 1732, and to wear those wigs and knee breeches; but I suppose it is just what you get used to. And my book says you sang in the boys' choir when you were young, and so do I. My voice is not very good by itself, but I like to sing in the choir, and the organist says I am well—that is, good at singing in the choir, I mean. You see, I take music lessons and ear training, and so maybe I know more about reading music than some of the other fellows. I'd like to do solos, too; but Ned Smith's voice is the best in the choir so he does them.

At my lesson last month I learned an arrangement of your "Surprise Symphony," and Tom and I are going to play it at the recital. My teacher says Tom would be much better if he paid more attention to his practicing. Me, I like to practice! And I love that surprise chord in your "symphony"; you must have smiled when you wrote it. I'd like to lead orchestras, too, some day like you did; and I'd like to go to London like you did.

I heard some of your symphonies played by our school orchestra. Our orchestra is very good, and I guess it is bigger than yours was. Tonight there is going to be one of your symphonies on the radio, so I guess I will stop now and get ready to listen to it. I will think of you when I am listening to it.

From  
JUNIOR

## Rhythm at Road's End

By Jo-Shibley Watson

AT THE FOOT of Palomar mountain, in the northeast corner of San Diego county in California, is a little red school house. I came upon it one day in spring. The great live oak that shaded the open door, bore strange fruit. Fluttering from its drooping branches swung dozens of tambourines made of paper pie plates glued together.

The Indian children of Los Coyotes reservation were painting the tambourines with strange Aztec and Indian designs. As each child finished his tambourine, he tied it to the old tree by a long string, and it whirled in the sunny air until dry.

The brown skinned children at the Warner's Hot Spring School were much too absorbed in their painting to look up when I entered. It was festival time; spring festivals in San Diego county bring the Rhythm Bands and Harmonica groups together. The children of the Warner School were to play soon in Balboa Park at San Diego, seventy miles toward the sea.

This interested group of children was made up of the sons and daughters of Indian warriors, prospectors, farmers and trappers. They were making their own costumes and they had fashioned nearly all the instruments used in their rhythm band. A fringed gunny sack or a piece of burlap made the dress, and for decoration there were colorful beaded head bands. An effective costume for any rhythm band, and especially so for these black haired children of Los Coyotes.

Stored away in the little red schoolhouse were many strange looking instruments. The large triangle was made from the bent radius rod of a Ford car. The drums were of all sizes, some were butter tubs, others were wooden cheese boxes. The drum heads

made also the rhythm sticks, which were a foot in length.

There were as many as fifteen tambourines made of paper pie plates. The tone varied with the thickness of the tambourine, one up to twelve plates glued together made a wide range of tone.

Horseshoes, struck with nails, were used for the smaller triangles. There were gourds for rattles, sand blocks, bird whistles and sleigh bells, sewed on tape, five to ten bells in a string. There was a toy xylophone, and a Victor record furnished the background; but there was no piano in the little red school house. The teacher had worked out a different signal for each instrument.

The great day came and the dark eyed children tumbled into the yellow school buses, and away they went down the highway to San Diego. Stolid faced George Chapparose held the cheese box drum between his knees and glared at Jody Blacktooth clapping a tambourine between her fat hands. Jose Bito, with the air of a gay caballero, rattled a gourd as Gloria Chutnucutt nudged him to make him stop.

It was spring time, and it was festival time. The Indian children knew it, but no smile showed the gaiety that filled their hearts. When they took their places before the fountain in the patio, every eye was turned toward their teacher and leader. The eager players holding their homely instruments aloft were like birds poised for flight.

An upraised hand gave the signal, and *The Anvil Chorus* rang through the cloisters with breath taking precision. They played the old French folk song, *Amayllis*, and the program ended with a flourish of *Stars and Stripes Forever*.

The mountain children brought to the

were made of inner tubes drawn down tight over the head and bound around and around with jute. This is very hard to do. Little drums were oatmeal boxes with heads of shellacked cloth, interesting in a tiny child's hands but not so effective as the cheese box. The drum sticks were dowel pins; these

city something more than old tunes played on home made instruments. They brought the wild swing of nature, the rush of the wind, the patter of the rain, the gentleness of spring. Their pent up feelings found release through self-expression; those who listened heard the rhythm at the road's end.

## Robin Entertains

By Julia Graydon

Listen my children and you shall hear  
Of the sweetest story of all the year.  
Of the loveliest sight that ever was seen,  
On any city or country green.

A robin perched like a little dot,  
On the radio pole in our back lot,  
Broadcasting into our radio ear,  
To the listeners-in, his song so dear.

## The Clapping Class

By Florence L. Curtiss

DORIS sat up straight and alert as the music teacher said to the class, "Now, I want each of you to write a major scale on the blackboard in the rhythm I shall clap. Listen carefully to the rhythm."

And she clapped distinctly, with good accent on this rhythm

"Duple rhythm," thought Doris to herself, "with halves, quarters and eighths," as she wrote the scale on the board correctly.

"Good, Doris," said Miss Rex. "Now, go to the piano and play it in that same rhythm." And Doris did so without an error. She always liked the rhythm class when she had been listening to clapped rhythms.

Doris and Elmer, who were neighbors, walked home together. "The class was fun to-day, wasn't it?" she said.

"Yes," answered Elmer, "and I am getting the rhythm much better now, too. I like the clapping."

"And it makes the scales interesting, too. I am going to practice them a lot for my next lesson."

"So am I," agreed Elmer. And they did; and they were pleased when Miss Rex noticed great improvement in their lessons.

## Putting Money Into the Bank

By Mary B. Rounds

GRACE was practicing her piano lesson when Alice called to her to come out to play.

"I can't," Grace said to her friend, "I have another half hour's practicing that must be done before I can play."

"Oh, come along," Alice teased, "you can do your practicing some other time."

Grace looked out of the window. It was a beautiful sunshiny day.

"I am sorry to disappoint you, Alice," she said, "but I really must finish my exercises. I am putting money into the bank, you know."

"Putting money into the bank," Alice exclaimed "What do you mean?"

Grace smiled.

"Well, it's not really money in the bank," she said, "but it's almost the same thing. You see I am storing up something that I can draw out some day and turn into money. Maybe I will be a great pianist like Paderewski or Josef Hofmann, and people will come to hear me play. Or maybe I will give piano lessons or play the church organ. Or even if I play just for my own enjoyment, I will have something that nobody can take away from me."

"I never thought of that," said Alice, as interest lit up her eyes.

"Well, it's so," declared Grace. "What we learn now while we are young is just so much stored up knowledge that we can draw out and use when we grow up."

"That is wonderful," Alice said thoughtfully. "I want to put some money in the bank too. I am going right home and begin now."

# JUNIOR ETUDE—(Continued)

## Recital Etiquette

By Gertrude Greenhalgh Walker

BARBEMAY was going to play a piano solo in Miss Brown's next recital. She was enthusiastic and thrilled and had spent a long time working on the finishing touches.

"Barbemay," said Miss Brown, "I know you will play well at the recital, because you know your pieces perfectly and play them artistically, but there are a few little manners of recital etiquette I wish you to observe. You know this will be the biggest recital in which you ever have taken part."

"What are they?" asked Barbemay.

"Just a few things that mean a lot to both performer and listener and make the performer seem more like a fine musician."

1. Wait until the applause given the previous player is over before going to the piano.

2. Walk carefully, not too slow, nor yet too fast.

3. Approach the piano seat from audience side of stage. (This is especially important for girls, so that the dress will not become awkwardly arranged.)

4. Adjust the seat to comfortable height.

5. Place feet on damper and *una corda*

pedals, and let them lightly rest there.

6. If the keys seem moist, lightly wipe them with handkerchief and then place it on left end of piano, or behind music rack.

7. If people in audience are conversing, place your hands on keyboard and calmly look out at them to get their attention, so they will know you are ready to begin. Do not begin while they are talking, as it is not fair to the composer whose music you are playing.

8. Take a deep breath for repose and concentrate on the music. Remember you are there to show off a composer's music—not to show off yourself.

9. Do not rise between numbers; just smile and nod your head towards audience if they offer any applause.

10. When rising, face the audience. It would be rude to turn your back to the audience.

11. When leaving the piano make a bow to the audience. It need not be an elaborate one, but this is merely the silent way of saying "thank you" and "Goodbye."

## ??? Who Knows ???

1. Which composer lost his hearing?
2. Which composers lost their sight?
3. Which composer lost the use of a finger?
4. What is a tuba?
5. How many half-steps in a major tenth?
6. What instrument is made of silver?
7. What letters compose the supertonic-seventh chord in the key of F major?
8. From what country does the Morris Dance come?
9. In what city did Bach teach school?
10. Is Enesco a violinist, composer, or conductor?

(Answers on this Page)

## Word Contest Game

By Annette M. Lingelbach

A MUSICAL TERM is agreed upon, and the players must use it as many times as possible in conversation. No one may interrupt the player speaking. Players write on paper the list of words used in the speech, the longest list winning. Ears must be sharp to notice the terms used.

Variations of terms may be used; for instance, if the word is *tempo*, the following may be substituted: speed, *largo*, *presto*, *adagio*, *moderato*, fast, and so on.

After one player has ceased speaking the next one begins.

This game will make the players more acquainted with the use of various musical terms.

## A Scale Recital

By Gladys Hutchinson

Did you ever take part in a Scale Recital? It is lots of fun.

Have a group of pupils of about the same degree of advancement, set the metronome to the *tempo* at which the scales can be executed perfectly; and each player then in turn performs the successive scales.

There should be absolutely no break in the rhythm as one pupil follows the other.

This is very entertaining and exciting. Try it at your next club meeting.

## Junior Etude Contest

The Junior Etude will award three pretty prizes each month, for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Put your name, age and class in which you enter, on upper left corner of the paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper, do this on each sheet. Write on one side of paper only. Do not use typewriters and do not have anyone

Subject for story or essay this month, "My Favorite Instrument." Must contain not over one hundred and fifty words, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by June 18th. Names of prize winners and their contributions will appear in the November issue. The thirty next best contributors will receive honorable mention.

### RULES

copy your work for you.

When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules will not be considered.

## What Music Does for Me (Prize Winner)

MUSIC is finer than other arts; it expresses and transforms man's thoughts more swiftly than do paintings, statues or poems. It is the only language that talks to everyone and allows everyone to understand. It will affect anyone who will lend his ear; it opened my eyes and ears to the exquisite beauty God has given to this world and to me. With this realization it has also brought me new friends, who see as I do, the inexhaustible splendor enveloping us. It has made me see myself with a true eye. When I see myself failing in music I look around and see that everything I touch I am hurting in the same manner. Music requires concentration to bring to light its depths.

Have I not much for which to thank Music, the God who created it, and those who so kindly and generously have given it to me?  
ROSE CAPODICE (Age 15), Class A,  
Illinois.

## What Music Does for Me (Prize Winner)

I AM very glad to write this composition on "What Music Does for Me," because it gives me a chance to tell how delighted I am to take music lessons. Music does many things for me. Practicing makes my fingers and arm muscles grow strong. Music makes me intelligent and a welcome guest at parties. I hope to play four pieces in our spring tournament. I love to play and practice.

The Schumann Club to which I belong gives plays, and this teaches me how to act. My mother wants me to be a fine pianist; and I want to be a music teacher so I can lead children into the magic land of music.

BARBARA COLITON (Age 9), Class C,  
Massachusetts.

## What Music Does for Me (Prize Winner)

MUSIC inspires me to do the better things in life. It also helps me to think of what my future might be; it enlightens my mind in school and elsewhere. If I did not hear music some of the time everything would seem lifeless. Sometimes it makes me feel happy though sometimes sad. It gives me courage to do things; it also helps me to get along well with society. It is like a tonic that makes me want to dance and sing; it brings different scenes to my mind.

My greatest ambition is to become a good pianist and to play with a symphony orchestra. If it were not for music in this world I do not know what I would do, because I like it so well.

ROBERT NEHLIS (Age 12), Class B,  
Wisconsin.

## Two-in-One Puzzle

By Kathryn Meadows

(a) REARRANGE the following jumbled letters to make four musical instruments.

1. T E C R O N
2. D O C I N O R A C
3. O A O N S B S
4. P H R A

(b) Use the first letter of each instrument and arrange to give the name of a famous composer.

## Answers to Who Knows

1. Beethoven; 2. Bach and Handel; 3. Schumann; 4. A large brass instrument which plays the low tones in the brass section of the orchestra and band; 5. Sixteen; 6. Flute; 7. G, B-flat, D, F; 8. From England; 9. Leipsig, Germany; 10. All three.

## Answer to March Diagonal Puzzle:

1. W-a-i-t-e-r
2. l-A-d-d-e-r
3. s-a-G-g-e-d
4. b-a-n-N-e-r
5. d-u-t-i-E-s
6. r-u-b-b-e-R

Diagonal gives WAGNER (chores may be used for duties).

## Prize Winners for March Puzzle:

Class A, Emily Ramer (Age 14), Illinois.  
Class B, Billy MacDonald (Age 11), Canada.

Class C, Jimmy Cruess (Age 7), Connecticut.

## Honorable Mention for March Essays:

Rosemary Nienaber; Ann Goodman; Donald Horton; John Williams; Anne Floersch; Theda Mae Theel; Jim Leeman; Etina Berglund; Thelma Allen; Don Williams; Ethel Trivette; Helen Judin; Martha Jane Justice; Marjorie Burma; Jean Townsley; Beverly McLaughlin; Phyllis Kupfer; Edna Faye River; Nan Sonje; Vincent Scudellari; Patricia Johnson; Margaret Grant; Jewell Walsh; Joseph Gallagher; Florence Flinneran; Virginia O'Donnell; Glory Rathe; Lorraine DeBoe; Billy Skiles; Bernadette Devereaux; Bettyrose Mosler; Maxine Ostler; Gloria Prieco; Mary Louise Feuch; Claire Resden.

## LETTER BOX

DEAR JUNIOR ETUDE:

I am three years old and started to take music when I was two. My mother is a piano teacher. I like to play in recitals. This is a

picture of my brother Charles and me. He is six and plays violin.

From your friend,  
FRANCES HUNTINGTON MCSWAIN (Age 3),  
Arkansas.

## Honorable Mention for March Puzzles:

Merland Morgan, Irene Miller, Claire Boulard, John Williams, Lorraine DeBoe, Lucille Oswald, Jeanette Hartman, Mildred Thomas, Carl Hartman, Evelyn Palansky, Kathleen Meehan, Lee Roussin, Mary C. McKinley, Peggy Ramsey, Beverly McLaughlin, Wilburta Bunker, Louis Bonelli, Betty Jean Cooper, James Pence, Ruth Pelffer, Jim Leeman, Allison Perkins, Anna Lowell, Laura Thorn, Josephine McGowan, Dorothy Moore, Sydney Andrews, Joan Ford.

INDIAN PUPILS AT LOS COYOTES RESERVATION

See story on previous page

## Pianist, Know Your Fingers!

(Continued from Page 405)

factor in control over tonal volume. This sensitiveness, moreover, is further heightened when the small muscles do most of the work of finger depression, for the muscles are relatively weak and a relatively large number of sensory nerves are stimulated during a given force effect. The key, under these circumstances, feels very heavy, and the finger like a small and delicate tool.

2. *Velocity*. As the small muscles dominate in the movement of the finger, the contractions of the long flexors with their impeding effects upon velocity may decrease. The highest degree of velocity is reached when the small muscles are entirely unassisted by the long flexors.

3. *The Control and Velocity of Hand Touches*. When the fingers are used to support hand movements originating in the wrist joint, a dominant use of the small muscles affords the most advantageous coordination. Contractions of the long finger tendons create a congestion in the wrist joint, which hampers the freedom, the control, and the velocity of the movement.

### Example of Small Muscle Dominance

THESE THREE ASPECTS of technic constitute, the reader will agree, almost a definition of technic. The theoretical exposition is, of course, very incomplete, and no practical instruction in the use of the small muscles has been given.

In closing, however, we will describe the appearance of a finger-stroke in which the small muscles dominate. Let the fingers of the right hand be placed on the keyboard in a moderately flat position—the position they take when the arm hangs completely relaxed at the side of the body. Then depress the finger so that the mid-joint breaks deeply, the nail-joint giving to the movement. Take care that the break of the mid-joint does not result either from an extension of the finger or from a downward-backward movement of the hand. Often considerable experiment is necessary before the student has success in producing the stroke. He can see what is wanted, however, by making the stroke artificially, that is, by pushing down the first phalanx of the playing finger with the fingers of the other hand. When the movement is made by the finger's own muscular force, the break in the mid-joint signifies that the small muscles are working harder than the long flexors.

The objection no doubt will be made that considerable force is lost in the joint movement, and the objection is reasonable, as far as it goes. The disadvantage, however, is compensated by other advantages, impossible to argue more fully here. Suffice it to say that the coordination can be observed in the playing of our great pianists and that it constitutes one of the most valuable of the finger touches. It is curious that no work on piano technic, so far as I know, has ever described the stroke nor analyzed it into its physiological factors.

\*\*\*\*\*

### Do You Know

That Von Bülow hated ovations and especially laurel wreaths presented on the stage. On one occasion he handed back such a tribute to the gift bearing usher, with the biting comment, "Take it away; I am not a vegetarian!"

That the father of the inventor of the telescope originated the idea of separate accompaniments to vocal melodies. His name was Vincenzo Galileo?

\*\*\*\*\*

That Josquin des Pres was the first to be called "a great composer?"

## New Lights on Giuseppe Verdi As Seen in His Letters

(Continued from Page 378)

I know that you are a passionate music lover. . . . But, alas! Piave and Mariani will have told you that in S. Agata, one never makes music, nor one speaks of it and that you would risk to find a piano out of tune and also lacking a few strings!

Thanking you nevertheless for your kind letter, I remain your devoted, etc.

To Francesco Florimo (Librarian of the Conservatory in Naples).

Genoa, March 12, 1883.

I read in the "Gazzetta Musicale" that a book of yourself will soon be published in which also a "programmatic letter" by Verdi to Florimo will be included, regard-

a reaction after having been so much abused in his life time. Now that he is dead, one roars, "Hosanna!"

To Giulio Ricordi (the music publisher),  
Genoa, March 24, 1883.

I read today in the "Fanfulla": "Maurel has told us that Verdi prepares a great surprise to the music world, and that he will show in "Jago" (Otello) the master hand."

Far be it from me!

It was never my intention and never will be to show a "master hand." I admire, without any prejudice, everything which pleases me and I write just as my heart

(verbally, not in writing) that, without a shade of resentment or anger, I will gladly return to him his untouched manuscript. Moreover, as I have acquired the property of the libretto, I offer it to him as a gift, as soon as he is willing to compose it. Does he accept my offer, I may hope to have rendered a service to the art we all love.

Pardon the trouble I give you, but as the matter should be treated with the utmost discretion, nobody could be more appropriate to do it than yourself.

To Mr. Rocchi, Perugia,

Genoa, Jan. 6, 1888.

Sir: You allow yourself to give me a lesson. I do not accept it.

Why do you, whom I do not know, send me your works? And why should I occupy myself with them? Do you know how many letters, poems, compositions, I receive daily from all parts of the world? And should I be obliged to answer all of them?

Perhaps you consider it as a duty, but I tell you it would be a tyranny to ask me that I should waste my time answering letters, examining poems and compositions that are for the most part worthless.

If I find your book, I shall return it to you.

To the Minister Ferdinando Martini (Minister of Instruction),

Milan, February 11, 1893.

Excelsency: In the "Perseveranza" I read that I shall get the title of a "Marquis." I appeal to you, to the artist, entreating you to do all you can to prevent it. My gratitude will be much greater if this appointment be left undone.

Some Bequests From The Last Will of Giuseppe Verdi.

Milan, May 14, 1900.

I bequeath:

To the Asylum of the City of Genoa: 20,000 lire.

To the Institute for Prachitic children: 10,000 lire.

To the Institute for Deaf Mutes of Genoa: 10,000 lire.

To the Blind Institute of Genoa: 10,000 lire.

To Guerino Balestrieri, who has been many years in my service: 10,000 lire.

To everyone who has been ten years in my service: 4,000 lire.

To the foundation "House of Rest" for musicians, besides the building which I had erected in Piazza Michelangelo:

a) 75,000 lire.

b) All my composer royalties from all my operas in Italy and abroad.

c) My Erard grand piano, my spinet, my decorations and my artistic souvenirs.

I wish that my funeral be quite modest, to take place either at sunrise or at sunset, without any pomp, without singing and music. The day after my death, 6,000 lire shall be distributed to the poor of S. Agata.

\*\*\*\*\*

### Practice Does Tell

"Do you play very much nowadays, Miss Solo?" he asked, as they seated themselves after a waltz.

"Only occasionally," she replied. "I have neglected my music shamefully of late and am getting quite out of practice."

"I was passing your house last evening," he went on, "and stood at the gate for a moment to hear you play. Instead of getting out of practice I think you are improving—if any improvement is possible," he added politely.

"Last evening?" she questioned.

"Yes—about nine o'clock."

"You are mistaken. I was at the opera last evening," she said in a strained voice, as she accepted an invitation to dance from another gentleman. "It was the man tuning the piano that you heard."

## Next Month

THE ETUDE for July, 1939, Brings Many Brilliant Features

### ALEC TEMPLETON SPEAKS

ALEC TEMPLETON

One of the most extraordinary successes among society night club artists of the higher class, is Alec Templeton, whose performances of his own compositions at the Rockefeller Centre in New York have been heard by millions over the Ford, the Magic Key, and the Bing Crosby hours. Sightless from birth, he has advanced regardless of what many might have considered an impossible obstacle. The eminent French pianist-conductor, Maurice Dumesnil, in a conference with Templeton, presents ideas of the widely discussed genius.

### "INTERPRETING GREAT MUSIC"

One of the most brilliant of the outstanding virtuosi who have toured the United States in recent years is the French composer-pianist, Robert Casadesus, whose appearances with great American symphony orchestras have been hailed by critics. His article is of great practical value to any music student.

### THE NEGRO "STEPHEN FOSTER"

This is a rare story of the now almost unknown minstrel who wrote some of the most widely sung ballads of the last century: *Carry me Back to Ol' Virginny*; *O, den Golden Slippers*; *In the Morning by the Bright Light*, among them. This article by Prof. Kelly Miller, M. A., of Howard University, is, we believe, the first presentation of many historical facts never hitherto made known in print.

### MUSIC AS A BUSINESS MAN SEES IT

Captain Allan Hancock, donor of the new and magnificent building of the Allan Hancock Foundation for Scientific Research, has provided for a wing for higher music investigation, at the University of California. Captain Hancock is one of California's foremost business men, whose interest in music is extraordinary. For some time he played in the violoncello section of the Los Angeles and the Hollywood Bowl orchestras. His observations upon music for the business man are very significant.

Technical Teaching Experts whose incomes aggregate many thousands of dollars contribute practical articles monthly to THE ETUDE, in addition to the large section generously filled with new and useful music.

ing the well known conservatory of Naples.

You know that I never liked noisy publicity and now I find it right away provoking. I would, therefore, be thankful to you if you would omit that publication. Or, should it be too late, to insert a notice which makes known my attitude.

To Count Arrivabene (a music critic of the "Opinione"),

June 5, 1882.

Berlioz was a poor sick man who raged with violence and wickedness against everybody. His talent was rich and powerful, he had a decided gift for orchestration and knew of many unusual instrumental effects before Wagner. He could not restrain himself, he lacked moderation and balance, things without which a perfect work of art is unthinkable. He trespassed always the boundaries, even in his otherwise creditable works.

His successes in Paris are mostly well deserved, but they are to be considered as

dictates, leaving others do as they please. Besides, I have not written anything of this "Jago" or rather "Otello," and I do not know when I shall be able to do it.

To Franco Faccio (the orchestra leader),  
Genoa, March 27, 1883.

The "Pungolo" reports concerning "Jago" that Boito (who later wrote the libretto of the "Otello") was so engrossed with the subject that he regretted not to be allowed to compose it himself. Those words spoken on the occasion of a banquet have probably not a great weight. Unfortunately, however, they cause all kinds of gossip. One could say, f. i., that I have compelled him to write the libretto. Still more to be regretted is the fact that, when Boito deplores not to be allowed to compose the text himself, he lets it transpire that he fears I will not compose as he would like. I agree entirely with him and, therefore, I write to you, the most intimate friend of Boito, in order that you may inform Boito

20¢ IN CANADA

**TEACHERS!**—You can encourage parents to keep up children's music lessons if you can't discourage them with the cost of music. CENTURY EDITION—at only 15¢—keeps the cost of pieces at a minimum—yet, doesn't restrict your teaching in any way.

Remember, this standardized price has not been achieved by printing an inferior Edition. If you are at all skeptical regarding this, we would urge you most earnestly, for your own sake and for the benefit of your students, that you secure a copy of Century and compare it with any other existing edition which you may have or may be familiar with, and we are certain that Century will prove positively and conclusively that it has no superior.

All the suitable classics and a multitude of Standard modern compositions are available in the "CENTURY" at this standardized 15¢ price, irrespective as to whether the Edition contains two or twenty pages.

Here are a few selected at random from our catalogue:

# THE WORLD OF MUSIC

GEORGE VI

KING GEORGE VI has graciously granted his patronage to the Royal College of Organists, of London, the first time that, in its seventy-five years of existence, the sovereign has become Patron of this Royal institution. Edward VII inherited a deal of his good mother's love for music

and continued much of her gracious attention to movements for its advancement; but, with his passing there seems to have been something of a loss of Royal interest in the tone art. So it is both pleasant and encouraging to note that the young British rulers are fostering an art that has had centuries of traditional favor by many of the best of England's monarchs.

THE NATIONAL FEDERATION OF MUSIC CLUBS, with Mrs. Vincent Hilles Ober as president, held its twenty-first Biennial Convention in Baltimore, from May 16th to 23rd. Highlights of the event were the great National Chorus of approximately a thousand voices; the Pageant of States; eminent soloists in concerts, including Efrem Zimbalist, violinist; Josef and Rosina Lhevinne, duo-pianists; and Marjorie Lawrence, famous Australian soprano; with numerous banquets and luncheons.

LEANDRO CAMPANARI, a musician of world renown at the turn of the century, passed away on April 23rd, at San Francisco, aged seventy-nine. He was a violinist of high repute, and was at times a guest conductor of the Philadelphia Orchestra and a regular conductor of the Manhattan Opera Company of New York.

THE CINCINNATI MAY FESTIVAL opened the thirty-third of these great events on May 2nd, with a program including Haydn's "Creation" and Handel's "Alexander's Feast." It continued through the week; Eugene Goossens was the conductor, and Kirsten Flagstad topped the list of eminent vocalists.

AN ALL-AMERICAN PROGRAM was presented by the *Société des Concerts du Conservatoire* of Paris, on the evening of March 29th. It included MacDowell's "Second Piano Concerto" with Maria Antonia de Castro as soloist; Randall Thompson's "Second Symphony"; Walter Piston's "Concerto for Orchestra"; and less ambitious works by Dr. Frederick Shepherd Converse, Edward Burlingame Hill, and Aaron Copland. The event was planned on the suggestion of M. Isidor Philipp, and was given in the grand amphitheatre of the Sorbonne, with Charles Münch conducting.

LEOPOLD STOKOWSKI, Fritz Reiner and Howard Hanson, three of America's most distinguished musicians, have consented to act as judges for the American Composers Award for 1939, of the Henry Hadley Foundation.

THE INTERNATIONAL MUSIC FESTIVAL of Lucerne, Switzerland, will open on August 3rd and close on the 29th. It offers a brilliant array of soloists, symphony and choral concerts, with the latter including two performances of the "Manzoni Requiem" of Verdi.

EDWARD BURLINGAME HILL

## Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

THE FIFTY-EIGHTH "MESSIAH" FESTIVAL, of Lindsborg, Kansas, was held during Easter Week, with Dr. Hagbard Brase leading a chorus of five hundred and forty-six voices. The "Messiah" had its one hundred and sixty-seventh performance at these festivals, and Bach's "St. Matthew Passion" was sung for the fourteenth consecutive time.

THE CHICAGO SYMPHONY ORCHESTRA, with Dr. Frederick Stock conducting, presented on one of the last concerts of its season the "Third Symphony" of Felix Borowski, eminent Chicago composer, and the conductor's "Concerto for Violoncello and Orchestra."

STEPHEN FOSTER is to be honored by our Postal Department, which will issue a Foster commemorative stamp as the first of a series recognizing American art and especially music.

CLERMONT PÉPIN, a young musical prodigy of Canada, but twelve years of age, recently conducted a group of his compositions when played on a program of the Symphony Society of Quebec.

ARTHUR FARWELL and Harold Morris have been announced as having tied for first place in the nation-wide contest of the National Federation of Music Clubs. Mr. Farwell submitted a "Concerto for Two Pianos and Orchestra"; and Mr. Morris offered a "Concerto for Violin and Orchestra." Mr. Morris, a native of Texas, was educated at Cincinnati, under Dr. Edgar Stillman Kelley; and Mr. Farwell, a native of St. Paul, Minnesota, was educated in Boston and Europe.

ARTHUR FARWELL

THE WORLD'S FAIR WAGNER CYCLE was opened on May 2nd, with a performance of "Lohengrin" while Crown Prince Frederik, Crown Princess Ingrid, the Danish ambassador, the Danish consul general, and the Danish commissioner to the fair occupied a box in "The Golden Horseshoe." Lauritz Melchior, famous Danish tenor, was very appropriately the *Lohengrin*, and Kirsten Flagstad, eminently popular soprano, also a Scandinavian, was the *Elsa*. The orchestra and audience stood before the rising of the curtain for the playing of the national airs of Denmark and Iceland, followed by *The Star Spangled Banner*.

SERGE PROKOFIEFF, Georges Enesco and Albert Stoessel have been announced as guest conductors of the Philharmonic-Symphony Orchestra of New York, for the 1939-1940 season. They will officiate while the regular conductor, John Barbirolli, takes his usual four weeks of rest during the concert period.

THE CHURCH AND CHORAL MUSIC INSTITUTE of Northwestern University, for the study and discussion of the problems of the Ministry of Music, will be held from July 29th to August 4th. The annual convention of the National Association of Choir Directors will be held concurrently. Full particulars from Oliver S. Beltz, 1822 Sherman Avenue, Evanston, Illinois.

DR. EDGAR STILLMAN KELLEY celebrated on April 15th his eighty-second birthday. In honor of the event a group of three hundred leading musicians of New York tendered the distinguished American composer a luncheon at which Dr. Walter Damrosch was the principal speaker.

ALL CHICAGO BOX OFFICE RECORDS for musical events are reported to have been broken by Paderewski at his recent recital there. This honor had belonged to Adelina Patti since December 9, 1889, when she drew \$10,235.47; but, including Federal tax, the receipts of Paderewski's recital were \$13,020.70.

WHEN CHARLES MAGNANTE and his Accordion Quartet, of which Joe Biviano, Gene von Hallberg, and Abe Goldman complete the personnel, gave on April eighteenth their concert in Carnegie Hall of New York, the first number on the program was the monumental *Toccata and Fugue in D minor* of Bach, transcribed for their instruments; and this followed by the brilliant *Rondo Capriccioso* of Mendelssohn. Interspersed among less pretentious but highly serious compositions were the *Waltz in C-sharp minor* and the *Nocturne in E-flat* of Chopin, and the *Liebesfreud* of Kreisler, played by Magnante; the *Overture to "The Marriage of Figaro"* of Mozart, by Magnante and Biviano; and the *Fugue in G minor* of Bach, by the Quartet.

CHARLES MAGNANTE

THE DETROIT NEGRO OPERA COMPANY has finished its second season. With a combined cast and ballet of one hundred and seventy-five, and the conductor the only affiliated white person, it gave last season a performance of "Aida" which won the enthusiastic approval of the press. As we go to the printer it is preparing an early presentation of "Carmen" in English.

(Continued on Page 485)

## Competitions

PRIZES FOR WORLD'S FAIR: First, \$3,000; second, \$1,000; to best chorus of one hundred and fifty to two hundred voices singing the *Sanctus* (in Latin) from the "Mass in B minor" of Bach, and *By the Waters of Babylon* by Philip James. First, \$1,000, second \$500, to best chorus of sixty to one hundred voices singing *Lucifer in Starlight* by Bantock (unaccompanied) and *The Nun of Nidaros* by Protheroe. Also liberal prizes for men's choruses of sixty to one hundred voices; for women choirs of fifty to seventy voices; and for male and female soloists. Complete information from Dr. D. E. Jones, secretary, *Scranton Tribune*, Scranton, Pennsylvania.

A PRIZE OF FIVE HUNDRED DOLLARS is offered by the Henry Hadley Foundation for the best composition in any of the major forms to be submitted within the autumn months. Full particulars may be had from the Henry Hadley Foundation, 633 West 155th Street, New York City.

THE EURIDICE CHORUS of Philadelphia offers a Prize of One Hundred Dollars for a Chorus for Women's Voices, in three or more parts, either a

capella or unaccompanied, and to words of the composer's choice. Compositions must be received not later than October 1, 1939, addressed to The Art Alliance, 251 South 18th Street, Philadelphia, Pennsylvania, to whom application may be made for further information.

THE PADEREWSKI PRIZE COMPETITION offers \$1,000 for the best work for Chamber Orchestra, and a second \$1,000 for a concerto or other serious work for a solo instrument with symphonic orchestra. Works must not exceed fifteen to twenty minutes in performance, and must be received before February 1, 1940.

Full information from Mrs. Elizabeth C. Allen, Secretary Paderewski Fund, 290 Huntington Avenue, Boston, Massachusetts.

PRIZES FOR BAND COMPOSITIONS: Instrumental or vocal solo with wind accompaniment; any form for symphonic band, except quick-step march; a work for small band or combination of wind instruments. Competition closes August 15th. Further information from Department of Music, World's Fair, New York City.

WILLIAM WARREN SHAW, eminently known voice teacher and author of Philadelphia, died April 29th in New York. Among his pupils were Olive Fremstad, celebrated Metropolitan dramatic soprano; George Hamlin, favorite tenor in the vogue years of the Victor Herbert operettas; and Noah Swayne, well known baritone of some two decades ago.

THE ANNUAL YOUNG ARTISTS CONTEST of the MacDowell Club of New York offers prizes in the nature of New York debuts to the most promising young singer, pianist, violinist, violoncellist, harpist and chamber music organization. Application blanks and full instructions may be had from the *MacDowell Young Artists Contest*, 166 East 73rd Street, New York City.

WILLIAM C. PATTERSON, veteran musician and teacher of Deersville, Ohio, passed away on April 15th, at the age of eighty-one. Through all these years he had been active in the civic and musical life of the little city. For more than fifty years he had been a regular subscriber to *The Etude*, of which he is reported to have had a practically complete file. Thus is broken another link in the chain of surviving friends of its founder, Theodore Presser.

THE PHILADELPHIA ORCHESTRA, with Dr. Eugene Ormandy conducting, devoted its closing pair of concerts on April 28th and 29th to the compositions of Richard Strauss, in recognition of his seventy-fifth birthday, which fell on June 11th of this year.

# The Joy of Singing

"WHY do you want to study singing?" asked the professor in a prominent Western university, of a young woman student who was majoring in biology.

"Because I feel impelled to do so as a means of self-expression," replied the young lady.

The professor was a well educated man of the world; and he carried his remarks further, with, "That is the very best reason for studying singing. I have often wondered why people want to sing. At one time it was thought to be a form of exhibitionism, the desire to 'show off,' the same thing that makes millions and millions, throughout the world, put on fancy military costumes and parade for hours at a time. One great military authority once said that the most powerful aid to the militarists is the uniform. If people did not love uniforms, it would not be possible, under ordinary circumstances, to enlist them in peace times. Make war horrible, dirty, agonizing and terrorizing, as it really is, and no sane person would want a part in it; but dress it up like a peacock and millions will swallow the bait, because it is human to want to show off.

"Well, in the days before the phonograph and the radio, thousands of vocal students sang because they were imitating the great opera, concert and church singers of the day. To supply this need, composers wrote innumerable parlor ballads. These were known in England as "Queen's Hall" stuff, because for the memorable "Ballad Concerts," conducted for years in London, by Boosey & Co., and by Chappell & Co., thousands of sentimental songs were written, which in years to follow were heard in the late Victorian and Edwardian parlors, from ambitious singers, who, in turn, provided much of the musical entertainment of the day. They sang as much like Sims Reeves, Mme. Belle Cole, Ben Davies, or Clara Butt, as their talents permitted. If you will glance at the London daily papers for several decades in that period, you will find the amusement columns flooded with the announcements of concerts given over, very largely, to music of this type.

"Musical taste in England improved, as it did in America, and singers and audiences became aware of the wonderful art songs of the Continent, from Schubert to Debussy. Composers of both countries realized this, and the song literature designed for British ears improved vastly. Charming as were some of the old English Queen's Hall ballads, a new type commenced to come in, with the distinctive and beautiful works of Liza Lehmann, H. Lane Wilson, and Landon Ronald, in Europe, as well as by MacDowell, Nevin, Lieurance, Rogers and Cadman, in America.

"With the rise of the Victor Talking Machine Company, many great artists were persuaded to make records. Everyone predicted the end of vocal study and singing in the home. The opposite was the case. Never was singing more popular and never were singing teachers more prosperous. Leaders in our great cities boasted of incomes from voice instruction soaring to \$50,000, and even \$75,000 a year.

"The Great War," however, brought drastic changes, not so much in the art and its interpretation as in economic conditions. Living quarters grew smaller, people entertained less at home, outside amusements, golf and the movies, came into the picture; and then the radio. Those students impelled by exhibitionism found it difficult to compete with the little walnut box which drew in from the ether the voices of the greatest living singers. Again the misanthropist proclaimed that singing and studying of singing were doomed. For a time, they seemed to be correct. Only rarely was singing heard in the home, and the sale of songs, good and bad, dropped off conspicuously. Meantime, choral groups, developed through the public schools, and wonderful *à capella* choirs commenced to appear in all parts of the country. Through them, young people began to revive the joy of singing. To sing alone is, however, a different thing, from standing up with fifty people and obeying the baton of a good leader. In solo singing, there is a thrill and 'liberation of the spirit,' which is inimitable. Gradually students began, once more, to find the joy of singing. Meanwhile, voice teachers became much better trained; and the result is that there now are far more finely schooled voices in America than ever before. Students learn through the radio, as was never previously possible, fine tonal and interpretative standards. That there will be a great revival of solo singing goes without saying. It is one of the richest of human needs; and those, who have once acquired the ability, find a means of self-expression not to be gained in any other way.

"Students with a better educational background are beginning to realize the high physical, artistic and æsthetic values that are part of a well-planned course in singing, now linked properly to literature and to the greater literature of music. Singing develops poise, frequently improves the health of the individual, and often has been known to demolish ancient inhibitions, dangerous to the individual. Some psychiatrists approve singing very highly in certain abnormal mental cases."

Our experience confirms that of the professor in every detail. The joy of singing is superseding mere exhibitionism. The song literature has vastly improved and is to-day much more intriguing and intelligent than in the past. Home groups are beginning to want to hear the singer "in person" and do not make comparisons with the great stars of the radio. The singer, who sings because the song within his heart is irrepressible, often stumbles upon a rational natural method of vocal expression which is surprisingly excellent.

Last July, we attended a convention of a branch of the International Arboreal Music Teachers Association. Among the delegates were the wrens, the robins, the catbirds, the cardinals, the thrushes, the quails, the mourning

doves, the peewees, the orioles, and several other feathered prima donnas. A daily clinic was held from dawn until breakfast. Then there were debates upon nest building and bug hunting, which lasted, off and on, until twilight.

"The joy of singing is one of life's greatest thrills."

NELSON EDDY

Finally, when the summer wore on and the babies were hatched and grew big enough to pay attention, our whole garden, with its twenty-seven nests (not counting those of the squirrels in the treetops), turned into a conservatory of song. We saw a brilliant red cardinal giving a lesson to its brown winged fledgling; and before long Miss Cardinal commenced to sing. When she sang she made the same tones that other cardinals make. She did not try to sing like a robin, or a catbird, or a thrush. Was she giving the world a lesson? Was she trying to say, "God gave you a voice which is your voice, and the highest in vocal art is to find the nature of that voice and to develop it along its own natural lines—not trying to make it like something else! True, the parrot, the mynah bird, the catbird, and some others, do imitate, but like most of the birds, we are all born with definite vocal limitations. Our voices are just as individual as our features. That is the reason why we can recognize our friends so readily over the telephone.

Just now, as we are writing this by the aid of midnight electric current (not midnight oil), an owl is singing outside our window. No matter how long he sings, his voice will be always that of an owl. He can never sound like a canary or a nightingale. The point is, however, that he is singing at his best and seems to be having a glorious time doing it. More than this, he is proud of his throaty trills and not afraid to let the world know it. Therefore, if you cannot sing as did a Caruso, a Patti, a Bispham, or a Homer, do not let the thought prevent your singing. Sing as God intended you to sing and you will be blessed with one of the great thrills of life. Singing for the sheer joy of singing is becoming more and more popular.

In singing a great deal depends upon the normal formation of the throat, nasal and buccal cavities, also upon the condition of the mucous membrane. As a part of the singer's hygiene, a throat wash recommended by established physicians is of the very greatest importance for daily use. Be extremely careful of unknown, untested throat medications. They can and often do injure the throat seriously. Physicians know of many such cases. One singer literally ruined her voice for a year, through the use of a throat medicine containing a chemical that scarred the mucous membrane. The best remedies should be used strictly according to

directions or under the advice of your physician. Certain standard preparations, on sale everywhere, are safe when properly used. They are, in alphabetical order, Astringo-sal, Bonsol, Glyco-thymoline, Hexylresorcinol Solution, Lavis, Listerine, Mercitan Solution and Pepsodent. These are not local products, but are sold in all parts of the country.

We are strongly of the opinion that we may expect a return of those wonderful days in sixteenth century England when all ladies and gentlemen who could sing reveled in the art. In the recent work by Miles Merwin Kastendieck, "England's Musical Poet, Thomas Campion" (Oxford Press), we find the following reasons for the cultivation of singing as "set downe by the auctor," William Byrd, one of the earliest of England's musical immortals:

- First, it is a knowledge easely taught, and quickly learned, wher ther is a good Master, & an apt Scoler.*
- 2. The exercise of singing is delightful to Nature, and good to preserue the health of man.*
- 3. It doth strengthen all parts of the brest, & doth open the pipes.*
- 4. It is a singular good remedie for stutting and stamaring in the speech.*
- 5. It is the best meanes to procure a perfect pronounciation, and to make a good Orator.*
- 6. It is the onely way to know where Nature hath bestowed the benefit of a good voyce: which gift is so rare, as ther is not one among a thousand that hath it: & in many that excellent gift is lost, because they want art to expresse Nature.*
- 7. Ther is not any Musicke of Instruments whatsoeuer, comparable to that which is made of the voyces of Men, wher the voyces are good, & the same wel sorted and ordered.*
- 8. The better the voyce is, the meeter it is to honour & serue God therewith: and the voice of man is chiefly to be employed to that ende.*

#### OMNIS SPIRITUS LAUDET DOMINUM

*Since singing is so good a thing  
I wish all men would learn to sing.*

### Gratitude

LAST month we embodied in an editorial a suggested plan to give Mme. Cécile Chaminade an international birthday party on the occasion of her seventy-eighth birthday, August 8th, 1939. The plan is simply that of having music lovers everywhere, teachers, their pupils, and club members, to send to

Mme. Cécile Chaminade  
34 Boulevard d'Italie  
Monte Carlo  
France

a postal card with some such greeting in English as

"Happy Birthday Wishes to Mme. Chaminade, who has brought so much beauty to the world, through the deathless art of Music."

or, in French.

1. A Madame Cécile Chaminade l'auteur charmante qui a donné à l'art musical des nombreux ouvrages inoubliables, nous envoyons nos meilleur vœux à l'occasion de son anniversaire de naissance.

2. A Madame Chaminade l'aimable et charmante auteur de magnifiques oeuvres musicales nous envoyons nos meilleur souhaits à l'occasion de son anniversaire de naissance.

The cost of mailing a postal card to Europe is three

MME. CHAMINADE  
AT HOME

This picture is the enlargement of a "frame" from a moving picture film made some years ago by the editor of *The Etude*, at Tamaris on the French Riviera. Mme. Chaminade was confined to her bed, but anxiously had it drawn to the window in order that she might have her first moving picture made.

cents, a sealed letter five cents, a half-ounce. The cost is trifling compared with the compensation of showing to this dear little French lady, who has given the world such beauty and delight through her masterpieces in her inimitable style, something of the gratitude which thousands in our country must feel toward her. Pupils and club members "just love to do things." Here is a fine chance for leaders everywhere to stimulate a world-wide Chaminade revival. Everything depends, however, upon the initiative of such readers as you who are now holding this copy of *THE ETUDE* in your hands. Will you do it, and how many of your friends and pupils can you induce to join with you? Let us make this birthday party a real surprise to this remarkable composer, now invalidated for years, but still with a heart full of the charm and youth that has set millions and millions of fingers interpreting her fascinating compositions at the keyboard. The musical world owes Mme. Chaminade a great debt, and surely we will all enjoy thanking her in this way. Remember the words of Seneca, "Nothing is more honorable than a grateful heart."

# Learning to Interpret Great Music

An Interview with the Famous French Pianist

## ROBERT CASADESUS

Secured Expressly for THE ETUDE MUSIC MAGAZINE

By

FLORENCE LEONARD

**I**N MY TEACHING of fifty-two American pupils, in the Summer sessions at Fontainebleau, I have found that in every case these pupils have thought too much about the literature which has been written about their music, and not enough about the music itself.

All this literature about compositions should be suppressed. Can a student learn how to play a Mozart concerto by reading a story embroidered around the facts of Mozart's life; or a biography which purports to be exact but is padded with anecdotes of romances that, if we may believe Mozart's own letters, are wholly imaginary; or even by reading a perfectly authentic biography.

Music cannot be explained by writing about its composer's difficulties with a patron or a parent, by describing a fortunate or an unfortunate love affair, or by enumerating the intrigues and jealousies of a composer's contemporaries. Does a letter from Beethoven's brother, or nephew, or lawyer, show you how to phrase one passage from his "Op. 111," or indicate whether "Op. 110" should be played in the style of "Op. 10, No. 1"?

It is the text of the music itself which must be read; and—I would emphasize this—the text which must be respected.

### Chopin's Meanings Distorted

CHOPIN IS THE COMPOSER who has suffered most at the hands of this type of authors. He has been traduced, his works have been actually deformed, through the influence of all that has been written about his life, his disposition, his health, and his love affairs. In fact, for this very reason the public does not respond, as it should, to the music of Chopin. Such a web of sentimentality, morbidity and misinterpretation has been woven about his name, that his music itself is falsely interpreted.

When Chopin writes a letter to a friend, and even to a musical friend, does he make use of banal descriptions? Never! We find in one reference to his "Sonata in B-flat minor," when it was just completed, this remark: "Here I am writing a 'Sonata in B-flat minor,' containing the march that you know. There is an *Allegro*, then a *Scherzo in E-flat minor*, the *March* and a short *Finale*; perhaps three of my pages have the left hand, in unison with the right, gossiping, after the march." This *Finale* is the one which has been variously interpreted in words by one musician after another. Perhaps the most familiar attempt at description calls it the wind rustling the leaves over the grave of the hero.

In the same letter Chopin writes of some new mazurkas: "They seem to me good, as is always the case with younger children when the parents are growing old." But of sentimental or picturesque description there is never a hint.

No! Chopin was a *modest, marvellous musician!* He needs no literature to speak for his music. It speaks for itself.

### Importance of Correct Reading

BUT IN ORDER TO PLAY him correctly the student must be able to read him correctly. Music, if read correctly, is sufficient for itself and needs no explaining.

The new school of teaching, I am glad to say, has improved the situation. Many students in the past have played Chopin badly, horribly. But now we find students of even fifteen years of age who instinctively play him correctly, romantically. I cannot tell you why. It is a mystery.

Perhaps the reason is that formerly they felt the influence of the literature about him too strongly, and now

the teachers of the new school have taught them to respect the text. Or perhaps it is due to the influence of the epoch, and the fact that in America, France and England, countries which have not been upset by political disturbances, the youth are working for the ideal of the music.

In America, especially, where the people love music, I have observed this attitude; and this, in many cases, with adult students who wish to achieve whatever is

CASADESUS AT THE PIANO

possible, although they have not begun to study early in life. Yes, especially in America do I find the adult taking up the study of music for the first time.

And I would encourage the adult to do this. One can study the piano at my age. It is true, of course, that one cannot become a virtuoso if he waits till he is twenty, thirty, or forty years old before he begins to study. But he can derive an enormous amount of pleasure for himself from the study of this instrument.

### Solfège the Fundamental Study

THE FIRST ESSENTIAL for the study of the piano is the ability to read music correctly; and the fundamental training for reading is found in *solfège*. This must come first. It is the basis of all musical knowledge. To begin *solfège* when you are five years of age is best. It is easy to learn notation and reading when one is young.

What does the study of *solfège* provide? An exact knowledge of the letters (which includes, of course, pitch and intervals), a subconscious sense of the length of each note, of the groupings and accents which are rhythm; knowledge of the progress to the chief note of each group, of the climax of the phrase and the sentence, and of the rise and fall of power and intensity, which constitute dynamics.

Such study as this is the foundation of good reading. It means that when you peruse the notes which a composer has written down, you know how to play them correctly. And at that point only is the beginning of interpretation. Only then does the interpretation become clear to you. But at once it is clear if you can read correctly.

Before you can interpret a composition, however, you must have muscles which will obey your commands. They

must do the work, and therefore they must be trained.

I cannot tell you how I myself began to study, for I cannot remember the time when I did not play, nor can I remember the steps I took in first learning to play. I never played in public as a prodigy, not that I know. It is not well for a child to appear in that way. In such public performances he thinks too much of the technical display, of the effect he is creating, and not enough of the music itself and its meaning. The training of an artist cannot be done in public. It must be done in retirement, in quiet and at leisure.

### How Much and How to Practice

MOREOVER, THE ELEMENTARY TRAINING should not be forced. Six or eight hours a day of study means forcing. It is not good. Chopin was right when he said a student should work but three hours a day, *with concentration*. With modern music, which is so difficult to read—not to play—one should study four hours a day, with close attention. As Maumontel said—he was a teacher of my school—"you should practice one hour of technique and three hours of pieces."

That hour of exercises is like training for sports. In it you should study every kind of figures, scales, double notes, trills, arpeggios, octaves, and should work for velocity. This training is for muscles alone. Afterwards comes the music.

In Etudes, Czerny is the best master. There are also studies of Philipp, and the exercises of Brahms. But the latter are for strong hands only, and not for immature players.

### Why Czerny?

CLEMENTI, ONCE CONSIDERED so important, is now rather out of date, but not necessarily so; but, if you have Czerny, you have everything.

Consider for a moment! Czerny covers the entire period from Beethoven to Chopin. For he was a pupil of Beethoven; but also he knew Chopin well. He not only knew the classics but he also was forward looking, to Chopin. All the composers of these periods are represented in his exercises and Etudes. In the "School of Virtuosity" alone will be found studies for Mozart, Beethoven and Chopin, and especially for Chopin.

Glance at a few of his studies. In "Opus 365," for instance, the first *Etude*, in F major, suggests at once the last movement of the Mozart "Sonata in F major." There are several others which speak equally plainly of Mozart. No. 5 is a study on trills and *cadenza* forms, such as will be found in many a classic *Adagio*. No. 7 prepares chord forms for Beethoven and Chopin. No. 15 teaches melody playing in octaves and sixths, and in the second portion the *cadenza* style again. No. 17 suggests the Beethoven "Sonata in B-flat major, opus 22"; and what is No. 16 but a preparation for the great *Chromatic Etude* of Chopin? No. 25 is plainly related to a Liszt *Etude*, in its wide leaps and melodic chord groups. So one might continue to find the related ideas. Even in "Opus 299" one can find such similarities. Indeed, a child can begin with Czerny, and by advancing steadily through all the five grades he will have his technique.

### Technic Must Become Subconscious

ONE MUST FIRST CONQUER every kind of technical difficulty as technique; then he must discard or forget what is too scholastic. It is like the study of composition. One must learn to follow the rules for constructing a sentence, and then one must lose consciousness of rules and write music itself—as Bach's way was.

Bach, too, must be practiced, and with great breadth of

style, as well as for technical clarity.

When you begin to practice pieces, a sonata, for instance, first work out the technic of each difficult passage. Besides, you must seek sonority of tone. Sonority we get through suppleness of movement. If you examine the ways of raising and lowering the finger, of depressing the keys, you should be able to distinguish between the hard, unyielding member and joint, and the supple, elastic one, between the stiff, strained lifting and striking and the loose, easy, unforced attack. Chopin again was right when he said, "Play with ease." He advised a gentle, elastic movement, not a harsh, sudden attack of the keys. Ease of movement, gentleness, he insisted on. But do not seek too much after different ways of attacking the keys. Freedom of movement is necessary, above all things, and thinking on large lines. Everything is in the music if we play with breadth of ideas.

### Difficulties of Chopin

MODERN MUSIC IS DIFFICULT to read, but not so difficult to play as Chopin. Chopin's music is the most difficult in the world. One never absolutely knows Chopin. I can learn a composition to-day and, if I lay it aside for a year, I must begin it all over again.

Louis Planté, a pupil of Liszt, at the age of ninety-five was playing the piano all day. I went once to see him. He told me he had worked on the *Barcarolle* of Chopin for sixty years, "And I do not know it now!"

One never knows Chopin. Suppose I begin an *Etude*. I practice it every day, with supple movements, and in a month I can play it. Very well! Then if I leave it for perhaps three years, I must begin as if I had never seen it.

In practicing Chopin it is of the greatest importance to watch one's style. The different points of view of various teachers make a great difference in the style of the playing. In France there are two distinct schools of interpretation of the works of Chopin. Both have the same traditions, the traditions of Czerny, of Chopin himself, and of Georges Mathias; but they differ in their application of these traditions. One school inclines toward the Romantic style; the other holds more to conservatism, to the idea of clearness rather than richness and fulness of tone and style. Both are French. But the Romantic group would play a *polonaise*, for example, with power and rich intensity, while the other group would set it forth with delicate, clear performance. The latter, of course, is in keeping with the early delicate style of the old French composers.

It would not be just to compare Ravel and Debussy as examples of these two types of interpretation. And yet one sees some similarity there. It is better to compare Ravel and Debussy with Schubert and Chopin. Ravel makes greater effects but is less profound; he uses a much greater canvas, his effects are noble, but Debussy, the mystic, is shut in within himself.

In playing octaves, whether in Chopin or any other composer, one must be careful, again, to watch for ease and suppleness and not to force the energy of the attack. If I play from the wrist and there is not power enough, I must not attempt to get more power by forcing the activity of the wrist. Instead, I must play from the elbow. But even here I must watch for supple, easy attack. I do not like to use the whole arm, as I find the tone too harsh.

### Necessity of Technical Practice

I, MYSELF, DO NOT now practice four hours a day. If I have not been playing at all for two or three days, then I spend about fifteen minutes on exercises. But that is not to be advised for students. Of course they do not like to practice exercises. But, if you tell them that they can get their technic by playing Chopin "Etudes," that is wrong. I might be able to keep in prac-

tice in that way; but they could not acquire their technic so. They must spend an hour on their piano gymnastics, at the piano; just as an athlete must train himself by exercises for arms, shoulders, chest, back, and legs. Chopin's compositions are not to be played for the purpose of getting technic; nor Mozart's, nor any of the great composers! Young students do not like this rule, but it must be followed with strictness. First they must take their hour

adapt my playing to each type of piano, and at once.

For instruction in using the pedal, study Chopin's markings. He made all his markings with great care. Of course every student should understand that a chief function of the pedal is to prolong the harmonies and to connect one to another. But the pedal must be changed very frequently.

Ravel also marked his pedaling with

## FIFTY YEARS AGO THIS MONTH

ALBERT ROSS PARSONS, widely known American pianist and teacher, was represented by a paper read before the Annual Meeting of Music Teachers' National Association, at Philadelphia in the first week of July, from which we quote a part of what he had to say on "The Mission and Worth of the Pianoforte Teacher in American Life," in which conditions not so different from those met by the teacher of to-day are discussed:

"Theoretically speaking, this mission should be that of a disseminator of musical knowledge, an educator of musical talent, and an agent in the great work of developing and forming the musical taste of the public at large.

"Why the work of the American teacher is not always in the line of such a mission is easily explained.

"In the vast majority of cases, pianoforte instruction is not engaged by parents with a view to solid and lasting attainments upon the part of their children.

"Their desire usually goes no farther than to have their children's taste, knowledge and executive ability developed as a source of pleasure to the domestic circle, and to have them acquire the measure of accomplishment usual in the social sphere which they are expected to occupy.

"Rarely indeed do parents in comfortable circumstances, and still more rarely those who are wealthy, ever express, either to their children or to the teacher, a desire to have pianoforte instruction conducted with a view to preparation for the practice of the musical profession in the event of their being thrown on their own resources.

"And yet, as a matter of fact, a very large proportion of our female teachers of music come from the ranks of those who as children cultivated music only as a social or as a fireside accomplishment, and whose first earnest efforts in music date from a time when it suddenly became evident that this art must henceforth be followed professionally as their sole reliance for support. When thus suddenly confronted with the stern realities of life, what do such young

people know of music?

"Where the study of music is so superficial with individuals, evidently the practice of the profession cannot be doing anything like what it should to shape public taste.

"But, for this state of affairs, who is responsible, parents or teachers?

"We believe neither. It is going too far to hold parents responsible for following the usage of people of their social circle. And, on the other hand, no teacher, no matter how conscious he may be of the need of a radical change in the course of pianoforte teaching, can, single-handed, do much to promote the needed public reform. The successful teacher is so busy meeting the demands made upon him by the present, that he rarely has time to mature plans for anything beyond. He finds, unfortunately, that while lip-service is everywhere rendered to the adage that knowledge is power, nevertheless, the fruit of knowledge, namely, executive skill, is much more highly prized than the tree on which it grows. Accordingly, as gardeners fix their attention on forcing the development of flowers, regardless of the incidental drain upon the natural vigor of the plant, so teachers forego comprehensiveness of plan and thoroughness as to details in their work, in order to grow showy musical fruits, mainly for the purpose of display. Nay, the true doctrine, that root and branch shall be known by their fruits, is changed into the heresy, that if you can cheat the eye by artificial fruits, root and branch may be ignored, and the art be valued in proportion to the success of the deception in the appearance of fruit. Hence, though hardly any time should be left for the acquirement of real knowledge throughout an entire season's lessons, the dear pupils must be ready at all times to play a certain number of popular pieces in order to conceal how little they know behind a show of knowing much!

"Unless the teacher enters this race with might and main, and bends all his energies to thus serving up such musical veal in imitation of matured beef, his less scrupulous competitors will leave him out of sight, and he will find all his pupils carried away from him in the universal swim!"

of "punishment"; then they may have their pieces.

My own greatest difficulty in concertizing arises from the great differences among individual pianos. In every town I visit I must play on a piano different from all others. If you play on ten of the best Steinways, you will find each one different from each of the others, in resonance and in action. I must train myself to discover at once the quality of the piano on which I am to play. Is the tone bright and clear, or is it dull? Is it full and sonorous, with big *fortes*; or is it thin and soft? I must

care, which should be studied with vigilance.

Since correct reading is so important, the student should give much time to it. Not only must he read accurately, with scrupulous exactness, but he must also learn to read rapidly. The eye should always be in advance of the notes which the hands are playing. In our French schools, and also in the Italian ones, the teacher often follows on the page the pupil's playing (or singing) and covers, immediately with a slip of paper or cardboard, the measure which is being played, while

(Continued on Page 467)

## Radio Flashes

By PAUL GIRARD

WEEKLY SYMPHONIC PRESENTATIONS by the National Broadcasting Company recently became a year round feature of radio when the NBC Orchestra began its summer symphony season of Sunday night broadcasts 8 to 9 P.M., EDST, over the NBC-Blue Network. Like the Saturday night broadcasts of the NBC Symphony Orchestra, heard during the winter season, the new series will be under the direction of noted guest conductors. Among those who are announced to appear with the orchestra are Erich Leinsdorf, the brilliant young Wagnerian conductor of the Metropolitan Opera, and Dr. Frank Black, general music director of the National Broadcasting Company. This new series of Sunday night symphonic programs will continue until the NBC Symphony Orchestra resumes its weekly broadcasts next fall. The programs will include the usual standard symphonic masterpieces and compositions by American composers as well as lighter works of the symphonic literature, now seldom heard at symphony concerts.

Television is no longer around the corner, but at the corner. On April 30 the first regular "high definition" television service in the United States was launched by the National Broadcasting Company with President Roosevelt as the first subject. The occasion was his delivery of the opening address at the New York World's Fair. Although television is now restricted to an Eastern area, and may be said still to be in its experimental stages, no one can refute the statement of C. W. Farrier, television coordinator of the National Broadcasting Company, that complete television service in America is inevitable.

Television shows, comparable to those of an excellent home motion picture program have been received nightly in the New York area for some time prior to the start of the nationwide service. Although the equipment is ready to reproduce sounds and images in the home, there is need for a television system, according to Mr. Farrier. "... In order that television give us a front seat at a presidential inauguration, that it give us an educational service that will bring the world's greatest teachers at our fireside, that it raise the curtain on entirely new forms of entertainment," he says, "then we must have a television system."

Gilbert Seldes, Columbia Broadcasting System director of television, states it is difficult to predict anything about programs, because television covers part of the field of each of the arts with which it will be allied—motion pictures, radio, news reels, stage, animated cartoons and many others. "Being able to pluck its material directly from life, television programs will be as varied as life itself. And since we are going to do a job without precedent, we will have endless opportunities for both improvement and error. Television differs chiefly from stage or radio in having a special immediacy for the audience. It goes directly into the listener's home and, more than that, into his living room. This peculiar quality of television creates one of the major problems of its programs.

Highlights of the Bible, a Sunday series of Scripture lessons, conducted by Dr. Frederick K. Stamm, pastor of the Clinton Avenue Community Church, Brooklyn, returned to the air on April 30, for its ninth consecutive year on a coast-to-coast network of the National Broadcasting Company. Heard from 10 to 10:30 A.M., EDST, over the NBC-Red Network, this broadcast is designed as a brief devotional service presenting the Scriptures in terms of conduct rather than in relation to theology. Dr. Stamm discusses the Bible in terms of modern life.

THE VIRGINIA CONSERVATION COMMISSION has recently recommended that the next General Assembly make the song, *Carry Me Back to Old Virginny*, the state's official anthem. The majority of the millions of radio listeners to this world renowned ballad take for granted that it is a Stephen Foster production, oblivious or ignorant of the fact that its author was James A. Bland, a Negro student of the government Negro university, Howard University, of Washington, D. C. Similarity in Negro motif, inspiration and genius easily accounts for this misplacement of authorship.

I have hummed the words and music of *Carry Me Back to Old Virginny* for more than fifty years, and have likewise labored under this same misapprehension until my attention was attracted to an article in the *Washington Star* of June 22, 1938. I am able to understand and appreciate the erroneous ascription of authorship, because of my own surprising lack of information when I had every opportunity to know better.

I entered Howard University in 1880, a few years after Bland's withdrawal and after he had copyrighted *Carry Me Back to Old Virginny*; *In the Evening by the Moonlight*; *In the Morning by the Bright Light*; and *Oh, Dem Golden Slippers!* which gave him world-wide celebrity. Although I have been intimately related to the student body, faculty, and alumni of Howard University, from that time until now, I do not recall ever hearing reference to the name of James A. Bland, with a possible singular exception. On one occasion a member of the graduating class of 1872, in reciting early incidents in the life of the institution, recounted the case of a student who was the Beau Brummell of the cohorts of that day. One of the student's female admirers made him a shirt. A poem in acknowledgement and appreciation of this handmade masculine garment relates; "I have tried it on, and I have tried it off," certainly an earnest of budding poetic possibilities.

### We Neglect Our Own

ONE NATURALLY WONDERS WHY Howard University did not follow up the career of its former student who had won such fame and distinction in the musical world. This inexcusable neglect may be accounted for by the fact that the university, at that time, labored under the spell of missionary enthusiasm which amounted almost to religious fanaticism. Anything that smacked of vaudeville, comedians, and minstrels was put under the ban; and the individual performers were held up as examples to be avoided. Even to hum such tunes on the campus was frowned upon as showing a lack of consecration. In those days, students were not permitted to attend the legitimate theaters, under penalty of dismissal, to say nothing of minstrel and vaudeville performances. Many a night did I steal out of the dormitory to hear Barrett and McCullough in Shakespearean rôles, at the risk of dismissal if discovered. Small wonder then that the University never made a nod of recognition or appreciation to the achievements of this frivolous minded former student whose accomplishments reflected as great glory upon his Alma Mater as any degreed Alumnus who has passed through her portals. In the meantime, the "Fisk Jubilee Singers" were "wafting" the meaning and message of Negro Spirituals around the world, on the wings of song, and thus brought fame and fortune to Fisk University. This illustrates the wide apart distinction of the Puritan line in that day, between the frivolous and the serious, between Jubilee singers and jazz.

# The Negro "Stephen Foster"

The first published biography of

JAMES A. BLAND

Composer of *Carry Me Back to Old Virginny*; *In the Evening by the Moonlight*; *In the Morning by the Bright Light*; and *Oh, Dem Golden Slippers!*

By DR. KELLY MILLER, M.A.

For many years *The Etude Music Magazine* has received scores of letters asking for information about the composer of *Carry Me Back to Old Virginny*. The investigation of the records of the Library of Congress and other large American libraries revealed little information upon the subject. We believe that this article, by the remarkable Dr. Kelly Miller, M. A., the Educator, for many years professor of mathematics, economics and astronomy at Howard University, is the first approximately complete compilation of material upon James A. Bland ever presented. Dr. Miller, born a slave in South Carolina, is one of the foremost scholars of his race; and, after a brilliant career, he is devoting his time largely to writing.

of Philadelphia sang and whistled this tune and refrain about the streets and at numerous social entertainments. A white composer, Sep Winner, being struck with its possibilities, reduced it to notes and gave his own name to the composition, by which it has been known ever since. It is easy to account for the inspiration of Bland's productions as the sheer creative energy of genius, but I have been wholly unable to find out how he acquired the technic of composition. The late James Weldon Johnson typifies the first school of Negro authorship of both words and music in the field of coon songs, ragtime and jazz. Of late the names of such composers have been legion. Mr. W. C. Handy has originated a new musical mood known as the "blues," of which he is still the chief producer and expositor.

From the "Oldest Inhabitants," an organization of the District of Columbia, devoted to preserving memories and records of interesting and important happenings among colored citizens of long ago, I was able to obtain much valuable memorabilia concerning the school days and early musical career of James A. Bland. However, such recollections have grown hazy and indistinct in the mist and maize of receding memories of more than sixty years ago.

### A Meager Record

THERE ARE THIRTEEN POETRY magazines listed in the *Reader's Guide*, which are supposed to be adepts in the matters of rare and curious data concerning poetic lore. The sum total of information derived from this source was to the effect that there is little information to be had. Such outstanding journals as the *New York Times*, *Boston Transcript*, *Chicago Tribune*, and the *New York Herald Tribune*, whose files are supposed to form current history of the times, confirmed the judgment of

the poetry magazine. The principal libraries of the country could furnish little more. The Congressional Library has for some years sought for information of Bland's life and works, but with meager and unsatisfactory results. There are to be found tidbits of scattered and fragmentary information throughout musical and minstrel journals. The biographical sketches attached to his copyrighted works in the Congressional Library are scant and meager, inaccurate, inconsistent, and conflicting on such essential questions as his parentage, education, and time and place of birth. Already a body of legend has grown up about the author of *Carry Me Back to Old Virginny*. One writer says that he was of Virginia slave parentage; another that the ballad expresses the lament of a Virginia Negro slave who was sold in New Orleans in

JAMES A. BLAND

The article in the *Washington Star*, already mentioned, aroused my curiosity and set me on the line of research to find out more about this forgotten student of Howard University, whose songs for the last fifty years have been sung around the world and carried by radio to all lands. Incidentally, after I had just indited the last sentence, I lifted my pen long enough to listen to WJSV broadcasting, *Oh, Dem Golden Slippers*, the product of Bland's creative genius.

### A Jealous Recognition

THE MUSICAL WORLD was at first not disposed to attribute to a Negro, authorship of words and music of his own creation. The spirituals sprang spontaneously from the Negro's soul, as the song from the throat of the bird; but their authorship, like that of all folk songs, was anonymous. Some upstanding Negro, with voice more powerful than the rest would improvise a striking sentiment wedded to some alluring sound, which made a hit and became the

vogue of the day.

Edward B. Marks, a music publisher, in "They All Sang" tells us that "not many of the ragtime colored composers read music. They played right out of their heads, and an arranger took down the notes as they played." *Swing Low Sweet Chariot* and *Steal Away to Jesus* are easily attributable to collective origin and anonymous authorship. It is known that *Listen to the Mocking Bird* was composed in this fashion\* A Negro barber

\*N.B.—The *New York Tribune* published, in 1927, another seemingly authentic version of this interesting tale, which follows, with abbreviations. "In 1854 there was a young Philadelphia street character known as 'Whistling' Dick, who won his support by singing popular ditties with guitar accompaniment. One day, as he finished a guitar solo with a brilliantly whistled imitation of the mocking bird, for which accomplishment he had a canny ability, Septimus Winner, a young musician of the town, came along, heard 'Whistling' Dick's surprising exploit, was inspired with the thought of the now famous *Listen to the Mocking Bird*, and that night transcribed it on paper."

Ell: another tells us that his father, Allen M. Bland, was a graduate from Oberlin College, with high honor; and still another that the son was graduated from Howard University with high honors. All such assertions are purely legendary and fictitious.

### And Some Survive

TWO OF MR. BLAND'S SISTERS are now living, the elder of whom is eighty-six years of age and is an inmate in a Washington Home for the Aged and Infirm. She retains only a faint and feeble memory concerning her distinguished brother. The other is considerably younger and retains a livelier and more vivid recollection.

A cousin is able to recite an interesting story concerning her distinguished relative, but her narrative is lacking in precision and accuracy of details. I have taken the information gathered from such scattered and miscellaneous sources, have tested it as far as possible, by living memory and,

From his early years, James A. Bland was looked upon as a musical prodigy. At an early age, he organized a glee club which gave frequent concerts and was noted for serenading hotel guests and other distinguished residents of the national capital. John H. Lewis, a retired clerk of the Interstate Commerce Commission and director of the Amphian Glee Club, for many years a leading musical organization in this city, was a member of Bland's first quartet.

From Geller's "Famous Songs and Their Stories," published in 1921, we read that "When he grew older, a kindly Virginian secured him a job of page in our House of Representatives, but that left him little time for his much loved banjo, so he abandoned the onerous duty of ministering to the wants of Congressmen. He next sought to follow a minstrel career, where his instruments would serve him to good advantage. But, alas, Bland's color weighed against him, notwithstanding the fact that the minstrels,

render his own compositions, chief among which old timers especially remember the *Christmas Dinner*, which was copyrighted in 1889.

I learned from his chums and schoolmates in the public schools that young Bland was not particularly noted for any marked indications of ability in his studies; but he was active, vivacious and a leader of the groups with which he associated, and especially popular with the young ladies. He completed his academic training at Howard University in his eighteenth year, in 1873. His schoolmates at Howard have only faint recollections of his student days.

I wrote to Hon. J. C. Napier, former Registrar of the United States Treasury, who was a member of the law class of 1872, requesting his memorabilia concerning James A. Bland. Both he and his wife were students in the university at that time and readily recalled him in those student days; but they were unable to furnish any important information concerning him. *Carry Me Back to Old Virginny* was written in 1875. This song at once brought him into the notice of the musical world. About this time, Bland became a member of the minstrel troupe under the leadership of Billy Kersands, the famous Negro comedian, and held down one end of the stage while Kersands held down the other. He toured

### MAGNIFICENT MEMORIAL TO STEPHEN FOSTER IN PITTSBURGH

*This beautiful chapel, adjacent to the Cathedral of Learning of the University of Pittsburgh, is the worthy memorial to the immortal Stephen Foster made possible by a munificent contribution from Josiah P. Lilly. This chapel, with its impressive hall and museum, has properly become a national shrine for music lovers from all parts of the world.*

by correcting evident inaccuracies and smoothing out inconsistencies and conflicting statements, have been able to formulate a brief sketch of the life and work of James A. Bland, confidently believed to be the fullest and most authentic to be found anywhere in print.

### Short and Simple Annals

JAMES A. BLAND sprang from a long line of free colored people of Charleston, South Carolina. Allen M. Bland, father of James A. Bland, attended a school in Charleston, taught by Daniel Alexandria Payne, who afterwards became a bishop in the A. M. E. Church and founder of Wilberforce University. Young Payne was driven out of South Carolina because of his activity in teaching school for free Negroes, against the law and public sentiment. Allen M. Bland afterwards attended Oberlin College where, according to the Registrar's report, he was a student in the Preparatory Department from 1845 to 1848. James A. Bland's mother was born of free parents, in Wilmington, Delaware.

Mr. Bland moved with his family to Flushing, Long Island, where James A. Bland was born October 22, 1854. The elder Bland, the father of twelve children, was undoubtedly a man of intelligence and ambition. He was among the first college bred Negroes in the United States, having been graduated from Wilberforce University, and afterwards from the law department of Howard University. He was the first colored man to be appointed Examiner in the United States Patent Office.

Immediately after the war, Allen M. Bland moved to Washington, D. C. and occupied a dwelling in a row of houses built by General O. O. Howard, within a stone's throw of the Howard University campus. Thus young Bland was brought up within a shadow of the institution from which he finished his academic training. He attended the public schools of Washington, before transferring to Howard University, where father and son were registered at the same time.

### THE UNMARKED, WEED-COVERED GRAVE OF JAMES A. BLAND, THE "NEGRO STEPHEN FOSTER"

*Through the researches of Professor Kelly Miller of Howard University, the grave of the man who wrote "Carry Me Back to Old Virginny" and other songs sung by millions, has just been located in the Merion Cemetery at Bala-Cynwyd, Pa., a suburb of Philadelphia. The picture shows the Editor of The Etude standing at the grave and is the first ever made of this spot which certainly deserves memorial recognition.*

smeared with lampblack or burnt cork, were giving rather feeble imitations of the Negroes in their gayest moods. He haunted every minstrel performance that played in Washington and listened earnestly to the melodies sung by the white comedians, and it made him grin ironically. If his birthright prevented him from performing, surely no exception could be taken to the writing of songs, and without any technical training to dull his sense of rhythm, he went in for song writing."

At the time when colored clerks were rushing into the government department, as a result of the Civil Service Examinations, they formed a social organization known as the "Manhattan Club," the prototype of the present day "Mu-So-Lit Club." At their meetings Bland was the star performer and was frequently called upon to

Europe as endman of the Kersands Minstrels and took England and Scotland by storm.

### A Prolific Genius

MR. BLAND WROTE over seven hundred ballads, during his lifetime. The Congressional Library contains the record of fifty-three songs copyrighted by James A. Bland, the full copy of thirty-eight of these is recorded, while the titles only of fifteen others are copyrighted. Most of his copyrights were taken out between 1878 and 1891. It is learned from the Boston Public Library that Bland published twenty-five different songs in German, although I can find no confirmation from German sources, whom I consulted through our American Ambassador at Berlin.

Among the more famous of Bland's pro-

(Continued on Page 472)

## RECENT RECORD RELEASES

By PETER HUGH REED

THE FIFTH, AND WE ARE GIVEN to understand, the last volume of the "Columbia History of Music through Ear and Eye," devised and assembled by Dr. Percy A. Scholes, the English music educator, has been put forth in this country by domestic Columbia (361). It begins with Elgar, ends with Albin Haba, and presents on the whole a well-chosen cross section of the music written from the close of the Nineteenth Century up to date. Unquestionably there are many who will disagree with Dr. Scholes' selection of works as well as of composers, but any one man choice of this kind is bound to dissatisfy some people. Considering the exigencies under which Dr. Scholes worked, having been limited to sixteen ten-inch record sides; to provide a representative and comprehensive view of the music of the past four decades presented many problems. Viewed as a whole, the sixteen composers Dr. Scholes has selected as his choice of ranking men of the Twentieth Century are represented quite favorably and adequately by the music recorded. As with his preceding albums, Dr. Scholes here provides in a seventy-odd page booklet, an instructive and interesting treatise on the music, the composers, the musical history, and so on, of the times. The set contains several first recordings. Its appeal will not be limited to the educator or the student.

It looks as if between His Master's Voice in England and Victor in this country Toscanini before long will have complete recordings of all nine of Beethoven's symphonies. Before sailing for Europe in April the Italian maestro is said to have recorded Beethoven's "Fifth Symphony" and also his "Eighth Symphony." This makes five of the famous nine that he has made to date. Rumor has it that he is to record the "Eroica" in London. If this is true, music lovers can rejoice, for it must be said in all truth that the recordings made by the maestro in England are tonally preferable to those he has done here. The latest of his English recordings, Beethoven's "First Symphony" and Brahms' "Tragic Overture" (incongruously housed in one album—Victor M-507), conclusively prove this. Toscanini is so essentially the singer in his conducting that a truly representative recording of a Toscanini performance should not be shallow or sharp in sound. The low quality of his recording of the "First Symphony" and the "Sixth Symphony" of Beethoven is conducive to instant enjoyment of his interpretative gifts. In his performance of the "First Symphony," his understanding of its Eighteenth Century qualities and his adherence to them make his reading so cherishable. He does not overinflate this music as another conductor did in a recent recording. Again in the "Tragic Overture" of Brahms it is Toscanini's feeling for its architectural grandeur that marks his performance off from all others except that of Sir Thomas Beecham. One may well find it hard to choose between the two.

Howard Barlow and the Columbia Broadcasting Symphony are represented by a splendid recording of Haydn's "Surprise Symphony" (B. & H. No. 94) (Columbia set 363). One of the composer's best known and most popular works, it has been badly in need of a modern recording, those existing dating back nearly a decade. It is heartening to find an American conductor so excellently represented on records (the quality of the reproduction here is particularly good). Mr. Barlow's long career

(Continued on Page 488)

ALEC TEMPLETON

SOME TWENTY-FIVE YEARS AGO near Cardiff, South Wales, a tiny boy, hardly two years of age, climbed up on the bench of an upright piano in the sitting room of a farm house. His little sister had just concluded her daily practice and gone to other duties. The child put his hands on the keyboard and his diminutive fingers crawled awkwardly, trying to imitate the notes of a nearby church bell. He was Alec Templeton, the son of a Scottish gentleman farmer who owned important interests in the fertile Welsh agricultural land.

Soon the little boy's gifts began to assert themselves in a most decisive manner. Frequently, when his sister practiced on some Clementi or Dussek sonatina, he would run up to her and exclaim, "You played a wrong note. I cannot bear to hear wrong notes!" And, if this guilt was denied, Alec would explore into the faulty chord and invariably discover the mistake. "Here it is," he would say, striking repeatedly on the note that ought to have been.

#### *Astonishing Precocity*

AT THE AGE OF FOUR he felt the urge to give his efforts a more permanent form, and, leaving aside the improvisation of embryonic sequences, he set out to build up a real piece which he still remembers as his "first known composition." But little Alec's imagination ran far ahead of his physical possibilities. It is reported that young Mozart once played with the tip of his nose one note that the limited stretch of his hand could not reach (*si non e vero, e ben trovato*—if not true, it is well invented). Alec's trouble was similar, but in the direction of chord playing. Since his hands were not able to span more than a few notes, he tried to perform the larger chords with his elbows, not realizing that he was paving the way for the "cluster" system advocated later by certain contemporary adepts of musical "dadaism." However, and regardless of physical handi-

caps, the piece got under way and finally was completed. It turned out to be a lullaby, and his mother used it to sing him to sleep.

The following year Alec started directing a choir of his playmates; and, when music was needed for some particular occasion, he composed it and taught it to them part by part. His hand had grown and already he proved to be a promising piano student. For several years he went on, and as his technic developed he used it for the purpose of expressing the world of melodies and harmonies that were constantly going through his brain. During that period and while still on the farm, he composed a great deal. But none of these compositions was committed to paper. Alec could not write music. He had been deprived of sight from birth. And he did not know it yet. Surrounded by the devoted care of his parents, he thought that his condition was normal and that he was like everyone else in the world. Only later did he learn

the truth, when it became necessary for him to study the Braille system without which his general education would have remained incomplete.

#### *Nature Makes Amends*

MEDICAL SCIENCE TEACHES us that when one of our senses fails nature compensates for this loss by stimulating the others in some mysterious fashion. Thus can be explained the phenomenal sharpening of the other major sense, that of hearing, in the Templeton of to-day. But let us return to the young British student years and to the time when his father, realizing that he must answer the call of genius, sold his farming interests and moved to the great city of London. There Alec sought and obtained introduction to the leading English musicians who unanimously predicted for him a brilliant future. He was twelve years of age, and the time for intensive study had come. The Royal Academy of Music opened its doors to him, and he studied piano, harmony, counterpoint, fugue and composition under the best masters. At the same time his tremendous desire for becoming acquainted with the musical literature found satisfaction through hundreds of records which were lent to him; for in this way he could hear the great symphonic repertoire, explore the wealthy fields of chamber music, and familiarize himself with lieder as well as opera.

Great honors were soon bestowed upon Alec Templeton. The British Broadcasting Company, having offered a prize for composition, he took part in the contest and won it. This meant, of course, much publicity and the opportunity to hear the crowned work performed over the radio.

been quite normal to follow in their wake and to continue a virtuoso career which had started so auspiciously. However, Alec Templeton began to feel another strong urge within himself. Among friends, in intimate gatherings, he often sat at the piano and gave imitations of well known composers or concert artists, which made the audience literally roar and ask for more. The portraiture was so striking that even when no name was announced the listeners always guessed the correct one. Sometimes he would "pick" on an English master; and, when, long before he finished, everyone would call the name, Alec would turn and say, "Yes, it is he, but please keep this confidential and strictly between ourselves; because, you know, I love and respect him so much."

At that time, musical satire was almost nonexistent. Some was being done in France, and most cleverly, by Bétové, an old friend and schoolmate of mine at the Paris Conservatoire, whose real name is Michel Maurice Lévy, and who is also a serious musician and the composer of an opera performed at the Opéra Comique in 1926. Many traveling Americans have heard Bétové in continental music halls, where he has achieved a lasting fame.

That was also the period when American jazz had invaded Europe in an unbelievable fashion. I may surprise many by quoting the fact that in Paris some imported American popular crooners and bands were receiving fees far in excess of those commanded by the world's greatest singers, instrumentalists and symphony orchestras. It was the age of inflation and easy life, of entertainment and frivolity.

#### *The Dawn of a Career*

AN UNUSUAL OPPORTUNITY presented itself to Alec Templeton and he wisely seized it. Jack Hylton offered him an engagement. The Hylton band was then at the top of

its glory. It had taken Paris by storm, as well as other European capitals. The contract was financially attractive; and it was stipulated that Alec, apart from his work with the orchestra, would appear as entertainer, a feature through which he soon became the real star of the company. When in 1935 Jack Hylton brought his band to the United States, Alec Templeton came with them; and it was not long until his work drew such attention that he did not renew his contract when it expired, but, instead, he came back to this country as an individual soloist. His position is now well established on the concert stage and over the air, and he has achieved the unusual feat of satisfying the sophisticated listener and the layman alike. He has triumphed over the handicap of his native

anopia by sheer force of character and never relying in the least upon it to win the sympathy of his audience. He is a true humorist and satirist with the full equipment of a splendid musician, and he has pushed still farther the art of imitation and improvisation carried out in France by the pioneer Bétové. He passes with equal ease from Beethoven's "Moonlight Sonata" to the interpretation of a Londoner singing *The music goes round and round*, from Debussy's *Poissons d'or* to the caricature of a Wagnerian opera.

Humor in music is a rare and almost indescribable art. It would be difficult to reduce it to words: it simply has to be heard. For this reason, to spend an afternoon with Alec Templeton is a great treat. Hardly has he greeted his visitor and mutual understanding been established till he goes to the piano and starts illustrating the different topics and characters as they come up in the conversation. He plays a few measures from a Mozart sonata, and he

# A New Genius Who Does Not See

By the French Pianist and Conductor

MAURICE DUMESNIL

Subsequently Alec obtained his L.R.A.M., or performer's diploma. By that time he had become a full-fledged virtuoso; and, when the *London Daily Express* announced another contest, he decided to enroll and try his luck once more. It was going to be a piano competition this time, and eight thousand entrants had flocked from all parts of the British Isles. Nevertheless, Alec was again successful. It was something of a consecration, indeed, and at once he became in demand on part of the concert managers, music clubs and orchestras. During several seasons he toured all over England, appearing as soloist with the Hallé Concerts in Manchester, the Scottish Orchestra in Edinburgh and Glasgow, the Leeds Festival, apart from London where he played under Sir Henry Wood, Landon Ronald, Sir Thomas Beecham, and others.

#### *A Skillful Portraiture*

SUCH ACHIEVEMENTS would have been considered by many as final, and it would have

chuckles gleefully as he proceeds to show us how Grieg, Wagner, Ravel or Debussy would have treated them. Then comes a Bach Fugue, and suddenly it turns to a typical Rachmaninoff melody, simply because he has brought out prominently an inside part. And, quoting at random, he will take a few measures here and there—let us say, from the *Volga Boat Song*, Debussy's *Reverie*, Chopin's *Ballade in A-flat*, and *Tca for Two*; and, from such astonishingly diversified material, he will extract a stunning improvisation, taking his listeners through contrapuntal intricacies, weaving the themes together in uncanny fashion and enjoying himself at all times while displaying his genius for mimicry with occasionally an ironic bite added to his delicate wit.

Alec Templeton also uses his voice, when he turns to "the shortest Wagnerian opera." The guttural *Ich's* and *Ach's* of a straggling German tenor, the shrill high notes of the famous soprano, the grunting shouts of the basso, all are there; and the Wagnerian orchestra is there too, introduced with marvelous insight into some of the harmonic and instrumental mannerisms peculiar to the master.

Lighter music follows, and an ensemble number from a Gilbert and Sullivan operetta is revealed with devastating penetration. It is probably a college performance, since the pitch wobbles, the phrasing is affected, and the caricature is so skilfully drawn that one cannot resist bursting into laughter.

### A Debussy Disciple

Alec Templeton's musical God, however, is Claude Debussy. He is completely saturated with the aesthetics of the French master. He is familiar with all his works and has arranged, by ear, the *Afternoon of a Faun* into a piano transcription which reproduces most faithfully the elusive orchestration of the original.

"Didn't Debussy want the running passages played like this—with much pedal and shimmering color?—Not like that, mechanical and dry?" he queries as he plays excerpts from the well known *Reflets dans l'eau* and *Poissons d'or*.

I was astonished by his uncommon comprehension of the Debussy style, by the flexible delivery of the figures, by the delicate *rubato* which never broke the golden flow of the music. And astonishment grew when, having concluded the performance, he continued improvising *à la Debussy*, from the early manner to the greater and maturer period. The same keen gift of observation was being displayed, as had been exemplified before on entirely different lines. Soon Ravel was called upon and his peculiar minor mood and characteristic treble writing were brought to the fore. It was, really, Debussy and Ravel at their best.

It is interesting to know how Alec Templeton assimilates his large repertoire of standard and popular music. He does it mostly by ear and sometimes verifies the text with the help of the Braille edition. He listens to phonograph records and his keen ear identifies almost immediately the complexities of the harmony and the play of the inner voices. It was no small wonder when I sat at the piano and played for him Debussy's *Le Petit Nègre* and Evangeline Lehman's *Southland Frolic*. Alec sat by and listened carefully. Twice I repeated these compositions; then he took my place, and after a few additional minutes of verification here and there, they were memorized.

### A Prolific Creator

THE TEMPLETON LIST of compositions is already long and varied. It includes piano solos, songs and instrumental numbers. He is also the author of some remarkable pianistic exercises in which the accustomed dryness is substituted by sequences of refined and personal harmonies, notwith-

standing the fact that the texture proper is of great value for the development of stretch and finger independence.

We sat on the sofa and started discussing the musical tendencies of to-day. Alec Templeton brings into his conversation the same spirited action and prolific versatility that he displays at the keyboard. He is always eager, vivacious, convincing; and one feels the constant flow of imagination that springs from his untiring brain.

"The so-called ultramodern composers," he says, "are really doing nothing new; in fact, they are only repeating what primitive musicians did hundreds of years ago. This applies to both classical and popular music. There has been so much talk about polytonality, and about atonality, that I do not know and I cannot see any reason why certain composers, who invent a plain

theme, feel the urge to modify it, to make it 'up to date' by adding discordant notes in order to shock the ear. Perhaps they are afraid to let their nature speak candidly and sincerely? Afraid of being judged as old-fashioned, by those who possess no melodic gift, and therefore are obliged to rely upon more commonplace and brutal elements? Afraid of not being 'à la page'? (Templeton's French is excellent and he even knows the vernacular.) Afraid of having the snobs turn up their nose? Why—it is ridiculous—and to me a composer who prefers yielding to a passing fashion rather than to creating what his own soul would dictate, is doomed to ultimate failure, though in a certain measure he may win temporary recognition."

"I love melody," Alec continues; "music  
(Continued on Page 488)

## Music of Worth to the Movies

By VERNA ARVEY

MUSICIANS IN HOLLYWOOD are subject to a large number of unexpected experiences, some amusing, some trying. For example, when Universal's new Deanna Durbin picture, "Three Smart Girls Grow Up," was in

DEANNA DURBIN

production, Charles Previn, musical director, trained an orchestra to play for a sequence in a girls' school when Miss Durbin sings *The Wren*. When it came time to make the scene it was discovered that there was no actor capable of playing Previn's part, brief as it was. So Previn, for the first time in his life, donned grease paint and make-up to enact the rôle of conductor in the film as well as in actuality! On another occasion at another studio, Margeurite Bitter, pianist, was told to report for work on "Gunga Din." The assignment said that she would be photographed playing her instrument. But, by the time she arrived at the studio, the minds of the officials had changed and it had been decided to omit the music sequence. In order to compensate her for her journey she was given a costume and make-up and asked to be an actress in a mob scene for a day!

One of the most important historical pictures of the year is Warner Brothers' "Juarez," based on episodes in Mexican history. The studio entrusted the music for this film to Erich Wolfgang Korngold, who discovered, on investigating Mexican music of that historical epoch, that it was so Europeanized that he had but to write in his own idiom rather than to incorporate a large number of folk tunes, to make it authentic. Korngold's original score for "Juarez" is said to have set a Hollywood record: twenty-eight hundred measures of music. Doubtless it will be cut greatly before the final release of the film.

The Jascha Heifetz film at Goldwyn's Studio has been retitled several times. The

latest title is "Angels Making Music." In this film will appear the California Junior Symphony Association, founded by Peter Meremblum and composed of forty-five boys and girls of superior musical ability. They are all grammar and high school students aged nine to fourteen. In the film this youthful orchestra plays the overture to Rossini's "Barber of Seville," as well as the accompaniments to two operatic arias sung by nine year old Jacqueline Nash.

For Fox's historical film, based on the life and work of Alexander Graham Bell, the producers decided to have variety in the musical score, and therefore they assigned a good many of the staff arrangers to the composition of original music for it, under the direction of Louis Silvers. At Warner Brothers, Claude Rains stars in a technicolor short called "Sons of Liberty," with original background music by Howard Jackson. At M.G.M., Daniele Amfitheatrof (formerly associate conductor of the Minneapolis Symphony), made a decided innovation when he sent copies of his musical score for the "Ice Follies of 1939" (entitled "Cinderella's Ice Carnival," and including a *March*, *Nocturne* and *Scherzo*) to many leading orchestral conductors in America, in the hope that they would program it. For this score, Bernice Petkere and Roger Edens supplied the musical motifs while P. A. Marquardt and Leonid Raab made the orchestration.

Six new songs have been composed by Irving Berlin for the new Sonja Henie film at Fox Studios. As is usual with Miss Henie's pictures, this one is in the form of a musical skating revue. Rudy Vallee and Tyrone Power appear with her on the screen. It may be well to recall that ice skating is closely akin to classic ballet dancing, since all of the figures are based upon and developed from ballet steps. In light vein at Warner Brothers Studios is the recent film starring Dick Powell and Ann Sheridan and based on a musical idea. This bears the dubious title of "Naughty but Nice" and recounts the story of a professor of music in a small college who hopes to persuade New York's leading conductors to play his serious compositions. He is not successful in this quest, but a publishing house accepts his compositions and puts them out as swing music. He thereupon finds himself enormously successful in an unexpected manner! Warren and Mercer supplied the songs and lyrics.

RKO Studios are making good use of the talents of Roy Webb, composer and conductor, for he has been assigned to two major films since writing the music for "Love Affair," with Irene Dunne and Charles Boyer. The new films are "Little Mother," with Ginger Rogers, and "The Flying Irishman," starring Douglas Corrigan.

## How to Improve the Child's Reading Ability

By STELLA WHITSON HOLMES

THE CAUSE of much poor reading is due to the fact that the teacher, never having analyzed her own natural ability, does not realize that she reads by position much oftener than by letter. If she will teach the child to read by position, as well as letter, she is teaching him to use his common sense in music; and his reasoning powers are developed just as in the study of literature and mathematics. In addition to the application of reasoning powers in this manner, the writer does one small thing that prepares the child for a splendid job of reading the moment his hands touch the keyboard, thus pushing up the quality of his finished attainment.

In illustration of this work that makes for better reading, we use a portion of George L. Spaulding's *My Partner*, so well liked by children of six.

### Tempo di Valse

In looking the situation over, every note is pointed out to the child. After finding that the piece starts with Middle C, I may say, "Now what do you do next?" and the child may say, "Go up to the next one." After the third measure is played, I may say, "Now we skip one up." Next the pupil tells me that we go back to Middle C, skip one up and drop one down. Then it seems well to have the child realize that we are to read the next letter, G, because if he merely feels his way over that much of a skip, he will be confused later on when the fingers do not lie directly over the notes to be played. The next he recognizes as "Strike the same note over and tie it." The next he may be able to tell me himself and may say, "Drop one down, play one up, skip one down, another one down, another one up, and skip one down to C again."

Now we have reached the place where he again reads a note, the letter G. From there he thinks in terms of "Drop one down, skip one down, then back to G. Drop one down, skip one down, then to C and tie."

If you have followed closely you will see that the child has reasoned his way through (and reasoning is one of the powers of the mind that the music teacher must feel responsible to train) and by reading possibly six letters in all, he has been relieved much of the painful grind to which defenseless small beginners were once subjected. This does not detract from his ability to read letters, but enhances it rather, by keeping him an active participant in music long enough to become an expert.

# A "Musical Circus" in Recital

A Program That Will Delight All Youngsters,  
and Intrigue the Boys

By V. A. BENEDICT

## MUSICAL SOLICITATIONS

*An Afternoon at the Fair* (A Paraphrase) ..... Blake-Levy  
Played by Two Violinists before the Curtain

*Trombone Sammy* (behind curtain):  
We're off! We're off! To spend the day  
We're all so happy on our way!  
Come! Hurry! Let us see the clowns  
That carry laughs to all the towns.  
Look! Look! Why we are almost there;  
I'm glad we'll see the skating bear!

VIOLIN: *We're Off*

*Trombone Sammy:*

In musical circles we go with a bound  
As we all ride away on the Merry-Go-Round.

O my! Gee, what fun  
To get in on the run!

And how sorry we'll be when the shrill  
whistle's sound

Says we all must jump off of the Merry-Go-Round.

VIOLIN: *The Merry-Go-Round*

*Trombone Sammy:*

O look, there's the merry old Pop Corn Man,

And he's popping the corn just as fast  
as he can;

I am hoping we'll get through that crowd  
right soon

And can hear as he whistles his jolly  
tune.

VIOLIN: *The Pop Corn Man*

*Trombone Sammy:*

Now isn't it horrid that skies should be  
breaking

With clouds while we're out on our holiday  
making?

The thunder and lightning

Are surely most frightening;

But here we will hide from the nasty old  
rain

Until good Mister Sun shows his bright  
face again.

VIOLIN: *The Shower*

*Trombone Sammy:*

O beauteous rainbow, tell us why

You bridge the lovely rain-washed sky?

We're all so glad again you're out

We'd like to greet you with a shout;

And now won't you charm the old rain  
away

So we'll have a nice Musical Circus Day?

VIOLIN: *The Rainbow*

(The two violin pupils leave as curtains  
slowly open revealing Sammy asleep at the

## CHARACTERS

*Music Solicitors*.....Two violinists

*Trombone Sammy*.....Small child

*Troupe Leader*.....Most advanced pupil

*Treble Clown*.....Very small child

*Bass Clown*.....Clever entertainer

*Singing Cowboy*.....Older pupil

*Pop Corn Man*.....Whistler

*Skating Bear*.....Small child

(stepping mockly toward the leader). Listen, who belongs in your troupe, anyway?

T. L.: Only performers with musical abilities (whispering) and—who practice daily—enjoy such a privilege. (Takes Sammy to exit.) Now, run home—it's getting late.

Sammy (returning): Oh, Mister Circus-Man, please let me stay for your rehearsal. Please! I've got musical ability and musical fingers too (moving them as if playing piano).

T. L. (thoughtfully): Well, you may stay, but only on one condition; that is, if you will show me what your musical fingers can do.

Sammy (rushing toward piano): I certainly will! This is my lucky day—so—Trombone Sammy I'll gladly play.

(As Sammy ends piece, Treble Clef somersaults in.)

Sammy (laughing): What's this?

T. L.: This is Treble, my midget clown. (Turns to Treble.) Treble, will you show this little boy how you play the piano?

Treble: Surely, I'll be glad to show him. (Turns to Sammy.) Would you like to hear Somersaults?

Sammy: I should say I would (going to extreme end of stage and sitting on multi-colored barrel while Troupe Leader takes his place on a high stool back stage. As Treble somersaults out, Whistling Pop Corn Man appears on opposite side of stage.)

Sammy (clapping hands): Wheel! This is fun!

Pop Corn Man (offering pop corn to Sammy from his music staff): Trombone Sammy should eat staccato food. (Pauses thoughtfully.) Suppose you listen to how my pop corn pops (plays Pop Corn Man).

(Bass Clown appears, juggling balls and going through comical maneuvers. He plays

The Clown and Jolly Jugglers).

Sammy (calling to Bass): Is your name Bass?

Bass (cartwheeling to Sammy): Yes, how did you guess?

Sammy: Well, the midget clown is Treble, so I thought you must be Bass.

Bass: Good guesser! Ta, Ta. See you later (cartwheeling to exit and bumps into Singing Cowboy).

Cowboy: Whoa, there, Bass! (Turns to Troupe Leader). Howdy, Jim!

T. L.: Hello, Bill!

Sammy (examining Cowboy's clothes): I believe I've seen you before.

Cowboy: No doubt you have, but I haven't time to talk now. I must try out this piano. (Turning to Troupe Leader) Jim, I want you to hear my latest piece, *The Horse Race* (plays).

T. L.: That was fine, Bill! Now, will you sing for us?

Sammy: Please, do!

Cowboy: I'll try! (Plays and sings *The Elephant and the Monkey*).

Cowboy (waving hat to Troupe Leader): Yippi-yi, Jim!

T. L.: Yippi-yip, Bill!

(First Big Top Musician enters playing Accordion Waltz. Skating Bear follows, dancing to rhythm. Accordionist exists and Bear goes to piano and plays, *Bear On Skates and Ponies*. Big Top Musician again appears, playing *Fly Away Waltz* on violin and Bear skates off the stage.)

Sammy: Say, Mister Troupe Leader, can you play?

T. L.: Yes, Trombone Sammy.

Sammy: Now, how about you (emphatically) showing me what you can do.

T. L.: Well, this time I will. Would you care to hear *Circus Pony*?

Sammy: Suits me!

(As Troupe Leader finishes piece, Second Big Top Musician enters.)

T. L.: What brought you here this time of day?

Big Top Musician: Your fortissimo attracted me, so I thought that I might as well drop in and rehearse a little myself.

T. L.: Go right ahead! Trombone Sammy and I always welcome entertainment. (Plays *Memories on violin*.)

Sammy (to Troupe Leader): Will you tell me how you travel from one place to another?

T. L.: Surely, since you want to join our troupe. (Cowboy enters.) You're just in time, Bill. How about letting Sammy hear the music we travel by?

Cowboy: Good idea, Jim! (Duet, *Camel Train*.)

Sammy: That surely was good music!

Cowboy: Glad you think so. Now will you play something for me?

Sammy: I'll play *When The Circus Comes To Town*. That's a song everybody knows.

(Troupe Leader and Sammy sing while other members appear on stage. Accordions and violins join in melody while all whistle. Finale, sung by entire group to above melody.)

"Now our troupe is on its way,  
We have had our fun—Sorry we can't stay;  
But we know you're getting tired,  
And we must not mar your day.

There is our Cowboy (bows), and our Skating Bear (turns),  
Big Top Musicians finely arrayed (bows),  
Little Treble Clef and the Big Bass pal (capers),  
And the Pop Corn Man, we all adore (swings staff).

We have had a big, big day,  
Happy troupe are we, happy, gay and free!  
We have tried to entertain,  
Hope in this we have not failed!  
So, thanks kind friends, for your presence here.

See you all again, next year;  
Be prepared to come, for some music fun,  
We'll be waiting, never fear.  
And again, we're on our way,  
Sorry we can't stay—We'll be back some day

But it's time we bid goodnight—  
Hope you've had a happy day!

#### CURTAIN

This sketch includes only boy participants in any number, with possibilities of adding any other circus characters. Suitable costuming and circus scenery will lend a colorful and pleasing atmosphere to this musicale.

\* \* \* \* \*

Solos suggested for this playlet include materials in the First, Second, Third and Fourth Grades. Piano, Piano Accordion, Violin, and Ensemble have been introduced. However, if needed, and available, any other instruments may be substituted or added. Also, more advanced compositions may be introduced, if suitable players are at hand.

\* \* \* \* \*

#### ADDITIONAL CIRCUS PIECES IN ALL GRADES

For the Pianoforte

##### Grade 1

*The Big Band*—W. A. Johnson  
*The Circus Arrives*—M. L. Preston (Desc. Verse)  
*The Comical Clown*—C. W. Krogmann (With Words)  
*Dance of the Puppets*—E. B. Martin  
*The Elephant*—H. Engelmann (Large Notes)  
*Hippety-Hop*—Edith Rose  
*The Jolly Clown*—M. L. Preston (Desc. Verse)  
*The Jolly Giant*—M. C. Freeman  
*The Lion*—H. Engelmann (Large Notes)  
*Little Brown Bear*—B. R. Copeland (Desc. Verse)  
*The Parade*—M. L. Preston (Desc. Verse)  
*The Pop Corn Boy*—N. E. Swift  
*The Tight Rope Walker*—M. L. Preston (Desc. Verse)

##### Grade 1½

*At the Circus, Polka*—J. S. Fearis  
*The Chariot Race*—R. R. Peery (Desc. Verse)  
*The Circus*—L. A. Bugbee (Desc. Verse)  
*Clown Capers*—W. Rolfe (Large Notes)  
*The Lion*—R. R. Peery (Desc. Verse)

##### Grade 2

*The Big Parade*—W. A. Johnson  
*The Circus Calliope*—P. Lawson  
*The Circus Parade*—F. H. Brackett  
*The Circus Ride*—O. Chandler  
*The Circus Ring*—M. M. Watson  
*The Clown*—G. Horvath

*The Clown*—A. P. Risher (Desc. Verse)  
*The Clown On the Tight Rope*—L. Schytte  
*The Dancing Pony*—R. R. Peery (Desc. Verse)  
*Elephants' Parade*—Grant-Schaefer  
*The Jolly Clown*—R. R. Peery (Desc. Verse)  
*The Juggler*—M. Eckstein  
*The Juggler*—H. Engelmann  
*The Juggler*—L. Streabbog  
*Leap for Life*—C. Gurlitt  
*The Pony Ride*—H. Dallam  
*The Ring Master*—G. L. Spaulding  
*The Snake Charmer*—W. O. Munn  
*The Trained Animals*—G. L. Spaulding

##### Grade 2½

*The Balloon Man*—E. R. Kroeger  
*The Circus Parade*—F. H. Grey  
*Dance of the Bears*—C. Heins  
*Entrance of the Clowns*—M. Ewing  
*Here Comes the Parade*—M. L. Preston  
*The Jolly Clowns*—C. W. Kern  
*Jolly Little Clown*—M. L. Preston  
*The Juggler*—R. H. Pendleton  
*Little Acrobat*—W. W. Smith  
*The Monkey and the Elephant* (March Grotesque)—F. R. Farrar  
*On the Trapeze*—W. A. Johnson

*On the Trapeze*—C. W. Kern  
*The Performing Bear*—J. Reiter  
*Performing Elephants*—M. Ewing  
*Playing Circus*—B. Violle  
*Three Ring Circus*—F. H. Grey

##### Grade 3

*Balloons in the Air*—B. Frick  
*The Clown*—O. Hackh  
*Clown Dance*—M. L. Lake  
*The Clowns*—L. Schytte  
*Dance of the Freaks*—F. Keats  
*Elephant Dance*—W. E. Haesche  
*Elephant Fox Trot*—R. Drigo  
*Midgets*—L. A. Coerne  
*On the Midway*—V. Renton

##### Grade 3½

*Circus Carnival*—A. B. Walbrunn  
*The Flying Rings*—M. Ewing

##### Grade 4

*Elephant Parade*—A. A. Mumba  
*Four Hands*  
*The March of the Elephants* (Gr. 2)—D. D. Wood  
*Parade March* (Gr. 2)—L. J. Beer  
*Two Pianos, Four Hands*  
*A Dance of Clowns*—F. Mendelssohn  
*Entrance of the Clowns*—F. Mendelssohn

## Music from a Carpenter's Saw

By FRANK J. BLOOMER

HOW MANY OF OUR READERS realize that music may be obtained from an ordinary carpenter's saw? Anyone, even without extensive musical training, but with a fairly good sense of pitch, can produce from a saw beautiful tones, of a somewhat shrill but interesting and resonant quality, not unlike those of a high pitched whistle; and can accomplish this with little effort or practice.

The first requisite is that the instrument is an ordinary carpenter's saw. It must, however, be of good steel, or it will not vibrate. Any standard make will do. Second, we need a violin bow, with a small piece of rosin for it. (A soft headed mallet, of rubber or wool, may be used instead of the bow; but, for best results, we advocate the use of a bow.)

So now let us scout about the house and see whether dad has a good steel saw, originally intended as a tool for household repairs, but which we will convert into a musical instrument. If Junior is not about, perhaps we can borrow his violin bow; or, if he is present, he can be assured that the bow will not be injured, as we shall play only on the smooth and not on the toothed edge of the saw. If it is necessary to buy a bow, an inexpensive one may be purchased from the nearest music dealer.

### The "One-Man Band" Starts

WITH THE BOW SCREWED real taut and a little rosin on its hair, we are ready to begin. The saw is always used with the

player in a sitting position; so that the first thing is for him to seat himself naturally upright. The saw is then placed between the knees, the toothed edge innermost, and the handle placed under the right knee. The right leg rests on the ball of the foot, with this foot drawn slightly toward the player.

The leg is now started in an upward and downward motion on the ball of the foot, which produces a *vibrato* effect. The blade end of the saw will be held by the left hand, while it rests on the four fingers and is held with the thumb on top. The fingers must be kept in a straight line with the saw, and the wrist held high. With a slight pressure of the thumb, arch the saw over the left knee, to form an inverted "S" the full length of the saw, from hand to knee.

### Rubs and Repertoire

TO PRODUCE A MUSICAL TONE, raise the blade to about a forty-five degree angle to the body, and, with the bow grasped firmly in the right hand, draw it over the smooth edge of the blade, about four or five inches from the handle. If the saw has been kept arched in the manner described, and if there is not too much pressure of the thumb, the lowest note of the saw's scale should come forth.

By pressing down on the saw, and away from the body, and at the same time playing up farther with the bow, various tones of the scale are made. It must be kept in mind, however, that the entire left arm should move, not merely the wrist. There must be never a release of the pressure of the thumb on the saw, lest an overtone, which is anything but appealing, will be produced. With a little patience and practice, it will be not long till a complete melody has been mastered.

Practically any musical composition, of a slowly moving tempo, can be played on this instrument (if we may call it such), provided the piece does not have a too extensive range. Recommended as particularly suitable are: *At Davenport*, by Cadman; *Cradle Song*, by Brahms; *Mighty Lak' a Rose*, by Nevins; *Andantino*, by Lemare; *My Heart is a Haven*, by Steinel; *A Dream*, by Bartlett; and *Liebestraum* by Liszt.

## Having Fun With the Ears

By CLAIRE SPAULDING

LISTEN, you music students and would be music students. Do not say that you cannot sing or play because you have no "ear." You, too, can have an "ear." It takes but practice, time and patience.

It is easiest with the aid of a piano. Take an octave to start—say from Middle C up one octave. Play one note until you think you would recognize it when heard again. Then take another. Turn your back to the piano and play one of the notes. Name it, and turn around and see whether you are correct. Then play another note, and name

it in the same manner.

When you are sure of that octave take the octave below Middle C, and each remaining octave, until you are able to recognize any note on the keyboard. That is all there is to it.

It would be better to have another person strike the notes and you to name them. Also try having the note played while you are in another room. In a comparatively short time you will be able to recognize any tone and will know when a note is accurate or the least bit off key.

Capt. Allan Hancock's Motor Cruiser *VELERO III*, designed as a floating laboratory and dedicated to the advancement of marine science.

# Music As a Business Man Sees It

A Conference with CAPT. ALLAN HANCOCK

**A** NEW SHRINE OF MUSIC is rising on the campus of the University of Southern California, as a part of the housing of the Allan Hancock Foundation for Scientific Research. The Foundation Building, with its Music Wing, is a gift from Allan Hancock, native Californian of pioneer lineage.

The Foundation Building is intended to become a West Coast center of intensive research in zoölogy, botany and related fields. It will include more than one hundred laboratories, study halls and classrooms; aquariums, photographic and X-ray rooms; exhibit halls and specially designed stacks for the preservation of thousands of marine and terrestrial specimens collected over a period of many years.

The Music Wing is being erected around four rooms moved intact from the former Hancock home, an Italian Renaissance mansion patterned after the Villa Medici of Florence, Italy, which was recently razed. Since the donor has been long a devotee of classical music, and is an accomplished violoncellist, the Music Wing is to become a shrine of culture. It will include an auditorium, a radio broadcasting and a recording studio; with offices, and technicians' quarters.

For the cause of a better musical art, Captain Hancock has long supported musical ensembles which have won international recognition in seasonal concerts over nation wide radio chains, and in public appearances all the way from British Columbia to Ecuador. Recitals usually are presented in conjunction with the showing of educational motion pictures taken on expeditions. No element of profit or advertising ever has been permitted in connection with these programs. In the future, all presentations will be under the sponsorship of the University of Southern California.

## A Bit of Chronology

CAPTAIN HANCOCK'S PARENTS reached California, by separate routes, at the peak of the Gold Rush of 1849. His father was Major Henry Hancock, whose grandfather came from Somersetshire, England. His mother, Ida Haraszthy, was of the Hungarian nobility.

Twenty years after the marriage of Major Hancock and Ida Haraszthy, and when their son Allan was but eight years of age, Major Hancock died, leaving his widow to carry on the management of the Rancho La Brea. On this rancho are the prehistoric asphaltum pits, famed as the West's greatest storehouse of pleistocene mammal bones. Major Hancock discovered, in 1875, these fossilized skeletal remains embedded in the treacherous tar.

It is a singular commentary on character that he never has asked an employe to perform a task which he could not execute himself; that his creed has been mastery of anything he undertook. He is a qualified navigator, licensed to master any vessel on the seas; an able locomotive engineer; a licensed aeroplane pilot; a capable musician; and he holds the degree of Doctor of Business Administration.

One suspects that he would far rather be termed a musician than a business man, so great is his love for the art. He was once treasurer, and later the president, of the Los Angeles Symphony Orchestra Association. As the executive he felt he could best understand the problems of the musicians if he played with them; so he studied tirelessly and earned a place in the first rank of the violoncellos. Later he played with the Los Angeles Philharmonic Orchestra and the Hollywood Bowl Orchestra, under great conductors.—Editor's Note.

Capt. Allan Hancock  
Pioneer Los Angeles business man.

Allan Hancock Foundation for Scientific Research on the campus of the University of Southern California, Los Angeles. One wing is devoted to music.

## Let Us Hear the Captain

"TO THOSE PEOPLE who live in the most profound isolation in remote areas of the world, classic music seems to have the greatest fundamental appeal.

"On voyages to the Galapagos Islands and distant shores of Central and South America, we have learned that people far removed from civilization aside from the bare necessities of life, derive the greatest satisfaction from hearing instrumental music. Usually they are most appreciative of classical and semiclassical compositions, melodious and lyrical, which come well within the limits of the type described as chamber music. The more colorful and sentimental the theme, the more keen is its appeal.

"Such people are capable of very deep feeling for the more dramatic compositions; but, as a rule, their responses are more subdued, probably because of an accentuated shyness which they naturally feel in the presence of visitors.

"These observations refer to persons who have lived in the more civilized centers of population and have, for one reason or another, removed themselves to the most isolated regions imaginable.

"They often exhibit innate curiosity over the newest developments in sound recordings and radio reproductions; but their preference for direct renditions may be

Secured Expressly for  
THE ETUDE MUSIC MAGAZINE

By  
VERNA ARVEY

defined as pure enjoyment of the latter, in contrast to the thrill of excitement over the former. It may be that their very detachment from the civilized world develops in these people a more acute attachment for cultural things with which they were at one time more familiar.

## The Aboriginal Taste

"WHILE WE SPEAK OF OCCIDENTALS, and specifically of transplanted Europeans, it is also true that the most primitive natives of the western Americas likewise respond most favorably to chamber music, rich in melody and harmony.

"The Seri Indians, of Tiburon Island in the Gulf of California, display the keenest enjoyment of the white man's music. They have no native instruments, so far as

we know; but they go into ecstasies over the simplest harmonica tunes. Because they hold themselves proudly aloof from the encroachment of civilization, the Seris have been described as clannish to the point of social introversion; but they are just as susceptible to the moods of music as tribesmen of definite cultural background.

"Is it trite to suggest that humanity possesses no greater cultural asset than musical appreciation? If music is a universal language it should be nurtured and encouraged through every channel available. Unfortunately, perhaps, the language of music encompasses good and bad words or moods, as does every language. Throughout the ages martial airs and trumpet blasts have stirred men to battle; but it would be most difficult to conceive of men with a strangle hold on each other's throats during the rendition of a Chopin concerto or a Liszt rhapsody. History discloses many instances of the comradeship between opposing lines indyced by music during lulls in warfare.

"We have found music something of an international passport, encouraging friendship and promoting better understanding wherever we have been privileged to play on our voyages in behalf of science.

"My earliest recollection of music is that provided by my mother in our own home. She was an accomplished pianist. Like every small boy I acquired a harmonica. I can

easily understand how my feeble attempts at following tunes by ear were somewhat distressing to my mother's sensitive musical soul. But she never discouraged my efforts. Sitting in the shade of the pepper and blue gum trees on the old Rancho, or driving a team with a load of brea, frequently afforded me opportunity to punish the pocket harmonica with a variety of airs which were most pleasing to me but perhaps considerably less thrilling to others.

### A Long Apprenticeship

"DURING MY SCHOOL YEARS I became an admirer of Harry Catt, the owner of a cornet. At once I was fired with an ambition to master that instrument, and, after long practice, I became chief trumpeter in the Belmont School. At home on the Rancho it soon became evident that my mother was not so fond of wind instruments. She adroitly turned my attention to strings. Ultimately she presented me with a marvelous violoncello and weaned me from the cornet.

"It was not a part of our creed to muddle around with anything. While a taste for the best in music was growing, I came to realize that the very best one can do may still fall far short of the feeling which inspired the genius of the master composers; so I practiced at every opportunity in the hope of improving my work.

"In the early days of Los Angeles the very isolation of the people seemed to inculcate a desire for music of the higher type. I cannot remember when my mother and I did not make it a point to attend concerts in town, though the trip from the Rancho often took more than an hour over dusty or muddy roads.

"As my training progressed my friends and I used to take great pleasure in playing with hotel orchestras and for dances. How we chuckled when we recognized friends among the guests, dancing at the hotels and parties! With these experiences, I gradually abandoned the cornet and devoted my entire attention to the violoncello. Thus it is that, while I hold no illusions as to the importance of any one instrument in a musical group, I naturally consider the violoncello as indispensable.

"When I was asked to become treasurer of the old Los Angeles Symphony Orchestra, and later became president of the organization, it was my feeling that I could best understand the problems of the musicians if I could play with them. I worked hard to earn a place in the first stand of violoncellos and may safely say that I have never enjoyed anything more than the harmony and teamwork of these associations and the opportunity to study and play under famed conductors. To me it was the privilege of a lifetime to play with the Los Angeles Symphony Orchestra, the old Philharmonic Orchestra, and with the Hollywood Bowl Orchestra. There is inspiration and satisfaction to be gained from this kind of work which is not to be derived from any other source.

### A Matter of Experience

"SOME MAY CONSIDER that the actual value of playing music has given them a better insight into its meaning than the listener could possibly achieve. This depends entirely upon the individual. There are those who listen intelligently and who may obtain a more comprehensive view of a composition than those who serve to interpret it. Musicians are prone to become critical of audiences. They may be even more critical of their auditors than their auditors are critical of them. It is well for artists to be constantly aware of the fact, that our great symphony orchestras, recordings and radio broadcasts, all have raised the level of good music to a high plane. To compete for and to hold public favor, it becomes necessary for musicians constantly to improve their technic and interpretation.

"There is no place in music to-day for mediocre performance. The best is not good

enough. To keep up to standard and to improvement, means the most intense application and the hardest kind of work. We are at the threshold of a renaissance in art. Our people have had their holiday of diversion from the pure emotionalism of idealistic composition. On the sturdy foundations of classic music left by the immortals of past centuries, we may hope that a new generation of harmonists will plant their feet and carry on from where the others left off.

"It is a fine distinction to make, but it has been our experience that programs are best received and most appreciated when they are chosen for their cultural value rather than from entertainment qualifica-

tioning becomes both harder and longer.

"A well chosen program may be just as effective with a hall full of children as with an adult audience. There is something fundamental about foundation music which is almost universal in its appeal to all ages.

"In Guayaquil, Ecuador, a few years ago we were invited by the President and members of his staff to play in one of the local theaters. No public announcement was made, and there was no advertising of any kind. Within a few hours word of the concert spread and when we arrived at the theater we were unable to penetrate the throng in the street. Many hundreds had forced their way into the theater, taking every seat. Police and soldiers were required to make

THE ALLAN HANCOCK ENSEMBLE

Capt. Allan Hancock, 'Cellist

tions. A great many people are heartily tired of being entertained and yearn for the more filling, more satisfying fare of truly great music.

"In the Hancock Collection the Ensemble library of musical scores includes the works of recognized masters of all ages and nationalities. We have no preference for individual composers but weigh each number for its beauty and worth in the light of experience. Then we work. Members of the ensemble practice together daily, usually four or five hours each day. As the dates for the concerts come nearer our prac-

tice becomes both harder and longer. way for us; and, after we had played and shown our motion pictures, it became necessary to repeat the performance in order to appease the crowd. Never have we encountered more appreciative audiences. It only goes to show that music is the universal language and a passport to the hearts of people. We could not speak their tongue, but they understood our message.

"With all this observation and musical experience to our credit, it would seem that good music is the most potent force with which to promote international understanding, amity and peace."

## Our Insect Musicians

By LESLIE E. DUNKIN

WE MAY FEEL like crying out, "Keep quiet!" when we first hear the musical efforts of our insect musicians, the grasshoppers and the crickets. This may be because we are too close to them. Band music sounds like a blaring noise, when we are too close to the players. When we go farther away, however, our ears detect the rhythm and harmony of the music. This same is true with listening to our insect musicians, especially the grasshoppers and the crickets. By remaining a little distance from them, we can better comprehend the musical tones they are producing.

However, it is necessary to be very near in order to see how they produce their music. Even when quite close, our eyes may not be quick enough to see what happens. Most musicians produce their music by using their hands or their mouth. These grasshoppers and crickets use their legs—their back legs. A portion of these legs has a row of fine teeth, much like the teeth of a saw. When these teeth are rubbed quickly across the hardened vein in the back of the front wings, a sound is produced, which, at a distance, is musical. The more rapidly this fine toothed bow is drawn back and forth across the vein the louder and higher becomes the tone.

Some of these two groups of insect musicians can produce their music while they are flying in the air, but others do it only while resting between flights. A large number of them can produce quite a symphony,

Bees, flies and mosquitoes are other insect musicians. These have two different ways to produce their music. Their wings are used to produce some of the tones. This is done by waving their wings up and down so rapidly through the air that musical tones are produced. We might be able to do the same with our hands or our feet, if we could move them as rapidly as these insect musicians move their wings. Each time the clock or watch ticks a second, a fly moves its wings three hundred and thirty-five times. A bee can do still better than that. In the same short length of time a bee moves its wings four hundred and forty times. The faster the wing moves the higher is the note. Thus the fly produces the note F, while the bee goes up to A in the musical scale.

Naturally this music is produced only when the insect musicians are in flight. However, they can produce music while not in flight. When a bee, a fly or a mosquito is caught and the wings held so it can not move, we find them still able to produce music. Near where they breathe we find a fiber which vibrates even more rapidly than do the wings. As the insect's breathing is increased, this fiber moves more rapidly and consequently makes a higher and louder tone of music. This might be thought of as distress music or a warning to other similar insects to flee from the immediate danger which is holding this particular musician.

## Wrist Lubrication

By

GLADYS HUTCHINSON

IN THE OLD DAYS the chief aim, when playing a *legato* passage on the piano, seemed to be to accomplish this with a perfectly quiet arm; and to insure the maintaining of a quiet arm a penny was placed on the wrist. It was the performer's job to see that the penny remained on the wrist throughout an entire exercise. The fingers were to do the work and the action of the fingers was to be very high; there was to be absolutely no arm motion.

As a result the performers, one after the other, gave up learning how to play the piano, on the grounds of "rheumatic" tendencies.

A few students of the piano intuitively relaxed the wrist at frequent intervals and were thereby saved from this premature "rheumatic" state. This was more through good fortune than through any intelligence on the part of the instructor.

Fortunately since those days there has been much improvement in the art of teaching; but occasionally when we attend a pupil's recital we feel that there still are teachers who do not analyze this point seriously enough; and our criticism of the playing is that the whole performance has been noisy, stiff and lacking in freedom, the cause of which is absence of understanding of the benefit of phrasing.

If there is anyone who feels that his performance lacks a free, easy, flowing movement, it will be well to analyze the situation. In the first place we should know that the blood stream contains red and white corpuscles. In preparing the playing condition and in executing a passage there is necessarily tension, which means that the red corpuscles for the time being have left the hand. However music is so constructed that this tension may easily be relieved. It is absolutely necessary that these red corpuscles flow back into the hand, in order to obtain not only a more pleasing performance but to avoid the "rheumatic" condition.

This is brought about through what is known as phrasing.

To acquire perfect freedom in phrasing the pupil may take the following simple five finger exercise—

**THE BANKING LAWS** of many of our states require that savings institutions shall publish from time to time the names of depositors who have dropped out of sight. Of course some of these people have died; but experience shows that many have simply neglected to communicate with the bank for so long a time that appeal to them through the public press is necessary before disposal of their deposits may be effected by law. The object is, of course, to attract their attention to the fact that their money is safe and available. We may smile at such people, but—

#### *We all forget something!*

And often what we forget is of very great value, something that has been increasing in worth for a long time, yet against which we have issued no demand for payment.

This article is also a public appeal to a class of people who are overlooking a deposit of value too good to neglect. There is no legal process of attracting their attention. But there may be a reminder, like this, if one will take it in good part.

#### *II—Dust Covered Talents*

WE SHALL DISCUSS the Abandoned Farms of Music Education; and in this shall talk to the countless people who, early in life and years ago, made deposits of Enthusiasm, Time and Energy in the study and practice of music—in piano playing, singing, fiddling, or whatnot. Enthusiasm's lamp once lighted, Time's magic once expended, Energy's power once applied—and all to establish a capital investment by someone who, at the time, had the adventurous courage to keep his one talent busy and out of the earth.

And then, not less earnestly shall I talk to the teacher who possesses the wonderful privilege of going abroad in the home territory of her professional work, appraising these abandoned properties. It will be an unusual privilege to do this, both to her and to the absentee owner. Let us see what a valuable, profitable, well worth money asset is lying loose in every community; which asset, beyond its capital value, is also a latent cultural factor of great importance.

So, friend amateur, what has become of it all? Of that interest in music that started you off exploring its beauty? Of those hours at the keyboard which seem to-day to have been so uselessly spent?

Do not reply, Mr. and Mrs. Music Depositor, that you have abandoned it. Like neglected bank money, this forgotten investment of yours is also subject to law. And the law's procedure is all in your favor. You may think that the little skill you once possessed, which permitted you to sing or play simple tunes "for family and friends," has entirely disappeared with the passing years.

Now note your first asset: *It has not disappeared.*

The psychologist will tell you that once you build a cell, which is a highly concentrated unit of intelligence, energy and skill, into your physical self, it is there for all time, that is, for all your time. You may prove this to your happy satisfaction, if you so desire. These very cells, though you continue to ignore them, lie ready at hand for your call to them—a call like unto that to Lazarus: Arise! Speak, and they will sit up at your command, with amazing alacrity for cells so long bedridden.

Years ago, you tell me, you studied piano or fiddle or voice. Then the cares of life set in, or discouragement worked its vicious effect against ambition, and you just gave it all up. And yet you admit it was a wonderful experience, and that you miss it.

"But at my age," you say, "what is the use of crying about it?"

Well, friend, the one amazingly helpful reply to that question is by a serial question:

"How would you like to get it all back

again? The thrill of making music? The ultra thrill of making better and better music? Of having an avocation into which you can retire as a wren retires into its box to sit on its nest and view the world through the opening, the eggs hatching meanwhile?"

Remembering what we have just said about cells built in earlier years, you will see that you still possess piano playing cells. Give them another chance, and see what joy is yours at having once called them

ridiculous of "fingering" that essayed to land the thumb safely on F, going up—things were simple. But like all experiences of life, music has kept right on developing in idiom and expression since your day. If, once upon a time, Clementi's "Sonatina, Op. 36, No. 1," tested your skill and ability to understand, you now face, if you care to turn your hand to it, Mr. Schönberg's *Opus 11*, in which such cryptics as the following occur. Compare two measures of both these composers:

# The Abandoned Farms of Music Education

By

THOMAS TAPPER

into existence. Resurrect them and they will amaze you with the cunning of which they are still capable. Of course, for the first few weeks or so they will limp a bit, having been, as we have previously said, bedridden for so long. But once get them started and you will be astonished at their agility.

Is there a definite way to do this?

There is; And here it is:

Your first impulse will be to resurrect your old exercises, études, and pieces. And, in a way, this is quite all right. The virtue of this lies in the fact that the hand and fingers will respond, for a time, to the call of the exercises; and pieces you once played more quickly, even move pleasureably, than to new ones. But new material will soon begin to play its magic part. What you are chiefly appealing to is physical response that once was rapid, but which now has the slower reaction of disuse. But all that will pass away. So the new material, exercises and pieces, will act like a rotation crop in the arable fields of your hands.

Now you, Mr. and Mrs. Reader, who once trained your hands at the piano or on the fiddle, who sang joyfully in youth; you are, by comparison, a most wealthy and opulently endowed person. Gentle reader, let me assure you that even a little knowledge and skill at music tucked away these many years in your cells and memory, in your heart and finger tips, is one of the richest retreats any human being may possess. You have only to open the window, let in the sunshine of renewed effort, and to move in for good. You are in the lovely house of your youth again!

#### *III—"The World Does Move"*

WHEN YOU STUDIED five finger exercises and the major scale from C—with that ter-

Ex. 1

A Clementi

B Schönberg

You will notice in the concluding measure of the Schönberg quotation the words *Wie ein Hauch*, which is, in English, as you may very well know, *like a sigh*. A little later on you will play the whole piece and you will be very apt, having finished it, to utter something more or less *Wie ein Hauch*. Then you play the Kuhlau again and say to yourself, "Yes, things have changed."

But, so have you.

Therefore, let us meet the one new idiom with the other new personality and start those early, delightful, youthful experiences all over again. Meditate on this, your great asset: "Everything you once learned is still dormant in your fingers." Do not doubt it for a moment! Even though—when you sit again at the keyboard (you—now grown dignified and imposing) and once more attempt that C major scale, you are apt to call yourself names for trying to slip a coat over your mature shoulders that you wore in your pinafore days. You feel too big for

that C major scale. But, as a matter of fact, the C major scale is too big for you. But only temporarily. You will shortly have it under control.

The procedure is simple: Resume with system. Ask a music teacher's advice; and pay willingly for it. Learn from her how to organize a review of all your early music education. Her experience and counsel will save you time and money. Then set out to do it all over again. You will grin with delight, a thousand times, in the process. At first you will feel about as confident as if having signed a contract to take up trapeze performance in a three ring circus. But the cases are not exactly parallel. You used to do these music stunts, and the little skill you worked up has stayed by you—a faithful, though sleeping, ally—through all these years.

Play some of the old pieces. You may think that to be caught playing, at your age, that nimble classic by E. Mack, entitled *My Ma's Waltz*, may fill you with confusion. Don't believe it. You will be confused only if someone of your social set chances to walk in and catches you at it, before you have it in full rhythmic command. For a month or two, then, lock the door before you begin. Should someone knock, exclaim, in a falsetto, that you are the piano tuner. That will clear the premises.

Now having stirred up the old garden soil of your mind, memory and fingers, and having cultivated it all afresh with generous fertilizing of loving resurrection, a great future is before you. It consists in this: You may now apply your reestablished technic to countless new compositions.

Have you ever thought of this?

If you can play one First Grade piece well, it means that you can play all First Grade pieces, if you so desire. There may be one thousand of them, or ten thousand, for all we know. Let us call it one thousand, just for easy figuring. They all are yours to command.

Then, you are soon able to play a Second Grade piece with equal celerity and correctness, not to mention the fun of it. On the same mathematical basis you can now play one thousand Second Grade pieces. And that to the First Grade and you have now a possible repertoire of two thousand numbers. Every day for life, to the solemn *dies irae*, you can step into any music store on earth (Everybody there will welcome you) and exchange a paltry handful of change for a roll of new music, all within your technical power. The Third Grade lies ahead. Your riches are increasing so fast that they actually begin to seem beyond your control. But they are not. They are yours to multiply as you will.

You admit, of course, the pleasure of this resurrection. What of its benefit?

James Francis Cooke has written many paragraphs of wisdom for these pages, yet never a greater truth or pronouncement than when he said, in substance:

"When you play the piano you are operating to your eternal benefit, because while you are at it you cannot possibly think of anything else. You may have cares and anxieties, but not now. For while you are mastering Schönberg, of to-day, or Czerny, of long ago, you cannot possibly think of trouble, ennui, pain, or enemies. Piano playing, therefore, has crossword puzzles, croquet and hop-scotch beaten a thousand miles, for concentration."

No sign warns us more emphatically that age is threatening than a decreasing ability to concentrate. Having returned to your piano, or fiddle, or whatever may have been your youthful practice, you will discover this fact—probably with concern—for your mind may at first hop, skip and jump like a Mexican bean. Do not be alarmed. Interest (with a capital I) in whatever you are rediscovering in music, will strengthen your concentration not only in music itself but also in everything else you do. Hence,

(Continued on Page 485)

THE FAMILY CIRCLE OF KEYS has shown us that there are twelve different keynotes. Each keynote represents both a major and a minor key. So there are twenty-four keys in all. (Many of our best theorists recognize the key of F-sharp and the key of G-flat as definite entities and so recognize the total number of keys as twenty-six.—Ed.)

Each one of these keys has its own particular set of relatives, some close and others distant. In the next few paragraphs we intend to examine the most closely related keys—the ones most used by composers in modulating. You are already familiar with the following pair:

The Dominant—the “brother” key—a rugged, masculine sort of fellow. Once you have made a half cadence, arriving on the dominant triad, it is simple to consider yourself no longer on a dominant triad, but on the tonic triad of the new key.

The Subdominant—the “sister” key—just as closely related as the dominant, but more gentle in character. The quickest way to make the acquaintance of this young lady is to start with the tonic triad of the key you are in, then pretend it was a dominant chord all the time, transform it into a dominant seventh by adding a “flatted” leading tone, proceed to the new tonic—and there you are!

Every major key counts these two fellow major keys as its closest relatives. But it also has relatives among the minor keys. These relatives may be divided into two groups, for there are two entirely different ways in which a minor key can be related to a major key.

The first way is through a similarity of key-note. For instance, here are the keys of C major and C minor:

Ex. 1

These two keys, we must admit, have several important points in common. Their tonics (keynotes) are identical. So are their dominants. And their subdominants, too. In fact, their scales are exactly alike except for two notes—Mi and La. What is more, both keys own the same dominant triad and dominant seventh chord. C minor is therefore very much a first cousin to C major. We can speak of it as the tonic Minor.

Music which begins in the minor often ends in the tonic major, by way of symbolizing joy triumphant over gloom. A catalog of such music would be almost endless, including, among other works, Brahms' “Symphony in C minor,” Jerome Kern's *Whip-poor-will*, and stacks of Bach fugues. Somewhat less frequently music which begins in a major key ventures into its tonic minor. This happens in the *Mar-seillaise*, by Rouget de Lisle.

Ex. 2

|          |   |   |   |   |   |   |   |   |   |    |    |    |
|----------|---|---|---|---|---|---|---|---|---|----|----|----|
| C Major: | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| C Minor: | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |

|          |   |   |   |   |   |   |   |   |   |    |    |    |
|----------|---|---|---|---|---|---|---|---|---|----|----|----|
| C Major: | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| C Minor: | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |

It will be noticed that Monsieur de Lisle's tonality shifting takes the tune out of its original key into the sister key, then into

# The Threshold of Music

Assistant to Dr. Walter Damrosch

## Keys That Are Related—Sisters and Cousins and Aunts Natural Laws That Guide The Flow of Chords

[This article is the thirteenth in a series on “The Doorstep of Harmony.” The first appeared in The Etude for January, 1938, and an article will appear each month hereafter.]

### Part I

the brother key, then back to the tonic *but in the minor*. For a whole measure, on the D chord, we are led to expect a return to the tonic, but until the following measure begins we have no way of knowing whether it is going to be major or minor.

The Subdominant Minor is almost as close a relative as the just mentioned tonic minor. In the key of C major the subdominant minor is F minor. The shift is easy, since the tonic of the original key simply becomes the dominant of the new key, just as it does whenever we shift into the subdominant major. A familiar example of this modulation occurs in the familiar *Melody in F* of Rubinstein.

Ex. 3

|          |   |                |   |
|----------|---|----------------|---|
| C Major: | 5 | 5 <sub>7</sub> | 1 |
| F Minor: | 5 |                |   |

|   |   |                |   |
|---|---|----------------|---|
| 1 | 6 | 5 <sub>7</sub> | 1 |
|---|---|----------------|---|

The Dominant Minor, on the other hand, is a much more distant relative. If we try to shift keys from C major to G minor we will see why this is so, for G minor has not a single chord in common with C major. The two keys simply have no common ground on which to meet.

### Relative Minors

THUS FAR we have talked about minor keys which are related to major keys because their keynotes are related. Now we are going to discover another batch of minor keys which are related through a similarity of scales. To illustrate, here is an extended version of the C major scale:

Ex. 4

Play these notes carefully, for in them is contained a natural law of music which is tremendously important.

If, as you navigate the descending scale, you stop two notes before the end, on Middle C, you will have played simply the scale of C major, no more, no less. But, if you include those last two notes, you will notice the intrusion of a minor flavor and a new tonality. The fact is, the last eight notes of that elongated descending

scale are the very notes of the descending Melodic Scale of A minor.

Try the same experiment in another key. Start with E-flat and play the E-flat major scale downwards until you reach the E-flat below it. Do not stop there, but carry it two notes farther down to C. There! You have played the descending scale of C minor.

The same thing is true in every key. The notes of every major scale are exactly the same as the notes of the descending Melodic Scale (or, as it is sometimes called, the Natural Scale) of the minor key two notes below it. Except for the fact that the minor key begins and ends in a different place, the two scales are identical. Because of the strong relationship between the two scales, the minor key is known as the Relative Minor.

Of course the official minor scale is the version known as the harmonic minor scale; the descending melodic minor is only a variant. But the harmonic scale can always be easily formed from the descending scale by changing one note—raising Ti (the leading tone). If, in the scale of A minor, already shown, we raise G to G-sharp, we achieve the harmonic minor scale.

Minor keys have no signatures of their own. (A signature, as you doubtless know, is the array of flats or sharps placed at the beginning of each line of music to inform you what key the music is in.) Every composition in a minor key uses the signature of its relative major. “Three flats” serve for both E-flat major and C minor. “One sharp” does double duty for G major and E minor. And so on.

Here is a simple example of a modulation into the relative minor, from the favorite, *With a Song in My Heart*, as sung in the popular musical comedy of some ten years ago, “Spring is Here,” by Richard Rodgers.

Ex. 5

This quotation is reproduced with the kind permission of the Music Publishers Holding Corporation, owners of its copyright.

The first chord, an E-flat major triad, is the tonic, of course. The harmony of the second measure is the dominant seventh chord of G. The third of these measures is tonic harmony in C minor, the first half

of the fourth measure is its dominant, which at the third beat moves smoothly to the dominant seventh of E-flat, and we are again at the front door of our home key. The common chord on which the two keys meet is that of C minor, which is the submediant of the Key of E-flat and tonic in the related C minor.

Here is another modulation to the relative minor, as it is done in grand opera. It happens in the *Coronation March* from “Le Prophète” by Giacomo Meyerbeer.

Ex. 6

At this point the march changes its key, switching from E-flat major to C minor. The common ground on which the two keys meet is the chord marked x, a Ti triad in the original key and a Re triad in the relative minor.

If you recall that much whistled tune by Richard Rodgers, *With a Song in My Heart*, you will remember that after four measures in E-flat major there is a shift to the relative minor, and the next four measures are a repetition of the first four only in C minor. Whistle it over to your self.

In the second movement of César Franck's “Symphony in D minor” a brief passage occurs which offers a striking comparison of the two forms of minor relationship, since tonic minor and relative minor are displayed side by side. The music seems undecided which way to go—like a chicken which starts to cross the road, turns back, and then crosses after all.

Ex. 7

The phrase opens in the key of C major. By the time it has reached the point (Continued on Page 482)

# BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

WILLIAM D. REVELLI

FAMOUS BAND LEADER AND TEACHER  
CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

NO MAN CAN BE RIGHTLY TAUGHT unless he feels the need of something in his life and his work." This rather terse bit of philosophy sums up our teaching problem very nicely. In the average high school band or orchestra we find most of the members able to "play all the notes," and usually well satisfied to do just that. It is difficult for them to realize that there is more behind performance than simply "getting the notes." Directors and teachers are constantly searching for some means of fulfilling the desire for musicianship rather than mere mechanical skill and technical ability.

This so-called idea of "student directing" has solved the problem in countless cases. It has been the means of "prying loose" the students from their self-satisfied mechanical performances and creating a desire for the attainment of truly artistic results, unfolding new views of the picture and fields of study previously overlooked. Mechanical skill and technical ability are of course very necessary, but they are but means to an end and certainly not the end or goal itself.

Student directing goes far beyond the idea of a student's learning to wave the baton correctly for various rhythms and to appear

in front of the organization as a leader at rehearsals or in public concerts. Although that may be the part that appeals to some students, it is wise to develop a well rounded course of study that will help students to visualize the problems of organization as seen through the eyes of the teacher. Often this study changes the student's attitude towards the teacher and his work with the organization. It helps him understand why certain things are done as they are, and what he as a student can do to help in the development of a better organization.

A study of student directing is of prime importance in that it develops the highest type of student leadership. It continually points the way to fields of study that develop musicianship of a high order, and keeps the student progressing, instead of his reaching the point where he feels satisfied with his ability on his instrument and his knowledge of music in general. It makes him aware of the many organizational details that must be taken care of, and through the training received, it becomes possible for him to handle these problems efficiently.

In the average school the band and orchestra go through a rebuilding process at the beginning of each school year. Loss of members through graduation, moving out of town, program difficulties, and so on, must be met by replacements from the beginner and intermediate groups. This is usually a trying period—the older members like to play the more difficult music, and new members have not the ability to attempt it. Under these conditions the new members either become discouraged and tend to give up, or they develop bad habits in the attempt to play music beyond their capabilities. Advanced members dislike the simpler music on which it is so essential for younger players to be working. This

## The Student Conductor

A Valuable Aid to Teaching

By H. E. NUTT

*Mr. H. E. Nutt, composer, teacher and lecturer, is a member of the faculty of the Vandercook School of Music, of Chicago. He has been long interested and active in the cause of student conducting; and, from close contact and experience in this field, he has gathered material which shows a keen insight and affords a wealth of information on the needs of the director and student.*

*In addition to his work in this field, Mr. Nutt has become well known as a guest conductor at clinics and festivals, and has acted as judge at various contests.—Editorial Note.*

H. E. NUTT

developed solidly and have attained enough experience to "hold their own" in ensemble work. Some students find that there is more to the matter of directing than they had supposed, and the study offers a challenge to their ability. The normally intelligent student soon finds that the further he advances in this study, the greater are his individual needs, and the greater is the effort he puts forth.

Under the guise of "advanced study" tests can be given in rhythm, intonation, routine of musical expression, interpretation, and other important points. Interested students can be drilled in reading time figures, in the rules of contrast, in the meanings of musical terms and other important items. Learning arises just from their study of scores and methods of indicating musical ideas by means of suitable gestures and baton motions. After all, the actual baton motions are worth little unless the correct musical idea is in the mind of the one making the gesture. In analyzing the musical score, student directors learn much about typical forms used in music, phrasing, elementary harmony, musical notation, eight fundamental learning points, transposition and terms and symbols used.

From the standpoint of organization, student directors should become thoroughly trained in library duties, rehearsal routine, office routine, accounting for property, attendance records, care of instruments, simple emergency repairs on instruments, methods of handling section drills, publicity work, and so on. In the matter of personal development, they should study stage deportment, speaking voice, bowing, getting on and off the stage, tact and technic of handling visitors, talking with teachers, school officials and business men; the development of modest confidence in themselves, and the ability to think and act with calmness in emergencies.

### The Dose Sweetened

THE PILL FORMULA is patent: put batons in their hands, guide their study carefully, and you can hammer away at fundamentals week after week without their realizing or resenting it. This special study appeals strongly to them and keeps their interest at high pitch until the younger members have

organized the class. In announcing the first meeting, the director may state that several have requested the formation of this special class for those interested in studying directing, interpretation, and so on, and that a meeting will be held in the Music Room on Friday afternoon after school, for the purpose of explaining this work and to see if there are enough interested to make the formation of this class worth while.

At this preliminary meeting, definite information as to dues or tuition, subjects to be covered, materials to be purchased, and other details, can be given, and a meeting place decided upon for the first regular class session. It is wise to keep a close check on attendance and have a definite understanding as to paying for lessons missed unless the student has an excellent reason for his absence. Dues can be paid on a weekly or a monthly basis. If the director does not expect pay for his services, the tuition or dues need not exceed fifteen cents per week for each student. If the director is to be paid for his time, the dues should not be less than twenty-five cents per week. Some directors prefer charging enough to cover materials, scores, music, paper, and other incidentals, for the entire class. As long as everyone accepts the tuition price there should not be any difficulty with regard to the financial requirements of the class. Perhaps a treasurer can be appointed to collect and account for all money so that the director need not handle the matter personally.

### Establishing Routine

THE FIRST REGULAR CLASS session is important. Start on time, and end on time. Be businesslike and keep the class moving. Due to the fact that most students are especially anxious about the baton motions, it is wise to start at once on that work. Explain and demonstrate four-beat, three-beat, and two-beat rhythm. Use short, straight strokes of the baton at first. The class is asked to sing or say each beat in perfect time, which is very helpful to their accurate use of the baton. The use of the left hand should be reserved until later, as it would be confusing to demonstrate this too early in the study, and rhythm indication should be worked out fully. Diagram the various rhythms on the blackboard, and have the students do likewise in their notebooks. Then have them repeat the baton motions for each of these rhythms at different speeds.

The next step is to cover gradually more space with the baton, and as the space increases, have the class say the numbers of the beats more loudly. Insist on definite directions and precision on the fundamental beats. Thus far we have used straight beats with a definite stop at the end of each stroke. Now we can indicate a smoothly flowing

(Continued on Page 477)

# THE ETUDE MUSIC LOVER'S BOOKSHELF

## The Paderewski Memoirs

CONSIDERED from a purely literary standpoint, "The Paderewski Memoirs" is one of the finest pieces of narrative writing produced in many years, in that the available material is so absorbing in its interest and that it is presented in an unending stream of captivating incidents for all musicians and music lovers.

In addition to being the dominating pianist of his era and one of the outstanding members of his race in all history, Ignace Jan Paderewski has always been an enormously engaging personality, from a human standpoint. When he arrived in America, in November, 1891, he was sent to the old Union Square Hotel, that same memorable building where Jenny Lind, at the behest of the King of Ballyhoo, P. T. Barnum, was serenaded by the red-shirted Fire Department of New York City. The hotel was alive with mice and bed bugs, and after a terrific crossing in a small steamer (*The Spray*), the young pianist could not have been very happily impressed with the New World. The Union Square Hotel was just a few blocks from old Steinway Hall. The Steinways were subsidizing the debut of the new pianist, and he was quickly moved up town to that fashionable fire trap, "The Windsor Hotel."

His name, Americans found hard to pronounce. The famous aureole of sandy hair made his portrait conspicuous wherever it appeared. Steinway's very practical manager, Charles F. Tretbar, explained, however, that America was accustomed to such great artists as Rubinstein and von Bülow, and he was very sorry to say that, notwithstanding his best efforts, the sales of seats were disappointing. We do not wonder that the despondent young artist sought to return at once to Europe. This feeling was intensified by the fact that he was asked to play six concertos in one week. In Europe one might be asked to play six concertos a season, and the strain of playing six concertos in one week naturally frightened the virtuoso to the verge of paralysis. On top of this, he was told that he was also expected to play six recitals during the following two weeks. The enormous amount of practice necessary to prepare these programs is extremely hard for anyone to realize. It meant keeping in the mind a million or more operations, conscious or subconscious, and having them ready for perfect presentation under the most severe conditions. Mr. Paderewski appeared at Carnegie Hall, New York, on November 19th, 1891. The preparation for this and the following concerts demanded an amount of physical labor that would have staggered a giant. The elderly guests of the old Windsor Hotel naturally would not tolerate the sounds of piano playing all night long, but that was the only time when the virtuoso could find time to practice. Consequently, he was obliged to go to the warerooms of the old Steinway Hall on Fourteenth Street and practice in a cold loft. Thus, in the most uninspiring atmosphere imaginable, Paderewski prepared his first American programs, through the long hours of the night. With arms "dropping off," with fatigue and his body bent with laborious punishment of the keyboard, Paderewski made his debut in America, in a much depleted physical condition.

"The Paderewski Memoirs" reveal one of the greatest secrets of Paderewski's success—work, long, hard and indefatigable. Nothing permitted him to stop short of the goal he sought. Once the great pianist said to the writer of this review, "The reason why the Poles are famous as linguists is that they take the time, the trouble and the pains to learn the languages." The same

thought could be applied to Paderewski's own art.

The initial appearances in New York were anything but a sensation, and some critics were very severe. Paderewski's first recitals were not at Carnegie Hall, but at the smaller hall of Madison Square Garden. Managerially, it was a very bad move, as it gave the public the impression that the young pianist's managers did not have confidence to warrant a recital in New York's principal hall. Finally Mr. Paderewski convinced Mr. Steinway that he deserved to be presented in Carnegie Hall.

Paderewski in His Prime

The author of this review, as a boy, attended the first Carnegie Hall recital and heard his friend, the great critic, Henry T. Finck, say in the lobby to a group of other critics, "I tell you, gentlemen, here is the greatest pianist since Liszt." Thereafter the pianist's success was a *furor*. The ladies particularly went wild over him, and it was not infrequent to witness showers of flowers upon the stage at the end of a recital. This engendered the jealousy of other pianists. The story is told of two famous pianists who went to hear a Paderewski recital at Carnegie Hall. As they went out one said to the other, a well known wit, "What did you think of it?" The reply was, "It was very fine, but of course it could not be as good as Paderewski."

This introduction is merely to indicate that the whole four hundred and four pages of "The Paderewski memoirs" are packed with incidents so engrossing that it becomes one of the most interesting musical biographies ever written. There is only one Paderewski. No one else could have written this book. From his birth in Kuryłówka, Poland, to this moment, when, as a man on the verge of eighty, he is touring America, his life has been one of the most vivid of our era. With the capable assistance of Mary Lawton, he has made this one of the books which everyone interested

By B. MEREDITH CADMAN

Realizing that many of our readers may have difficulty in securing the books listed in this department, THE ETUDE MUSIC MAGAZINE will be glad to furnish its readers with these books at the price given, plus the slight charge for transportation and delivery.

in music, particularly the piano, should possess. While these memoirs terminate with the beginning of the Great War, Mr. Paderewski has promised more memoirs of the years subsequent to 1914. Thus, there is nothing in this book relating to Paderewski's memorable career as a statesman at Versailles and at Warsaw. However, the work does cover that period of chief interest to musicians, notably the years of preparation with Leschetizky.

## She Shall Have Music

Musical romances for children have been none too numerous, and THE ETUDE hails a new book skillfully written and finely presented in "She Shall Have Music." This is the story of Karen, child of a cultured Irish family settled in America. Karen's musical progress comes to her as a part of life, and the author has told "just what happened," with such ease, fluency and interest that the reader is impressed with the feeling that he is reading a real account of what actually occurred in the Forrest family. Any girl interested in music will find this not only a very absorbing story, but, because of the musical understanding with which the book is written, also a very inspiring help to study. We cannot imagine a nicer birthday present for the girl student from ten to fifteen years of age.

She Shall Have Music  
By Kitty Barne  
Pages: 261  
Price: \$2.00  
Publisher: Dodd, Mead & Company

## Organizing Play

Of all the books we have seen upon games, contests, parties, picnics, outings, and jokes, this "Social Games for Recreation," by Mason and Mitchell, is certainly the most comprehensive. One in possession of this compendium should be "fixed for life" in all matters of this species of social entertainment. It contains full and ample directions for over twelve hundred individual games for home, school, club or playground use. Teachers and club leaders are often at a loss to know what to do to keep groups of people entertained. It takes no little ingenuity to create a new game. Many of the games and contests in this work are musical, and others can be easily adjusted to musical subjects. Teachers, who realize the value of occasional musical parties for children, will find a splendid lot of practical suggestions in this book. The writer knows of one teacher who for years used parties to hold certain members of her class who could not very well be sustained by the musical interest in the work. Behind every boy and girl there is a little human being, and that human being enjoys play.

Therefore, if you need Social Mixers, Social Dancing Aids, Party Games, Mystery Games, Mental Play, Teaching Games, Joke Stunts, or Forfeits, you will find them in this book which the writer heartily recommends.

Social Games for Recreation  
By B. S. Mason and E. D. Mitchell  
Pages: 421  
Price: \$2.50  
Publisher: A. S. Barnes and Company

## Small School Music

Hazel Gertrude Kinsella and Elizabeth M. Tierney, both professors in the excellent music department of the University of Nebraska, have had wide experience in surveying the musical work of schools in small towns and rural communities. Very few of these communities have very highly trained supervisors available. Much of the work falls upon the regular teachers of the school. The book covers in brief and efficient fashion such subjects as, "The Art of Singing," "Types of Song," "Tune and Rhythm," "Music Appreciation," "Music Reading," "Learning to Play," "Interval and Modes," "Musical Organizations," "The Radio and the Musician." Music in the Small School

## Pioneer Days in the Dance

Did you ever dance the "Wild Irish man," or the "Tempest," or the "Racquet," or the "Varsoviene," or the "Fireman's Dance"? Do such exclamations as "Lady, through the side door," "Behind the couple, peek once more," "Allemand Right," "Forward again with a Do-si-do," mean anything to you? Our pioneer forefathers knew all about them, particularly those pioneers who ventured out westward and were dependent upon their own resources for entertainment, especially dancing. Now that the fun of country dance has been rediscovered in our ball rooms the jollity, the innocent hilarity of a simpler age, is being found again as a prophylactic for the sophistry that was, in many instances, making our young folk laughably artificial. For that reason, such a book as "Dances of our Pioneers," which tells just how these dances should be done and presents twenty-six of the best known dance tunes (such as *The Bear Went Over the Mountain*; *Captain Jinks*; *Do-si-do*; *The Head Two Gents Cross Over*; *The King of the Cannibal Island*; *Top of Corn Road* and *Virginia Reel*) presents a volume brimful of "reel" fun for those who take the trouble to go after it. The book is cleverly illustrated by Brooks Emerson. Dances of our Pioneers

## Musical Advance

The Volume of Proceedings of the Music Teachers National Association for 1938 is one of the most comprehensive and interesting of the thirty-three issues published by this fifty-five year old organization. These volumes have a very significant place in the annals of American musical education. In the olden days, the teachers and experts invited to speak "read a paper" and some of these papers were painfully prolix, clumsily worded, and not always creditable to music and musicology in our country. This was widely observed by certain pedants; and for a time the pendulum swung the other way and the paper became so highly expert and so specialized that only their perpetrators could understand them. As far as influencing the great body of American teachers along any practical

# THE TEACHERS' ROUND TABLE

Conducted Monthly by GUY MAIER  
NOTED PIANIST AND MUSIC EDUCATOR

Correspondents with this Department are requested to limit their Letters to One Hundred and Fifty Words

THE TEACHERS' ROUND TABLE believes its name if the leader monopolizes discussion. This month I would like you to share a few of the many letters from Round Table friends who offer stimulating suggestions, or who bring me up short when my statements are inaccurate or misleading. I wish they knew how grateful I am for the lifts they give me over many a steep grade!

Mrs. M. K. (Minnesota) shares my conviction that "teacher and pupil can be on happier terms with each other if the lesson hour is passed with real fun and enjoyment shared together." In other words, away with that stiff, distant teacher and pupil attitude! Concerning the use of vivid, colorful language in lessons, she writes, "I feel that in this business of teaching, there are some magical ways of getting results. One bit of magic I know always works, and that is to use picturesque language or striking illustrations in making pupils understand what they must do. For such picturesque expressions I have found you a good source. For instance, you once used the expression, 'old horse galloping in the pasture,' when describing playing that should have been more *legato*. How many times since then I have used the same expression!

"This morning I had an eleven year old boy playing an octave exercise from Doering's 'Op. 24' (one of your recommendations). He played the long skips with good accuracy, for he always pretends he is playing basketball; I had told him this kind of exercise would improve his aim and show, too, whether he could make a good basket throw. Another boy, in playing a left hand treppgiated chord accompaniment, held his fingers too long on some keys, overlapping the tones. So I asked if he had ever seen a little dog out in a yard, tied to a stake, start racing out after someone, forgetting his chain and being yanked back. Just so, his habit of holding down keys after they should be released, was impeding his own movements. It was all I needed to say! Not only do such illustrations act like magic to give the child an understanding, but they help to give enjoyment to the lesson."

To which I can only add three soulful "Amen's," and a fervent plea for a lighter, more bantering approach to students of all ages.

In different vein, R.P. (New York) takes me to task when, in recommending Vol. I of Mason's "Touch and Technic," I am counter to its directions, stating "of all the hokum that has been disseminated on the subject of weight playing, the worst is the dropping of the arm and wrist as the key is played." Oh dear, oh dear, that was careless of me! I didn't mean to be so drastic—I simply meant that weight touch is better learned if it is thought of as an *in touch*; that is, it is advisable to approach the key with high arm and hand (either from above the key or on the keytop), instantly releasing all effort the moment the tone begins to sound, but with the wrist and arm still held high. After the tone is made, you can do anything you want—drop your wrist, bounce into the air, or fall into the cellar! In other words, controlled weight cannot be learned by letting the hand and fall limply or by pumping down as the tone is made. If you do this, you will not make the kind or amount of tone you want. Mr. Mason probably did not think it necessary to explain this. So, forgive me, don't you?

GUY MAIER

## The Helper Helped

S. K. M. (Pennsylvania) sends a severe letter. Here it is:

"In the September issue, I find an article referring to piano instruction for a child of four, which you apparently think is too young to begin. I would like to refute that statement because of my own experience with a younger child. The little girl is just past three years. She has been coming to me daily for a period of twelve weeks, thirty minutes a day. She knows all the keys on the keyboard—whole, half and quarter notes—she knows and can write, in the treble clef, the notes from middle C to G above the staff; and we are now learning the bass clef. As I play a tone, she writes it in its proper line or space.

"I use the book 'Music Play for Every Day,' and she can now play *The Woodpecker*. Due to her young age, everything we do is a game; and of course she loves it. Frequently, the rôles of teacher and pupil are reversed; but all that goes in with the day's fun.

"We have talked about several composers (she remembers their names and a few incidents in the life of each), and then I play for her some of their compositions. She listens attentively and requests the pieces to be played again and again—naming her favorites. In addition, I give her rhythm work, such as marching, tapping, and so on.

"It is a joy to work with the child and while it has required a great deal of patience, I firmly believe it has been worth while. I still maintain a child is never too young to begin music instruction."

I am happy to share this letter with all the teachers because it is an excellent model to follow in dealing with pre-school children. S. K. M.'s course of sprouts for her three year old is admirable in every way. I hope she realizes her unheard of opportunity in having that youngster thirty minutes a day for twelve weeks. Whew! What wouldn't the rest of us give for a chance like that! With such a set up much could be accomplished with even an unmusical child. But where are those blessed paragons of parents willing to finance such an arrangement? The best we can hope for is to start a summer music class for pre-school children, praying that parents will cooperate to the extent of three mornings a week. (This, by the way, is a good solution for that pesky summer teaching problem.)

But if S. K. M. will carefully reread the "Too Young" answer in *THE ETUDE* for September, she will note that I did not say that a child is ever too young to begin music. Heavens, no! I firmly believe that every baby should be started on his musical journey in the cradle. Why else would I have recommended my own "Experiments with a Three Year Old" from "Playing the Piano" (Maier-Corzilius); or why would I have advised the use of "Music Play for Every Day," which S. K. M. and countless other teachers use with the greatest success?

But, don't forget, that some children have

not developed sufficient physical coordination to warrant starting the piano as early as four. These should be kept in a general music class (also recommended in that September answer), until five or six years of age.

For early singing and later, playing, S. K. M. might look up "Song Cargo" written by my own five and six year olds, Bob and Ted Maier. This collection of children's songs and pictures is everywhere used with gratifying results. Children, even as young as twenty months, love it!

The Diller-Page "Pre-School Music Book" outlines an excellent *modus operandi* for group work with youngsters, two and a half to five years old.

M. L. S. (Illinois) has devised a fascinating chart to "egg on" her pupils. "My students haven't had the opportunity of a musical education and, therefore, they were very enthused over their first lessons. In order to stimulate and preserve their interest, I devised the following plan which has worked perfectly. It is this plan I wish to present to the Teachers' Round Table.

"I drew a large G clef on a cardboard eight by ten inches. This is used as an automobile racetrack. The track is divided into twelve segments; each segment permits them to go a distance of twenty-five miles, which signifies a perfect lesson. The child starts the race with a little colored sticker car at the town called 'Poor Burg,' a place at which he does not wish to remain for long. At every seventy-five miles, there are towns at which a new car is awarded. The second town is 'Never-Stop,' whose population is ten; the third town is 'Linger-Less,' with a population of fifteen; the next town is 'Keep-On' and the population is fifty, and the last and most glorious town is 'Glory-Ville' with a population of three thousand. I gave the towns a name which signified progressiveness. A grand prize is given to the one who completes the race first, and a lesser prize is given to each one in order of their completion. On the back of the chart is a list of things upon which the child is graded. I was careful not to make too detailed a chart, as it would not mean as much to the child, taking for instance tone, touch and correct notes under 'expression.'"

All of which is excellent—but does not go far enough. May I make a few suggestions? Why not give bigger and better cars along the way? Start out with an old broken down jalopy, change progressively to more expensive cars, and finish with something truly eye filling. I would also give each sector much longer mileage. Can't you just hear Bill say, "Aw shucks, twenty-five miles—that ain't nothin'!"? So give him at least a hundred for the jalopy journey and a thousand for the finish. Also, the cities *en route* (at least for my pupils) would have larger populations and the end would be no less than a triumphant entrance to one of the World's Fair cities!

The names of your towns are fine; but I would make them even more exciting. The only objection to my chart might be that it would sound a little too much like an advertisement by P. T. Barnum!

D. M. (Ohio) wants the names "of any melodies, easy concertos other than those of Mozart, about fifth or sixth grades." That's a hard one! As to Mozart, most of his concertos are so difficult that artists are scared to death of them. Occasionally there is an isolated movement that a youngster might study: for instance, the first movement of the "Concerto in C Major" (K. 415), the second movement of the "Concerto in D major" (K. 537), the first movement of the "Concerto in A major" (K. 488), and so on. Have you examined the "Concerto in D major" by Haydn, or the *Rondo* by Prince Louis Ferdinand (a contemporary of Beethoven)? There is no other "miniature" concerto like that charming, easy "In Elf Land" one by Seufel-Holst. I wonder if your boy is advanced enough to play the "Sentimental Rhapsody," by William Pelz? This five minute concerto is jazzy, brilliant, tremendously effective—a sort of short "Rhapsody in Blue." It can be played also on two pianos, or as a piano solo. I recommend it without qualification.

To M. S. (Missouri), my admonitions on counting are not clear. She asks, "After reading your reply in *THE ETUDE* for February, in regard to counting, I would like to ask if young students should be taught to count until rhythm is established in feeling, or consciousness; and how one can get them to count without counting for them, or with them?"

First, let them count for you as you play one of their own simple pieces—preferably in slow two-four time. Have them "conduct" with one or both hands as they count; this is done by describing a fish hook in the air—thus

sure it is done as gracefully and flexibly as possible, thinking of the elbows as the moving point for the arm, and using free wrists to draw the fish hook in the air. Three-four time is done thus:

with an easy, wide sweep in moving from the third beat back to the first. Then have the students to play the same pieces for you—while they count and you conduct. This is the best introduction to counting I know; and if you carry it out I can guarantee that your pupils will not have any more trouble "taking the count."

# The "Musical Lighthouse" of New York's East Side

## A Study of The Music School of The Henry Street Settlement

Secured Especially for  
The Etude Music Magazine  
By MYLES H. FELLOWES

FOR THE PAST ELEVEN YEARS, the lower East Side of New York City has been experiencing a novel adventure in social living. The mortar binding the adventure is music; not professionalized music; not even lessons and concerts for their own sake; but music as a means of stimulating personal coöperation among people who might otherwise remain poles apart; music as a means of fostering character development, and aware, appreciative living. The successful progress of this adventure is the story of the Music School of The Henry Street Settlement.

Picture to yourself this Lower East Side of New York—rickety tenements, fire escapes hung with faded clothing that tells all too plainly the life history of its owners; swarming streets; children, and old women with shawls over their heads, crowding to the curbs in search of sunshine, for the excellent reason that there is no other place to find it; a babel of foreign tongues—Russian, Armenian, Yiddish, Chinese. Into such a neighborhood the Henry Street Settlement has brought health, service and Americanized living.

Four years ago another vision was brought to Henry Street; and its result is the present status of the settlement's Music School. The woman who brought it is Grace Spofford, Director of the Music School of the Henry Street Settlement, Head of the Music Division of the National

Federation of Settlements, and formerly Dean of the Peabody Conservatory, and of the Curtis Institute. Miss Spofford has envisaged and carried through the project of bringing music into the lives of the underprivileged, as a means towards understanding and self-respect.

### An Expansive Vision

"MUSIC IS THE MOST SOCIAL of all the arts," Miss Spofford tells us, "because it brings people together and enables them to commune with each other, to have fun together regardless of language, position, background, or beliefs. People cannot read books together, unless they at least share the same language and a measure of sympathy with the views of the author. They can enjoy pictures together, but they cannot take an active part in them; and the drama provides but a limited scope for coöperative participation. But music enables people to work together, to pull together, play together in more senses than one. At the Music School, we aspire to stress the value of music as a common experience in living."

At first glance the Music School of the Henry Street Settlement appears to be like any other first rate conservatory. There is a faculty of internationally known instructors, including Lydia Hoffman-Behrendt, Isabelle Vengerova, Robert Scholz, Joseph Knitzer, Alix Young Maruchess, Phyllis Kraeuter, Lucille Lawrence, Fraser Gange, Emma Zador, Lehman Engel, and Aaron Copland. There are classes in Theory, Harmony, Composition, Musical history, Orchestral and Chamber Music, Choral Singing, and Operatic Acting, in addition to Individual and Group Lessons in Sing-

ing and Playing. But the purpose of the instruction is different from what one finds elsewhere; and this difference is important. The aim of the Music School is to present instruction of a professional quality for non-professional use; to supervise the social and recreational music of the Henry Street Settlement; to serve as a center of neighborhood musical activities; and to promote, musically, the social and cultural movements of the lower East Side. In assuming these additional responsibilities, a music school of first rank steps beyond the confines of mere lesson giving and becomes a valid instrument of social welfare. The socially minded residents of other cities would do well to look towards what is being accomplished at this Music School.

### The Geometry of Music

THE FUNCTIONING of her school is described by Miss Spofford as a pattern of three circles, lying one within the other. The inner circle comprises the Music School proper, giving instruction and building the taste of some five hundred young people who will one day take their place in the pattern of American life. The middle circle stands for the parent Settlement House, into which the Music School reaches by supervising and assisting musical recreation for those who can never devote themselves to music study. And the outer circle represents the neighborhood, an area of some two miles, for which the Music School provides lectures, concerts, religious festivals, and plain musical fun, all to be enjoyed by people who are neither music

students nor settlement house members, and who would have no music whatever if they were not presented to them in an organized, pleasant, accessible form.

The Berni family illustrates the working of the three circles. There are four generations of Bernis, and all come within the scope of the Music School. Ann, six, comes for singing lessons. Mrs. Berni is a member of the Mothers' Club at the Music School and visits Miss Spofford's lectures. Both parents attend the weekly concert and "sings"; and they bring the grandparents along with them, for they, too, love the concerts. The old people tell of the festivals they used to know in Russia, and say that the music "makes us live once more young." The only member of the household who does not actually come to the Music School is the ninety-five year old great-grandfather, who does not leave the Bernis home for any purpose. But the family carry the music and the fun home to him, and he enjoys it vicariously.

### Humanizing Music Study

THE CHIEF DIFFERENCE between the Music School and the average studio is that the former does away entirely with professionalism and competition. The settlement house pupil does not think in terms of a career, although several of the students have gone directly from the Music School to important professional posts in orchestral and radio work. More likely, he thinks of saving up enough money for new music and carfare on stormy days. His music is consequently given to him, not as something to set him apart from others but as a force to bring him into closer contact with them in understanding and shared joy. Piano student accompany the string students the string group plays with each other and with the woodwinds and brasses; and all dream of joining the orchestra; while the singers complement their vocal work with participation in the choruses and madrigal groups. When student concerts are given (and there are about thirty a year) the names of the participants do not always appear on the program. The pupils strive to do their best, for the glory of the composer and the honor of the School; but competition in the sense of trying to outdo someone else does not exist.

There are four hundred and fifty pupils of twenty-three different nationalities, registered at the School. Fifty per cent of these are children. The remainder are young office workers, factory hands, mechanics, and clerks, all of whom hasten to their lessons after five o'clock. Except on Saturdays when the youngsters can come in the morning, the School does not open before noon, but from six to ten activity is high, and the girl who stands up all day in a ten-cent chain store, and the boy who works on a clothing press, forget their cares in playing Beethoven and Brahms in four-hand editions. Many of the children are too little to come alone, and the waiting room of the School is crowded with eager mothers, hatless and in thin coats, who are perfectly willing to wait about for hours at a time, telling each other of the progress of Sammy and Tony. (Miss Spofford has not yet been able to weed the competitive spirit from the equipment of maternal pride.) And some of the children who live outside the immediate neighborhood make a busman's holiday of schoolless Saturday.

# FASCINATING PIECES FOR THE MUSICAL HOME

## SPARKLING SPRAY

This composition, if it were being played at a gay café on Broadway, would be classed as a "novelty number" like *Nola* or *Flapperette*. It needs to be played with a light forearm in a very sprightly dance-like fashion. If played in conventional fashion, it will lose all its flavor.

Grade 3½. Allegro capriccio M.M. ♩ = 120

CHARLES E. OVERHOLT

The musical score for "Sparkling Spray" is composed of several systems of music. It begins with a treble and bass staff in 3/4 time, marked "Allegro capriccio M.M. ♩ = 120". The first system includes a piano introduction with a *mp* dynamic and a *cresc.* marking. The second system features a *mf* dynamic and a *Poco più mosso* tempo change. The third system includes a *Ped. simile* instruction. The fourth system is marked *Tempo I* and includes a *mp* dynamic and a *cresc.* marking. The fifth system features a *Poco meno mosso* tempo change and a *p con grazia* dynamic. The sixth system includes a *Ped. simile* instruction and a *rit e dim.* marking. The seventh system is marked *a tempo* and includes a *p* dynamic. The eighth system includes a *Ped. simile* instruction and a *D.C.* (Da Capo) instruction.

Grade 3.

## AT DAWNING

Charles Wakefield Cadman's *At Dawning* is one of the most loved heart songs of musical history. It makes an especially attractive piano piece. Imagine, as you are playing, that the melody is being sung by some especially rich contralto or mezzo-soprano voice, like that of Marion Anderson, and subdue everything else to this. If you know the words of *At Dawning*, say them with your fingers at the keyboard. Grade 4.

## THE BIRD-CLOCK

Nearly every European palace has a bird-clock— not the cuckoo clock that has come to us from Alpine lands, but a clock with a highly decorative little bird which flaps its wings and twitters merrily at certain intervals. Mr. Lemont's gay little bagatelle should be played in the *leggiero* spirit, with a very clear-cut staccato Grade 3

CEDRIC W. LEMONT

Op. 9, No. 2

Allegro giocoso M.M.  $\text{♩} = 76$

Grade 3.

# MEXICAN MOONLIGHT

J. LILIAN VANDEVERE

Tempo di Tango (dreamily) M.M. ♩ = 144

The musical score for "Mexican Moonlight" is written for piano in 4/4 time. It begins with a treble and bass clef, a key signature of one flat (B-flat), and a tempo marking of "Tempo di Tango (dreamily) M.M. ♩ = 144". The score is divided into five systems of two staves each. Dynamics include *mp* (mezzo-piano), *mf* (mezzo-forte), *f* (forte), and *mf* (mezzo-forte). Articulations include slurs, ties, and fingerings. The piece concludes with a "Fine" marking and a "D.S.%" (Da Capo) instruction.

# MAZURKA, IN B $\flat$

Grade 3 $\frac{1}{2}$ .

Tempo di Mazurka M.M. ♩ = 132

FREDERICK A. WILLIAMS, Op. 98, No. 1

The musical score for "Mazurka, in B-flat" is written for piano in 3/4 time. It begins with a treble and bass clef, a key signature of two flats (B-flat and E-flat), and a tempo marking of "Tempo di Mazurka M.M. ♩ = 132". The score is divided into two systems of two staves each. Dynamics include *p* (piano), *f* (forte), and *p* (piano). Articulations include slurs, ties, and fingerings. The piece concludes with a "Coda" marking and a "Last time to Coda" instruction.

Copyright MCMXVIII by Oliver Ditson Company

International Copyright secured

The main body of the score consists of seven systems, each with a treble and bass staff. The music is written in a key with two flats and a 3/4 time signature. Fingerings are indicated by numbers 1-5 above notes. Dynamics include *dolce*, *p*, *f*, and *mf*. The piece concludes this section with a *D. C.* (Da Capo) instruction and a repeat sign.

CODA

The CODA section is a short piece at the bottom of the page, consisting of two staves. It begins with a C-clef on the treble staff and a key signature of two flats. It includes the instruction *accl.* (accelerando) and ends with a final chord marked *f*.

# ALPINE VESPER CHIMES

*p* *espress.* *mp*

First system of the musical score for 'Melissa'. It consists of two staves (treble and bass clef) in G major. The music features various dynamics including *mp*, *mf*, *p*, *p sempre espress.*, *poco f*, and *mp*. Tempo markings include *rit.*, *a tempo*, and *molto*. There are also fingerings and slurs indicated throughout the system.

## MELISSA

### VALE DE SALON

The composer of this work, well-known to Etude readers through his numerous melodic and skillful piano pieces, has just been honored with the degree of Doctor of Music from Illinois Wesleyan University. This melody properly deserves the term "mellifluous" as it is "honey-like" in its sweetness. It is an excellent short recital piece. Grade 3½.

CARL WILHELM KERN, Op. 554, No. 1

Tempo di Valse M.M. ♩ = 60

Second system of the musical score. It continues the melody and accompaniment. Dynamics include *p*, *dim.*, and *p*. Tempo markings include *rit.* and *a tempo*. The system ends with a *Fine* marking.

Third system of the musical score. It features a more active melody. Dynamics include *mf*. The tempo marking *più animato* is present.

Fourth system of the musical score. It continues the active melody. Dynamics include *mf*. The tempo marking *meno mosso* is present.

Fifth system of the musical score. It concludes the piece. Dynamics include *pp*, *mf*, *f*, and *p*. Tempo markings include *rit.*, *a tempo*, and *calmato*. The system ends with a *D.C.* (Da Capo) marking.

# MASTER WORKS

## PAPILLONS

(BUTTERFLIES)

ROBERT SCHUMANN, Op. 2

(Composed in 1830 and 1831)

Edited by Xaver Scharwenka

The Etude has the honor to present Robert Schumann's irresistibly beautiful *Papillons* (*Butterflies*) serially. That is, it will appear in three parts in future issues. While *Papillons* is published as Opus 2, it represents the maturity of Schumann's finely poised musical mentality as well as his lovely aesthetic sense. Every piano virtuoso feels this to be an indispensable part of his repertoire. Schumann wrote these pieces in the exuberant period of his life before there was any suggestion of his tragic moroseness. Numbers 1, 3, 4, 6, and 8 were written in Heidelberg when Schumann was about twenty years of age. They were an instantaneous success right from the start. Grade 5-7.

### Introduzione

*cresc.* *ff* *poco rit.*

*mf* *M.M. ♩ = 80*

*sf* *sf* *sf* *marcato*

First system of a piano piece. It features a treble and bass staff. The bass staff has a *p* (piano) dynamic marking. The music consists of arpeggiated chords and sixteenth-note patterns. Fingering numbers (1-5) are indicated for both hands.

Second system of the piano piece. It includes a *pp* (pianissimo) dynamic marking. The tempo changes to *(poco rit.)* (a little slower) and then *(a tempo)* (return to tempo). The music continues with complex arpeggiated textures and fingerings.

Third system, labeled "No. 6" on the left. It begins with a tempo marking of *M.M. ♩ = 84*. The music is in 3/4 time and features a series of accented chords marked with *sf* (sforzando). The system concludes with a repeat sign and a final chord.

Fourth system, starting with the tempo instruction *Più presto* (faster). The dynamic is *pp*. The music is in 3/4 time and consists of accented chords. The system ends with a repeat sign and a final chord.

Fifth system, with a tempo marking of *M.M. ♩ = 84*. It features a series of accented chords marked with *sf*, followed by a section marked *pp* (pianissimo) with sustained chords.

Sixth system, with a tempo marking of *M.M. ♩ = 80*. It begins with a *sf* (sforzando) chord, followed by a *mf* (mezzo-forte) section marked *leggero* (light). The system includes various chordal textures and fingerings.

Seventh system, with a tempo marking of *M.M. ♩ = 84*. It features a series of accented chords marked with *sf* and *ff* (fortissimo). The system concludes with a final chord.

OUTSTANDING VOCAL AND INSTRUMENTAL NOVELTIES

BLESS THOU, O GOD, THIS DAY

L.D. Stearns

Andante espressivo

THELMA JACKSON SMITH

The musical score is written for voice and piano. It begins with a vocal line in G-flat major, 4/4 time, marked 'Andante espressivo'. The piano accompaniment starts with a series of chords in the left hand and a melodic line in the right hand. The lyrics are: '1. Bless Thou, O God, this day, 2. Keep me from wrong de-sire, Help me to walk with stead-fast faith, With cour-age, love, and praise through all its hours, And ne'er for-get to use my Help me to climb a lit-tle high-er, To sense Thy beauties o-ver land and sea, To re-al-ize Thy wondrous high-est pow'rs, In stead-y striv-ing for my own soul's growth, In search for wis-dom and for knowl-edge true, gifts to me, In-spire me with the pow'r to strive and rise Through earn-est ef-fort toward the far-off skies, To do a-right what-ever I have to do, Teach me to right-ly pray, Bless Thou, O God, this That by Thy grace I may at-tain the prize, Teach me to right-ly pray, day. Bless Thou, O God, this day.' The score includes various dynamic markings such as *mp*, *mf*, *f*, and *cresc.* and features a repeat sign with first and second endings.

# ROMANCE

PRIMO

A. RUBINSTEIN, Op.44, No.1

arr. by Preston Ware Orem

The musical score is written for a single melodic line on a piano. It begins with a key signature of two flats (B-flat and E-flat) and a 4/4 time signature. The tempo is marked *p* (piano). The score is divided into several systems, each containing a single melodic line. The dynamics range from *p* (piano) to *fff* (fortississimo). The tempo changes include *a tempo*, *rit.* (ritardando), and *ten.* (tenu). The score includes various articulations such as slurs, ties, and accents. The piece concludes with a *ppp* (pianississimo) dynamic and a *decresc.* (decrescendo) marking.

Violin

Cornet

Piano

This block contains the musical notation for the Violin, Piano, and Cornet parts of the 'Up With the Flag' march. The Violin part is written on a single staff with a treble clef. The Piano part is written on a grand staff with both treble and bass clefs. The Cornet part is written on a single staff with a treble clef. The music is in 2/4 time and features various dynamic markings such as *ff* (fortissimo), *mf* (mezzo-forte), and *f* (forte). There are also articulation marks like accents and slurs throughout the score.

FLUTE

This block contains the musical notation for the Flute parts of the 'Up With the Flag' march. It consists of three staves, all with treble clefs. The music is in 2/4 time and includes dynamic markings such as *ff*, *mf*, and *f*. The score features various articulation marks, including accents, slurs, and breath marks, indicating phrasing and performance techniques for the flute players.

## 10 Instrument Offers Picher Opportunity than The VIBRAHARP!

Photo shows Adrian Rollini, internationally famous Vibraharp star.

Whether you play for pleasure or profit, no instrument offers greater opportunities for achievement than the sweet and mellow-toned Vibraharp.

For proof, spend an evening with the radio. Note the prominence of the vibraharp in the arrangements of top-notch orchestras . . . its success in swing ensembles . . . its mounting popularity as a background for vocal groups.

### Easy to Own—Easy to Play

History-making new Deagan Vibraharp establishes a new high in value, a new low in price. Easy to play (lessons furnished). Irresistible as solo instrument—indispensable to the modern orchestra. Particulars on request.

**C. DEAGAN, Inc.**  
Dept. E7 1770 Berceau Ave. Chicago

## Suggestions for Good Reading

### MUSIC AND MUSICIANS

**MY WIFE AND I**—The story of Louise and Sidney Homer—by Sidney Homer. A fascinatingly human story of the public and private lives of a famous singer and composer husband. \$3.50 postpaid.

**MUSIC IN MY TIME** and other Reminiscences—by Daniel Gregory Mason—a journey through the past five decades of music with this famous musician-composer, teacher, writer—over 100 pages illustrated. \$5.00 postpaid. Scribner, 60 5th Ave., New York.

**TWENTIETH CENTURY MUSIC**—After. How it developed—how to listen to it. An explanatory guide to a new musical era. Not method, biography or criticism. Debussy, Ravel, Scriabin, Stravinsky, Strauss, Kodaly, Schoenberg, etc. \$3.00 postpaid.

**PLAIN WORDS ON SINGING**—William Shakespeare. New revised edition by popular demand; describes voice teaching method and spirit of the most successful teacher of his day—"the first singing teacher of London." \$2.00 postpaid.

**MUSIC THROUGH THE AGES**—Bauer—author of "HOW MUSIC GREW" (1950). Authoritative complete textbook in many chapters on modern music, mechanical music, instruments, orchestras, individual composers' works. \$3.50. P. Putnam's Sons, Dept. E, 2 West 45th St., New York.

### MUSIC AND HEALTH

**THE DOCTOR PRESCRIBES MUSIC**. Dr. Edward Podolsky, M.D., in-creases blood pressure, accelerates breathing, aids digestion, improves your health. Teachers, students, listeners—send for this fascinating book. \$1.50 postpaid. Lederle A. Stokes Co., 443-4th Ave., N. Y. C.

### CHILDREN'S MUSIC BOOKS

**A CHILD'S BOOK OF FAMOUS COMPOSERS** by Gladys Burch and John Wolcott. 20 biographies that children will enjoy. Authentic, inspiring lives of great composers and their music. Illustrated with contemporary portraits. \$1.50. A. S. Barnes & Co., 67 W. 44th St., New York.

## Learning to Interpret Great Music

(Continued from Page 430)

the student is playing it, thus compelling his eye to proceed in advance of the hand or voice. I find that learning to read correctly is more important to the American student than to spend much time on rhythm. Thanks to jazz, the American usually has a good feeling for rhythm.

### What Makes a Successful Student?

THE TEACHER HAS TO TAKE into consideration other things beside the knowledge of the music. What kind of hand has the student, for instance? There are good hands and bad hands. There is also the disposition of the student toward his work. For there are three requisites for the player who would achieve something sig-

nificant. These are conscientiousness, love of his work, and diligent application. With these three qualities, even the amateur can accomplish much, and this even in spite of a poor hand. Many of the works of Beethoven, Chopin and Ravel will be possible for him.

But especially he must have feeling. And this I would emphasize for every student. If I practice with understanding, conscientiousness and feeling, I am sure to reach my public. They are sure to understand me. I do not play "for the public." I play as I feel the music, and in all the countries, everywhere, the public has loved my playing; and I have always had the same contact with them, whether in Norway or Spain, in Brazil or Boston.

## The Music Lover's Bookshelf

(Continued from Page 442)

workable line, some of these papers were of negative value. Then the problem of putting them out came into the hands of a very experienced and broad musicologist, Professor Karl W. Gehrken of Oberlin College, who has for many years given invaluable attention to the preparation, selection and editing of this material, so that the proceedings have in recent years reflected the best musical pedagogical thought of present day America. The music teacher who spends \$2.50 for this volume is purchasing expert opinion and advice which should be worth many times this amount. The writer was particularly pleased with such essays as *Piano Technique: Myth or Science*, by Lawrence Schauffer; *Experiencing Music with the Piano*, by Abby Whitside; *Does Modern Piano Music Require a Special Technique*, by Arthur Byler; *The Individual Voice in Choral Singing*, by John Findlay Williamson; *Violin Study in Colleges*, by H. Hugh Alvaler; *Problems of Cello Teaching and Playing*, by Janos Scholz; and *College Entrance Credits in Music*, by Roy D. Welch. But these are only a few of thirty-eight contributions, all equally good.

### Music Personalities

David Ewen has reviewed the procession of musical notables of to-day in a volume entitled "Men and Women who make Music." This series of word portraits should be of interest and value to contemporary students and music lovers, particularly in these days when these music makers are introduced to millions of homes weekly over the air. These are in no sense biographies, but rather a series of appraisal portraits of such celebrities as Casals, Szigeti, Pinza, Melchior, Gieseking, Menuhin, Schnabel, Lehmann, Ormandy, Heifetz, Hofmann, Flagstad, Paderewski, Toscanini, and Kreisler. They have been done sympathetically and entertainingly and are very readable. The book is illustrated with many excellent "off-set" portraits.

Men and Women who make Music

Publisher: Thomas Y. Crowell Co.

### Brahms Masterpieces

To the average musician without training in the reading of orchestral scores, the high series of staves and their notes is about as clear as an involved problem in

trigonometry. Now these works are appearing with a piano transcription of the score at the bottom of each page. All that is required is to glance up at the measures above and one may see at a glance how the master has employed the various instruments to express his ideas. Of course, some general knowledge of the transposing instruments is needed to comprehend this. The "Symphony No. 1," the "Symphony No. 2," and the "Variations on a Theme by Josef Haydn," have now appeared in this new series with an admirable introduction and analysis (twenty pages) by Dr. Hugo Leichtentritt, who for many years has taught at Harvard University. The collection is handsomely bound and finely printed, although the notes are necessarily small.

Johannes Brahms: Three Orchestra Scores

Pages: 389 score pages

Price: Paper binding \$3.00; cloth \$4.50

Publisher: Books and Music, Inc.

### A Galaxy of Children's Songs

The employment of the radio in the lives of little folk has become one of the significant elements in our modern whirlwind civilization. Wherever the radio touches, the name of Dorothy Gordon has gone under the pseudonym of "The Song and Story Lady." She has contributed much toward safe and delightful air entertainment and culture for children. The new book, "Treasure Bag of Game Songs," gives the songs with musical arrangements by Adele Buchman, and then tells just exactly how to use them as games. They are action songs of the modern type, which keep the little bodies, as well as the minds and the voices busy. To anyone having the great problem of amusing children with intelligently regulated instead of disordered play or "rough house," this book will come as a blessing. There are twenty-two songs in all. The book is charmingly illustrated by drawings with a juvenile appeal, by Veronica Reed.

Dorothy Gordon's Treasure Bag of Game Songs

Pages: 93

Price: \$1.50

## PIANO TEACHERS!

HERE'S AN OPPORTUNITY to become a local service representative for one of the world's great pianos—MATHUSHEK.

Distinguished in the field of fine piano building since 1863, MATHUSHEK PIANOS are acknowledged as being among the outstanding creations in the progressive development of the piano.

We suggest communicating with us for further details regarding this opportunity. Or if you happen to be coming to New York for the World's Fair and we have come to a tentative agreement, we will ask you to be our guest for a day at the well-known Narragansett Hotel in New York. After a visit to the factory, negotiations may be completed.

Write immediately for details regarding available territory which does not conflict with our present dealer relationships. Special preference for accredited teachers.

Music Lovers: Write for Mathushek's Musical Map of Manhattan and the Fair!

## Modern Vocal Methods in Comparison with Bel Canto

By HOMER HENLEY

### Part II

**B**UT HOW MAY ANY GIVEN STUDENT of the voice know that he is receiving teaching based upon and actually derived from the principles of true *bel canto*?

A fair question, and one that has long been in need of a definitely categorical answer. Here follows a resume of the characteristic fundamentals of *bel canto*, with lesson form amplifications of their always cautious brevity; and these amplifications are not only the generally accepted extensions in the teaching of the best modern followers of the art of *bel canto*, but they have also been ratified, personally, to the writer by the testimony to him of almost every great singer in the world to-day.

1. *Principle of Breathing.* ("The art of singing is the school of respiration."—*Porpora*)

Chest high; shoulders down and back; abdomen slightly retracted; a buoyant expansion of the chest to be felt at all times; muscular breath control to be felt at the sides of the torso, under the shoulder blades and in the small of the back. These muscles are used to press the breath against the arch of the chest and maintain it there. The "singer's push" for control of both tone and breath comes from the tensing of the diaphragm. The entire chest should expand for a singing breath, from the lower line of the ribs to the shoulders, but the shoulders must never rise. If the chest be held high, it will be found that but little intake of breath is necessary to fill the lungs, as the expanded position of the chest automatically retains a good portion of the breath in continuous reserve. Inclining the upper body slightly forward frees the shoulders and induces the sinking in of the abdominal wall—one of the vital principles insisted upon by the old masters of *bel canto*.

2. *Principle of Pronouncing.* ("He who knows how to breathe and how to pronounce, knows well how to sing."—*Pacchiarotti*.)

The school of pronunciation is the school of the vowel. But even before words are considered, one must be mindful of the great principle that "starting every note on the exact pitch intended" produces a freedom that favors, and, in many instances, guarantees the production of unconscious pronunciation and expression.

Of the thirteen or more vowel sounds the most fundamental are: *Ah* as in *father*; *Aa* as in *hat*; *E* as in *meal*; *IH* as in *mill*; *Eh* as in *met*; *A* as in *may*; *Oo* as in *shoe*; *Oh* as in *go*; *Aw* as in *saw*; and *Uh* as

in *up*. All other auxiliary and intermediate vowel sounds grow out of these.

In harmony with and following after the necessary preliminaries of right breathing and exactitude in tuning the voice (for these prepare the way by opening the throat, and by depriving the lawless interfering muscles of their power of obstructing the free passage of the tone), there are certain positions of the mouth, tongue, jaws and lips, which operate for greater freedom in the shaping and emission of the vowel sounds. Here is a little lesson in them:

Vowel *Ah* (father): The jaws a thumb's breadth apart; the tongue-tip just touching the back of the lower front teeth; the smiling muscles raised to display the upper teeth, for this act, in turn, raises the soft palate, and so aids in opening the throat. (Many of the great singers have told the writer that their own *Ah* is horizontally placed, and that it seems to them to emerge through both their ears, rather than from their mouths.) Vowel *Aa*: in all senses the same as *Ah*, except for the sound being brighter and more silvery than the *Ah*.

Vowel *E* (meal): Teeth a finger-breadth apart; tip of the tongue lightly touching the lower front teeth; a pleasant half smile raising the upper lip; the sound pointed, but escaping any shrillness. *E* is often, and perhaps rightly, said to be the most refining of the vowels.

Vowel *Ih* (mill): The same as *E*, only a shade wider in formative size.

Vowel *Eh* (met): The same as *E* and *Ih*, only still wider in shape.

Vowel *A* (may): The same as *E*, *Ih*, *Eh*, only still wider. (Although it should be kept in mind that all these four "dental" vowels are tapered to a point on the upper middle front teeth.)

Vowel *Oo* (shoe): Jaw dropped to oval the lips. (Remember, the lips are "the painters of the tone.") Lips rounded and slightly advanced. The lips should feel the vibrating influence of the tone. As the voice ascends the scale, the lips are used less and less, and the mouth should open gradually more and more to free the sound.

Vowel *Oh*: The same as *Oo*, only the lip orifice should assume a longer oval.

Vowel *Aw*: The same as *Oo* and *Oh*, except that the oval should take on a still lengthier oval.

Vowel *Uh* (up): Mouth opened a thumb's breadth. No especial position of tongue or jaw. Lips spreading for a half smile. The sound of the *Uh* to be felt in the front part of the dome of the mouth—

in the indentation just above the root ridge of the upper front teeth. *Uh* is an embryonic, formless sound, physically considered, but in the ear it assumes a definitely valuable contour peculiar to itself alone, there being no permissible substitute for its authenticity in such words as *love*; *above*; *shut*; *shove*; *come*.

3. *Principle of tuning.* ("Unerring tuning places the voice."—*William Shakespeare*.) Tuning means sounding a vocal tone in comparison with a reliably pitched instrument, such as the pianoforte, until the vocal tone is brought with perfect exactitude into the very center of the note sounded on the piano. It will be found, after the tone is tuned, that the resultant sounding of the voice on that note has been established in the corridors of the head spaces—those cavities of resonance behind the nose. It is just here that may be found the line of demarcation between the so-called "nasal" teaching of many present day vocal pedagogs, and the "school" teaching of the old masters—the word "school" implying insistence on nothing less than absolute tonal perfection and purity. Present day teachers attempt to "place" the voice in the head cavities by means of physical manipulations of the soft-palate. The old Italian masters of *bel canto*, by tuning the voice, automatically prepared and opened the way for it to flow unhampered in resonant and beautiful currents through all the available spaces of the head. The singer who tunes his voice unerringly on every note he sings will find his tones soaring in a perfected beauty which would be quite impossible of attainment under any system of muscular adjustment.

4. *Principle of Joining.* ("He who knows not how to join, knows not how to sing."—*Johannes Adam Hiller*.) Joining, the essence and fountainhead of *legato*, is mastered by causing the voice to leap with lightninglike celerity from the old note to the new—but only after the old note has lived its entire life—and without breaking the sound. It will be found that thereby the "long curve of beauty" remains undisturbed, and that the line of song is preserved quite free from the vulgar taint

of "scoop" or "slur." As Jenny Lind once phrased it: "It is as if one were, so speak, singing both *staccato* and *legato* simultaneously, and this is above all things almost impossible to express in words. But the "lightning leap of *legato*" accomplishes the seemingly impossible, and that, with sufficient practice, becomes in the end the beautiful commonplace of good singing.

5. *Principle of agility.* ("The voice should be cultivated by a correct performance of exercises in agility. Then it will be at the command of the singer."—*Pietro Tosi*.)

The old masters well understood that the voice never reveals itself in all its natural purity and freedom until it has undergone the strictest regime of exercises that promote flexibility; for in flexibility lies the secret of the true flowing liberty *cantilena*. All scale work must be practiced upon the principle of accenting first note of any group and singing intermediate notes, between accents, lightly. This is the key to both flexibility and freedom in those passages which demand control of *coloratura*, and it may be added that, by inversion, the most flexible voice is that which also owns the steadiest control of straight tone.

6. *Principle of Swelling and diminishing the Voice.* ("Until the singer has learned how to use his breath so that he can swell from the softest *piano* to the loudest *forte* and again diminish and divide the sound into a thousand parts, pressing and letting it sway, he cannot say he is master of his breath."—*M. Crescentini*.)

Practice augmenting and diminishing tone on the lowest note of the voice and all vowels on that note. Thereafter proceed upwards by careful semi-tones in the same manner. Let the *pianissimi* at either end of the tapers be started and concluded with the smallest possible sound. When an attitude is reached where the voice finds difficulty in negotiating the principle, it will be found that intensifying the head resonance in the nasal corridors will open to bridge whatever break or interruption of the tone may occur.

(Continued on Next Page)

## Just Before You Sing

By GURDON FORY

AS YOU WAIT in the wings or in the little side room just before you are to go on to sing, what do you do? Here are two suggestions given by a veteran:

To calm yourself and overcome that awful shaky feeling do not pace nervously back and forth, simply consuming the energy you will so soon need. Sit down quietly, paying no attention to those who may be your companions in misery; fold your hands and take slow, deep breaths, in this manner: inhale slowly and deeply for three slow counts; retain the breath for three slow counts; exhale slowly for three slow counts; wait for three slow counts; and then repeat the process. Continue it until you are called.

This idea of "rhythmic breath" is very, very old. It calms you, not by any mystic

miracle, but by keeping your mind employed otherwise than in the nervous apprehensions which public singing causes. If you practice faithfully you will find yourself remarkably cool and self-possessed when you step out before the audience. Try it, you singers, and old ones, too, whom stage fright still terrorizes.

To warm up the voice, just before you go on try this in case the situation is such that vocalizing is impossible: Repeat the consonant "k" rapidly and vigorously in a whisper with a sound like "Kuh-kuh-kuh-kuh," on and on, over and over. This calls for a lot of muscular action around the larynx and will soon give you a feeling of warmth and freedom around the vocal cords. Try it, all of you.

# Modern Vocal Methods In Comparison With Bel Canto

(Continued from Preceding Page)

**Principle of expression:** ("The aim of singer should be to touch the inmost"—*Manstein*.)

This principle has been held to the last, though indeed it is by far the most important of them all; for the excellent reason that expression "to touch the inmost" can scarcely be achieved until the singer is so sufficiently freed and made supple that its very tone moves the ears of its hearers even before the text has begun its sway. Expression singing must arise from:

- A comprehensive knowledge of the best music;
- Cultivation of the artistic personality of the singer;
- A study of controlled emotions;
- Clothing the bodily motions and the facial play of the performer with

that inner grace which the world recognizes as charm:

- e. And, finally, teaching one's self to so live the experience he is striving to portray, that controlled technic may be forgotten for the duration of the performance; for it is well said that "technic is only learned to be forgotten."

Herein then, have been set down the governing ideas of all the best known modern methods of cultivating the voice.

If one can be said ever to reach any reliably definite conclusions in the immensely elusive business of training the human singing voice, then it must appear that the preponderant scale of evidence is on the side of ancient *bel canto*; for its exemplars are to-day, what they have been, without exception, in the past, the greatest singers of their several periods.

## The Story of "Il Bacio"

By PALMER VAN GUNDY

NOR NEARLY A CENTURY Arditi's classic soprano air, *Il Bacio* (*The Kiss*), has been an international favorite. But when Deanna Durbin, lovely singing star of motion pictures and radio, sang it so beautifully in "Three Smart Girls," she started a vogue that may make it the most popular classical song of the age. For this reason the story of how it came to be written should be of more than historical interest.

During the middle of the last century names, aside from those of the leading singers, were as well known in the operatic world as that of the conductor-composer, Luigi Arditi. After more than a decade of successful leadership of the Havana Italian Opera Company, during which time the organization made extensive tours to New York and other American cities, he moved to London. There, as his numerous operatic companies traveled to distant cities for protracted engagements.

It was on one of these tours—to Dublin in instance—that Arditi composed *Il Bacio*. The way, the troupe stopped at the Queen's Hotel in Manchester,\* England, and the conductor-composer felt in the need to make music. While his wife, Virginia, and the leading soprano, Marietta Piccolomini, conversed together in low tones, he seated himself at the piano and began to improvise. For some time he exporized idly, and then gradually, without his being aware of the change, he began to play a new and fascinating melody. As by command the conversation ceased. Piccolomini was the first to speak: "What a lovely theme! It would make a wonderful song. Why don't you write it up for future reference?"

The composer scribbled a few bars on an envelope and slipped it into his pocket. Before the evening was over he had forgotten the incident. After the performances in London, Piccolomini sailed for the United States and the conductor busied himself with many things.

A year later Arditi remembered that he had promised his principal soprano that he would compose a song for her to sing at her first concert on returning to England. In a sort of panic he realized that she was due in London any day. What was he to do? Try as he would he could not put himself in a creative mood.

Then he recalled the incident of the tattered envelope. But where was he to find it? As a last resort he appealed to his wife, who had been known to help him in similar emergencies in the past. Quite characteristically she did not disappoint him. The precious scrap of paper was in her possession.

The next step was to find a suitable poem. Fortunately Arditi had a friend, a baritone by the name of Aldighieri, who offered to write the verses if an appropriate subject were supplied. Again the musician relied on his wife. It was she who suggested the theme of "The Kiss." That same day Aldighieri placed the completed poem in the hands of his friend.

Arditi went immediately to work. Never had he been able to compose with so little effort. The music seemed to flow from his pen with uncanny fluency. It was as though an unseen arm guided his hand to undreamed of heights of inspiration. He knew that at last he was creating his masterpiece.

When Piccolomini arrived in London, Arditi was ready with the song. Realizing at once from what source it had been derived, she was delighted and committed it to memory within a few hours. The next day she sang it at Brighton. From that moment there was never any question as to the future of the composition. Its fame spread through all of England, and in time extended throughout the whole of the civilized world. For publishers and retailers it proved a lucrative source of income. One Parisian firm is said to have made four hundred thousand francs on the French copyright alone. Unfortunately for Arditi, he had sold his entire interest in this song and three other compositions for fifty pounds. Beyond that he had to content himself with the glory and honor which came to him as the creator of the ever popular *Il Bacio*.

\* \* \* \* \*

"Voice study requires the following in the order named: Intelligence, industry and enthusiasm; easy natural breathing, effortless and without strain or tension, with perfect poise of the body, and a feeling of inspiration—thus producing a natural, beautiful tone."—Emma Thursby.

# HARMONY

## Is Your Next Step Towards Pre-eminence in Music

A practical knowledge of Harmony—the Grammar of Music—will immeasurably widen your musical horizon. It will open up many new and bigger opportunities to you—a higher standing and recognition, and greatly increased financial returns from your work.

Musical authorities and representative musical publications emphasize the necessity of a knowledge of Harmony in an adequate musical education.

### Qualify for Higher Positions in Music

If you feel that you have gone as far as your present musical training will take you; if you are ambitious to make further progress, enjoy greater recognition, and increasing financial returns, then you owe it to yourself to find out what this great Musical Organization has to offer you.

# THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

## Types of Organ Recital Programs

By

EDWARD G. MEAD

ORGAN RECITAL PROGRAMS, whether consisting wholly of original organ compositions or of these and organ transcriptions, may be classified broadly into seven types:

1. *General*, consisting of compositions by various composers.
2. *Seasonal*, compositions pertaining to Christmas, Lent, and Easter.
3. *Historical*, compositions arranged in chronological sequence according to composers.
4. *National*, compositions by composers of one nation or groups of nations.
5. *Contemporary*, compositions by living composers.
6. *One composer*, compositions by J. S. Bach, Franck, Widor, or some other outstanding composer.
7. Various combinations of the above types.

1. *General*. In selecting numbers for this type of program it is advisable to consider not only the æsthetic value of the numbers themselves and your own particular liking for them, but also the tonal capacities of the organ on which you are to play, as well as the character of your audience. Obviously it would be fitting to select only such pieces as would sound well on the organ to be played. If the audience is to consist largely of organists, at least a few academic numbers may be chosen, such as they might fully enjoy; but, if the audience is to be an average one—which is most likely—then the program should be planned so as to make an appeal to the finer tastes of this audience, varied as those tastes may be. In other words, there should be at least one or two pieces on the program that would interest someone, if not everyone.

### Escape Monotony

IN ARRANGING THE CHOSEN NUMBERS it is most important to observe varying contrasts of style and mood between any two successive numbers, as well as points of climax and repose in the program as a whole. For instance, a heavy, full organ number should be followed by a light one for the soft stops, a meditative number by a *scherzo* or similar piece. If the organ has chimes, one or two chime numbers would appeal to many of the audience. For further variety, add an impressionistic number and a humorous one. Finally, close with something brilliant and stirring, for the sake of a fitting climax. With few exceptions this plan of arrangement might, in general, apply as well to the six other types of programs. Moreover, if the recital consists of more than five or six numbers, or is more than a half hour long, it will be better to divide the program into three or more groups, in which case each group in itself may be planned somewhat as a

unit. The following might serve as a specimen program:

- I  
*Prelude and Fugue in G minor*,  
J. S. Bach  
*Pastorale* ..... Franck  
*Marche Religieuse* ..... Guilmant
- II  
*Clair de lune* ..... Karg-Elert  
*L'Organo Primitivo* ..... Yon  
*Carillon* ..... De Lamarier  
*Pantomime* ..... Jepson
- III  
"Second Symphony" ..... Vierne  
III. *Scherzo*  
IV. *Cantabile*  
*Toccata (Thou art the rock)*... Mulet

2. *Seasonal*. This program, compared with the general type, is somewhat more narrow in scope, although more unified in respect to subject matter. A Christmas program would naturally have the general theme of joyousness; a Lenten program, that of sorrow; an Easter program, of exultation. Especially effective would be compositions on the order of fantasias, variations, or choral preludes based on carols or chorales appropriate to the season. The pieces chosen should present contrast in style, the final piece being climactic in effect. In the case of a Lenten recital, however, it might be more fitting to end with a quiet number.

3. *Historical*. A program of this type is of particular interest especially to organ students, in as much as one can present in chronological order some of the finest

works of the greatest organ composers. Recently I played a historical recital, the program of which was divided into three groups. In the first group were four pieces by seventeenth and eighteenth century composers; in the second were five by nineteenth and early twentieth century composers; in the third were four by living composers. Incidentally, it was helpful to the audience to have on the printed program the years of birth and death of the composers in the first two groups, also the years of birth of the composers in the third group.

4. *National*. As a first example of this type, why not choose suitable pieces by American composers, who, as a class, surely deserve recognition in their own country? For another program select numbers by French composers, since they have written more of interest for the organ than other old world composers. Similarly, a program of English, German or Italian composers might be used; or any of these five groups might be combined.

### A Fertile Field

5. *Contemporary*. A PROGRAM of pieces by living composers should prove unusually worth while. The composers might be represented in a diversified order, or in groups, or as of one country at a time. A recital of contemporary American compositions would prove very interesting to the audience.

6. *One composer*. A recital of this sort is somewhat unusual, but generally of interest on this account. Certain organists, who are devoted to Johann Sebastian Bach

(Marcel Dupré, for instance) have played all of his organ works in a series of recitals. Last year, especially, were Bach recitals in order all over the organ world on account of the two hundred and fiftieth anniversary of his birth; and likewise Haydn recitals, for the same reason. Another outstanding "one composer" is Charles M. Widor, whose ten organ symphonies have been played in a series of recitals, at times by a few American organists. Similarly, the leading organ works of César Franck or Siegfried Karg-Elert, or any other outstanding composer of note, might be played in one or more recitals. The program may be arranged either as a general type or in order in which the numbers were written. The latter plan is preferable, especially if a series of recitals be played, since it tends to show the nature and extent of the composer's development.

7. *Various combinations of types*. In a group one may present a national type program in a historical sequence, or a contemporary program; or a contemporary program may consist of three or more different national groups. Last summer a recital of contemporary compositions, I wrote played a group of three Bruckner numbers, a group of four by French composers, and a group of five American numbers. In another recital were three Bruckner numbers in the first group, five American numbers in the second, and a suite by a French composer in the third.

In all of the above seven types of programs, only music written or arranged for the organ has been considered. It may be added, by way of final suggestion, that if in any of the above programs one is assisted in a recital by a soloist or a group of performers, it would be fitting to have such a person or group appear in the middle part of the program. If there are two or more such appearances, these should alternate between groups of organ numbers. Such was the plan followed last year in a Bach-Handel Recital in which we were assisted by my church choir in three groups.

## Tempo in Hymns

By EUGENE F. MARKS

"SHAW!" SAYS SOME ONE, "That's easy, we have only to consider the sentiment of the words." While this comprehension is important, yet it is not sufficient, as so many diverse influences govern the rate of speed at which a hymn should be taken that to gauge this matter wisely is more difficult than a casual glance discloses. Study and thought are demanded in deciding the correct tempo of a hymn as well as the sentimentality of the words.

In order to gauge the tempo of a hymn one must take into consideration many adverse connections surrounding it; for, as Richard Wagner says, "The right comprehension of the melody in all its aspects is the sole guide to the right tempo."

Foremost among these surroundings stands the historical background, which is neglected by the majority of leaders or organists, but, which, if studied, would

greatly aid in determining the tempo. Not only should we consider the history of the music itself, but also there should be a study of the environment and characteristics of the composer. In a broad sense we may assume that at their first introduction the majority of hymns were sung in a slow sedate tempo, with the exception of the canticles and hallelujahs, which we learn historically were chanted rapidly. Still, even with this knowledge, it is advisable, in congregational singing, not to carry these exceptions excessively fast; for we must take into consideration that the ancient songs were rendered by a choir composed of select professional singers and not by a mass of the laity. By listening carefully to the singing of a congregation, the organist or director can decide upon a convenient tempo to suit it; but, once decided upon, he should adhere as closely as possible to the desired correct tempo. If interludes are introduced

between the verses, they should adhere to the same tempo (better without *ritardando*, for if a tempo is slowed down or hastened through any cause it is difficult to return just the delinquency. In such a case it is advantageous to brighten the tone of the organ by the addition of 4ft stops, sometimes even the more shrill 2ft stops, and then gradually to trend back into original tempo. Do not change the tempo too suddenly, or it will cause confusion.

### Our Hymn Origins

REVERTING TO THE EARLIEST HISTORICAL RECORDS of church music, we learn of psalm chanting among the Hebrews constituted the earliest form of church singing. In this early B.C. period, a distinction was made between the solemn chants at a moderate tempo (Clement of Alexandria) and the hallelujahs, which were quick and animated. St. Jerome (4th century) described

ated between the psalms, hymns and articles. The hymns were not of a modern character. They consisted of chants solemnity (extolling the sovereignty of God) rendered in a *maestoso tempo*. Also, they embraced the psalms of jubilation demanding an animated delivery. The psalms are chants of ethics requiring a moderate rendition. The canticles, being lofty songs of praise, were chanted in a quick and animated manner (St. Augustine, 4th century). From the early divisions of the character of church music, with its diverse experimental tempos, we receive a glint to the treatment of our present day hymns. Notwithstanding the neume notation of the 4th to the 9th century, the Alleluiah songs gradually lost their jubilant method of rendition by a slackening in the tempo; till, in the latter part of the 9th century, a regular arrangement of syllabic hymns, termed sequences, appeared, from which some of our Protestant chorales directly emanated.

### The Roots of Speed

THE FIRST ITEM of interest to be considered influencing the speed of a hymn should be the historical status of music at the time of the appearance of the composition. We learn that *musica mensura* (measured music), the direct precursor of our hymns, did not exist until about the 12th century, and we then begin to gain informative hints concerning the tempo of the songs of this period. For the tempo of the sedate hymns of this period, given in an illustration composed of semibreves, minims, and black notes without stems, in the "Standard History of Music" by James Francis Cooke, (page 22), stand the following directions, "Play the whole notes four times as long as written, the half notes four times as long as written, and the black notes without stems as long as whole notes." About 1250 *musica mensura* gradually merged into notes of equal length, of which *Old Hundred* (1551 A.D.) stands as a survival and so should be sung slowly and reverently. It is noticeable that a few of the present choir directors are endeavoring to "step up," or hurry, this old favorite hymn in accordance with the demand of the modern mania for rapidity in hymn singing; but undue speed given this hymn of the 16th century is to be decried. In judging the historical status of a hymn, one must take in consideration the evidence of the music solely, but there must be also a weighing of the environment and characteristics of the composer. For example, Palestine possessed a religious tendency; so his compositions display earnestness without any frivolity.

Another important factor to be considered in adapting a suitable tempo to hymns is the significance of the words, which in many cases are of such a determinative character that one cannot mistake that the words should take precedence over the music. Of such a character stands the hymn designated as *Cruger*. The poem (1644) by Martin Rinkart was set to music by Johann Cruger. The music itself furnishes no hint to the tempo, as it is in ordinary hymn style; but the words (translated into English) convey at once the idea of exuberant joyousness, and so demand a somewhat animated rendition. One needs only to read the first four lines of the poetry in order to decide upon an appropriate tempo:

Now thank we all our God,  
With heart, and hands, and voices,  
Thine, O God, the wondrous things  
Thou hast done,  
In whom the world rejoices.

Only this quatrain of God's omnipotence and the world's reciprocity of joyful thankfulness, and the tempo may be appropriately set. One needs but to read "Majestic sweetness sits enthroned" and he realizes that there must be no hurry in such a hymn, but an atmosphere of grandeur and majesty must be created by the tempo. Also *Rock*

of *Ages* shows a solidity of thought which must be engendered by a tempo of moderation, just as "Look Ye Saints" demands an air of victory. Can a musician fail to select a suitable pace for the music of a hymn, after studying the context of its words? Such a full comprehension of the words also produces an appropriate quality of tone in the delivery.

### The Chorale Is Born

IN THE BEGINNING of the 16th century Martin Luther of Saxony introduced a popular element into worship by writing hymns (poems) in the vernacular of the German people and setting them to rhythmic music, which appealed to the people in a new and livelier sense than the old unrhymed church music in Latin. The movement passed rapidly over Germany and produced in a short time a literature of sacred hymns and tunes, termed chorales, which cannot be surpassed for dignity and simple devotional earnestness. Undoubtedly the chorales emanated from the *cantus firmus* of long notes of the preceding centuries and partook largely of its natural characteristics of slowness in rendition. As the chorale proved to be the nucleus of Protestant church music, in regard to hymns, we may safely decide that the majority of hymns should be taken at a slow tempo or at least a moderate one. However, there seems to be a slight difference between a chorale and a hymn. According to the rules of strict four part writing, the chorale demands a change of harmony upon each accented beat, whereas the hymn is not so restricted; and, as Reverend Carl Heyl writes in *The Christain World*, "Hence the chorale melody will be stronger, more stately and dignified, slower in tempo, weightier in contents," and so on. To illustrate, the *Long Meter Doxology* belongs to the choral type. Even the man without much musical knowledge recognizes in this grand old tune the qualities cited above." So slowness in delivery enhances the excellency of this hymn.

Finally, we must recognize the fact that the predominating influence in gauging a hymn tempo is the music itself. We realize that some hymns demand a march tempo, which allows them to be used for processional and recessional purposes (note the popularity of *Onward Christian Soldiers*); others partake of the nature of a *Valse Lente*; then the decided rhythm of a *mazurka* is encountered; or the rhythm of a *nocturne* or other tunes of a meditative character; and the tempo of each tune must be adapted to the demand of each particular form represented. As one organist exclaims, "Why should I not use a Chopin waltz as an offertory selection?" Viewing the subject from the standpoint that almost every character of music is represented within the scope of our modern hymnology, he is free to choose his selection; but we have yet to discover an example of a *Valse Vivace* among the hymns of our church; and it is certain that, with the great mass of organ music at our disposal, something more sedate, dignified, and composed especially for devotional purposes, could be found. "Everything has its appointed hour," says the wise man.

In conclusion we find that in gauging the tempo of hymns attention and study must be given the following essentials:

1. Historical background of the hymn and its composer
2. Import of the words with a resultant tone quality
3. Characteristics of the rhythm and form of the music itself, which demand an appropriate rate in tempo.

Comments upon the modern and so termed "Gospel Hymns" are unnecessary, as they too loudly shout their secularity. However, as the use of popular songs during the Luther Reformation produced ultimate good, so the "Gospel Hymns" may claim their usefulness.

### An Unforgettable Privilege

By ALLISON PORTER

WHEN the great "World's Fair" in New York opened, I visited it with a group of widely traveled music teachers. Most of them had seen several World's Fairs here and abroad. They were all of the opinion that New York's offering is so vastly superior to anything heretofore attempted that some were already organizing special World's Fair trips for their pupils. One man was planning to hire a bus and make the trip from a mid-western city with thirty pupils.

The amazing beauty of the buildings, the marvelous floral and arboreal planting make this Fair the sight of a lifetime. One lady said, "If I had only seen the majestic British Building with the original 'Magna Charta', the beautiful Italian Building which is virtually veiled by a huge waterfall, the magnificent and exquisite French Building with the most unique restaurant ever planned, the astounding Soviet Building of marble and steel which cost two million dollars, I would have felt well repaid for my visit. These wonderful buildings and all of the thousand and one other industrial, artistic and educational exhibits make this the Fair of all Fairs."

Fortunately, by organization, the expense of securing rooms has been reduced through such enterprises as the American Woman's Club, 353 West 57th Street, which provides unusual and safe dormitory facilities as well as private rooms for women, with swimming pool and library opportunities. Here is a veritable woman's city with a clubhouse that houses a beauty parlor, drug-store, shops, travel bureau, laundry, valet and many other services. For the convenience of the Fair visitor, the much liked "En Pension" Tours and Registered Rooms, Inc. offer rooming facilities as well as tours of the Fair and the marvelous metropolis under experienced guidance at a very moderate blanket rate, affording residence in central clubs, transportation to and from the railroad station, a visit to big broadcasting and television studios, a transatlantic liner, dinner at a Broadway Night Club and other entertainment. Send your requests for further details on these tours to 551 Fifth Ave., New York City.

### YOUR CLUB-HOME for the New York WORLD'S FAIR

Desirable women and girls can live luxuriously in New York's cultural music center during their World's Fair visit. Magnificent lounges, music rooms, library, sun roofs, swimming pool, garage. Only a short walk to shops, theatres, galleries and park. Easy access to World's Fair grounds.

**Club Dormitory at \$1.50 a day**  
Huge dormitory, 100 Simmons beds, private lockers, attendants; for groups of women or girls or individuals. \$1.50 daily. Double rooms, double bed, private bath \$4.00, twin beds \$5 and \$6 double; single rooms, private bath \$3 to \$5 per day.

**A Floor for Men and Wives!**  
Husbands, wives, or single men accompanying AWC guests are housed on a separate floor at similar rates. Send promptly for Booklet "E".  
**AMERICAN WOMAN'S CLUB**  
353 West 57th St. New York, N. Y.

### "EN PENSION" IN NEW YORK!

New York World's Fair "En Pension" tours of 5 to 8 days for \$18.50 to \$28.35, including all costs except meals and transportation—in cooperation with Registered Rooms, Inc. Also thousands of clean, comfortable rooms in New York hotels, apartments, residence clubs, woman's clubs, and private houses, available at reasonable rates. References.

You can obtain rooms at any Postal Telegraph office in your home town. Or, if you prefer, send immediately for descriptive folders on rooms and tours.

**REGISTERED ROOMS, INC.**

408 South Seventh St. Ann Arbor, Mich.

At the Juilliard Summer School, 130 Claremont Ave., New York City, Mr. Maier is giving two Forum Courses for teachers and advanced students:  
July 17 to 21 and July 24-28.

## The Negro "Stephen Foster"

(Continued from Page 432)

ductions are: *Carry Me Back to Old Virginia*; *In the Morning by the Bright Light*; *In the Evening by the Moonlight*; and *Oh, Dem Golden Slippers!* Gellers' "Famous Songs and Stories," published in 1931, says of *In the Evening by the Moonlight*, "Though ragtime and jazz may come and go, the old reliable *In the Evening by the Moonlight* continues to toll like a bell that is never still, and to-day (1926), forty-six years since it first appeared on the American scene, there is scarcely an adult who cannot hum the chorus of this crooning melody, a faithful nocturnal song."

One of his songs, *Father's Growing Ole*, was dedicated to his father, Allen M. Bland, and another, *The Old Homestead*, to his brother, Ivanhoe Bland, both of which were copyrighted in 1879. His songs were published by leading musical publishing houses.

It appears that Mr. Bland was not businesslike in copyrighting his productions; as a number of his songs were not copyrighted until after several editions had been previously printed. The copyright was usually taken in the name of the publishers, but in several instances it was stipulated, "Permission to reproduce must be secured from James A. Bland." He never enjoyed any considerable income from his copyrights, out of which his publishers are said to have made fortunes.

### Sunshine and Shadows

A COUSIN WRITES, "After years of success in the United States, he went with the Callender Minstrels to London, and the show took London by storm. There he made his biggest hit. King Edward, then the Prince of Wales, on many occasions honored him. His songs and jokes brought tears and laughter, and he was then the idol of all England and Scotland."

For twenty years, James A. Bland was the star man in a white minstrel company in England, from which he received a salary of ten thousand dollars a year, exclusive of the income from his copyrights. Like many an artist of the minstrel type, he was prodigal of his income while it lasted. He returned to America, wholly without funds. A boyhood friend offered him desk accommodation in his place of business, where he might indulge in composition as the mood struck him. It was here that he wrote his last production, *The Sporting Girl*, which he sold for two hun-

dred fifty dollars to Slaven and McNish, comedians then playing at the Kernan Theater in Washington.

Being generally discouraged, he left Washington for Philadelphia, where he died shortly thereafter, May 5, 1911, and, as lately discovered, was buried in Merion Cemetery, just outside the city. Thus passed one of the greatest troubadours of his time, who gave joy to the world, but derived from it only tragedy and sorrow. Although James A. Bland was the author of a number of songs and ballads of lasting fame, his name will go down in history, like that of John Howard Payne, as the author of a single world renowned ballad, *Carry Me Back to Old Virginia*.

Dixie, the musical inspiration of the Southern Confederacy; *Swanee River*; and *Carry Me Back to Old Virginia*; each expresses the lament of some transplanted slave at severance from his homeland. This attachment for locality and endearment of birthplace, set forth in soulful song, have made the southland ever dear to memory and imagination. These ballads are racy of the soil and reveal the Negro's passive and pliable soul-stuff. Stephen Foster, and other white authors, vicariously portray the Negro's soul.

In Bland, the Negro is wholly lost in the artist. He completely objectifies the sentiment, which he conveys with complete racial and personal detachment. Bland, like the true artist that he is, does not preach or sermonize, but merely depicts and portrays. He holds up the mirror to nature. James A. Bland constitutes a unique character in lyric literature, in that, though being a scion of an enslaved race, he immortalizes the soul yearnings of his people to glorify the land where his ancestors were held in bondage. In response to a letter to European libraries, I found that eighteen of Bland's works were catalogued in the British Museum Library, in London. Even the Prussian State Library, at Berlin (the largest in Germany), has the following, published by Oliver Ditson of Boston: "Songs with Chorus and Piano"—*Carry Me Back to Old Virginia* (1936); *In the Morning by the Bright Light*; *I'm gwine away*; *Oh, Dem Golden Slippers*; *De Golden Wedding*; and *Heimweh nach Virginia*, published in 1937, by Francis, Day and Hunter, of Berlin.

Copyright 1939 by Kelly Miller.

\* \* \* \* \*

There are two keen delights for the music-lover. One is a new work by a great composer known to him. Another is the performance of an old and familiar work by a great performer who hitherto has not been heard in it by him. This last is indeed a keen delight, and its pleasure is two-fold—it reveals something further about the performer, and something further about the work."—British Musician.

## ORGAN AND CHOIR QUESTIONS

Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. Can you advise me where I can get a book on the construction of pipe organs? What is the "Chorus Generator" on the Hammond Electric Organ? Who built the Mormon Temple Organ? How many manuals has it?—W. J. S.

A. We suggest the following books on organ construction: "The Contemporary American Organ," by Barnes; The Electric Organ, by Whitworth; Cinema and Theatre Organs, by Whitworth; How to Build a Chamber Organ, by Milne. All of these books may be secured through the publishers of THE ETUDE.

The Chorus Generator on the Hammond instrument, we understand, is a device for augmentation of the string section. The organ in the Mormon Tabernacle at Salt Lake City (which we presume is the one you have in mind) was originally given to the church by Joseph Ridges, a carpenter, who devoted his spare time to building an organ (the instrument presented to the church). When the present Tabernacle was being built, Ridges was entrusted with the building of a suitable organ. The instrument was reconstructed and enlarged, and in 1900 was rebuilt and enlarged by Kimball of Chicago. In 1915, it was again decided to reconstruct and enlarge the instrument, which was done by the Austin Organ Company, of Hartford, Connecticut. The instrument contains four manuals, and we believe a new console is now in use, having been furnished by Austin Organs Incorporated.

Q. Can you tell me how to fix the exhaust chamber on my reed organ? It was slit for about a foot on the bottom when it was being moved. The canvas (if it is made of canvas) is in good condition.—N. L.

A. The material on the exhaust chamber is probably rubber cast on canvas—known as rubber cloth. The slit can be repaired by rubber to rubber, using automobile tire cement.

Q. In directing a church choir the question arises as to when the singers should breathe. Do you object to them taking a breath simultaneously? Should the rhythm be kept unbroken? Or may there be slight pauses for taking breath at the end of phrases or at the end of verses? Do you permit breath taking in the middle of words? Is breath taking a different matter in chorus and solo work?—H. W. G.

A. There is no objection to simultaneous breathing in ordinary passages where the words are sung together; in fact, the breathing should be simultaneous. Where the parts enter at different times, and the breathing places consequently come at different points, simultaneous breathing would not be advisable. The rhythm, as a rule, should be kept unbroken. A general rule to impress upon singers is that the time for breathing should be taken from the time of the last sung note; that is, "cheat" the value of the last note of the amount of time required for the breath, unless a rest follows, when the breath can be taken during that period. Of course, at the end of a verse, time may be allowed for a breath. We would not ordinarily permit taking breath in the middle of a word, but if the word includes too many notes for the singers to sing without a breath, we should arrange it so that groups of a part would breathe at different points in the passage, so that the breathing may not be apparent to the audience. If, as sometimes happens, a rest is inserted in the middle of a word, the effect of the rest need not necessarily indicate a "breath"; in fact, we would prefer it without breath. The general principles of breathing apply to solo and chorus work, though the soloist may be inclined to take slightly the more liberty. More detailed information may be had by perusal of *When and Where to Breathe* in "Choral Technique and Interpretation" by Coward.

Q. In reading your department I often see references to the A.G.O. specifications for pedal clarier. Can you put me in touch to get just what these meant?—W. S. B.

A. The reference is to measurements approved by the American Guild of Organists for construction of an organ pedal board. For information as to measurements address the General Office of The American Guild of Organists, R. K. O. Building, Rockefeller Center, 1270 Sixth Avenue, New York City, New York.

Q. I have a reed organ with stops named on enclosed list. What would be the best stops to use for a Mass in plain chant, and for hymns by a choir of forty children?—S. S. H.

A. Accompaniment to plain chant should be of a light character, and we suggest your trying a combination of 8' and 4' stops for the purpose; for instance, Diapason 8', Melodia 8', Bassa Flute 8', Fernflute 8', Viola 4' and Flute 4'. You might experiment on this basis adding or taking off stops, as may seem advisable. Oktav Koppel might serve to add brightness, if it does not produce a thick tone on the left hand side of the keyboard. For hymn singing you might try "Full Organ."

Q. I have two old style reed organs. I have reworked one so that it now plays fairly well. I have not as yet finished work on the other one. Is it possible to connect these two of reeds and stops in one cabinet and make a two manual organ? Also, could electric motor be installed, and can the instrument be provided with a set of pedal keys?—A. B.

A. It might be possible to combine the organs into one two manual instrument, we should not consider it very practicable, know of no reason why a pedal board and electric motor could not be included, if the experiment is successful. You might be able to secure a used two manual reed organ at a comparatively small cost.

Q. In hymn singing should the congregation sing only the melody? (Some seem to think that four part harmony is not proper in the church.) When the choir is in the congregational singing, should they be in four part harmony? In singing the choir should the choir and congregation sing in part harmony in the responses? The services are those of the Lutheran Church. What the price, with teacher's discount, for a piano arrangement of Bach's "Jesu, Joy of Man's Desiring"?—S. S. T.

A. The matter of the congregation singing only the melody, or the parts, would be difficult to arrange, on account of strangers who might be present and join in the singing. We should think that no ruling would be advisable, allowing the congregation to participate according to their desires. Balanced part singing might not always be possible, but the participation on the part of the members of the congregation is of more importance. Whether the choir lead the singing in parts or in unison is dependent on what is considered best locally. Unison singing is sometimes very helpful in leading a congregation. Whether the singing of chorales and responses is in parts or unison also depends on the wishes of those in authority. Plain chant, however, should be sung in unison. The arrangement of Bach's "Jesu, Joy of Man's Desiring" by Myra Hess may be secured from the publishers of THE ETUDE for six four cents, plus postage.

Q. The organ on which I play, a fairlone (electric), has several notes on the G keyboard that often give a sound similar to an electric buzzer. These notes cannot be changed when soft stops are drawn. The notes are even if no stops are drawn. It is out of question to have the organ gone over by a repairman, and I wonder if I could not have these repairs.—F. B. B.

A. The trouble you mention may be caused by primary valves that are leaking. The valves should be relathered. Our suggestion would be that, if it is impossible to have work done by a regular organ repairman, communication be sent to the builder of organ, if possible, stating the trouble, asking whether parts can be supplied with instructions as to installation. It would, of course, be preferable to have the work done by a reliable, experienced organ mechanic.

Q. I am attempting to teach myself to play the organ at our church, so that I substitute for our regular organist. The organ contains the stops included on enclosed list. Not being familiar with an organ, naturally I know nothing of combining stops. Will please name some books that I might get the Great and Small, using about the 10 stops as those included in list or ones substituted.—G. F. S.

A. Many organ collections would naturally include the use of more than two manuals, but, as you suggest, stops may be substituted, of course, manuals too. For some unarranged for small two manual or (smaller than yours, unified and duplex) you might examine

"Church Music for the Smallest Organ" by Novin.

"Presser's two staff Organ Book"

For study purposes we suggest

The Organ, by Stainer-Kraft

Primer of Organ Registration, by New

Organ-Playing, its Technique and Expression, by Hull

Any of these books may be secured through the publishers of THE ETUDE.

Q. Can you tell me the cost to run a motor for a medium sized three manual organ, for an hour? Do you recommend "for Beginners in Organ Playing" by Ed Shippen Barnes?—M. B.

A. The cost of running an organ depends on the wind pressure of the instrument, size of motor, local rates for electricity and so forth; consequently we cannot state the cost without this information. We think you would find the book mentioned valuable in your study of the organ.

# THE ACCORDION DEPARTMENT

## Rhumba and Bolero Rhythms in Accordion Playing

By PIETRO DEIRO

As told to EIVera Collins

THE ACCORDION is particularly well suited for the projection of tango, rhumba and bolero rhythms. Artists who have not played Spanish, Cuban and Argentine music will find a lot in store for them as they interpret these colorful dances with their unusual rhythms.

Correct accentuation is of vital importance in the projection of any rhythm and is accomplished on the accordion by proper manipulation of the bellows and clear and distinct playing of the bass chord buttons.

Let us review some of the suggestions already given for producing an accent on the accordion. Using the bass section as an example, we know that when playing an accented note the bass button is played with the same touch as regularly used and the accent is produced by a quick and sudden jerk of the bellows. Please note carefully that when the bellows are given this sudden jerk they remain in almost the same position and are not opened nor closed to any degree. When the jerk is given simultaneously with the playing of the bass button a clear and distinct accent will be produced. If the bellows are opened or closed any distance while the bass button is played the result will be merely a draggy sound and not an accent.

The practice of these unusual rhythms is highly recommended if for no better reason than to force the accordionist to learn to produce accents on the bass section.

It is a good idea to establish the rhythm mentally before beginning to play it. Some accordionists find that they are helped if they either beat out the time, clap it with their hands or sing it. If the latter systems are employed they should be discontinued as soon as they have served their purpose because rhythm should be felt instinctively. This may be difficult for some but it can be cultivated and it is an essential part of a musical education.

Rhumba and bolero rhythms may be written in the music for either the left or the right hand. The examples accompanying this article show the rhythm for the left hand. They are selected from albums arranged by the writer and called "Argentine tangos" and "rhumbas and boleros." The eighth and sixteenth notes in these examples must be played with a quick *staccato* bass. Release the button the moment the tone has sounded unless the note is indicated as tied. The standard system of bass fingering is recommended for these measures. This calls for the use of the third finger on all bass notes while the second finger plays all chord notes. It is difficult to produce the correct rhumba or bolero rhythm with other systems of fingering which tend to produce a draggy bass accompaniment.

Observe the measures where a bass note is tied to another bass note which has a chord note above it. The finger remains on the button playing the tied note while the chord note is played and the bellows jerked slightly to accent the chord.

Each hand should be practiced individually when learning selections with complicated rhythms. The bass rhythm in particular should be perfected before attempting to combine the two hands. Even though the accompaniment may be complicated it must not interfere with the melodic line for the melody should be brought out just as clearly as though a violin were playing it while an accordion played the rhythmic bass accompaniment.

Accordion music libraries now provide excellent arrangements of well known tangos, rhumbas and boleros. We suggest that accordionists devote part of their practice time to learning some of them as no repertoire is complete unless a few are included.

Q. What is the correct position for a lady holding an accordion?—A.—K.C., Missouri.

A. When seated, the lower corner of the keyboard should rest inside the right leg. The bellows and bass section should rest on top of the left knee, which is slightly lowered to permit ease of bellows action. The standing position for ladies is the same as for men.

Q. Is it difficult to master the concertina? Can you give me some information about this instrument? Could one learn the piano accordion without a teacher? Would it be difficult for several years of piano?—A.M., Virginia.

A. The concertina is generally considered a difficult instrument to learn. As you have several years of piano instruction you will find the accordion very easy. It can be taught, providing you secure the proper study material and devote sufficient time to practice.

Q. Is a hundred and twenty bass accordion right for a girl eleven years old, who has had a very thorough five years' piano foundation and about six months training on a twelve bass accordion?—R.B., Massachusetts.

A. Nothing less than a hundred and twenty bass instrument should be purchased for your daughter, as she evidently is quite advanced in music. If she is small for her age, it would be best to get a small sized hundred and twenty bass instrument, which is called the baby grand model and is light in weight.

Pietro Deiro will answer questions about accordion playing. Letters should be addressed to him in care of THE ETUDE, 1712 Chestnut St., Phila., Pa.

# THE ETUDE

## Piano Solo Composition PRIZE CONTEST

Four Generous Prizes

CLASS ONE

### Concert Piano Solo

(See Description Below)

**FIRST PRIZE - \$250.00**

**SECOND PRIZE - \$150.00**

CLASS TWO

### Entertaining Piano Solo

(See Description Below)

**FIRST PRIZE - \$250.00**

**SECOND PRIZE - \$150.00**

This Prize Contest is open to all who wish to enter it, excepting members of the staff of THE ETUDE MUSIC MAGAZINE and employees of the Theodore Presser Co.

**THIS CONTEST WILL CLOSE NOVEMBER 1, 1939**

THE ETUDE MUSIC MAGAZINE feels that a Composition Contest of this character will stimulate composing efforts directed toward supplying present-day pianists (of whom there are many giving formal and informal recitals) with some new material for their audiences to enjoy, and that composers also will be moved to bring forth for those who play chiefly for their own amusement some new piano solos for them and their friends to enjoy. Only Piano Solos will be considered in this Contest. Do not send compositions of any other character.

**CONDITIONS** are simple.

All entries must be addressed to:—

**THE ETUDE PIANO COMPOSITION PRIZE CONTEST**

1712 Chestnut Street, Philadelphia, Pennsylvania

All manuscripts submitted must have written at the top of the first page—For THE ETUDE PIANO COMPOSITION PRIZE CONTEST.

The real name of the composer-contestant must not be placed on the manuscript. Write a fictitious name on the manuscript and write that same fictitious name on an envelope. Seal within that envelope a slip of paper with the real name and full address written upon it, and bearing in the lower left hand corner also the fictitious name. This sealed envelope should be attached to and sent with the manuscript. By this system judging may be kept free from any considerations other than the merits of each composition. One of the

greatest reasons for conducting a contest after this fashion is to assure the unknown composer the opportunity to have an equal chance with composers of established reputations. In this contest all are welcome to participate and every manuscript submitted will be reviewed by a number of competent judges. Their decisions will be impartial and final.

No composition already published shall be eligible for entry in this contest.

No variation nor any adaptation of a previously published melody shall be eligible for entry in this contest.

The pedantic type of composition such as those running to involved contrapuntal treatment of themes should be avoided.

The Piano Compositions winning prizes are to become the property of THE ETUDE MUSIC MAGAZINE with full publishing rights vested in its publishers, the Theodore Presser Co.

Class One

### CONCERT PIANO SOLO

First Prize—\$250

Second Prize—\$150

Manuscripts entered in this class should be solos of average length written for the more advanced pianist. This does not mean a number demanding virtuoso ability for its rendition, since there are many appealing piano solos played in concert by master pianists, yet which are played frequently by many who may be generally described as advanced piano students or accomplished pianists. Any form such as the prelude, waltz, caprice, nocturne, etc., may be used, but the judges will be influenced more by compositions possessing the qualities of spontaneity and melodic freshness than by those written in the strict pedantic style.

Class Two

### ENTERTAINING PIANO SOLO

First Prize—\$250

Second Prize—\$150

The publishers of THE ETUDE are firmly convinced that there is a definite place in the teaching repertoire for the recreational piece which reflects something of the present-day tendency in its rhythmic and harmonic design. Such pieces also are enjoyed by the average pianist and his or her intimate audience in the home or in small social groups where entertainment is the paramount consideration. Radio pianists catering to a wide and varied audience also appreciate compositions of this character. This class affords a splendid opportunity for the composer whose writing talent inclines toward pieces such as *Holiday*, *Holiday, Serenade for a Wealthy Widow*, *Noli and Flapperette*.

# THE VIOLINIST'S ETUDE

Edited by  
ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

## Violin Makers Make a Village

By MARION GRUBB

ON THE EDGE OF LORRAINE, in France, there is a little village where everybody who is old enough is a maker of violins. The craft is an ancient one. For centuries the violin makers of Mirecourt used to offer the masterpiece of their corporation in the parish church, on St. Cecilia's Day, after marching thither in procession, clad in festal garments. Although this picturesque custom has lapsed, those who take the cures at neighboring spas, and walk daily the length of Mirecourt's narrow streets, find there perpetuated a bit of the living past.

To the little village comes now and again M. Henri Casadesus, Founder of the Society of Ancient Instruments and connoisseur in the music of the seventeenth and eighteenth centuries. With him come friends and musicians who watch with delight the work of the master craftsmen of Mirecourt, whose skill derives indirectly from the violin makers of Cremona.

### A Noble Handicraft

THE VILLAGE STANDS near the Vosges, but the location has little to do with the choice of a craft. This craft, indeed, was not

chosen but inherited. The Dukes of Lorraine were great amateurs of art. When they were in residence at the Château of Ravenel, some of the walls of which are still standing near Mirecourt, they brought with them their musicians and a violin maker who had worked in Cremona. This skilled craftsman is said to have taught his art to a few pupils; they in turn taught it to their neighbors and to their children, so that for centuries, in this remote spot a beautiful art has been handed down from one generation to the next. There are records of apprenticeship to master violin makers in Mirecourt as early as 1637; and in 1732, the year George Washington and Haydn were born, the master violin makers of Mirecourt received their charter from the Dukes of Lorraine. Also, the best workmen of Paris received their training in the workshops of this village.

### A Quest for Wood

AS THE HILL FOLK of the southern United States make annual pilgrimages to the mountains for evergreens and herbs, so the

artisans of Mirecourt make periodical pilgrimages to their own mountains, and to those of other countries, to procure suitable woods for the making of their finest instruments. The resonant fir, needed for the "table" or top, is not found in the Vosges but in Switzerland and in Roumania; and even in these countries certain sections produce better wood for this purpose than do others. Maple is used for the back and the ribs, ebony for the finger board; the bow is made of Brazil wood, Pernambuco wood, iron wood, and others.

There are no maple forests as there are forests of fir. Maple of the right kind has to be sought through the forests of central Europe, where it is found scattered here and there among other trees. The beauty of maple wood is its richness, its veining, its "waves" reflecting the beauty of other instruments. Natural seasoning and aging of this wood require years and years, and the value of an instrument is thereby enhanced; for violin makers believe that material is of primary importance in making instruments of wood.

Resinous wood, cut into thick planks, is piled log cabin fashion in drying sheds. This is done in order that the air may circulate freely. The care with which all the various woods are arranged speaks eloquently of the importance attached to proper aging.

### And So an Instrument

THE SAWING SHEDS are next the drying sheds. There workmen saw the wood radially, or from heart to bark, to preserve the grain. With Cologne glue, slabs are joined carefully together.

Across the village street from the sawing shed are the ateliers or cabinet-making shops, where is done the delicate, precise and beautiful work which goes to the making of a perfect violin.

In that room it is the privilege of a visitor to receive what M. Casadesus calls the "de-

licious impression of looking upon a work of art in the making, meditated, executed, caressed by the same man," a man concerned not with "standardizing the product," but in concentrating on the skill of "expert, patient, pious fingers" a knowledge which is as much a part of his racial inheritance as are the shape of his hands and the color of his eyes.

This atelier does not look like a room in a factory; it is a studio. The faces of the workmen are bent over the table where lie the polished, finely grained bits of wood which they are to join. There is no idleness, no chatter. Expert skill demands concentration. They look like musicians in an orchestra. The sunlight coming through high windows picks out high lights in shining surfaces, and turns shadows to black velvet. One workman, the most skilful of all, has been chosen to finish the violins. He cuts with a very sharp tool, the F-holes, places the pegs, adjusts the strings, sets up the bridge, gives the violin a "soul" (*âme*) as the sound post is called. And so is completed a little instrument to outsing all others.

\* \* \* \* \*

### Violinists, Do You Know?

THAT THE FIRST violin patent registered in the British Patent Office was in 1776? It was for a special kind of finger board designed to help the player to keep in tune.

That, whereas violins are generally considered to improve with age and constant usage, just the opposite is true of bows. They may be restrung countless times, but the wood of the stick gradually deteriorates.

That the violin is made of approximately seventy different parts, of which about fifty-seven are glued together?

That Ole Bull, on one of his tours of the United States gave two hundred and seventy-four concerts in six months?

## Piano Teachers for Violin Teachers

By MRS. CLEMEWELL MACKENZIE

A YOUNG VIOLINIST, starting out to build up a class of pupils, will find a good working knowledge of the piano very helpful. If his pupils are used to an accompanist playing along with them, they will feel much more at ease in trying to do ensemble work in church and school groups and therefore will show off to much better advantage than those who never have had such an experience. Also, several pieces played nicely together, from time to time, as a sort of informal concert for the parents, will tend to make them realize that their child is really doing well and learning something that is pleasing to hear. No one can offer quite so much moral support to a shrinking young violinist as his very own teacher. No one can help him through his first few public appearances quite so effectively. And if the teacher does not do the accompanying, almost certainly no one else will; at least, not until the pupil has struggled through so many pieces in such an unmusical, half finished sort of a way, that he has lost all desire to hear the

completed result of his labors. He may even complain then that the piano bothers him, that he would rather play alone. And such a one may soon lay down his violin in favor of baseball, for he has missed the great fun of playing with others.

Most young violin teachers wish they could play the piano, and a great many of them do seriously try to study accompanying, but very few persevere very long. And perhaps the main reason is that so few piano teachers ever have taken the trouble to consider the piano and its difficulties, as they appear to the violinist. The first thing that confronts a violinist, as he begins his first piano lesson, is a big surprise to him. He has grown up through years of study to consider that he has a thumb and four fingers, the pointer finger being his first finger, whereas, on the piano, the thumb is considered as the first finger. He will stumble over the finger marks, and be corrected over and over; and after doing nothing much else except perhaps to listen to a great deal about hand position and attack

A MASTER'S WORKSHOP

and how important it is always to finger just the way it is marked, he will emerge from his first lesson feeling that he is a very stupid dunce and that he had better leave the piano and all its mysteries to the pianists. If he is very determined, he may come back again; but he is almost certain to hear a great deal more about just how to sit, and how to hold his hands, and above all, how very important it is for him to follow the fingerings exactly; with the result that he will probably not return very many times.

### Away With Non-Essentials

A PIANO TEACHER who has the alertness to realize at once that what a violinist wants and needs is the ability to play accompaniments, and who sets about to teach him to play one right away, even though he be an extremely simple one, and the hand position and fingering are not all they should be, will have his pupil so enthused and eager to learn more that he will feel that the lessons are just exactly what he needs and will come gladly back for more. Any one who has had years of training on the instrument, and has a real desire to advance on another, will absorb a great deal of the technical details by the process of imitation, or in the form of hints casually dropped by the wayside. And this being the case, he is not irked by the feeling that he is being made to wade through a great maze of uninteresting material.

He will need to know a lot about chords and their inversions and positions, because he often will want to play the violin melody along with his struggling little pupils, at the same time supplying some harmonic accompaniment with his left hand. He needs to know about the keys of F, C, G, D and A, much more than about any of the others, as almost all music for beginning and intermediate violinists is in these keys. So why not teach first the keys that he will need to use first and most frequently. Why not also use some books of

violin and piano music, letting him play the accompaniment while you play the violin part higher on the piano. Why give him great stacks of purely pianistic things, full of runs and seven flats and stumbling blocks. Give him a feeling of security by showing him a few things he can leave out of a difficult accompaniment, at least until he has gained more technical ability. And then, if something simply has to have a fingering worked out and marked down, dear teacher, get a blue pencil and mark it X, 1, 2, 3, 4; X for the thumb. Your violinist will be grateful; he will have no difficulty nor feeling of clumsiness or frustration; and he will be as eager to get a smooth, workable fingering as you are to give it to him. And he will have that forward reaching attitude that we all enjoy working with so much, and which comes to a pupil only when he feels he is doing something well, something that is doing him a lot of good, and, most important, something that he likes.

Play a lot of accompaniments, letting him watch you. Talk about various good accompanists, and in every way try to make him feel that he knows how accompanying should be done, as well as being able to do a bit of it himself. Remember that he will be often called upon to coach his pupils, who may have occasion to play with some pianist, perhaps quite advanced technically, but untrained in the art of accompanying. This is a very trying ordeal the first few times it happens. It ends more often in failure than in success. If he understands the composition from the standpoint of both the violinist and the accompanist, he can more often turn the ordeal into a successful experience. No one can feel more helpless than a violin teacher who knows nothing about the piano. No one will work more willingly if you but make him feel you are giving him what he needs, and that he is not a clumsy nitwit floundering around among a bunch of notes with the wrong fingers marked on them.

## The Importance of Right Arm Training

By J. W. HULFF

WATCHFULNESS and patience on the part of the violin teacher, especially during the first few months of instruction to the child, are most important.

The scales, slurring, fairly correct intervals, tempo and expression are usually acquired more readily by the young student than the art of drawing the bow correctly, at right angles to the strings.

The child's sole ambition is to play melodies, and he does not realize the necessity of correct right arm work at the very outset of his musical studies. As a consequence the teaching of correct bow strokes to a child presents difficulties that the teacher must solve if he would do his duty.

Unless the teacher is alert and painstaking, and above all, patient in his endeavors, the child acquires a fixed, faulty style of bowing that hampers his future progress.

It is good to vary the practice of mirror bowings with "blind" right arm work. One of the advantages of this method of bowing is that it may be used in the home when

the pupil is away from the teacher. Father or mother can spend, say, ten minutes with the child during the daily practice period. The child is told to close his eyes while taking the bowing exercise and not to stop the strings. The parent guides the bow, using only slow, full strokes, being sure that the child maintains a correct hold of the stick. He should be impressed with the fact that this style of bowing is being given him so that he can feel when the bow is traveling at right angles to the strings. He should also be told why a bow should not travel laterally, if the correct tone quality is to be produced.

Care should be taken when giving open string bowings that the student does not swing the neck of his instrument to the left on the down strokes.

The "blind" bowing exercises should be continued persistently until the student, when playing from the printed page, actually feels uncomfortable when using incorrect bow strokes.

### When Genius Interprets Genius

"In that instant a beauty which had never been in the world came into the world; a new thing was created, lived, died. That thing was neither Beethoven nor Ysaÿe; it was made out of their meeting, and just that miracle could never occur again."—Arthur Symons describing the playing of Ysaÿe in the "Kreutzer Sonata."

Answering Etude Advertisements always pays and delights the reader.

PLAY PIANO JAZZ like dance and radio players. Quick mail course. Information free. Erskine Studio, 810E East 14th Street, Oakland, Calif.

## HOW TO BUY A NEW PIANO

Piano facts which will save the buyer money and help him to make a safe and satisfying selection

By William Roberts Tilford

Prepared after extensive research conducted by THE ETUDE MUSIC MAGAZINE

You may secure one of these valuable booklets absolutely without cost by sending us your name and address.

We will also appreciate it if you will send us the names and addresses of at least two or three friends or acquaintances whom you know to be definitely interested in purchasing a piano in the near future.

You may use the following coupon or write the names and addresses on a plain sheet of paper and mail to

## The "Musical Lighthouse" of New York's East Side

(Continued from Page 444)

traveling to the School when their fathers leave home for work, waiting hours for their thirty-minute lesson, and then waiting about again until their fathers have finished their workday and can call for them.

### Comprehensive Activities

BESIDES THE STUDENT CONCERTS, the Music School provides twelve faculty recitals a year, orchestral concerts (this student orchestra is particularly strong in its woodwinds and brasses, the very choirs which professional organizations often have difficulty in filling), and operatic presentations. Last year, the *Third Act* of "The Marriage of Figaro" was given by the worker-pupils, with such success that the entire opera is being prepared this year. And the season before last the Music School presented the first play-opera ever written by a ranking composer, for youthful voices and on a modern theme. The work is *The Second Hurricane* by Aaron Copland. Written especially for the Music School, the opera describes the exploits of a group of youngsters in saving their community from storm disaster. The musical idiom is simple and understandable, and the young participants enjoyed their hard work as much as the New York music critics approved of the performance.

When neighborhood performances are given most of the student body takes part, not only in the program but also in the care of the Playhouse, ushering, distributing programs, preparing and carrying instruments, clearing away, and servicing the hall. At the informal concerts, the audience is invited to participate. Miss Spofford opens the festivities by reminding these neighborhood dwellers that they are about to share in a three-way coöperation involving the composer who supplies the material, the performers who interpret it, and the listening group which must provide the necessary attitude of orderly reception. As a result of this audience-education, the concerts of the Music School are seldom disturbed by late arrivals, rustling programs, or conversational recitations.

Reaching out into the further circles of the pattern, the Music School now takes a definite hand in shaping the musical activities of the Settlement House. Formerly, the Music School kept to its own work, and such musical fun as the Settlement wished was arranged there. Now, the Music School maintains an instructor in Settlement Music, who combines teaching duties in the School with the direction of musical activities in the Settlement House. Play groups of tiny children may want to sing; boys from the Arts and Crafts Club become enamored of the *Soldiers' Chorus*; the Mothers' Club wishes to dignify its meetings with songs; a discussion group of Union workers wants to call their meeting to order musically. In such cases the liaison officer between the Music School and the Settlement House takes charge, drilling the singing, suggesting suitable choruses, playing the accompaniments, and, best of all, encouraging active musical participation among workers and housewives and babies who are shut out of music-study proper. Thus it often happens that new students appear at the Music School as the result of this musical fun at the Settlement House.

The neighborhood is served by concerts, lectures, and sings, as well as by musical festivals at Easter and at the Jewish Harvest. At Christmas time, the Music School gives a jolly party, to which neighborhood residents are invited as well as musical celebrities. Two years ago, John Barbirolli acted as Santa-Claus-in-mufti, with the result that the pottery class in the Settlement House became inspired to model an

orchestra of quaint little men, all playing hard on violins and violoncellos. Last year, Kirsten Flagstad visited the School and sang for the children; and, full of the spirit of coöperation which is as much a part of the curriculum as music itself, one tiny boy approached the great Wagnerian soprano with a kindly suggestion.

"Don't you sing 'Traviata'?" he enquired.

"No," she replied, "that is not in my repertoire."

"Oh, that's a pity," he said politely; "maybe you'd like to learn it. I hear it's very fine music."

### As Lives Are Touched

INTERESTING NON-MUSICAL RESULTS have come out of the Music School. A child who had lately recovered from infantile paralysis applied for piano lessons. His hands were nearly useless and his speech, too, was defective. Yet he was accepted, in the hope that the muscular coördination of playing might help him. After a few months of practice his hands became freer, and, in proportion as his hands grew more normal his speech improved. To-day, the child is on the highroad to health. Several cases of nervous maladjustment have been successfully dealt with through music study. A number of boys, who were feared as hard characters in the neighborhood, have become reformed, after a semester of musical thinking and musical drill. And the acme of coöperative effort is reached by a scholarship boy from Brooklyn. The child lives in a cellar, and is so poor that neighbors supply him with his carfare to come to his lessons. His first teacher was a local druggist who thought the boy gifted, taught him what he could between compounding prescriptions, and finally brought him to the Music School for an audition. He was accepted, and now whenever he plays his family, the druggist, and his neighbors come trooping in his train, to hear and rejoice.

While the School desires first to serve its own neighborhood, many students come from distant sections of New York and adjoining boroughs. Students who can pay for their lessons are charged a nominal fee, partly to keep the all too slender budget of the School in balance, and partly to encourage the idea of independent responsibility in the pupils. But when talent exists where "lesson money" does not, scholarships are provided.

### The Field Is the World

BEYOND QUESTION, there is need for similar work in socialized music in other parts of the country.

"The idea of bringing music to a community as a whole has been taken up to some degree by the various WPA projects," says Miss Spofford; "but this work, centering as it does upon group teaching to the exclusion of individual and selective instruction, is not enough. Neither does it handle the problem as a self-contained neighborhood task. And the best way to bring music to people is to let them feel it to be personally their own."

"There is a splendid field for service in social music, and it deserves the attention of the graduates of our finest conservatories. There is little room for them to-day in the overcrowded, overcompetitive concert field; and here is work crying out to them. What better could they do than to return, each to his own community, be it small or great, and implant there the seeds of social, humanized, non-professional music?"

"The first step would be to get in touch with any local settlement or community house, with the supervisors of school music, with individual teachers, and with socially-minded citizens who might interest

(Continued on Page 482)

## VIOLIN QUESTIONS Answered

By ROBERT BRAINE

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

### A Left-Handed Pupil.

C. L. B.—You surely have a problem in your less than five year old boy, whose parents are both totally deaf, although the boy himself has excellent musical hearing. The boy is left-handed in all his activities, and seems bright and intelligent. His grandparents, who have good hearing, will supervise his violin practice. In cases of this kind, I advise that the left-handed person practice "left-handed" for two or three months, the teacher noting the ease or the difficulty with which he plays. Then try him with right-handed bowing, which should be continued if not found too difficult. In Germany many children are taught to be ambidextrous, that is, to use either hand with the same facility. In the case of your little pupil, you already know that he can play readily in the left-handed manner. After a trial of the right-handed manner, if this seems difficult or impossible, the only thing is to make a left-handed player out of him. It is a great advantage to bow with the right hand. In a symphony orchestra, the first violins must bow together, and the second violins together; and one player bowing with his left hand would break this uniformity.

### Books on Violin Making

A. W. S. 1. For your first study of the art of violin making, I suggest, "The Violin and How to Make it," by a Master of the Instrument; or, if you want a more elaborate and a more expensive work, you might get, "Violin Making as it Was and Is," by E. Heron Allen. These works can be purchased through the publishers of THE ETUDE. 2. It is almost like hunting for the proverbial "needle in the haystack" for you to try to find the name of a piece which you heard over the radio. However, if you know the station through which the piece was heard, and the time and name of the "hour" on which it was used, you might be able to learn something about it by communicating with the station.

### About Dulfenn and Dodd

J. H. W.—1. Alexander Dulfenn made violins in Livorno in the seventeenth century. He was not a great violin maker, and the books about noted violin makers give him only a line or two. I do not know the present market price of his violins. You can easily find out from a dealer in old violins in New York City. 2. Thomas Dodd, son of the famous bowmaker, Edward Dodd, made violins in London, England, from 1786 to 1820. He is known for his extremely fine varnish, and artistic workmanship. The Dodd copies of Amati and Stradivarius are first class instruments, and worth a great deal of money.

### The Land of Plenty

I. O. G.—The United States is now the most famous and lucrative market in the world for violinists and, in fact, for musical performers, and organizations of all kinds. A famous performer, who would receive a handsome fee for a concert in Europe, would probably get two or three times as much in the United States.

### A Practice Violin

U. I. G.—Many people write to the Violin Department, asking how they can produce extremely soft tones on the violin, so that they can bow freely, without annoying or disturbing the occupants of adjoining rooms. There are two procedures in such cases: the use of a mute, or the use of a skeletonized violin. These can be obtained from any large music dealer. Mutes are made of ebony or other hard wood, or sometimes of metal. Slots are cut in the wood so that the prongs can be pushed down on the bridge between the strings. This gives the tone a somewhat muffled, veiled, and mysterious character. Some players use mutes to diminish the tone. It should be used, however, only to produce its characteristic tone, and not to diminish the volume. For practice purposes, the skeleton violin is much better. Violins of this type are made without a back, and, as only the top vibrates, the tone produced, while of true violin character, is rather faint, and can hardly be heard outside of a closed room.

This instrument is used only when a very faint tone is required for practice purposes, and not for the characteristic, mute quality of a veiled, mysterious effect.

Mutes of larger size can be procured for use on the violoncello and viola, as well as the violin. They produce the same characteristic tone on these instruments as on the violin. When the composer wishes the mute to be used, he writes the words, *con sordino*, (*sordino* for plural, as in music for orchestra), into the score. The use of the mute then continues until the words, *senza sordino* (*without mute*) appear, when the mute is to be taken off.

Violin students should do a certain amount of practicing with the mute, so as to become familiar with the characteristic "muted" tone, as it is frequently used in orchestral and solo work.

### Instruction Book for Violoncello.

D. T. I.—Probably Langey's "Tutor for the Cello" would be what you want. As you live near Duluth, it would be possibly better to visit some of the large music stores in the city, where you would find a large assortment of instruction books.

### Violin Ornaments

C. R. G.—In the early days of violin making it was the fashion to ornament the violin with all sorts of pictures, wood carving, coloring and various kinds of adornment. This has completely gone out of fashion. The best makers of the present day make their violins with great elegance, superb artistry, but quite plain. Instead of sculpturing their scrolls with heads of angels, birds, demons, and all sorts of fantastic images, they cut the scrolls with the highest artistic skill. They spend much time in choosing their wood, and their varnish, a thing of genius. How much better this quiet elegance than all the tawdry nonsense with which the early violin makers plastered their violins. It may be said, in passing, that very few of the Cremona masters frittered away their time in adorning their violins with unnecessary decorations. There is no doubt that the example of the great Cremona makers gave us the present elegant, but plain, design of the violin as we now know it.

Many owners of violins, with these fanciful adornments, seem to think that all this gilding and broad work adds greatly to the value of the violins, whereas the opposite is the truth.

### Open Air Concerts

S. M. T.—The reason why there is so little playing of the violin and other string instruments in the open air, is on account of the lack of resonance. Hector Berlioz, the author of the famous, "Treatise on Modern Instrumentation," stated that a symphony orchestra of fifty or sixty men would make as much volume, playing in a concert hall of ordinary size, as an orchestra of five or six hundred playing on an open plain. The tones of an orchestra playing in a building are reinforced and increased in resonance by being reflected by the walls of the building in which the orchestra is playing. Still, the history of music relates many examples of the use of string instruments in the open air. History tells of a French King, who invariably had his army led into battle by twenty-four violinists. I remember visiting a World's Fair at Antwerp a few years ago, where a symphony orchestra gave open air concerts, afternoon and evening in the exposition grounds. The effect was better than I had hoped for. In the United States open air concerts are increasing. A large size is usually used, in which the orchestra plays and this greatly increases the resonance.

### An "Elderly" Pupil

J. Z.—At the age of fifty-four, one can expect much in the way of speed in fingering technique. I would advise you not to commence with rapid finger exercises. You had better devote a year or two to first position work. Get the "Easiest Beginning Elementary Method for the Violin, Op. 38," by F. Wohlfahrt, also the "Violin School," Vol. 1, by Hermann. These two books are entirely in the first position, and will give you a good foundation, which you can build later. After having mastered the first position reasonably well, you will be ready to take up more advanced work such as the "Elementary and Progressive Studies," Books I and II, by Kayser. Your age progress will be rather slow, and you expect to accomplish anything real worth while, you ought to have two lessons a week from a first rate teacher. If you have a good voice, practice in singing will help you greatly with your violin playing. Your teacher will advise you in a few weeks whether you are making sufficient progress to warrant keeping on with your practice.

### Regular Care

H. J. C.—You will find it a good idea about every six months, to have your violin looked over, by an expert repairer, to see that everything is in good condition. The violin is a very delicate bit of machinery and has to be looked after constantly, if it is to be kept in good playing condition.

### Inscriptions on Violins

A. S.—Thank you for sending me a drawing of a violin with the interesting inscriptions on the back. Makers of violins, lutes, and other stringed instruments, in the Middle Ages were very fond of ornamenting their handiwork, in this manner, usually representing historic personages, castles and other historic buildings. There is a very fine collection of historical musical instruments in the Metropolitan Museum, in New York City, and the direct might be able to explain the meaning of the inscriptions on your violin, if you sent it him.

# BANDS AND ORCHESTRAS

## The Student Conductor

(Continued from Page 441)

by using gracefully curved motions directing the beats. The class should sing beats in connected style. The first lesson will be complete at this point.

At the second session, review the basics and begin the study of the left-hand motion. Place the following outline on the board and have each student to copy it in notebook. This outline covers the fundamentals of baton motions and can be used as a guide for all directing problems:

**Rhythm**—indicated by direction of baton motion;

**Tempo**—indicated by speed of baton motion;

**Volume**—indicated by the space covered;

**Style**—indicated by the manner in which the space is covered—

A. Soft, meek style—indicated by left hand, fingers extended, palm down.

B. Loud, vigorous style—indicated by clenched left hand.

**Stops**—as long as the baton moves the tone shall continue, but when the baton stops the tone shall stop.

As soon as possible begin to demonstrate baton motions as applied to familiar melodies such as *Long, Long Ago*, *America*, *Swanee River*, and other familiar pieces in song style. The next step is the directing of easy band or orchestra numbers. Many publishers put out sample thematics of their music, and these make fine material for student directors to work upon. After the first lesson the class time should be divided into periods, with perhaps one-half three-fourths of the hour devoted to directing, and the remaining time given to problems of organization and questions for discussion. Gradually cut down on the time for directing, and add more to the study of elementary harmony, library problems, rehearsal routine, drill methods, notation study, ear training, time figures, routine of musical expression, rudiments of music, transposition, manuscript work, music copying and ideas on contest preparation.

In order to hold the interest of the class, it is unwise to dwell too long on any one subject. It is better to take a little of many subjects at each class session until you find that the students like, and what they need. Start the class with a review and study of directing points. Sandwich in some of the things they need but may not be too much interested in learning, and in winding up the lesson give them some of the things they like. If the class is large enough and the proper variety of instrumentation, have the students to bring their instruments and play easy music, taking turns at directing the ensemble. Phonographic recordings are also a fine source of practice material for the class. If possible have them direct concert ensembles occasionally. This will be an honor, and serve as a reward for those who do exceptionally well.

Experience has convinced many directors that it is best to run the class for a definite number of weeks and then discontinue it for the remainder of the school year. In many schools the class could well begin in September and disband when the contest season begins about March 1st. By that time the director will have discovered the real interests and abilities of the various members of the class, and can assign them their special duties accordingly. Some will assist in section drill, some in library

work, some in office and publicity work, some in attendance work, while others act in such capacities as property managers, and setting chairs and stands for rehearsal. Because they have learned to see the problems of the organization more nearly as the director sees them, these student directors are valuable help and can assist greatly in handling many organization details. Fortunately, those who do not become skilled directors usually find some phase of organization work in which they excel, and which they take pride in doing.

### The Student Director's Opportunities

THOSE FEW WHO BECOME really good directors can often assist by directing at rehearsal, allowing the teacher to sit in the balcony of the auditorium and listen to his band or orchestra, as a judge does at the contest. Last year, at the Southern Indiana State Contest, a student was called upon to direct the band because just a few days before the contest his director became severely ill. The young man did a remarkably fine job. At Wells High School, Chicago, Mr. Fain, director of instrumental music, rarely directs in assembly programs. His student directors are trained to do this work, and they have close cooperation from all members. In addition, student directors often take charge of the band at basketball games and at similar engagements.

In most schools, no effort is made to offer a second year of student directing. As a rule, a number of seniors are in the class and are lost by graduation. Of the others there are usually some who feel that they have gone about as far as they can in studying the elements of directing and would not do well in advanced study. The few really talented ones left can best be taught by individual coaching as needed.

In our discussion thus far we have considered the subject of student directing only as a study for advanced players. There is no doubt about the value of this study for these members of our organizations, and the benefits for the organizations themselves are many, due to the services of these specially trained members. But in recent years a new phase of this work has developed. The fundamentals presented to the class are so important that it seems advisable to begin this study much earlier in the training of the individual. Too many students go along for several years, learning to play in a mechanical sort of way, with little idea of true musical values. They are busy learning to "get notes" and to keep their place in the score. They are simply mechanical players, not musicians. The baton motions do not mean much to them, either as indications of rhythm and speed or volume and style. They have only vague ideas of what the director is expressing with the baton. Why not train every beginner as a student director?

The beginner can learn to direct four-beat rhythm, as he learns to play simple four-four exercises on his instrument. When he begins on three-four time, he likewise learns to direct three-beat rhythm. With each new time sign he learns to direct the rhythm with simple straight beats. This will assist him greatly in developing a strong and accurate sense of rhythm. As he progresses, he learns to indicate tempos by the speed with which he moves the hand when indicating rhythm. The next step is for the student to imitate tempos and tempo

# AMERICAN CONSERVATORY OF MUSIC

CHICAGO

54th SEASON

Founded in 1886 by John J. Hattstaedt, today The American Conservatory of Music is outstanding among institutions for music education in this country. Its graduates are to be found occupying positions of honor and responsibility in every department of music.

Member of the National Association of Schools of Music

**The Faculty**—One hundred and thirty artist teachers of national and international reputation comprise the faculty.

**Accredited Courses** are offered in Piano, Vocal, Violin, Organ, Orchestra and Band Instruments, Public School Music, Children's Piano Work, Class Piano, Musical Theory, Dramatic Art and Dancing.

**Certificates and Degrees** are conferred by authority of the State of Illinois and recognized the country over. Degrees conferred are those of Bachelor of Music, Bachelor of Music Education, Bachelor of Speaking Arts, Master of Music and Master of Music Education.

**Dormitories**—Desirable living and boarding accommodations can be secured at the Conservatory Dormitories at surprisingly low rates. Particulars on request.

**Professional and Teaching Engagements**—Although the management does not guarantee positions, it has been most successful in assisting students to find remunerative situations in colleges, academies, music schools and in concert, orchestra, lyceum and choir work.

**Tuition** is reasonable in keeping with the times and may be paid in convenient installments. Complete particulars given in catalog which will be mailed on request.

**Students' Self Help**—The management makes every endeavor to assist needy students to find part-time employment. Many find work as teachers, accompanists, or part-time positions working for commercial houses, etc.

Fall Term Starts September 14th

# THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES

An Alphabetical Serial Collection of  
THE WORLD'S BEST KNOWN MUSICIANS

This series which began in February, 1932, has included to date a total of 3916 celebrities. It will be continued alphabetically until the entire history of music is adequately covered. Start making a collection now. Nothing like this has ever hitherto been issued. Etude readers desiring additional copies of this page and pages previously published are referred to the directions for securing them in the Publisher's Notes Department.

**David Van Vactor**—B. Plymouth, Ind. Comp., flutist. Studied with Mark Wessel. In 1933 won N. Y. Philh. Symp. Soc. \$1,000 prize with his "Symphony In D."

**Francesco Maria Veracini**—B. Florence, Italy, 1685; d. near Pisa 1750. Comp., cel. vlnst. Was chamber-virtuoso at Dresden; then with Count Kinsky at Prague. His vln. works incl. 24 sonatas.

**Henri Verbrugghen**—B. Brussels, Aug. 1, 1873; d. Northfield, Minn., Nov. 12, 1934. Cond., vlnst., teacher. From 1922-31, cond., Minneapolis Sym. O. Fac. mem., Carleton Coll., Northfield.

**Jean Verd**—B. Paris. Ist. teacher. Studied at Conservatoire. Soloist leading orchs. of France. Toured with Jacques T. and Pablo Casals. W. mem., Clin. Cons.

**Giuseppe Verdi**—B. Le Roncole, Italy, Oct. 10, 1813; d. Milan, Jan. 27, 1901. Famous comp. Opra.—"Il Trovatore," "Aida," & "Falstaff"; & the "Masonic Requiem"; the greatest of many works.

**Theodor H. H. Verhey**—B. Rotterdam, June 10, 1848; d. there Jan. 28, 1929. Comp., tchr. Studied with Glese and W. Borkel. Wrote operas, orch. works, choruses, violin pieces, and songs.

**Edward Verheyden**—B. Antwerp, 1878. Comp., violinist, teacher. Studied with L. Mortelmans. Has been for some time prof. of theory at cons. in Antwerp. Operas, chl. works, songs, orch. pea.

**Johannes Verhulst**—B. The Hague, Mar. 19, 1816; d. there Jan. 17, 1891. Comp., cond. Was Royal Mus. Dir. at The Hague. From 1850-83 cond. of all the great Dutch mus. festivals.

**Mathilde Verne**—B. Southampton, Eng., d. Eng., Aug., 1936. Pnst. tchr. Sister of Marie Wurm. Pupil of Mme. Schumann. Was well known in Eng. as soloist, chamber mus. player, and teacher.

**Alessandro Vessella**—B. Alife, Italy, Mar. 31, 1860; d. Rome, Jan. 6, 1929. Comp., band dir. From 1880-1921. Dir. of Municipal Band of Rome. Orig. band works and arrangements.

**Oreste Vessella**—B. Alife, Italy, Mar. 18, 1877. Comp., band dir., clarinetist, Nephew of A. Vessella. For over 20 years was dir. of own band at Atlantic City, N. J. Vocal and band works.

**Walther Vetter**—B. M. May 10, 1891. Music writer. Has held imp. posts in Danzig and Burg. Since 1934 pres. Breslau Univ. Has w. literary works of note.

**Elda Vettori**—B. Venice, Italy. Soprano. Entire musical training in U. S. Sang with St. Louis Opera Co., then became member of Metro. Opera Co. (debut in "Cavalleria Rusticana").

**Gina Ciaparelli Viafora**—B. Italy; d. N. Y., Jan. 11, 1936. Operatic sopr., tchr. Studied in Rome and Milan. Debut in Rome, 1898; Amer. debut in Phila., 1900. From 1907-10, mem. Met. Op. Co.

**Paul Viardot**—B. Courmery, France, July 20, 1857. Comp., vlnst., writer. Son of Pauline V. Garcia. Pupil of Léonard. Successful appearances in Paris and London.

**Pauline Viardot-Garcia**—B. Paris, July 18, 1821; d. there May 18, 1910. Famous dram. singer, comp. Opera debut, London, 1839. Created many important roles. Wrote operas and other works.

**Harry L. Vibbard**—B. Limestone, N. Y.; d. Syracuse, N. Y., Jan. 14, 1938. Comp., organist. Pupil of W. Berwald & Widor. For 37 years a fac. mem. of Coll. of Fine Arts, Syracuse Univ.

**Regina Vicarino**—B. New York. Soprano. Studied with Barthelmy in Paris, and with Lombardi in Italy. Has made operatic concert appearances in Europe and America.

**Nicola Vicentini**—B. Vicenza, Italy, 1511; d. Rome, 1572. Comp., cond. Mus.-mas. for Cardinal Ippolito d'Este at Rome. Invented unusual instruments, one, the archicembalo, having 8 keyboards.

**Paul Antonin Vid**—B. Toulouse, June 16, 1818; d. Paris, April 9, 1931. Cond. Pupil at Paris Co. Marmontel, Durand, Massenet. Was cond. at Opéra and Opéra com.

**Raoul Vidas**—B. Roumania. Violinist. Pupil of his father and of Berthelmer in Paris. New York debut in 1918. Appeared as soloist with Chicago Symphony Orch.

**Johann Gottfried Vierling**—B. Metzels, Ger., Jan. 28, 1750; d. Schmalkalden, Nov. 22, 1813. Comp., organist. Pupil of C. P. E. Bach and Kirnberger. Organ works and cantatas.

**Louis-Victor-Jules Vierné**—B. Poitiers, Oct. 8, 1870; d. Paris, June 2, 1937. Comp., organist. Pupil of César Franck and Widor. Organist at Notre Dame. Prof. of org. at Schola Cantorum.

**Henri Vieuxtemps**—B. Verviers, Belgium, Feb. 20, 1820; d. Mustapha, Algiers, June 6, 1881. Comp., famous vlnst. Fr. 1846-52 solo vlnst. to Czar; prof. at Petrograd Cons. Many fine violin wks.

**Hector Villa-Lobos**—B. Rio de Janeiro, Mar. 5, 1890. Comp., cond. Appeared as violoncellist at 12. Has been guest cond. of orchs. in Brazil and Europe. Has written orch. works. Res. Paris.

**Luisa Villani**—B. San Francisco. Sopr. Stud. with her father in Milan, Italy. Debut at La Scala, 1907. Sang with Metro. Op. Co. Created Flora in Montemazel's "L'Amour del Tre Re."

**Vera de Villiers**—B. England. Contralto. New York debut, 1933. Has become known through having appeared in concerts in leading U. S. cities. Has made extensive tours of Europe.

**Charles John Vinton**—B. Houghton-le-Spring, ham, England, Sept. 1832; d. Feb. 23, 1937. Comp., organist, editor. Important posts in Eng. Choral and orch. work.

**Henry Bathuel Vincent**—B. Denver, Col. Dec. 28, 1872. Comp., dir. Has 20 yrs., dir., organ dept. and asst. mus. dir., Chautauque Inst. Dir., Erie Playhouse. Chl. works, also songs.

**Leonardo Vinci**—B. Stronigoli, Calabria, 1680; d. Naples, Mar. 28, 1750. Comp. Was Maestro at the Royal Chapel, Naples. Wrote operas, oratorios, cantatas, masses, and songs.

**Ricardo Viñes**—B. Lérida, Spain, Feb. 3, 1875. Pianist. Studied at Paris Cons. Has appeared in all mus. centers of Europe. A leader in presenting mus. of Debussy, Ravel, and other "moderns".

**Giovanni Battista Viotti**—B. Fontanetto, Italy, May 23, 1755; d. London, Mar. 3, 1824. Noted violinist, comp. Considered the father of modern violin playing. Rode was his pupil.

**Almon Kincaid Virgil**—B. Erie, Pa., Aug. 13, 1842; d. St. Petersburg, Fla., Oct. 15, 1921. Pioneer mus. pedagog., inventor of the practice clavier. Wr. technical wks. Schools in N. Y. and London.

**Antha Minerva Virgil**—B. Elmira, N. Y. Comp., pianist, educator. A pioneer in use of practice keyboards. For many years has maintained a school in N. Y. Has pubd. technical works.

**Alberto Antonio Visetti**—B. Spalato, Dalmatia, May 13, 1836; d. London, July 19, 1929. Comp., cond. Studied at Milan Cons. Was prof. of singing at R. C. M. Wrote musical and literary works.

**Tommaso Vitali**—B. Bologna, Italy, about 1665. Comp., dir. Court dir. at Modena. Three of his sonatas in the library of the Biblioteca, Bologna.

**Franco Vittadini**—B. Pavia, Italy, April, 1884. Comp. Studied at Milan Cons. Director of Pavia Musical Institute. Has written operas, prod. in Rome, Monte Carlo and Milan.

**Antonio Vivaldi**—B. Venice, about 1675; d. there 1741. Comp., cel. vlnst. In 1713 became dir. of the Ospedale della Pietà at Venice. A prolific writer of violin works and operas.

**Amedeo Vives**—B. near Barcelona, 1871; d. Madrid, Dec. 2, 1932. Was teacher of composition at cons. in Madrid. Most important works were operas, operettas, and songs.

**Geneviève Vix**—B. France. Debut Paris, 1905; then sang with great success in Spain and South America. In 1917-18 she sang important roles with the Chicago Opera Co.

**Lodewijk de Vocht**—B. Antwerp, 1887. Comp., cond. Studied at the Antwerp Cons. In 1929 prof. there of harmony and instrumentation. Has written masses, orch. works, cantatas and songs.

**George Voelker**—B. Richmond, Va., Mar. 3, 1860; d. there Nov. 14, 1928. Comp., band dir., arranger. Was dir. of Voelker's Band. Wrote much band music, incl. famous "Hunt in the Black Forest."

**Adolf Vogel**—B. Germany. Operatic bass-baritone. After considerable experience in European opera centers, he joined Metropolitan Opera Company, making his debut in 1937.

**Heinrich Vogt**—B. Munich, Jan. 15, 1844. Famous dram. ten. Fr. to his death, a member of the Munich Court Opera, & greatest Wagnerian singer.

# VOICE QUESTIONS *Answered*

By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## Boy's Voice

**Q.** I am a singing teacher, graduate of a prominent conservatory. I have a boy of ten who has an exceptionally beautiful voice like the sopranos of the boys' choir boys. His range is from G below middle C to G first space above the staff, his clef. What exercise and what songs should I give him to groom him for entrance to one of the better schools in New York. What songs shall I give a young girl of ten?—D. B.

Your letter suggests that your boy has natural mezzo soprano voice, a voice rather common among boys. Of course I cannot tell him any certainty without hearing him. As I am a well trained singing teacher, you would be familiar with the usual methods of training a mezzo voice. Be careful not to let him sing too high, too loud, or too long a time. Teach him how to breathe or at least give him some breathing exercises. As songs, teach him some of the simplest of the classics, Franz, Schumann, Schubert, etc. Some English songs also. Let him learn the sacred songs, the ones not too difficult with too long a range, so that some day may enter a good choir and benefit by that training.

The same remarks apply to the girl of ten although the young girl's voice is really neither as strong nor as developed as the voice of the boy of the same age.

## Notion in Singing

**Q.** I have studied singing for four years and I have always been able to put "Soul" in my singing, but I feel that I am losing it. I have been unable to secure a steady position, earning only enough to pay my music. This left nothing to help my daily life. They criticize me continually and severely and this makes me feel badly. In their lecture me because I am not able to put any "Soul" into my singing. Under such conditions how can I do it?—L. H.

**A.** It is a curious fact that those who love music most, often criticize us most severely for the mistaken impression that they are helping us. Friends as well as our own family often take this attitude. You must guard your heart and accustom yourself to endure criticism, even though it may be unjust. If you ever achieve a public career a will find critics and audiences quite ruthless. If they like you they give you enthusiastic praise; if they dislike you they lower you with blame. To succeed you must expect the first without becoming puffed up, and endure the second without discouragement and dismay.

Have a heart to heart talk with your family and friends. See if there is any justice in their criticism and attempt to be guided by it. A better understanding between you and them may perhaps enable you to recover your former peace of mind and allow you to sing once more with expression and soul.

## Tongue That Trembles

**Q.** When I sing above G on the first space above the treble, my tongue shakes and rises the back. I keep the tip of the tongue lightly against the lower front teeth, with relaxed jaw and good breath support. What can I do?—C. B.

**A.** Is your speaking voice, pleasant, comfortable and easily produced, or is it inclined to be nasal and tight, because the tongue lies high in the back of the mouth? Any defects of speech will naturally show in your singing. It is not easy to change bad tongue habits. Remember, please, that tongue, jaw, roof and lips must always be flexible, so that they may move comfortably with every change of vowel and consonant sound, yet always under the control of the will. Read Ellsbrown's book "Resonance in Speaking and Singing," and Clara Kathleen Roger's "English Diction."

## Very Young Child, Tonsillectomy

**Q.** My daughter aged seven, has taken away her tonsils for two and one half years. We tend giving her vocal lessons when she is ten. At what age should voice training begin?

**A.** Two years ago she had her tonsils and adenoids removed and the doctor also cut off her uvula. Will this affect her voice?—C. Y.

**A.** Seven and one half is very young for a girl to commence singing lessons. She could go to school and be prepared in the vocal studios suitable to her age. She may be permitted to sing in church and to take part in the ordinary school music. She should continue her piano lessons; but few, if any, singing lessons should be attempted until she is twelve or thirteen. Look well after her health and see that she gets plenty of food, fresh air and exercise. Singing requires first of all a sound mind in a sound body.

**Q.** The doctor, who removed her tonsils and adenoids, probably found her uvula too long, so that it touched the back of the tongue producing a throat irritation and occasional coughing spells. Unless the uvula grows again, and if the operation was skillfully performed, there should be no harm done to her voice.

## Lyric Soprano

**Q.**—1. I have been told that the vowel ah is detrimental and should not be used in singing exercises. What vowel should I use?

**2.** Suggest some vocalises and some songs for lyric soprano.

**3.** My range is

but I am told that to sing above High C is bad for the voice.

**4.** Are there any good teachers in Chicago?—H. W.

**A.**—1. Ah, as in father, is generally thought to be the most comfortable and easily produced vowel. Most normal singers are trained upon it, and you may have noticed that most cadenzas are sung upon ah. Unless you have some individual, personal peculiarity in the construction of your throat, you may sing Ah without fear.

**2.** Horatio Connell's "Master Exercises," Pauline Viardo Garcia's "Vocal Exercises," and Marchesi's Volume I are to be recommended. Songs for lyric soprano are legion. Try some of the songs of La Forge, Charles, or Rogers. *Mi chiamino Mimi* by Puccini; *Je dis que rien*, from Bizet's "Carmen"; and *Souvenez vous Vierge Marie* by Massenet.

**3.** Your range is extraordinarily long; but it is only valuable if your scale is smooth and all your tones of fine quality. Most singers are satisfied if they can produce beautiful tones, clearly enunciate words, and make lovely phrases throughout two octaves. Try for beauty rather than the extraordinary high notes; but, if you must sing above High C, be careful that you neither strain nor squeeze your throat.

**4.** Chicago is the greatest and most musical city in the Middle West. There are many excellent singers and singing teachers in Chicago and you should have no trouble in finding one who will teach you every branch of the vocal art and do this carefully and well.

## Should the Singer Play the Trumpet?

**Q.** I am a girl eighteen years of age, and I have studied singing about two and one half years and piano about four. My aim in life is to be a concert and radio singer. I am taking trumpet lessons, and I wonder if strenuous playing will hurt the cords in the throat. If so, I will give up trumpet playing.—M. E. S.

**A.** Playing the trumpet certainly strengthens all the breathing muscles and is good for the general health and for your musicianship. Unfortunately, trumpet playing tends to stiffen the lips and most of the muscles of the throat. Your singing teacher will be able to advise you as to whether or not you are doing these things. To be a good radio and concert singer requires a very fine control of the voice and a very sensitive enunciation of the words; and nothing should be permitted to interfere with these things.

## Chewing Gum

**Q.** Does chewing gum affect the voice in any way? I stopped smoking and started chewing gum.—T. L.

**A.** To those who are inclined to have a dry throat, gum chewing is sometimes beneficial, because it increases the flow of saliva. Take care that the continuous chewing motion does not tire the jaw muscles nor stiffen the throat muscles.

## Enlarging the Repertoire

**Q.** How shall I go about choosing songs for my particular voice (bass)? How can I tell whether or not to include songs which other voices sing, but may not fit my voice or my style?

**A.** I am a basso cantante with a range from E, first ledger below the bass staff to F third space above it. I have studied sufficiently to sing concert songs, oratorio and opera arias. Would you say I am on firm ground to study operas with my pianist. There is no opera coach available here.—W. E. J.

**A.** There are three ways to enlarge your repertoire:

1st.—Obtain, either by purchase or from a lending library, as many songs as possible by the great composers, and written for a voice similar to your own. Study them thoroughly, to find out which of them suit your voice and your temperament, and choose from them. Every publisher will send you a catalogue, if you write for it.

2nd. Attend every recital by a bass-baritone, every opera and oratorio available in your neighborhood. Listen carefully to all the radio singers with voices similar to yours, and note carefully every song that pleases you.

3rd. Study with a good singing teacher, who is familiar with both the song and the opera literature, and who will suggest suitable songs for you. Your work with your coach should go hand in hand with that of your singing teacher. Whether or not your voice is far enough advanced for you to trust yourself to study with your pianist alone, it would be difficult to say without personally hearing you.

LEON ROSENBLUM, member of the Artist Piano Faculty of Sherwood Music School.

# Sherwood Training Develops Outstanding Musicians . . . .

Theodore Lettvin, a pupil of Mr. Rosenbloom, was awarded an appearance with the Chicago Symphony Orchestra last season.

Whether you wish to play an instrument, to teach, conduct, sing in opera or on the radio, SHERWOOD MUSIC SCHOOL can help you achieve your ambition.

## Fall Term Begins Sept. 18

Sherwood training is professional training, under artist teachers who are also noted musicians, and who give you the benefit of their varied experience and methods.

Accredited courses lead to certificates, diplomas, and degrees in piano, violin, cello, voice, organ, wind instruments, theory, composition, public school music, conducting,

microphone technique, dramatic art and play production.

Sherwood is conveniently located in the cultural heart of Chicago. Beaches, parks, playgrounds, theaters, art galleries and museums offer unparalleled opportunities for recreation and cultural contacts. Dormitory accommodations at moderate cost. Write for catalog. 410 S. Michigan Ave., Chicago, Ill.

Institutional Member of the National Association of Schools of Music

## STANDARD HISTORY OF MUSIC

Latest Revised and Enlarged Edition

By JAMES FRANCIS COOKE

Chapter Headings of a few of the many subjects covered in this volume

How Music Began  
What Polyphonic Music Was and How It Came to Be  
What Early England Gave to Music  
The Wonderful Bach Family and Some Musicians Who Lived at the Same Time  
How the Organ, the Violin, and the Piano Influenced the Art of Music  
Johann Sebastian Bach, the Greatest of the Polyphonists  
Franz Joseph Haydn and the Development of the Sonata and the Symphony  
Christoph Willibald Ritter von Gluck and the Reform of the Opera  
Robert Schumann and the Age of Musical Romance  
Some Famous Opera Writers of the Nineteenth Century  
Richard Wagner and "the Music of the Future"  
Great French Composers of the Nineteenth Century  
The Modern Art-song and Its Composers  
Recent Great Virtuosos of the Piano  
Music in America  
Masters of the Early Twentieth Century  
Newer American Musical Lights

The author, who is esteemed here and abroad as an authority and a gifted writer on music subjects, has drawn on his rich reservoirs of experience gathered from teaching, research, travel, and personal acquaintance with world-noted music folk to make possible the interest content, judicious scope and practical arrangement of this book. In a style rivalling a graphic, well-told tale, this book successfully fulfills its mission to impart a useful knowledge of music history from the earliest known facts, instruments, and composers to the epoch-making living composers, and the present eminence of the art in education, in our social life, in the band and orchestra field, in opera and in radio and motion pictures. It is an ideal text book for class use because the logical and practical arrangement simplifies the work of the teacher and makes the subject clear, interesting, and entertaining to class members. Each chapter is just long enough for a story lesson assignment and is followed by a set of test questions. Its historical charts, index, and colored Music Map of Europe are also great teaching aids. It includes over 200 illustrations and phonetically gives the pronunciation of hundreds of names and words of foreign origin. Nearly 900 names and well over 100 subjects are indexed, making this a superb, permanently valuable reference volume on important composers and vital music data.

## FRETTED INSTRUMENTS DEPARTMENT

## Ferdinand Sor

By GEORGE C. KRICK

**F**ERDINAND SOR, one of the most renowned guitarists of all history, has been acknowledged as also the greatest composer of original music for guitar. Born in Barcelona, February 17, 1780, he died in Paris, July 8, 1839. His musical talent showed itself quite early, for at the age of five he composed little pieces, which he performed on the violin or guitar. Musicians who came in contact with the boy soon recognized his genius, and his parents were persuaded to place him under a teacher for instruction on the violin and violoncello. So remarkable was his progress that after a few years he entered a monastery of his native city to receive a thorough general education including lessons in harmony and composition. Young Sor soon discarded the violin and violoncello, owing to his becoming fascinated by the guitar, and from this time it commanded his undivided devotion.

When at the age of sixteen he left the monastery his teachers had every reason to be proud of him, for he astonished musicians by his unrivalled technical proficiency in guitar playing and his profound knowledge of harmony and counterpoint. He became a member of an Italian opera company in Barcelona, which afforded him opportunity of becoming acquainted, in a practical manner, with the art of song and instrumentation. Inspired by this association, he wrote an opera, "Telemacco," which had great success in Barcelona and later in London.

Sor now journeyed to Madrid, where members of the aristocracy became interested in the young artist, and here he composed several symphonies and quartets, some church music and a number of Spanish songs. After the outbreak of war between Spain and Portugal, we find him as captain in the Spanish army, and, several years later in Paris, where he resumed his artistic career, associating with all the musical personalities of that period.

### In London

IN 1809 SOR WENT to London, where his extraordinary skill on the guitar and his beautiful original compositions created a furore. Up to this time the Spanish guitar was scarcely known in England and, this new instrument presenting, in the hands of an artist, a new phase in tonal art, was hailed with delight by the elite of society. Teaching and composing now kept Sor fully occupied, and these years in England represent the most prosperous and successful period of his career. In 1817 he appeared as soloist in a concert of the London Philharmonic Society, at the Argyle Rooms.

While Sor was popularizing the guitar in England, Giuliani was doing the same in Austria and Russia, finally going to London where there was great rivalry between the two artists. Each of the great masters had his partisans and there were Sor Clubs and Giuliani Clubs. But eventually both left London, Giuliani traveling to Italy, Sor to Paris and later to Russia. There he wrote a funeral march for the obsequies of Alexander I; and he composed also the music of the Ballet "Hercules and Omphale." Returning again to Paris and London, he wrote the music of the ballet, "Le dormeur Eveille," and the fairy opera, "La belle Arsene." In 1831 Sor, with the violinist Lafont and the pianist Herz, performed Hummel's trio, the "Sentinelle." The "Harmonicon" of February 1831 stated: "Ferdinand Sor stands at a vast

distance from all other guitarists, both a performer and composer."

Ill health now forced Sor to restrict public appearances; and, hoping a change of climate might help him, he turned to Paris but to no avail; and, a painful illness, he died on July 8, 1839.

Ferdinand Sor was a composer of instinctive genius. Aside from those already mentioned he wrote numerous works for the theater—operas, ballets and pades, amongst them: "The Fair Smyrna," "Le Seigneur Genereux," "Sicilien," "Gil Blas," and "Cendrillon." These "Gil Blas" and "Cendrillon" were quite popular for many years and produced at the Royal Opera, London, also in Paris.

As a composer for guitar, Sor stands above all others. One critic of that time wrote: "What Mendelssohn is to the piano, Sor is to the guitar." Others have spoken of him as "The Beethoven of the guitar."

Up to the time when Sor came upon the scene, most so-called sonatas and other works for guitar contained long passages in single notes with occasional basses on open strings, although Carulli, Aguado and Giuliani had already cut loose from this system and had greatly improved the method of writing for guitar.

Sor, with his thorough training in harmony and counterpoint and experience in instrumentation, soon found that the guitar was capable of producing three and four part harmony; and his original compositions for guitar show the hand of the master. Upon his method are built the modern school of Tarrega and others. Without study of Sor's "Etudes" and other guitar compositions, the present day guitarist cannot expect to reach the top.

His "Method," the result of many years of observation and teaching, is a remarkable work containing numerous examples of technical nature and a great deal of text giving explanations of everything pertaining to their execution. His four volumes "Etudes" cover almost all phases of guitar technique and at the same time are melodious and from beginning to end contain nothing but beautiful harmonies. The first one of these "Opus 6" (12 Etudes) was evidently too difficult for beginners and he later wrote "Opus 31" and "Opus 35," consisting of 24 Etudes. A student will do well to begin with "Opus 35, Book 1," then "Opus 31, Book 1," follow these with "Opus 35, Book 2," and "Opus 31, Book 2," and after these are thoroughly mastered, one is ready for "Opus 6" and later for "Opus 29," 12 Etudes of considerable difficulty. Of his "Fantasias" the "Opus 1" is perhaps the easiest one, but withal quite effective. The second, third, fourth and fifth Fantasias, "Opus 7, Opus 10, Opus 11, and Opus 16," require more advanced technique. The "Variations on a Theme from Mozart, Opus 9" is one of the most effective of concert numbers and can be found in the repertoire of all the leading guitarists; this is true also of several of the Minuets in "Opus 11." Other numbers of outstanding merit are "Grand Solo (Opus 12)," "Sonata, Opus 15," "Grand Sonata, Opus 22" and "Second Grand Sonata, Opus 23." The "Opus 22" is undoubtedly his greatest work and demands the utmost technical proficiency and musical insight from the artist. While at first a student may find the music of Sor rather difficult, he will soon discover that the left hand fingerings employed will prove logical and practical.

# QUESTIONS and ANSWERS

A Music Information Service Department  
Conducted Each Month

By KARL W. GEHRKENS

Professor of School Music, Oberlin College  
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## Runs in Mozart Fantasia.

Q. 1. Please tell me how measures 34 and 35 of Mozart's Fantasia in D minor are played. Are the notes played evenly, or is a group of notes played faster than a group of four. Is the first note of each group accented?

A. 1. A chord is too large for small hands, it is allowable to leave out a note and play it with the left hand, as in the eleventh and twelfth measures of Beethoven's "Sonata, Op. 7, No. 1" (first movement).

2. These three measures from Beethoven's Sonata, Op. 28 puzzle me. Are the figures marks of fingering? If not, what are they?—Miss D. McK.

A. 1. These runs should be played quite evenly; at least, there should be very little extra accent on the first note of each group. In the first run (Measure 34) I should say the C-natural is the most important note. Also in the second run each C-natural is important, as it is at the top of the hill, so to speak. There should be a little crescendo up to that point.

2. This is often permissible, but in this case it is better to roll each chord containing the melody note (quarter note). This quarter note can be released by the hand immediately, as it is being sustained by the pedal. This makes the passage simple for any size of hand.

3. These figures point out the fingering. Often in descending diatonic runs, only the figures 3 and 4 are marked; in fact, that is all that is necessary, as all we need to know is which finger passes over the thumb.

## Diminished Intervals.

Q. 1. I am having some difficulty in writing doubly diminished and doubly augmented intervals. Would you kindly write several and possibly make a statement about them?—J. P.

A. Doubly diminished and doubly augmented intervals are theoretically possible but are rarely encountered in actual music. For a good discussion of these unusual intervals I would refer you to "Manual of Harmonic Technique," by Donald Tweedy, page 16. The examples printed below will also help you.

## The Pedals of the Piano.

Q. 1. Will you please give me help and instruction on the pedals of the piano?

A. Please give the names of books on the use of the pedals which would make a good course in pedaling?—L. M. T.

A. 1. The right-hand pedal is called damper pedal, and its function is to lift or push the dampers away from the strings when the player wants all the strings to vibrate; and to press the dampers against the strings again when the player wishes them all to stop vibrating. If you will take off the front of your piano and observe how each damper works when you strike just a single key, and how all the dampers move back and forth as you work the damper pedal, this will become clear to you. The usual principle is that the pedal is released with each change of harmony, so that the music moves clearly from chord to chord without blurring.

The left hand pedal on the upright piano moves the hammers closer to the strings, so that each hammer thus has a shorter swing and consequently produces a softer tone. On the grand piano the pedal shifts all the hammers to one side so that each hammer strikes only two of the three strings, thus producing a tone that is softer and somewhat different in quality.

2. Write to the publishers of THE ETUDE for a good book of elementary pedal exercises.

## Is "Souvenir" in Three-Four or Six-Eight Rhythm?

Q. Why is the *pia animato* in Souvenir by Brahms in six-eight time? Are measures 6, 7 and 8 in three-four or six-eight time?—Miss M. B. H.

A. I do not know to what edition you are referring. I have three different editions before me and all three have this piece in three-four measure throughout. Neither is there any *pia animato* marked, but I suppose it is the part marked *in poco pia vivo* in my copies. If your copy is marked six-eight it must be wrong.

## Four Against Three.

Q. In Chopin's "Minute Waltz," measure 46, would you explain the meaning of the "4" connecting two notes, C and D. How is the measure played?—Mrs. E. J. V.

A. The "4" does not connect the notes C and D. It merely indicates that the right hand is playing four notes against three in the left hand. To find the exact position of these notes count twelve (the common multiple of three and four). Each note in the right hand then has three counts and each note in the left hand has four. The notes in the treble come on counts 1, 4, 7, and 10; the bass notes on 1, 5, and 9. This waltz actually has but one beat to the measure. If you think of it in this way you can probably sense the rhythm. If you cannot do this, play the second beat of the bass between E and D, and the third beat between D and B. Sometimes this measure is written as follows:

## What Is Hand Touch?

Q. 1. In Czerny's "School of Velocity Op. 299," No. 6, the heading is marked non legato. What is the non legato touch and how is it played in rapid passages?

2. Modern teachers speak of "hand touch." What is hand touch? And is it used especially in rapid scales?

3. Why are the fourth and fifth tones of the diatonic scale called perfect intervals, since all are imperfectly tuned except the octave?—B. H.

A. 1. Since the piano tone continues to sound for a brief instant after the key is released, non legato (not legato) is impossible in rapid runs; certainly, it would be impossible with a tempo marked 208 quarter notes to the minute.

2. Hand touch is not used in rapid scales, but in slower passages of a melodic character. The hand is used in making the tone instead of the fingers. In rapid runs only the fingers are used with action at the knuckles. The faster you play the less hand action is used.

3. The fourth and fifth of the diatonic scale are called perfect intervals because, when inverted, they do not change their character. Minor intervals when inverted become major and major intervals inverted become minor. These are of course merely names.

## How to Play A Turn.

Q. I have been a subscriber to THE ETUDE for many years and have always found the Question and Answer Department very interesting. Now I have some questions of my own which I should like answered.

1. Am I right in thinking that the second G marked X which appears tied is played, but lightly?

2. The first note E in the right hand is the same as the second note in the left hand. In the right hand lifted to allow the left hand to play it?

3. Would you play the turn as I have written it out or should it be played four notes in the right hand to three in the left hand? Would the way I have written it be considered all right for a young student?—Mrs. J. B.

A. 1. Yes.

2. Yes.

3. It is correct as you have written it but it might also be played as four sixteenth notes against the sixteenth note in the left hand. It depends on the tempo. Probably your way as in the example, is best. Your suggestion of playing the turn against three notes in the left hand involves the problem of three notes in one hand against four in the other, which is always more or less difficult.

# Chicago Conservatory

Established 1857

Your musical education at Chicago Conservatory will be directed along sound educational lines combined with the highest artistic standards. For 82 years this has been the reputation of this nationally recognized institution—a reputation that lends immediate prestige to its graduates.

Courses in all branches of Music and Dramatic Art leading to Bachelor and Master degrees. Piano, Voice, Violin, Cello, Orchestral and Band Instruments, Organ, Public School Music, Dramatic Art. Special courses in Harmony, Counterpoint, Composition, Orchestration, Ear Training, Normal Methods.

## SCHOOL FACILITIES

Noted faculty of 165 teachers  
60 studios with finest physical equipment  
Theatre seating 350  
Library  
Located in the musical center of Chicago.

## STUDENT APPEARANCES

All students make public appearances in the Conservatory's Little Theatre. Contacts also made for radio and concert appearances of advanced students.

## FALL SEMESTER STARTS SEPTEMBER 11

Institutional Member of the National Association of Schools of Music

Dormitory accommodations. For full information write to Jeanne Howard, Registrar, for new catalog E. T.

25 E. JACKSON BLVD., CHICAGO, ILLINOIS

# OBERLIN CONSERVATORY OF MUSIC

A Division of Oberlin College

Thorough instruction in all branches of music... 46 specialist teachers... excellent equipment... concerts by world-famous musicians and organizations... weekly student recitals... for these reasons Oberlin attracts serious and talented students. Degrees: Mus. B., School Mus. B., A.B. with music major. Write for catalog.

Frank H. Shaw, Director  
Box 579 Oberlin, Ohio

# SCHOOL OF MUSIC OF THE UNIVERSITY OF MICHIGAN

Complete curricula leading to degrees in all branches of Music. Faculty of distinguished artist teachers. Concerts and May Festival by world's greatest artists and organizations in Hill Auditorium seating 5,000. Chorus of 350; student symphony orchestras, glee clubs, bands, etc. Recitals each week on \$75,000 organ.

Fall Term begins  
September 25th

CHARLES A. SINK, President  
Box 1004, Ann Arbor, Michigan

## The Threshold of Music

(Continued from Page 440)

marked x it has shifted to the relative minor (dominant triad of A minor). But the next measure witnesses a strange transformation. The note G-sharp is rewritten A-flat, and we find to our amazement that we are progressing rapidly into the key of C minor (a shift to the tonic minor of our original key). Y marks the tonic triad of C minor; but with the next chord we are off again, and a moment later the versatile diminished seventh swings us once more into the key of A minor (the relative minor, again). Our moment of landing is at Z.

If the Tonic Minor is considered a first cousin, the Relative Minor certainly deserves to be rated as one, too. The tonic minor, you remember, had brother and sister: keys (dominant minor and subdominant minor). Similarly, the relative minor has its brother and sister keys, which are also cousins to the original key. Here they are:

The Relative Minor of the Dominant—the key whose tonic is the third note of the major scale which was our original point of view—the key of Mi. In the key of C, the relative minor of the dominant is the key of E minor. Its tonic, the triad of E minor, is already a member of the C major family of triads, so modulation is fairly simple. For instance, in the *Waltz No. 15*, in A-flat of Johannes Brahms, we have

Ex. 8

A-flat Major: 1 5 1 4  
C Minor: 6 4 6

6 1 3 4 6 1 5 1

The modulation here, as you can see from the chart, is from A-flat major to C minor.

The Relative Minor of the Subdominant—equally a cousin, and an equally hospitable host to visit. Its tonic chord is the minor triad on Re. Like the other two relative minors, it is to be found as frequently as daisies in a hayfield. Pick up a college song book, or a volume of Chopin piano pieces, or a selection of the latest dance hits; and you will find examples by the dozen.

Here is one from the classics. It will be found in *Abendlied*, from "Twelve Four-Hand Piano Pieces, Opus 85" by Robert Schumann.

Ex. 9

C Major: 1 5 1 4  
D Minor: 5 2 1

## Cousins Once Removed

AMONG THE MORE distantly related keys are the ones which have no direct relationship, but are "relatives of relatives." "Family connections" we should call them, properly speaking.

For instance, between C major and E-flat major there is no direct relationship. The two keys have different scales, and they have not a single chord in common. But they have a common relative: the key of C minor. This mutual cousin is the tonic minor of C major, and it is also the relative minor of E-flat major. This is enough to establish an indirect relationship. If you stop to figure it out, it will be found that E-flat major is the relative major of the tonic minor of C major.

(Continued in THE ETUDE for August)

## The "Musical Lighthouse" of New York's East Side

(Continued from Page 476)

themselves in the plan of fostering a music school which could serve the needs of the community as a whole, together with those of its pupils. Discover exactly what the musical needs of the territory are, and see if these various and separated agencies cannot come together in filling them.

"The financial end of things would present an initial problem, of course. We of the Music School have not completely solved ours. Thus, a practical 'starter' would be a small music department within the settlement house itself. In such a way, space could be obtained cost free, while the entering wedge into the musical needs of the community could be inserted immediately. No matter how small a faculty of instructors, it would need to be assembled from among the finest musicians of the territory. The day has passed when social music could be entrusted to well intentioned workers with but a haphazard musical training. Community music needs alert, experienced musicians, the very best available. And get the work under way to a very small start. Group music should come first,

carrying the gospel to the many by means of an adult chorus, a children's chorus, an orchestra, and a band. Individual lessons would follow as a matter of course, after the ground had been broken and the neighborhood's interest had been captured.

"For it is the individual neighborhood group which remains the basic nucleus of national music interest. Here you will find your potential listeners, pupils, buyers, and teachers. The comparatively lesser group which patronizes professional concerts, and the still smaller group of performers, are never representative of the complete community needs. But these needs can be brought to reveal themselves to the skilled neighborhood worker; and, once they are realized and met, each individual community may look forward to better living, more disciplined thinking, and, best of all, more humanized, cooperative living. The highest hope I can carry for American music is a shifting of emphasis from over-professionalism, to personal participation in music shared as a common experience of life."

\* \* \* \* \*

Music—the most abstract of the arts—is deeply rooted in spiritual sources. When these sources fail, divine melody is no longer heard in the land. The heart withers; feeling is replaced by cerebral activity; inspiration by the ingenuity of the human mind. No matter how vast our technical skill, how enormously enlarged our knowledge of harmonic and rhythmic material—without the authentic voice our creations will prove lifeless, void.—Thilo Becker.

Write, "I saw it in THE ETUDE."

THE ETUDE

THE COVER FOR THIS MONTH—there is no better theme for world living than the desire to help one's generation prepare good things for the next generation and contribute whatever possible toward the betterment of things for that next generation. The picture used on the cover of this issue comes from the photographic library of H. Armstrong Roberts of Philadelphia. As far as we know it bears no official title. Very likely the first title that would come to the minds of many would be, "The Old Music Shopper." That would just leave it at a purely stage whereas a greater worth would be to carry it to the story stage. A good eye-provoking title would be, "From One Generation To Another."

The world of tomorrow will need thousands with a proficiency at the piano keyboard and at the organ keyboard. We need to measure our obligation to previous generations for the music benefits we enjoy in this age to show how great a gift this generation may give to the next in perpetuating the art of music through training children of today to meet the music needs of the grown-ups of tomorrow.

POEMS FOR PETER—by Lysbeth Boyd Borie, Set to Music by Ada Richter. A book of Rote Songs—Children and adults will love the gay, whimsical poems by this delightful delineator of child life. Since the first verses for Peter appeared in the leading magazines, and later in book form as *Poems for Peter* and *More Poems for Peter*, all have wanted to hear about Peter's experiences at the seashore, his visits to his grandmother's, and the simple little things that fill each day. Forum magazine says: "These irresistible verses which Lysbeth Boyd Borie has written for her small son have a disarming simplicity, a quaint imaginative twist, and are free from the simpering coyness which so often mars child poems."

In selecting verses for musical treatment, Ada Richter has chosen from among the many favorites of both volumes those that seem to be the most popular, at the same time considering which would lend themselves most readily to music. For the most part, the songs are very short and of course easy to sing. Familiar titles included are "Too Salty," "Peter Family Tree," "Who Do You Spoze?" "Too Expensive," "Only Just Me," "Greaty-Great Grannie," "Trains," "Lucky," and "Old Mister Ocean."

As a composer of music for children, Mrs. Richter has established an enviable reputation for herself. With her own experience as a music educator, she is well qualified to know what the child should and can accomplish in music. As would be expected, the music for these songs is written within the limited range of the child voice. The piano accompaniments are very simple, so that the average pianist can play them with ease.

Teachers and music educators in the lower grades seeking new and attractive rote-song material will do well to secure a first-from-the-press copy of this delightful book, which may be ordered now at the special advance of publication cash price of 50 cents for a single copy, postpaid.

WHEN THE MOON RISES, *A Musical Comedy in Two Acts, Book and Lyrics by Juanita Austin, Music by Clarence Kohlmann*—Good news! Another musical comedy by the writers of the already popular *An Old-Fashioned Charm* is announced for early publication.

Here we have another striking refutation of the general impression that "nothing ever happens" in a quiet, secluded neighborhood like that of a summer hotel in a rural district. How could it be otherwise in the exclusive, fashionable resort "Cedarglades" in the heart of New England? And who would think differently from a first glance at the simple setting of the hotel grounds with its background of appropriate shrubbery and the usual garden furniture in evidence?

However, things do happen almost as soon as the story opens. Into the midst of the aristocratic patrons enters a new guest—Jon Tarko, famous tenor and composer. Because he is of gypsy birth, the wealthy widow, Mrs. Spendwell, takes umbrage and threatens to

leave unless Tommy Rott, the assistant-assistant manager, gets rid of the intruder. Easier said than done! Mrs. Spendwell's daughter Arline is in love with Tommy Rott, who finds himself between two fires—his loyalty to the hotel, and his fear of losing Arline.

Jon meets Roger Lynne, an old friend who is engaged to Helen Brookes, daughter of the wealthy Aloysius Brookes, another guest. Roger has previously written the words to Jon's song "Carla," named after a gypsy girl of the tribe repudiated by Jon. When Jon sings the song, Carla, hearing it in passing and recognizing the voice of the singer, ventures into the hotel grounds to warn him of the anger of Paulo, the gypsy king. She finds only Helen; the two girls soon become friends and make a pact whereby each is to aid the other in a search for happiness. Later on the gypsies appear on the scene; the king can get neither Jon nor Carla to return to the camp. Finally, Paulo agrees not to make trouble till after the moon rises.

The uncertainty as to the time the moon does rise leads to many happenings, including the kidnapping of the queen of society. After a series of apparently insurmountable complications, the skein of events finally untangles itself and happiness appears in store for everybody when the moon rises.

This operetta is for presentation by high school and amateur groups; it requires five men and four women soloists, with short speaking parts for three men, and a mixed chorus suited to the size of the stage. The setting is simple, both acts taking place on the hotel grounds. The time is the present. The costuming of the hotel guests should be suitable to their social position, while that of the gypsies should be colorful and otherwise distinctive of their calling. Besides the overture there are sixteen musical numbers, including six solos, three duets, one quartet,

and a number of choruses, one being for men's voices.

Following the publication of *When the Moon Rises* there will be issued, for rental only, a stage manager's guide in which will be found full directions for costuming, dancing, lighting, and many other important details, the knowledge of which will aid in a better presentation of the work.

Those who found *An Old-Fashioned Charm* so delightful, and all who are interested in operetta productions now may order single copies of the vocal score of *When the Moon Rises* at the special advance of publication cash price of 40 cents, postpaid. These copies will be forwarded as soon as the book is printed.

### SYMPHONIC SKELETON SCORES—*A Listener's Guide for Radio and Concert* by Violet Katzner

|                                  |             |
|----------------------------------|-------------|
| No. 1 Symphony No. 5 in C Minor  | Beethoven   |
| No. 2 Symphony No. 6 in B Minor  | Tchaikowsky |
| No. 3 Symphony in D Minor.....   | Franck      |
| No. 4 Symphony No. 1 in C Minor. | Brahms      |

In preparing this important new series, it has been the purpose of the author to bring to millions of music lovers an understanding and enjoyment of the great symphonies through a simple melodic plan of analysis. To the uninitiated, symphonic music may sound like a confusing mass of tone. Such a musical conception is easily clarified, however, when one becomes familiar with a definite line of melody that is etched throughout an entire symphony.

To accomplish this, the author has isolated the unbroken melodies of the great symphonies and presents them in an easy-to-follow form, with just enough analysis to differentiate the themes without losing sight of the composition as a whole. As a further aid to enjoyable listening, the instrument, or instruments, carrying the melody are clearly indicated, so that the reader may follow the melodic "conversation" as it is tossed back and forth between the different instruments. The Symphonic Skeleton Scores thus become a unique guide for radio listeners, concert goers, students, and all who seek a genuine understanding of the great master works. They are excellent also for use with phonograph recordings. Their graphic but simple presentation makes symphonic literature accessible to everyone.

The series will comprise a number of separate books, each devoted to a single but complete symphonic work. The first four books to be issued are the favorite and most-often-heard works of the great symphonists Beethoven, Tchaikowsky, Brahms, and Franck, as listed above. Others will be added from time to time. Prior to publication, this series carries the hearty recommendation of the National Federation of Music Clubs, Child Study Association of America, Layman's Music Course, National Music Teacher's Association, Federal Music Project, and numerous outstanding musicians and educators of this country.

A single reference copy of each of the four books listed above may now be ordered at the low advance of publication cash price of 25 cents each; all four books, 90 cents, postpaid. When ordering, be sure to state which books are desired.

IT IS NOT TOO EARLY TO PREPARE FOR NEXT SEASON—Aside from incidental summer activities most music teachers at this time are enjoying a well earned period of relaxation and rest. It is characteristic of successful American professional and business men that they appreciate the value of a vacation. Nothing is more stimulating or invigorating, nothing so well prepares mind and body for next season's tasks, as a few months' respite from active teaching duties.

However, vacation frequently ends all too soon, and foresighted members of the teaching profession never enter upon a new season's work without adequate preparation. There are announcements of next year's classes to be mailed to prospective pupils, new music, methods and studies to be examined for possible inclusion in the teaching curriculum, studio decorations and equipment to be put "ship-shape."

Better to lay plans and to begin preparations now than to wait until the last week or two and then have to rush to have everything in readiness before students come for their first lesson. Examination of new material can be much more thorough when done leisurely. Why not order "on approval" material you intend to look over? Catalogs, thematic, and descriptive listings also are available from your dealer.

For years the publishers have been supplying announcement forms, teacher's publicity pieces and other dignified advertising literature for the use of members of the music teaching profession. Write to them for samples, if interested.

The past few seasons have seen a marvelous advancement in piano teaching material; the development of music instruction in our schools has been little short of phenomenal, and many fine choral numbers, instrumental solos, ensembles, methods and studies have been published. Look over these during leisure hours. Some may be just what you have been seeking.

### TWELVE MASTER ETUDES IN MINOR KEYS, *For Piano (Grade 6-8)* by Franciszek Zachara—Modern piano compositions require modern technical equipment, and this set of studies by the talented Polish-American pianist, Franciszek Zachara, presents invaluable practice material in the problems that are met by advanced students of the instrument.

There are octave and chord studies for both hands, arpeggio and rapid scale passages, intricate rhythmic designs and studies with chief emphasis on tonal production. These are chiefly in grades 6 to 8. The work will be issued in the *Musica Mastery Series* of copyrighted studies for piano students uniformly priced at 60 cents a copy.

In advance of publication single copies of Zachara's *Twelve Master Etudes in Minor Keys* may be ordered at the special cash price, 20 cents postpaid, delivery to be made when the work is published.

Some time ago we published the *Little Classics Orchestra Folio*, containing gems from the writings of the great classic composers arranged for playing by young organizations well along in the first year of their existence. The book was joyfully greeted and immediately adopted by school orchestra directors, everywhere. Its success prompted the engagement of Mr. Leidzén to make band arrangements of the same type of material, in the same grade of difficulty, and to distinguish the collection from the orchestra folio we have entitled it *All-Classic Band Book*.

ALL-CLASSIC BAND BOOK, *For Young Bands, Arranged by Erik W. G. Leidzén*—In his illuminating article on "The Band Repertoire" in the February 1939 issue of *THE ETUDE*, the able editor of the Band and Orchestra Department of that journal makes mention of the many fine band arrangements now available for concert organizations. The demand for this literature has come as a result of the development of music appreciation in the schools. The young instrumentalist joining the school band is not content to toot away on marches, his training and environment have created a taste for good music.

Some time ago we published the *Little Classics Orchestra Folio*, containing gems from the writings of the great classic composers arranged for playing by young organizations well along in the first year of their existence. The book was joyfully greeted and immediately adopted by school orchestra directors, everywhere. Its success prompted the engagement of Mr. Leidzén to make band arrangements of the same type of material, in the same grade of difficulty, and to distinguish the collection from the orchestra folio we have entitled it *All-Classic Band Book*.

Our editors have completed their work and copy has been placed in the hands of the engravers for making the plates. During this month, however, the special advance of publication cash price will remain in force on the following parts: C Flute and Piccolo, D-flat Piccolo, E-flat Clarinet, Solo and 1st B-flat Clarinet, 2nd B-flat Clarinet, 3rd B-flat Clarinet, E-flat Alto Clarinet, B-flat Bass Clarinet, Oboe, Bassoon, 1st E-flat Alto Saxophone, 2nd E-flat Alto Saxophone, B-flat Tenor Saxophone, E-flat Baritone Saxophone, Solo and 1st B-flat Cornet (B-flat Soprano Saxophones), 2nd B-flat Cornet, 3rd B-flat Cornet, 1st Horn in F, 2nd Horn in F, 1st E-flat Horn (Alto), 2nd E-flat Horn (Alto), 1st Trombone, 2nd Trombone, 3rd Trombone (all Bass Clef), 1st and 2nd Trombone (Treble Clef), 3rd Trombone (Treble Clef), B-flat Bass Saxophone or B-flat Bass), Baritone (Bass Clef) (Euphonium), Baritone (Treble Clef), Basses, Tympani, Drums, Conductor's Score (Piano).

Copies of these parts may be ordered now at the pre-publication price, 15 cents each; orders totalling 25 or more parts at 10 cents each; Conductor's Score (Piano) 25 cents, postpaid. Delivery will be made when the work is published.

### OUT OF THE SEA, An Operetta for Children, In One Act, Music by Lily Strickland, Book and Lyrics by Ethel Watts Mumford—Very satisfactory progress is being made in the preparation of this work for publication and scores should be available in ample time for the opening of the school season. Grade school teachers planning an operetta production for next season will find this one of the most interesting presented in years.

Naturally, Lily Strickland's talent for writing tuneful, yet worthwhile music will lead music folk to expect a much-better-than-average score, but in this operetta they also will be delighted with the fascinating story, a fantastic tale that should hold audiences from curtain to curtain. The unique combination of sea-folk and land-people in the cast of characters gives rise to many humorous situations punctuated with sparkling dialog.

The music is well within the capabilities of young performers. The solos are easy to sing and all are within a medium range of voice; the choruses are either in unison, or in simple two-part form. The staging, while presenting opportunities for a colorful and elaborate setting, also may be quite simple and inexpensive. Incidentally, full directions for staging, costuming and dancing are included in the book.

Single copies of *Out of the Sea* may be ordered now at the special advance of publication cash price, 35 cents postpaid, delivery to be made when the book is off press.

**THE YOUTHFUL BARITONE, An Album of Songs for Studio and Recital—**By the time the schools open in the Fall the publishers hope to have copies of this volume ready for high school and college baritones to begin work in preparation for the solo assignments they may be given during the concert season. The editors have about completed their selection and, as there will be few mechanical details to look after, it should not be long before the collection is placed on sale.

While the songs included have been selected primarily for young singers whose complete baritone range has not been fully developed, they also should prove of interest to more experienced singers for use as encores and program group numbers. The best contemporary composers have been drawn upon for material and the songs, both text and music, will prove acceptable for recital use.

In advance of publication copies of this book may be ordered at the special cash price, 35 cents postpaid.

**THE YOUTHFUL TENOR, An Album of Songs for Studio and Recital—**The period when a young man's voice has just changed from treble quality to the masculine tenor is one in which the greatest care should be taken to avoid singing songs that make undue demands on the voice. Songs in which the tessitura is too high may be definitely harmful. Experienced teachers recognize the necessity for this care and ever are

on the alert for songs that safely may be given to these young tenors.

Of course, there are some high notes in the songs in this collection, but these are reached logically and without placing a strain on the singer. Sometimes an alternate note is suggested. The texts of the songs chosen for inclusion in the contents of this book are suitable for use at any public appearances the youthful artist may be called upon to make. This feature, and the musical worth of the numbers, will make the volume equally attractive to more experienced singers, as well as to beginners.

Single copies of this book may be ordered now at the special advance of publication cash price, 35 cents postpaid. Orders will be filled when the book is published.

**ADVANCE OF PUBLICATION OFFERS WITHDRAWN—**Teachers of the piano and school music instructors who plan ahead for next season will be glad of the opportunity afforded them this summer to examine two new works to be published this month. The books have enjoyed an exceptionally large advance sale, showing that there is a market for works of this type and that teachers, everywhere, are acquainted with the talents of the noted American women composers who made them. As these volumes are now placed on the market copies may be had from your local dealer, or for examination from the publishers. The special advance of publication prices are withdrawn, of course.

*Play and Sing*, by Ada Richter is a book of favorite songs in easy arrangements for the piano made because of the demand created by the author's immensely successful *My First Song Book*. This book, too, will contain 40 songs that everybody knows, classified as follows: School Songs, Songs of Other Lands, Songs of My Country, Songs from Operas, and Songs My Grandparents Sang Long Ago. The arrangements will be a bit more advanced than those in *My First Song Book* but well within the ability of second graders. Complete texts are given with each song. Price, 75 cents.

*Ten Studies in Black and White*, by Mana-Zucca is a new addition to the popular *Music Mastery Series* of piano studies. It supplies technical training needed by advancing students from grade 4 onward in a collection of appropriately-titled study pieces that many teachers will alternate with, or substitute for, the standard studies of Clementi, Loeschhorn, Heller, von Bülow and Cramer. Students will enjoy working on this set of studies by the composer of the well known *I Love Life* and other familiar songs. Price, 60 cents.

**THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES—**In the past few years there has been a trend toward summer operas, and concerts given in the open. This movement includes not only such endeavors as those sponsored by the larger cities but also band concerts which are a tradition in the average small town. In the more pretentious stadia some of the greatest artists in their particular field participate.

This kind of musical entertainment appeals to many because music and nature are akin. Perhaps this is how the composers have felt and it is interesting to note how many of their works deal with the Great Outdoors.

No doubt many readers of *THE ETUDE* will attend these open air concerts, where music of some of the earliest composers, as well as that of the "moderns," is played by men and women who have carved a niche, no matter how small, for themselves in the music world. Would it not be interesting to know something of these various people?

*THE ETUDE Historical Portrait Series* gives just that. Every month there is a set of 44 pictures with brief biographies for each. This portrait series is being presented alphabetically and although nearing completion, copies of back issues are available at the nominal cost of 5 cents for one sheet. They will prove invaluable not only in adding interest to your summer concerts but also as handy additions to your reference library.

**THE TIDES THAT MOVE—"How are you ever going to sell all of this music?"** asked a visitor being shown through the reserve stock room floors for the publications in the catalogs of the Theodore Presser Co., the Oliver Ditson Co., and the John Church Co. The reply given was, "despite the fact that this seems like an overwhelming lot of music publications, all of these reserve stock shelves would seem very denuded in two years' time if no new printings were made of any of these publications in that period."

Just as in deep waters there are moving tides not discernable to the eye so it is with these stocks. When some publications get down to the last three or four thousand copies we must order another edition so that there will be no hold-up of orders several months hence through lack of copies on hand. Other publications may reach points of only two months' stock on hand, when their quantities are down to between three and five hundred copies some may be even less, but always there is the constant adding of new printings to these reserve stocks.

Following is a list of interesting numbers selected from many publications represented in printing orders during the past thirty days. These publications may mean more than a list of titles to any teachers or active music workers if any such individuals desire to avail themselves of the Theodore Presser Co.'s readiness to extend examination privileges on a complete copy.

| SHEET MUSIC—PIANO SOLOS |                              |       |        |

**THEODORE PRESSER CO.**  
1712 Chestnut Street, Phila., Pa.

**HERE'S A MUSICAL BARGAIN FOR YOU—**During the months of June, July and August we offer to non-subscribers *THE ETUDE* a special three months get-a-quieted subscription for the summer issue at a price of only 35 cents. Every music lover is thus given the opportunity at little cost, to learn the value of *THE ETUDE* MUSIC MAGAZINE. Orders filled promptly as received. When the issues are exhausted, no more subscriptions can be accepted. Send your 35 cents in cash, money order or stamps NOV Canadian subscribers please include 10 cent additional to cover Canadian mailing expense.

**FINE MERCHANDISE GIVEN AS REWARDS FOR SECURING SUBSCRIPTIONS TO "THE ETUDE"—**All articles offered are of standard merchandise and you will be pleased with any selection you make. Here are a few rewards offered:

**Flashlight:** All metal, chromium-finish complete with bulb and battery. A surprise gift for boys—a practical present for grown-ups. Your reward for securing two subscriptions.

**Correspondence Case:** This handy Case has a sturdy leatherette binding and includes a pad of writing paper, calendar, envelope, pocket and pencil or pen holder. Closed, it measures 6" x 8 1/2". Awarded for securing one subscription (not your own).

**Bon Bon Dish:** This footed Bon Bon Dish will come in very handy as a container for shelled nuts as well as all kinds of candy. It is 5 1/2" in diameter and has a bright chromium finish that will not dull or tarnish and can be kept clean simply by washing. A splendid "little" gift—another fine prize. Your reward for securing one subscription (not your own).

**Leather Wallet:** Fine leather Wallet with zipper fastener. Includes an open face pocket for license cards, a coin pocket, another pocket for calling cards, etc. Your choice of black or brown. Given for securing one subscription (not your own).

**Ladies' French Purse:** Here is a compact combination purse and bill fold. Closed, it measures 4" x 3". Opened, it reveals two pockets for bills or memos. It is made of moire silk and comes in two colors—choice of brown or navy blue. Your reward for securing one subscription (not your own).

**Penc-L-Knife:** This unique combination of pencil, knife and nail file can be carried in the vest pocket or purse and will prove a real convenience to the possessor. The pencil is no heavier than the average, the stainless steel knife blade has a keen edge and the nail file is sharp and efficient. Your reward for securing three subscriptions.

**FRAUD AGENTS—**For months we have been advising music lovers to exercise every care in paying money to strangers for subscriptions to *THE ETUDE*. Beware of the man who offers you *THE ETUDE* at a cut rate, or makes special concessions. Carefully read any contract or receipt offered you. Regularly accredited representatives of *THE ETUDE* MUSIC MAGAZINE carry the official receipt from the Theodore Presser Co., publishers of *THE ETUDE*. Assure yourself of the responsibility of the canvasser. We cannot be responsible for money paid to persons not authorized to represent us.

### A Text Book for Students of All Ages—

### HARMONY BOOK FOR BEGINNERS

By Preston Ware Orem (Mus. Doc.)

Many students and teachers of music, wishing to "brush up" on the fundamentals of this fascinating subject, have utilized leisure time during the summer months for self-study with *Orem's Harmony Book for Beginners*. It is a harmony book WITHOUT RULES, presenting accurately everything from the rudiments up to and including the dominant seventh chord; all in non-technical language. Filled staves are supplied, right in the book, for writing out all of the exercises. This, of course, makes the volume valuable for future reference. A knowledge of harmony is an asset to every student as it enables one to "think musically."

# The Abandoned Farms of Music Education

(Continued from Page 439)

back to the music of former days not will awaken pleasure, but it also will a new measure of mental health and ighth. Try it and see! You will remember means and faces all the more readily e bringing back to your fingers and bs the liltng classics of olden times.

## IV—Distribute Effort

ESSENTIAL FACTORS of music, with h the world's greatest orchestras and ists create their surprising effects in ormances, are employed by you at the o—let your technic be as simple as it . What we all need is to know those ers in wider application than we can e them ourselves. That is the spread applied. There are five of these factors: lody, Rhythm, Meter, Harmony, and po. With these, colored by our own er feelings, we "interpret." Mr. Paderew- does no more; and you do no less. But ust as one essential of learning five new ds in a foreign language is to hear them d by skillful word handlers, so the full ret of these five factors of music is never y revealed by what you, individually, with them. To put it practically—*You st hear them done.*

o-day we may avail ourselves of that rvelous privilege. Assign yourself lessons music observation. You turn on your io—to the best music of the day's offer-. On one day, listen to, observe, think out, sing along with, the Melody. (Item .1.) The music may be old or futuristic, may be the kind whistled by a barefoot r, or performed by an orchestra of a hund- d players plus a chorus of five hundred; there is always a tune to it. Listen in- tly to that tune. Try to pick it out at keyboard (one finger will be enough). ember that particular tune as long as can. Hum it to yourself. You are now e Land of Music, where the great ones e speaking its language to you. The ether about you is full of music. Your radio pick up a little of it. Use that little for it is worth. You have only to listen with same concentrated interest that impels hild to blow a whistle—and the world melody will become for you a wonder rld. And what is the benefit of that? It his: You will play every single melody t your fingers can master in the spirit, tion and manner of the greatest—be- se you are now getting to be on speak- (listening) terms with them. The logic it is amazingly simple: You play mel- es. In the ether of the room where you countless melodies are pouring in night day. Your radio can catch some of m. You may be this moment in the rthwest of the United States. The Phila- phia Orchestra is performing this present ment. You are studying melody and how play it. Tune in and listen. And just an- er word about melody before we go on the next factor. Let us notice that mel- es for the orchestra or piano are very ch like the fishes of the sea. Some swim the surface, but many others are way wn in the cool, deep waters of the bass— your left hand at the piano, and in the oncellos, double basses, and bassoons of orchestra. Don't miss them because they m deep!

If you will watch a master workman do- skillfully what you are trying to learn do, you will gather a lot of ideas as to y it can best be done. So with Rhythm. th all the emotional feeling removed, it a job to be done. Let us look into it. Rhythm is a particular motion of the tones. neone once said: "Rhythm is the long short of music." Not a poor definition, ause rhythm is the effect of combined e-lengths.

Rhythms vary enormously, yet each factor st sustain the music in perfect balance.

Turn on the radio again. Your teacher will sanction this, because the Philadelphia Or- chestra, to which you are listening, will illustrate more rhythmic figures in a half- hour than most of us would play in half a lifetime.

The harmonic effects you hear and pro- duce are the shifting lights of chord-change and chord-merging. It is difficult to listen intelligently to the harmonic effects of even simple music. But, if you will actually lis- ten to the chords you play and not exclu- sively look at them on paper, the secret of their effects will begin to emerge.

If rhythm be the "go" of music, *tempo* is the speed of that "go." Most amateur players, and many professionals, habitually play too fast. Speed is a subtle temptation. The orchestra, the great (the truly great) soloists have a poise, an ease of manner, a

upon the pedal or off, just remember that what settles all of these matters is the con- tinuity of effort that keeps on—determined to understand them. It can be done.

Count with the playing. You are then learning the uniform metric base of the rhythmic motion. And these two factors will become more and more familiar to you as tools for your music-making. Keep up the practice. You (we all) need lots of it! And just here one may appropriately point out that meters are no longer confined to twos, threes, fours and sixes. Quite common to-day are meters of fives, sevens, and of groups compounded of two (different) units: Thus we find five-four in Ferdinand Hiller's Op. 57

Ex.2

Allegro energico

SCOTLAND AT THE WORLD'S FAIR

Twenty-four, bright-eyed smiling Scottish lassies who have arrived from old Scotland to fill an engagement in the "Merrie England Village" at the New York's World's Fair.

rate of speed, all so perfectly balanced that you never suspect speed.

And in the matter of *tempo* do not over- look this fact: Most words used to indicate speed say nothing about speed. For ex- ample: *Allegro* never in this world meant "fast." It means cheerful, merry. *Largo* does not mean "dead slow," as many think. It means broadly, ample, with largesse. *Adagio* says nothing about how fast (di- rectly). It means at ease. *Andante* is just a plain direction to play at a walking (andante) *tempo*.

## V—The Fruits of Labor

YOU ARE RENEWING a joy of youth. A teacher, it is to be hoped, is guiding your efforts. A new world of music, that lies just beyond the threshold of the one you used to dwell in, opens before you. It is a world whose mysteries abound in common sense; to delve into which pays the hand- somest dividends. If you appreciate music—with delight in its experiences—remem- ber ever that love for anything never runs smooth and unimpeded. You will have to pay tribute for all you get. But note this— from the pen of one (Dr. L. P. Jacks) who is wise beyond his generation: "True Love" (it may be of music) "is not the love that meets no obstacles, but the love that can triumph over every obstacle."

Then, if there be stumbling of the fingers at the beginning, slowness in note reading, uncertainty as to whether to keep the foot

as well as such combinations as

Ex. 3

Allo scherzando e vivace

Also seven-four rhythms are occasion- ally discovered.

The Russian composer, Vladimir Rebi- koff has a most charming piano piece in eleven-eight rhythm, and easy to play. This quotation shows how reasonable it is:

Ex.4

Observe that Number 1 of the quotation is a combination of  $\frac{5}{8}$  and  $\frac{6}{8}$  while Number 2 is  $\frac{6}{8}$  and  $\frac{5}{8}$

Always remember that the rhythm of a

composition is the "go" of it That spirit of "go" may be as prosaically plain as a tune in half notes throughout. Or it may be the riot of motion made by a jazz band. The radio will pour into your conscious- ness every variety of it. You may think you have already listened to rhythmic ef- fects. But not until you tie that listening into your own finger motions will its secrets be revealed. You must listen to rhythm as one who makes it. It is amazing to note what is revealed when we study what we think we know.

## The World of Music

(Continued from Page 426)

RAYMOND E. DURHAM, president of Lyon and Healy, Inc., since 1927, died sud- denly on April 2nd, at the age of sixty-two, at Chandler, Arizona, where he and Mrs. Durham were on vacation. Mr. Louis G. LeMair, vice-president and general manager since January 1, 1935, of this great music concern, has been chosen to become Mr. Durham's successor.

COMMEMORATING THE TERCEN- TENARY of the birth of Racine, after a performance of "Der Rosenkavalier" of Richard Strauss, at the Monte Carlo Opera House on the evening of March 11th, there was a presentation of "Athalie," an opera in three acts with its poem by Racine, for which Handel wrote the music in 1733.

JOSEPHINE STILLWELL, music teacher for more than half a century, including all but the last few months of her life; founder of the two largest music clubs of Crawfords- ville, Indiana; and for much of this period a subscriber to The Eude Music Magazine; died there on January 13th at the age of eighty-five.

A NO-DEFICIT ORCHESTRA has had several years of existence at Wheeling, West Virginia. It is known as the Civic Symphony Orchestra of Wheeling, operates a full winter and summer season on Four Hundred Dol- lars, and was organized and is led by Pietro M. Selvaggi, an instructor in the Public School system of the city, with the assis- tance of Irwin Fluharty, a newspaper man active as a musician.

THE WAGNER SOCIETY of Amster- dam, Holland, has given a production of "Mathis the Painter," by Paul Hindemith.

RUSSELL KING MILLER, widely known musician of Philadelphia, passed away on May 3rd, at the age of sixty-seven. In a half century of activity as organist, con- ductor and composer, he had officiated in some of the city's most prominent churches; had led choral organizations; and, among compositions, his "Festival March" won in 1893 the prize of the American Guild of Organists for the best organ work sub- mitted.

THE MOZART SOCIETY OF SCOT- LAND, organized three years ago for the purpose of giving annual festivals of the master's works, presented on February 25th a program of music for the stringed instru- ments; on March 3rd a program of quin- tettes, in G minor and D major by Mozart, and in C major by Beethoven; and on March 3rd a varied program.

HARRY BRANT, young American com- poser of New York, has been awarded the prize of one hundred dollars offered by the Society of Professional Musicians for a com- position for chamber music combination of instruments.

"PIMPINONE," a three act chamber opera by Telemann, a contemporary and rival of Handel, had three performances in April, by the Music Department of the University of Chicago.

MME. NORMA K. LUTGE, America's first woman impresaria, who discovered the talent of Kubelik and Gabrilowitsch, her early pupils, died March 30th, in Los Angeles. She presented the first symphony orchestra heard in San Francisco; and she brought to America for the first time the Philharmonic Orchestra of Leipzig.

# THE JUNIOR ETUDE

Edited by  
ELIZABETH A. GEST

## Who Am I?

By Gladys Hutchinson

WHEN A SMALL and informal recital party is forthcoming, the game of "Who Am I" should be planned and prepared in advance. It is fun as well as informative.

Prior to the meeting each participant should prepare a paper of facts about an interesting composer, without letting any one know the composer he selects.

At the party the papers are read in turn; and during the reading the other players try to guess the name of the musical person being described. The one who guesses the greatest number of names wins.

The paper prepared should be something like this:

### Who Am I?

I was born in Poland seventy-eight years ago and studied music, when a young boy, at the Warsaw Conservatory, and later taught piano there.

I went on my first tour as a concert pianist at the age of sixteen; but it was not until I was thirty-one years old that I first played in America. Since that time I have played there many, many times.

I am also a composer as well as a concert pianist; and everyone at some time or other has heard my *Minuet l'Antique*.

Who am I?

## Musical Fan

By Aletha M. Bonner

A lively, tuneful Spanish dance;  
Some music that's form free;  
A blaring burst of trumpet tones;  
Now can you name these three?  
Fandango; Fantasia; Fanfare

## A Musical Puppy

By Carmen Malone

When Sue first played her violin  
(She plays each day from five to six)—  
Her puppy raised his head and howled,  
For sharps and flats don't mix;  
Especially when those sharps and flats  
Are played instead of what should be!  
And squeaks and groans come in between,  
From up-bow movements, constantly.

Sue practiced faithfully and long,  
And now, when she begins to play,  
Her tones are smooth and deep and true.  
Her puppy comes in every day  
And seats himself upon the stool  
To notice if she's playing well;  
Sweet violin tones are his delight.  
And she's in tune, he's pleased to tell!

## The "Fate" Symphony

By Nellie G. Allred

"DID MISS CARSON give you a new piece?" Sue ran out of the house and called to Carol, who was tramping home through the snow from her music lesson.

"Yes," Carol answered.

"What is it? Come in and tell me about it."

Carol ran across the street to her chum's house. The girls went inside to where the piano stood. Carol took her new piece from her music bag and placed it on the piano.

"It's a selection from Beethoven's 'Fifth Symphony'—the 'Fate' symphony. Listen, here is Fate knocking at the door."

And she played the first few measures of the right hand part.

"The 'Fate' symphony," Sue repeated, "I believe I've heard of it somewhere."

"Of course you have. We heard the *First Movement* in our Music Appreciation class at school last year. Remember?"

"Slightly," Sue answered. "But I seem to have forgotten most everything about it."

"Well," Carol began, "It is the fifth of the symphonies that Beethoven wrote. And of course you know Beethoven was the greatest master of the symphony the world has ever known."

"Even I know that," Sue admitted.

"And it is in the key of C minor. It has three flats, see?" And Carol pointed to the key signature on the sheet of music. "It has four movements, as all symphonies do—an *Allegro*, or fast movement; an *Andante*, or slow movement; and instead of the third movement being a minuet, like the third movement of most symphonies, this one is a *Scherzo*, or playful piece; and of course the fourth movement is the *Finale*, and is played quickly, like the first one. The *Finale* to this particular symphony is a mighty song of triumph—the triumph of Man's

struggle over Fate. In the three preceding movements, Fate has almost overcome Man. But in the last movement Man overcomes Fate, and Miss Carson says that this song of triumph is really the most beautiful movement of the whole symphony. She said she believed the State Symphony Orchestra would play the "Fifth Symphony" at its concert next month, and for me to be sure and pay particular attention to the last movement. She played the beginning of it for me, and it went something like this," and Carol played a few phrases with one finger.

"I have my lesson Saturday," said Sue. "I wonder if Miss Carson will give me the same piece you have."

"Maybe so," Carol answered. "Why don't you tell her you want to learn it."

"I think I shall. Since you've told me so much about it, it will save her a great deal of trouble, explaining it to me. Did she tell you anything else about it?"

Theme of Last Movement

"She said that the autographed copy of the 'Symphony' is in the music department of the Prussian State Library in Berlin. It was a present, in 1908, from the family of Felix Mendelssohn."

"I hope the orchestra does play it next month," said Sue, wistfully. "I'd like to hear it all the way through."

"So would I," Carol agreed, as she folded her music and placed it back in her music bag. "But now I'd better get home and learn to play this theme instead of wondering how the whole symphony will sound."

## For Musical Machinery Out-of-Order

By Marjorie Knox

JOHN was very much disgusted, when he came home from school one afternoon, because his older brother, George, had his cut down car parked in the middle of the driveway, so that he couldn't get past with his bicycle. George apparently had taken the whole engine apart, for all around him seemed to be tools and machinery parts. John stopped to see what was going on; he found his brother busy examining every engine part before he put it back in its place. When he had finished, he said:

"Listen, Johnny! Those tappets don't make half as much noise as they did."

"Yeh," snickered kid brother, "something about that rattle trap sure sounds better. But what did you do to it?"

"Well, of course, Johnny, you wouldn't know enough about a car for me to bother giving you the details. But the way to make anything go better is to take it to pieces

until you find the cause of the trouble, and then work on that part until you get it fixed." He started to pick up his tools, then added: "You might try it on your music sometime."

Johnny snapped his fingers. "Gee, I haven't practiced yet to-day. You've given me a swell idea! That new piece is hard, but I think I can get it all going fine if I take it, a few measures at a time and work on them until they sound right, then go on. I bet it won't be long until I can play the whole thing if I do it that way."

"I bet so, too, Johnny. Better hop to it right now and see if you can get your musical machinery put together as fast as I did."

Now John never learns a new piece without stopping wherever he finds a difficult place, and taking it apart, measure by measure, until he learns it. Try it yourself!

## The Fourth of July

By E. A. G.

*The Fourth of July  
Has a sound all its own,  
For firecrackers make  
An unmusical tone.*

*The Fourth of July  
Often makes lots of noise;  
It pleases some girls  
And it pleases some boys.*

*The Fourth of July  
Needs a musical sound;  
Let Nations sing forth,  
In sweet concord abound!*

## Letter to Mozart

By E. A. G.

DEAR WOLFGANG AMADEUS MOZART:

Here I am writing you another letter wrote to you once before, but that was quite a long time ago—several years, fact—so may be you do not remember.

Somehow I always seem to remember your names—I guess I must like the name of Wolfgang Amadeus, because I never remember the first names of Haydn and Schubert and some other composers. And then I have a sister named Nancy, and she reminds me of your sister called Naner and we play together just as you and your sister did, only my sister plays better than I do. For one thing, she has more time to practice, because now that I have started violin lessons, too, I have to practice violin. I can play some of your minuets on the violin, and I am glad you wrote some easy ones. And we both just love the *Minuet* from your opera "Don Giovanni."

My teacher says you were one of the greatest composers, because you were master in writing chamber music, symphonies, operas and piano works, and all the short life time of thirty-five years, from 1756 to 1791. You must have been busy at the time and just brim full of talent. How did it feel to have so much talent? That one feeling I will never have! I would be pleased to have just a wee speck; but, even without any, I am having lots of fun with music and enjoy practicing on the piano and violin, and my teacher says I am improving. Someday I am going to play your chamber music in trios and string quartets.

From  
JUNIOR

## Composer's Enigma

By Eunice C. Boyelston

My first is in *hat* but never in *cap*;  
My second's in *America* and also in *France*.  
My third is in *yellow*, but never in *green*.  
My fourth is in *dog* but never in *cat*.  
My fifth is in *nap* but never in *sleep*.  
(Answer Haydn)

# JUNIOR ETUDE—(Continued)

## Joseph's Vacation Hobby

(Just for Boys)

By Albertha Stoyer

"WISH I had an interesting hobby to spend part of my time on this summer," said Carl.

"Why not try the same one that I'm going to follow during vacation?" suggested Joseph.

"What is it?" Carl asked.

"Well, you remember how Mother promised two years ago that if I would study piano until I had a fair foundation in music she would buy me any kind of an orchestra instrument I want, and then let me join the junior orchestra class at school. The next year is up, and because I have worked hard at my piano I am to get the orchestra instrument this fall. Now," he continued, "I don't know which instrument I would like best, so I am dividing the summer vacation into four equal periods of time. During the first period I want to learn about the stringed instruments; the second period I will study the wood wind instruments; the third period, the brass instruments; and the last period, percussion instruments. By that time I will know what each instrument is like, and then I can select one."

"Your plan sounds very sensible to me," said Carl; "and, since I am to enter that orchestra class in the fall, I think I will follow your plan. How will we start?" he added.

"We can get books at the library on musical instruments, and also life stories of famous musicians who have played orchestra instruments. We can visit the local music stores and look over the instruments on display; we can listen to radio programs; we can attend local band and orchestra concerts, and we can get acquainted with the orchestra directors and players hanging around here," Joseph added, with growing interest.

"Couldn't we send to the instrument factories for catalogs?" inquired Carl.

"Yes, let's do it to-day," answered Joseph, "and tomorrow suppose we start learning about orchestra instruments by visiting the music stores down town!"

## Who Knows ???

How many symphonies did Haydn write?

How many thirty-second notes in a double-dotted half note?

What is the meaning of *poco a poco calando*?

Name three operas by Puccini.

From what is this melody taken?

What is the nationality of Paderewski? What composer was born in 1833 and died in 1897?

Who wrote the opera "Pinafore"?

What is meant by transposing?

If the submediant triad in a minor key consists of D-flat, F, A-flat, what is that minor key?

(Answers on This Page)

## Answers to Who Knows

1. One hundred and four; 2. Twenty-eight; 3. Little by little dying away; 4. Madame Butterfly; "La Tosca," "La Bohème"; 5. Schumann's Traumerei; 6. Brahms; 7. Brahms; 8. Sir Arthur Sullivan, a libretto by Gilbert; 9. Playing the same tones, relatively but in a key other than the one written down; 10. F minor.

## The Frog's Song

By Erna Kable

IT WAS the morning after Miss Day's pupils' recital. Suddenly Lillian and Mary, dragging Effie by the hands, burst into the studio.

Lillian's eyes were flashing, "Oh, Miss Day," she shouted excitedly, "Effie's not going to take music lessons any more! She says it's no use, she'll never be able to play like Clemence Lee, anyway."

Miss Day smiled. "Come, sit down. I want to tell you a story."

The three little girls sat down on the sofa, and then Miss Day began,

"One fine morning a redbird sat on the limb of a tree and trilled his morning song. 'How beautiful—how beautiful,' he thought when he had finished singing, and then he heard a queer noise.

"'Croak, croak.'"

"'Dear me, what a dreadful sound,' thought the little bird. He looked up and all around.

"'Croak, croak.' There was the noise again. The redbird looked down."

On a mossy stone at the edge of the pond

sat a great, green frog blinking his big, round eyes; and he said, "Croak, croak."

The redbird sighed, and then he said, "Dear me, Mr. Frog, why do you make that ugly noise?"

"Ugly noise?" the frog answered in surprise. "Why, I was singing my morning song."

The little bird was filled with disgust. He felt that something must be done, so he threw back his head and burst into his loveliest song. He trilled and he warbled to his heart's content; and then he said, "That, Mr. Frog, is a morning song. Now, you try to sing it."

The frog merely sat and blinked his eyes. Then the redbird said, "Come, come, Mr. Frog. Why don't you try?"

The frog blinked his great round eyes again and then he answered, "Poor little redbird, don't you know that my song is as beautiful for me as your sing is for you?"

Lillian and Mary and Effie looked into each other's eyes solemnly. Then Effie smiled at Miss Day. "I think Mr. Frog was right about that."

The little girls got up to go.

Effie said, "Thank you for the story, Miss Day. I'll come for my lesson in the morning."

\*\*\*

## Questions to Think About

1. Do you think Mr. Frog was right?
2. What did he really mean?
3. Do you think Mr. Frog thought his song more beautiful than the redbird's?
4. Have you ever felt like Effie?
5. What do you think the redbird thought?
6. What lesson do we learn from Miss Day's story?

DEAR JUNIOR ETUDE:

I have been taking THE ETUDE for two years, and I think it is about time I wrote to you to tell you how much I like it. When it arrives I can hardly wait to open it. Just think, I was wishing for a certain piece last month, and this month it was there! And I enjoy reading letters from other Juniors, in the Letter Box. How I wish some of them would write to me!

From your friend,  
GLADYS YOUNG (Age 15),  
Connecticut.

DEAR JUNIOR ETUDE:

I am a little girl, four years old and I enjoy music very much. I can sing and play the piano by ear, and can name over one hundred classics when my mother plays a few bars of them. I would love to come to your house and play for you and name some of the pieces you would play for me. I entertained the children at my sister's school during music week, and I enjoyed it very much.

From your friend,  
ROSALIE BINDER (Age 4),  
Pennsylvania.

Juniors of Joliette, Province of Quebec, Canada

As usual the JUNIOR ETUDE Contests are omitted during July and August. The results of the June contest will appear in November

## Annie's Composer Dolls

(Just for Girls)

By Riva Henry

"I DO GET SO TIRED of practicing my piano lessons on these hot summer days," Verna complained as she settled herself on the top step of Annie's shady veranda.

"I don't!" Annie answered without stopping her work of cutting out paper dolls.

"No?" queried Verna with a surprised stare. "And are you playing with paper dolls? Why, Annie, you're too old for that!"

"I know it," Annie replied. "But these are not just ordinary paper dolls. They are composer dolls."

"They must be something new," said Verna. "Do tell me about them."

"My piano teacher often tells me little stories about the lives of the composers whose works I am studying," Annie answered, "and I always had trouble remembering them. But now," she went on, "I've started collecting pictures of these composers, and when I can get them in the correct size I cut out the head and shoulders, and paste them on the tops of old paper dolls."

"And how does that help you to remember what your teacher has told you?" Verna wanted to know.

"Well," explained Annie, "after playing with them they seem like close friends to me. I keep them between the pages of a large note book, and whenever I learn something new about a composer I jot it down on his or her page."

"Another reason why I'm fond of these home made dolls," Annie added, "is because they have made my practice hour much more interesting."

"How's that?" inquired Verna eagerly. "I want to accomplish all I can in my practice hour, too."

"Every day before I begin practicing I gather up the dolls of all the composers in my lesson. Then as I play each piece or exercise I set its composer doll on the music rack of my piano; and really," she declared, "I'm a lot more careful about making mistakes with those picture dolls watching me."

"Not a bad idea at all," Verna admitted thoughtfully. "I think I'll try it myself!"

## Composer Initial Puzzle

By Dorothy Baker

THE initials of the following will give the name of a composer. Answers must give all words or names.

1. A percussion instrument; 2. A French composer; 3. A wood wind instrument; 4. A brass instrument; 5. A term meaning rather slow; 6. The first name of a contemporary pianist; 7. The surname of a contemporary violinist; 8. A double-reed wood wind instrument; 9. One of the world's greatest opera composers; 10. The composer of the "Unfinished Symphony"; 11. The colloquial name of the tympani; 12. A famous Belgian concert violinist and conductor.

## Answers to Composer Initial Puzzle:

1. Tympani; 2. Saint-Saëns; 3. Clarinet; 4. Horn; 5. Andante; 6. Ignace (Paderewski); 7. Kreisler; 8. Oboe; 9. Wagner; 10. Schubert; 11. Kettle Drum; 12. Ysaÿe. Initials give TSCHAIKOWSKY.

## A Genius Who Does Not See

(Continued from Page 434)

without melody means nothing. Melody is to music what the blood is to the human body. I truly believe that we are ready for a decided return to melodic inspiration and to general clarity and charm."

At this point of the conversation Alec returns to the piano, and he plays Chamade's always lovely *Automne*.

"I just love this *Automne*," he comments, while the melody sings under his fingers. "It is so atmospheric, so filled with the perfume of dying leaves, of wet forest lanes—I often play it for my own pleasure."

Alec Templeton believes that Debussy has been a chief factor in this century's musical evolution. "His influence has been very definite on all composers in the past twenty-five years," he states. "The most remarkable thing about it is that, regardless of nationalities or native characteristics, everyone has fallen under the magic spell. Debussy remains the most powerful force that ever swayed the world, musically speaking. Still, he did nothing toward that end, he was the opposite of an *arriviste* (one having 'arrived') and his music is apparently more for the elect than for the man on the street. Is it not extraordinary that he finally reached the heart of that very man? Now, the *Reverie* is hummed around corners, by people who remain in the dark as to the identity of its composer."

We now discuss the French school of to-day. "A distinction ought to be made," he continued in subtle jest, "between those who are sincere and those, such as Milhaud and Poulenc, who, I think, write with their tongues in their cheeks."

As he speaks, Alec branches into an improvisation in Poulenc style, such as, "Poulenc, for instance, invents a short but appealing little melody. He exposes it simply, but unfortunately he gets into unwarranted complications, changes of style, heaviness of harmonization, which are no longer in keeping with the character of the original. Milhaud, also a gifted musician, is liable to write one page of very attractive, fresh and spontaneous music, as he did at the beginning of one of his sonatas for violin and piano. Then we turn the page, and everything becomes aggressive, ear rending, in short, voluntarily ugly. No doubt such authors do that with a view toward 'knocking them cold.' Why don't they remain sincere, such as Ravel was? I am at a loss to explain."

### Approves American Music

Alec Templeton, of course, is an expert on jazz, and he thinks it will mark its stamp more and more upon the musical production on this side of the Atlantic. "The music of such American composers as George Gershwin, Cole Porter, Jerome Kern and Ferde Grofé," he declares, "is certainly very fine; and it will have a definite influence on music of a more serious character."

Here, and in order to emphasize the accuracy of the foregoing prediction, we must mention the name of John Alden Carpenter. The noted Chicago composer has written several compositions in which, indeed, there are unmistakable shadows of the higher type of refined jazz. Let us quote a few: the *Concertino*, for piano and orchestra; the *Diversion*, in G major for piano solo; and the stunning ballet, "Sky-scrapers."

In concluding, Alec Templeton turns back to classicism. "The various types of the so-called ultramodern music that I have listened to," he says, "make me more convinced than ever of the genius of the great Bach. All the harmonies which are now used, can be found in the works of Bach."

It was getting late and, although reluc-

tantly, I had to take leave. I carried away with me a deep and lasting impression of my visit with this young man of twenty-seven, so phenomenally endowed by nature. Alec Templeton has never in his life seen the sun, nor the moon, nor the stars. He does not know what light is. The names of the colors have no meaning for him. Still, he hears, he feels, he receives countless impressions; he evaluates, he comes to conclusions, with an accuracy that is a subject for wonder. Throughout his successes he has remained unaffected, simple and gentle. He is an authentic genius; a genius in the full and exceptional French meaning of the word *génie*.

And who knows? Perhaps it was God himself, who in His infinite purpose, took away Alec Templeton's sight, "that his soul might see."

## Recent Record Releases

(Continued from Page 432)

as a symphony conductor on radio makes him an ideal leader for recording.

Liszt's "Second Piano Concerto, in A major," is a richer and more poetic score than his "First Concerto." Heard less frequently in concert, it is undeserving of its neglect. Based almost entirely upon one theme, it has been called "The Life and Adventures of a Melody." The concerto is in one movement, although divided into sections suggestive of movements. One critic has written of this music: "Never has Liszt rioted more unreservedly in fitful orgies of flashing color. It is monstrous, formless, whimsical and fantastic, if you will; but it is also magical and gorgeous as

anything in the Arabian Nights." Petri plays this work so superbly, hardly knows where to begin praise. (Columbia set 362).

Felix Weingartner gives us the vital and ingratiating performance of Beethoven's "Fidelio Overture" (Columbia 69545D) to date; and Arthur Fiedler sends competent, straightforward renditions of Ravel's *Bolero* and Halvorsen's *March of the Boyards* (Victor set M-13). Of interest, since both compositions represent trends in contemporary music, are Scherzo from Carl McDonald's *Symphony* and Menotti's *Overture "Amelia Goes to the Ball"* (Victor 15377). Played by the Philadelphia Orchestra under the direction of Eugene Ormandy, both pieces are given brilliant performances.

Emma Boynet, protégée and assistant of the noted French pedagog, Isidor Philips, and representative of France in the field of piano music at the New York World Fair, has made an album presenting a selection of French piano music from 1880 to 1910 (Victor set M-549). All pieces are skillfully written, but only a few are of true significance—Debussy's *Les ongles* and *Les parfums tournent dans l'air du soir*. The others are *Fifth Barcarolle* of Fauré, *Nocturne en forme de valse* by Paderewski, *Baigneuses au Soleil* by de Séverac; *Bourée Fantastique* and *Idylle* by Chabrier, Ravel's witty and scintillating *Alborada del Gracioso* (The Morning Serenade), *Merry Jester* receives its first domestic recording in its original form (as a piano solo) under the capable hands of J. Maria Sanromá (Victor disc 4425); Rachmaninoff's *Etude Tableau in F major* and *Prelude in G-sharp minor* together with Scriabin's early works, *Etude, Op. 2, No. 1* and *Prelude, Op. 11, No. 2*, are rendered with fine musical insight by Anatole Krichman (Columbia disc 69569D). The piano student will find much of inspiration in these recordings.

It has often been said that a trio is more difficult to write than a quartet, since the task of making the trio sound is a harder one. It is to the complete credit of Jean Françaix, the young French composer, that his "Trio in C major" not only sounds, but is also a spontaneous and animated work. Played by the Pasquier Trio (Columbia set X-130), it is given a competent and well-grained performance. Françaix contrasts his four movements ingeniously by having his first and third movement played by two viols and the other two without.

Recommended: Dvořák's happy and tuneful "Sonatina in G major, Op. 100," played by Ossy Renardy and Walter Robert (Columbia set X-129); Boellman's *Toccata* for organ, played by Howard Commette (Columbia disc 695231); Herbert Janssen's fine singing of Schubert's *Ständchen* and of Schumann's *Die Begegnung* (Victor disc 15379); Handel's "Sonata No. 6, in G minor," for oboe and harpsichord, played by Mitchell Miller and Yella Pessl (Victor disc 15378); and Victor discs, 1975 and 1976, containing several "Pieces de clavecins en concert" of Rameau—played by Barrère (flute), Zeddo (harp), and Britt (violin).

### Musicians and Kings

Certain members of the orchestra of the San Carlo Opera, Naples, in claiming damages for their discharge, have invoked an edict made by the former Bourbon king of Naples.

In 1821 King Ferdinand decreed that musicians of the San Carlo Opera, given their positions, could only be discharged by royal decree. Although Naples is now a province of a united Italy, musicians maintain that the Bourbon law has never been repealed.

## Next Month

THE ETUDE for August, 1939, Will Include These Interesting Features

### A Brahms Master Lesson by Guy Maier

Mr. Guy Maier, who conducts the Teachers' Round Table in *The Etude*, is not merely a virtuoso pianist, but also a very able and distinguished pedagog. He has prepared a Master Lesson on the *Scherzo in F minor* by Brahms. It is one of the most brilliant and helpful pieces of didactic analysis we have seen. It will keep thousands of fingers of readers of *The Etude* busy in August.

### Diversions of the Masters

What did the great masters do in order to have a good time? How did they choose to amuse themselves? Mr. Jerome Bengis has made this a subject of delightful research, and we have appended pictures showing how musicians of to-day seek recreation.

### Buckwheat Notes

Ever hear of "buckwheat notes"? Thousands and thousands of Americans use them for notation, to the exclusion of all others. Mrs. Katherine P. Pulling, in an article called "Singers of the Soil," tells the curious and interesting story of this unusual method of reading music.

### Music Before the Little One Goes to School

The late Dr. Preston Ware Orem, for years music critic of the Theodore Presser Company, was a "natural born" expert upon music for children. This is the last article he left for *The Etude*, and we are convinced that his final message to our readers will be one which both parents and teachers will find momentous.

### The Music of Latin America

In an editorial, an outline is given of the musical achievements of the "Other Americas" with their musical delight and charm, which now contribute so much to our life in the United States. The cover of the issue will be a beautiful girlhood portrait of Teresa Carreño, "Empress of the Keyboard."

JOHANNES BRAHMS

## The Student Conductor

(Continued from Page 477)

changes as directed by his teacher. Soon these ideas transfer to the mechanics of playing his instrument. He gets the habit of actually "following the stick" from the very beginning. He learns to play softly when the baton covers little space, and soon learns that if the music is of a separated, accented style the baton stops; and in *legato* passages the baton moves smoothly with no stops. The physical expression of rhythm, speed, volume and style enables his teacher to check constantly on his progress in musicianship and to help him improve in this phase of study along with the betterment of his technical ability.

The more we act as a guest conductor at clinics and festivals, and as a judge at various contests, the more we are convinced that the fundamentals of student directing should be acquired by all, and that they are of the utmost importance to every member of our organizations and not for a chosen few.

## Do You Know

That at nine years of age Handel wrote fugues and motets as exercises in composition, and played organ of the Cathedral of Halle when his master, Zachau, wished to have a vacation?

\*\*\*\*\*

That Beethoven was the first composer to recognize the true value of the tympani (kettle drums)? The *scherzi* of the "Eroica" and "Fifth, in C minor" symphonies are interesting for study. In the *Dona Nobis* of his "Mass in D (Missa solennis)" the drums are in B-flat and F, a key seemingly quite foreign to that of the movement. He departed from the tonic and dominant tuning of the drums, and in the second act of "Fidelio" they are at a diminished fifth, A-natural and E-flat. In the "Eighth Symphony" they are used in octaves.

\*\*\*\*\*

### Served Right

"What kind of music suits you best?" "Well, I'm not very particular. I like it either rare or well done."—*Toronto Globe*.

Write, "I saw it in THE ETUDE."

THE ETUDE

## SPECIAL NOTICES AND ANNOUNCEMENTS

### SPECIAL NOTICES

**FOR SALE** by owner: Violin, Stradivarius model of period 1723. Made by French Master who studies in the old Cremona School. Wood is of quality used by Amati and other Italian Master. Violin is up to concert pitch and guaranteed to be as stated by expert violin authority. Address Box 86, Lambertville, Mich.

Entered as second-class matter January 16, 1884 at the P. O. at Phila., Pa., under the Act of March 3, 1879. Copyright 1939 by Theodore Presser Co. for U. S. A. and Great Britain.

\$2.00 a year in U. S. A. and Possessions, Argentina, Bolivia, Brazil, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Mexico, Nicaragua, Paraguay, Republic of Honduras, Spain, Peru and Uruguay. Canada and New Zealand \$2.25 a year. All other countries, \$3.00 a year. Single copy, Price 25 cents

CENTURY gives you the world's best music, beautifully printed on the best paper, every bar in the standard size, each note certified to be correct, as the master wrote it! What more can sheet music be! There are over 3,000 compositions in the Century catalog, all 15¢ (20¢ in Canada).

When you buy music, tell your dealer what selection you want and he will say, "In the CENTURY EDITION, please." That means you will pay only 15¢—less than half what you usually pay. And you can't buy better music at any price.

THOUSANDS OF SUCCESSFUL TEACHERS use and recommend "CENTURY CERTIFIED EDITION" exclusively—because they know it is all that good music can be at half the price or less. Its modest price adds them in enrolling more pupils, and parents greatly appreciate the saving.

# THE WORLD OF MUSIC

IGOR STRAVINSKY is announced as having been appointed as Charles Eliot Norton Professor of Poetry at Harvard University, for the 1939-1940 academic year. Though designated as a chair of poetry, this Professorship is awarded annually, without regard to nationality, to men of high distinction and preferably of international reputation in poetry, music, or any other of the fine arts. It is believed to be the first time a musician and composer has been chosen for this post. Stravinsky will live in Cambridge and give at least six public lectures.

MORE THAN SEVENTY-TWO THOUSAND DOLLARS were the gross receipts of the Metropolitan Opera Company during its recent three day season in Dallas, Texas.

GOTTLIEB GRAUPNER

Stone conducting. Gertrude Ehrhart, Boston soprano, was the *Marguerite*; Paul Althouse, Metropolitan Opera tenor, sang as *Faust*; Gean Greenwell, basso, was the *Mephistopheles*; and Mark Love, Chicago City Opera Company baritone, the *Brander*. The organization gave its first performance, Haydn's "Creation," in the Stone Chapel, on Christmas night, 1815, with Gottlieb Graupner conducting.

WHEN WALTER GIESEKING was soloist at a near-closing concert of the Cincinnati Symphony Orchestra under Dr. Eugene Goossens, he played the "Concerto in D minor, No. 3" of Rachmaninoff, "so superbly that the audience sprang to its feet and shouted its acclaim."

VIOLINS AND VIOLINISTS is a cheerful little journal filled with varied information of interest to devotees of this "Queen of Instruments." Several of its early numbers have been coming as most welcome visitors to our desk. Good luck to our vigorous young contemporary and its optimistic editor!

THE ST. LOUIS GRAND OPERA ASSOCIATION is an opera venture underwritten by one hundred individuals and firms to present opera on a non-profit basis—the second such enterprise in the United States, with San Francisco as the first. Its bow to the public was made on April 17th, with a performance of Wagner's "Die Walküre" with Lauritz Melchior, Danish tenor, and Marjorie Lawrence, Australian soprano, in the leading rôles. Verdi's "Otello" followed on April 21st, and Gounod's "Faust" on the 24th. Metropolitan Opera Company artists interpreted all leading characters.

MARJORIE LAWRENCE

TRAIPSIN' WOMAN CABIN, eighteen miles south of Ashland, Kentucky, was the scene of the Ninth Annual American Folk Song Festival on June 11th. Last Year twenty thousand people from all lands trekked the picturesque Mayo Trail to this windowless little cabin to hear the mountain songs by mountain singers.

## Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

THE ANNUAL BACH FESTIVAL at Baldwin-Wallace College, Berea, Ohio, was held on June 9th and 10th with Dr. Albert Riemenschneider conducting. The "St. Matthew Passion" was the item of chief interest. Eminent vocal and instrumental artists contributed to the programs.

DANTE FIORILLO, of Westwood, New Jersey, has been awarded the Pulitzer traveling fellowship in music, which is given each year "to the student of music in America deemed most talented and deserving of this provision for European study."

A "CONCERTO FOR CLARINET," by Henry Brant, has been awarded the One Hundred Dollar Prize offered by the Society of Professional Musicians of New York.

JOSEPH HÜTTEL

THE SOCIETY OF EGYPTIAN MUSIC, with the collaboration of the Egyptian State Broadcasting Company of Cairo recently presented a program of chamber music, including the "Quartet in F minor, Op. 10" of Hindemith; "Sonata in B minor, for violin and piano" by Respighi; the "Quartet in C major" by Hüttel; the "Trio with Piano, in C minor, Op. 2," by Suk; and "Starnelli e Ballade, for string quartet" by Malipiero. The artists were M. M. Adolphe Menaszes, violin; Silvestro Catechcio, violin; Joseph Hüttel, alto (viola) and piano; and Mayer Reininger, violoncello.

MARCELLA SEMBRICH, internationally famous soprano, and for many years of the Metropolitan Opera Company, and Edward de Coppet, eminent patron of music and especially of the great Flonzaley Quartet, are to be honored by bronze plaques on two endowed chairs in the Town Hall of New York, as "tributes to those whose work and worth inspire those who come hither to emulate their example."

JOSE ITURBI, pianist and conductor, has had a season of brilliant success at the head of the Orchestra of the Theatre Colon of Buenos-Ayres.

WHAT A BLOW to our American musical art. The management of the New York World's Fair announced on May 24th that after May 29th "all programs of classical music scheduled for the Hall of Music would be cancelled," and that popular music at popular prices would be substituted. So Commercialism literally kicks Frau Art out of bed.

## Competitions

PRIZES OF TWO HUNDRED FIFTY DOLLARS and One Hundred Fifty Dollars, each, are offered for the best and second best Concert Piano Solo and for the best and second best Entertaining Piano Solo, entered in THE ETUDE Piano Solo Composition Prize Contest. Competition open to all composers excepting members of the staff of THE ETUDE and employees of the Theodore Presser Co.; closes November 1, 1939; complete information from THE ETUDE Piano Composition Prize Contest, 1712 Chestnut Street, Philadelphia, Pennsylvania.

THE EURIDICE CHORUS of Philadelphia offers a Prize of One Hundred Dollars for a Chorus for Women's Voices, in three or more parts, either a capella or unaccompanied, and to words of the composer's choice. Compositions must be received not later than October 1, 1939, addressed to The Art Alliance, 251 South 18th Street, Philadelphia,

Pennsylvania, to whom application may be made for further information.

THE PADEREWSKI PRIZE COMPETITION offers \$1,000 for the best work for Chamber Orchestra, and a second \$1,000 for a concerto or other serious work for a solo instrument with symphonic orchestra. Works must not exceed fifteen to twenty minutes in performance, and must be received before February 1, 1940.

Full information from Mrs. Elizabeth C. Allen, Secretary Paderewski Fund, 290 Huntington Avenue, Boston, Massachusetts.

A PRIZE OF FIVE HUNDRED DOLLARS is offered by the Henry Hadley Foundation for the best composition in any of the major forms to be submitted within the autumn months. Full particulars may be had from the Henry Hadley Foundation, 633 West 155th Street, New York City.

ERNEST BLOCH'S new "Concerto for Violin and Orchestra" had its first public performance when on a program in London late in April, with Joseph Szigeti as soloist and Sir Thomas Beecham leading the Philharmonic Society Orchestra.

PADEREWSKI'S FAREWELL TO NEW YORK was to have been a concert at Madison Square Garden on the evening of May 27th, and an audience of fifteen thousand was gathered for the event, when the seventy-eight year old "Emperor of the Piano-forte" collapsed and had to be taken to his private railway car that had carried him as far as Los Angeles and back, while he played twenty of his scheduled twenty-five engagements. On advice of his physician the "living immortal among musicians" cancelled the remaining concerts and in the night of May 30th sailed on the Normandie for his home in Switzerland.

THE METROPOLITAN OPERA COMPANY drew sixty-eight thousand attendants to its eight performances in one week, in April, at Cleveland, Ohio. Forty Thousand of these came from outside Cleveland, with delegations from several bordering states.

HERBERT L. CLARKE, conductor of the Long Beach Municipal Band (California), and internationally famous cornetist long soloist with the Sousa Band, received recently the honorary degree of Doctor of Music, from Phillips University of Enid, Oklahoma.

TURKISH SONGS made up the program of a gala concert given on February fourteenth, at Cairo, Egypt, by the eminent Turkish singer, Mounir Nottedin Bey of the Conservatory of Istanbul.

MISS HELEN L. CRAMM, widely known American composer, especially of fascinating pieces for little tots, passed away on June 14, at the age of eighty. Born at Pembroke, New Hampshire, December 8, 1858, Haverhill, Massachusetts has been her home since 1872. Her musical education was received at the New England Conservatory, supplemented by studies with eminent private teachers. Her compositions and compilations are numbered by the score; and these exhibited her peculiar genius for melody which gave a charm to all she wrote. Her reputation as a teacher was second only to that as a composer.

"THE OLD MAID AND THE THIEF" by Gian-Carlo Menotti, twenty-seven year old American composer, and the first opera to be commissioned by N. B. C. for radio, had its world premiere on April 22nd, with the collaboration of the N. B. C. Orchestra and with Mary Hopple as *The Old Maid*, Robert Weede as *Son of the Trail*, Margaret Daum as *Letitia*, and Dorothy Sarnoff as *Miss Pinkerton*. Alberto Erede conducted and Joseph Curtin, as *Narrator*, set the stage and linked the episodes.

THE SIXTIETH BIRTHDAY of Natanael Berg, the eminent Swedish composer was celebrated by the Philharmonic Orchestra of Stockholm which invited him to conduct a program of his own works, including his "Fourth Symphony, 'The Seasons'"; his widely played "Concerto for Piano and Orchestra," with W. Witkovsky as soloist; and "The Hymn of Israel" for mixed chorus and orchestra.

NATANAEL BERG

ST. LOUIS SUMMER OPERA at Forest Park opened with a performance of Friml's "Rose Marie" on the evening of June 2nd and it will close with the American premiere of "Victoria and Her Husband."

THE HORATIO PARKER FELLOWSHIP for musical composition, in the American Academy of Rome, has been awarded to William Douglas Denny of Berkeley California.

THE ANNUAL BERKSHIRE SYMPHONIC FESTIVAL, by the Boston Symphony Orchestra under the direction of Serge Koussevitzky, is announced for August 3rd, 5th, 6th, 10th, 12th and 13th, in the new Tanglewood Shed which has been completed at an expense of \$91,193.95.

SOLANGE DELMAS, coloratura soprano of the Grand Opéra of Paris, is announced for a concert tour of the United States during the coming season.

A FOUR-DAY MOZART FESTIVAL at the Juilliard Graduate School of New York City, was opened on April 25th by the production of an English version of "The Marriage of Figaro."

# Musica Pan-America

*The Hall of Americas*

*The Patio*

PAN-AMERICAN UNION IN WASHINGTON

*From this magnificent building in Washington are broadcast the Pan-American concerts which have been heard by millions.*

THE magnificent continent of South America is probably far better known to citizens of the United States than ever before. Owing to unsettled conditions in Europe, vast numbers of tourists, who have heretofore set sail for Havre, Southampton, Hamburg or Naples, have bought passage upon the sumptuous liners for South American tours. Thus part of the annual treasure that went overseas to Europe was transferred to our sister republics to the South. In addition to this, air transit has brought the continent very close to us.

We hail this opportunity with joy. Latin-American in origin, the people of the countries of South America feel themselves just as much Americans as do the citizens of New Hampshire, Alabama, Iowa, Texas or Oregon. They are just as proud of their countries and just as zealous in their patriotism. It is highly desirable, for a multitude of reasons, that our citizens should come to know more and more of our fine neighbors to the South; and we welcome wholeheartedly their visits to us.

For years *The Etude* has read with the keenest interest the reports of musical progress in our sister republics. We have watched the cosmopolitan nature of their programs; we have observed the development of new and interesting musical ideas; we have sensed the coming of a new flavor in musical art, part Latin, part cosmopolitan, and part Indian. Moreover, they have sent us new and delightful rhythms and melodies, which have been warmly welcomed. The *Argentine Tango* as well as the *Brazilian Samba* and *Marcha* have a flavor that is most distinctive.

While all South America is Iberian in its culture, it must be remembered that Brazil, with more territory than the United States, and, with half the terrain and population of South America, is Portuguese and not Spanish. The mother country, Portugal, has produced comparatively few musicians of international renown. On the other hand, Brazil has given us music workers and composers of high ability and distinction.

To our minds, the greatest pianist born on this side of the Atlantic was the brilliant Venezuelan, Teresa Carreño,

and we consider it a matter of peculiar good fortune to have known her very well indeed. The daughter of the Minister of Finance of her native country, who was a good amateur musician and her first teacher, she had unusual advantages in her native City of Caracas, where she was born December 22, 1853. An extraordinarily beautiful child, she made a sensation when she made her début in New York City at the age of nine. Much of her life was spent in the United States. She once said, "I speak American and not English." This she did with no suggestion of her Spanish-American heritage. Carreño was so American in her ways that she resembled a very Yankee aunt of the Editor, and he always laughingly addressed her as "Aunt Emma." Few people know of the influence of Carreño upon the life of Edward MacDowell. MacDowell was a capricious and somewhat difficult child. Carreño, who was one of his first teachers, tried to win him with affection and kisses, only to find them received with a boyish resentment. Then she threatened him with kisses if his work fell below what she expected. The strategy worked wonderfully. In speaking to your Editor, she once said, "The world will never know what a time I had in turning that Quaker into a musician." Later, however, she was of enormous service to him by playing his compositions, "everywhere."

For a time, Carreño studied with Louis Moreau Gottschalk. Your Editor's father knew Gottschalk well; and, once, when visiting him, father heard the child play. Gottschalk referred to her as "My South American diamond." Later, she studied with Chopin's pupil, Georges A. St. Clair Mathias in Paris, and then with Rubinstein, who declared her the "Empress of the Keyboard." At the age of thirteen she commenced her first European tours, which lasted over ten years. In the meantime, she had developed a beautiful voice. She married the operatic conductor, Giovanni Tagliapietra (1846-1921), who was a member of an old Venetian family of high distinction and was well known in New York as a vocal teacher. She joined his company on a tour of South America. Becom-

ing dissatisfied with him, she "told him to get out" and then went down into the orchestra pit and conducted the company for the remainder of the tour. She was married four times. Émile Sauret (1852-1920), the violinist, was her second husband. Her third husband was Eugène Francis Charles d'Albert (1864-1932), pianist and composer; and her fourth husband, Arturo Tagliapietra, was the brother of her first spouse. With him, a devoted and understanding consort, she spent her last years in happiness. Mme. Carreño was a woman of great personal understanding, fine spiritual nature, and high character. In conversations with her, she tearfully revealed to us her struggles to meet the shortcomings of her first husbands.

Judging from the performers we have heard and the compositions we have seen, South America is teeming with talent. When students, like Carreño or Guiomar Novaes, are put through a long period of serious study, magnificent results are obtained. Many of the simpler South American compositions are remarkable for alluring rhythms and an emotional charm often entirely wanting in northern climes. While the more or less distinctive Iberian themes are charming, it is not difficult to sense in more modern and representative works the aboriginal Indian and African elements which have a kind of genetic influence that is very powerful. It should never be forgotten that in the blood of many of our South American brothers run traces of the Incas, the Aztecs and the Mayas, who produced the most astounding aboriginal civilizations of the new world.

The majestic opera houses in the large South American cities indicate the popular love for song and the drama in Latin style. The conservatories are very individual in their appeal and in their methods, which are based upon European types rather than those same types as adapted to conditions in the United States.

The Pan-American Union in Washington, as we have frequently noted, presents many concerts of original and folk compositions of the South American countries, played by our fine Naval and Military bands and orchestras. Thus, for some years, the citizens of the United States have heard the beautiful and impressive music of South America. These concerts have been sent by short wave radio to all of the South American countries and have been one of the strongest means we have discovered of promoting international amity. As Dr. Leo S. Rowe, director general, has continually pointed out, music is an international language, a kind of supertongue which is vastly superior to orations, arguments and debates, for bringing about a spirit of interappreciation. Let us have more and more interchange of musical interests with our sister republics.

## Twenty Million Potential Players

THE Convention of the Music Industries which meets this month at the Hotel New Yorker, New York City, represents a very significant and necessary group of business enterprises concerned in the making of musical instruments, and in the collecting, production and sale of all of the materials that go into their manufacture.

It is hard for a novice to conceive how vast are the ramifications of these industries, which call upon the whole world for raw materials and parts.

If you are in New York and plan to visit the World's Fair, you will not find on the grounds of the Fair one very small fraction of the magnificent and immensely interesting display of materials, instruments and everything to do with music, that you will find in this "World's Fair of the Music Industries" at the Hotel New Yorker, Eighth Avenue and Thirty-Fourth Street. Several floors of this great hotel are given over to these industries, and *The Etude* advises its readers, who may be in New York from August first to third, not to miss this fine exposition which they may see without cost.

Unfortunately, there are no substantial and farreaching

surveys of the actual numbers of music students and players in America. However, cross sections have been surveyed and we may make an estimate, which we believe is conservative, that there are at least twenty million players of musical instruments in America. The Piano Manufacturers Association reports that there are probably nine million players upon the piano.

The increase, during the past ten years, in the number of performers upon band and orchestral instruments, has been enormous. "Life," during the past year, estimated that there are one hundred and fifty thousand bands and orchestras in America. It is a very poor band or orchestra in these days that does not have at least thirty players. This would make four and a half million band players. In addition to these are the orchestra performers and players upon all manner of other instruments.

It is very gratifying to see a fine increase in the number of pianofortes manufactured. One dealer reports that he has increased the floor space in his factory over fifty thousand feet in four years.

The millions of dollars that have been spent upon musical instruments in the last decade are staggering. Wise publicists are beginning to look upon this as an invaluable investment.

## The Music of Nineteen Hundred and Now

TEMPORA mutantur, et nos mutamur in illis"; so runs the old Latin line. Indeed, times do change and we change with them. In the eight-hundred pound time capsule, which the Westinghouse Electric and Manufacturing Company have sunk in the New York City Fair Grounds (with the idea that some time in 2694 A.D., or thereabouts, some of our descendants may want to dig it up and look at the contents) there are three compositions which are supposed to represent the music of now:

1. *Finlandia* of Jean Sibelius;
2. *The Stars and Stripes Forever*, by John Philip Sousa;
3. *Flat Foot Floogie*, by Bud Green, Slim Gaillard and Slam Stewart.

## So Easy!

ONCE in London we attended a concert at which Saint-Saëns was the artist. He was noted for his effortless, unpretentious playing. As we were leaving the hall an elderly gentleman remarked, "My word, wasn't it easy!" Of course, the ability to surmount great technical obstacles is the result of long and hard practice; but some players give the impression that the work is still one of "impossible" difficulty. When Siloti first played in America, as a comparatively young man (1898), he played with such astounding ease and impassivity that the public of that day was not impressed with his virtuosity. Liszt rhapsodies rained from his coat sleeves with so little exertion that he surely could not compare with the lathered gentlemen of the keyboard who made all the difficulties obvious by their snorts and gyrations.

We have an idea, however, that a great deal of music is made far too much of a physical struggle. We hunt out the hard way to do things. There is far too much time given to working out problems "at the keyboard," which should have been first worked out in the understanding. "Who taught you to make that marvelous trill?" we once asked d'Albert, after a Beethoven recital in Berlin. "Niemand," he answered, "Ich hab es immer gehabt." What he meant was that he heard in his mind's ear just how it should be played and then, with uninhibited fingers, played it. Of course he could have gone through the operose process of fighting it out with a metronome. Some can get it in no other way and then the difficulty is that it is hard to get rid of the suggestion of a mechanical background. Most people have a fine natural trill and do not realize it. Take your technical struggles easily, by letting your wits spare the callouses on your finger tips.

# Music of the Woodland

## A Musical Playlet

By

D. V. BENEDICT

### CHARACTERS

*Wishing Fairy* (Toe-Dancer)

*Dickie* (Small Boy)

*Bettie* (Small Girl)

*Flowerets*

Two Daisies

Two Roses

Two Bluebells

*Birds*

Owl—Master of Ceremonies

Two Woodpeckers

Cardinal

Bluejay

Humming Bird

Canary

Peacock

Meadow Lark

Heron

Song Sparrow

Mourning Dove

Nightingale

Mockingbird

### COSTUMES

Children—play clothes

Flowerets—crepe paper costumes

Birds—dresses or suits representing colors of birds

### SCENERY

Trees and shrubs for background. Bench for children to rest upon. Stuffed birds make very effective atmosphere. Moon showing through trees. Small green lights might be used to give effect of fireflies among shrubbery. Flowerets on small chairs near edge of the stage, where they remain throughout the program.

### DEDICATION OF RECITAL BY ADVANCED PUPIL

In dreams do we frequently yearn  
For childhood's fantastical things,  
For far away haunts with their sweet  
scented jaunts,  
And for nature on fluttering wings.

But, after all, what a delight  
Just to dally the dull hours away;  
Won't you join us this festival night  
In our fanciful musical play?

Let your thoughts to our woodland be  
borne,  
Be your visions transported on high;  
Whilst our souls in delight take to wing  
for their flight  
As the birds coursing far in the sky.

—Pause—

And now, dedicating our Musicales, I will  
play *If I Were a Bird*, by Henselt.

Boy and Girl enter, looking about as if in  
search of something.

Girl:  
All our lovely hopes have vanished,  
We have missed the grand array,  
When the flowerets and the birdies  
Laugh and dance, and sing and play.

Boy:  
Sister mine, are you not weary?  
We have traveled far and long;  
Come, let's rest—and then quite merry  
Homeward steps we'll cheer with song.

Girl sits at piano—Boy sits near by and  
falls asleep.

Girl:  
Slowly now you're drifting—drifting  
Under summer's magic spell;  
*Moonlight Revels* lends the music  
This, the story it will tell.

How amid the woodland echoes  
Comes the lilt of fairies' wings,  
As they softly, lightly gather  
Into sprightly dancing rings.

How the chimes, as sentry keeping,  
Watch aloft, on time and place,  
Warn of fast approaching daylight  
As the fairies glide through space.

Girl plays *Moonlight Revels* by Andre.  
She then sits down by Boy and falls asleep.  
Soft music while *Wishing Fairy* pirouettes  
in and says:

Ah! My little ones are sleeping,  
And they've dreamed and wandered  
long,  
Searching for our beauteous woodland  
And its birds' concourse of song.

Now, as Queen of all the woodland,  
I will make their dreams come true;  
(To audience)  
And, with all our best endeavors,  
We'll unfold this land to you.

*Wishing Fairy* sings *Come Where the  
Bluebells Ring*, by Alice Holmes and Frank  
Brackett. Fairy pirouettes off stage, waving  
her wand to Owl, who bows in acknowl-  
edgement. Owl, perched on a tree trunk,  
hoots and awakens children. Girl goes to

piano and plays *Summer Reverie* by Frank  
Grey.

Owl:  
To Woodland, as the *Wise Old Owl*,  
I'm known,  
Of me the birds and flowers for  
guidance ask;  
But, who are you; and hast thou need  
of aid?  
Now quick with queries; I'll reveal  
your task.

Children walk over to where Owl is  
perched.

Boy:  
My sister dear, and I have wandered  
far;  
We're very much distracted, on my  
word;  
The Woodland Concert now we seek  
because  
About it many lovely things we've  
heard.

Owl:  
Ah! How well the *Queen of Wishes*  
Here has favored all to-night;  
She a promise late has given  
Hearts shall glow with keen delight.

She a *Chief of Ceremonies*  
Here has made by wave of hand;  
Now allow to be presented  
Unto you our happy band.

And, in order to make certain  
All in harmony is ready,

I will call to all the woodland  
To awaken and make merry!

Owl hops down and, standing at the  
piano, plays *Reveille* by John Thompson.  
From behind the scenes a chorus im-  
mediately sings *Voices of the Woodland*  
to Rubinstein's *Melody* in F. Flowerets  
keep their heads down from the beginning  
of the playlet until called upon, in this  
song, to awaken. They join in the last part  
of the song, as it calls upon the birds to  
sing.

Owl:  
Little flowerets have awakened  
Anxious all their parts to do;  
Let's be quiet and attentive  
While their thoughts they give to you.

Owl returns to perch.

Daisy:  
Nestled 'neath our petals, children,  
There's a song you cannot hear;  
I would like to play it for you,  
So you'll know it when you're near!

Daisy plays *The Katydid* and the *Cricket*,  
by Dorothy Wade.

Rose:  
O flowerets so dear, would you like to  
hear  
A story that's told in a lay;  
Of Goldilocks gay, and how she would  
play,  
If she lived here among us to-day?

Daisy:  
Yes, tell us about it! Oh do!  
Then we'll join with the birds  
In their hymns without words,  
While the morn's cool and sparkli  
with dew

Rose sings *If Goldilocks Had Lived To-  
day*, or *The Rag Dolls Ball*, by Ella Allen

# Teaching the Little Tots

## The Real Pre-School Age

By

PRESTON WARE OREM, Mus. Doc.

This is the last article in THE ETUDE files from the late Dr. Orem

ONCE UPON A TIME (we have liked always this style of beginning) the writer attended a kindergarten, conducted by two gentlewomen, enthusiastic disciples of Froebel, who had studied abroad and who "knew their stuff." Although this was not a musical kindergarten, almost everything was done to music and to good music at that; marches, drills, games, pantomimes and the like. Music, manners and deportment went hand in hand, as they should always, and we youngsters were treated like little ladies and gentlemen. In all our early efforts at learning, things were called by their proper names and there was no personification of things inanimate and above all things, no "baby-talk." This latter will do very well for lovers in certain stages of idiocy, for horses and for cats. But for infants—no! We have soothed many an obstreperous horse with baby-talk, and we have had cats rolling about in ecstasies with the same; but for various reasons we do not care for it with the very young of the human species. We are too prone to take for granted a certain early imbecility which is, indeed, non-existent. One has only to observe the attitude of infants towards certain of our antics to know what nincompoops they may think us to be. But to return to our kindergarten. We learned to sing at sight in this little school, and, of all things, by the "fixed Do." We are starting no argument, however, as to the merits of the "fixed Do" or the "movable Do." The thing to do is to learn to read at sight, as best we may. But naturally we have our own ideas upon the subject.

### No End to Tunes

IN THESE DAYS WE ARE ASKED often many things about music which serve to show that the subject is much in the minds of even the comparatively uninitiated. Just for instance: only recently we were asked as to the further possibilities of original creative work. With so many beautiful melodies in existence, would it still be possible to create more? The answer is that in the element of melody alone, the possibilities of the twelve sounds (half-steps) used by us to create melodies, as repeated in the several octaves at our disposal, are mathematically inexhaustible. Moreover, as measured out by rhythm and illumined by harmony, they still give room for practically infinite originality. We have digressed thus, apparently, from our main subject, to enforce a certain point, and that is: that many new listeners to music and new potential performers upon musical instruments are born daily; and for these the field is enlarging continuously. Besides, it is not so much that we need more music as that we need better music; and in particular better music for the very young. In our own judgment, "baby music," is quite as undesirable as "baby-talk." Furthermore, as one wise old publisher used to remark, "We publish too much!"

We will mention the word psychology just once, only, to leave it. It is a much abused, much misused word! The proper method of approach to children is to study

each individual child. *Experientia docet.* We have never met but one psychologist whom we would call real; and he, although a lover of music, is not especially interested in music teaching. Then, too, maybe we parents know more about our own children than do the fellows who write books about it all. There may be, and probably is, something of good in most any method or system of teaching; but, when a fellow comes along telling us that he has the only panacea for all musical teaching ills, we feel inclined to view him with suspicion. We do not wish to be understood as deprecating original creative work on the part of any of the musically inclined, professional or otherwise; quite the contrary, in fact; but we do advise against any premature or ill-advised rushing into print.

### The True Pre-School Pupil

NOW, AFTER ALL THIS PRELUDING, just what do we personally consider to be the real pre-school age in music? Why, "the

ceptable piano playing. a bravura technic. Far from it, in both instances. And besides many "cultivated" voices are just as objectionable to us, personally, as are the efforts of many "large toned" technicians. And what shall be sung to the newcomer into this weary world, full of tribulation? For us, the young mother singing to her offspring has a most intimate appeal. Naturally the singing should be rhythmic, but not strongly so; soothing in character, preferably. The traditional cradle songs, most folk songs, and many other melodies (old and new) are suitable. To us anything in the nature of jazz or swing is highly objectionable; there is a ring of coarseness and insincerity about the whole thing. Besides, the world's greatest composers have given us cradle songs, most appealing in their artistic simplicity and naturalness. There are but few who under the inspiration of motherhood are unable to sing at all, and likewise there are but few "monotones." Bashfulness and self-consciousness are the causes of reluctance to sing on the part of many; and more frequently than not, they interfere with the due appreciation of pitch. We believe that most so-called monotones can be cured.

The songs selected for the purpose should be of moderate compass, right in the middle of the voice, largely diatonic and without wide skips or awkward intervals generally. The natural voice should be employed. Untold harm has been done to voices through the symptomatic assumption of incipient tonalities developed for the purpose of executing "blues," not to speak of its effect upon the listeners. And, just by the way, what has become of the serried ranks of real contralti, competent and full-chested, once so conspicuous in some of our old-fashioned choral societies? We were wont to await in thrilled anticipation their attacks in the oratorios of Handel and Mendelssohn. But, after all,

music is not necessarily good because it is difficult or complicated, nor bad because it is simple. A single "sour" tone, however, may upset a whole melody; and one false tone, an entire harmonic progression.

### Cradle to Pre-School Class

BUT THE BUDDING INFANT is soon out of the cradle stage and then what? After some months, the youngster, in the course of the natural exercising of his members, will in all probability pull himself up to a standing position, first by the sides of his crib and later by the rails of his playpen. Monkey-like, say you. Not at all; we are not interested. But we might repeat the

old joke about that *paterfamilias* who, upon being asked by Junior, "Say, Dad, is it true that we are all descended from monkeys?" replied: "Well maybe you were; but I'm sure your father was not." In our own case, after an infant less than a year old had pulled himself up in the manner related, we taught him to take a few simple dance steps, to our own singing, and in time at that. And the tune used was *Pop Goes the Weasel*, a strongly rhythmic one. And our own singing appeared to be appreciated really for the first time.

Now we are not writing of an infant prodigy, but just a normal "kid" to whom some attention is being paid, other than that of hygienic and dietetic routine. Music in company with all the arts, is a part of life itself; and fortunately the idea is beginning to be more generally understood and appreciated. And what was the result of this very early experiment? Within a month or so this particular youngster was walking by himself, entirely unsupported; and, indeed, in a short while he was running and has been running ever since, besides grabbing every other young hopeful of anywhere near his own age in an improvised joyous "ring-a-round." Here we find material ripe for the Pre-School Class. And, as Fielding puts it so truly: "Life is just as much of an art as is a statute or a noble poem." And now, what next?

So far as the successive emergences from the cradle to the pre-school music class, thence to the kindergarten or musical kindergarten, and thence perhaps to the regular beginners class, are concerned, these all have our enthusiastic approval. The succession seems perfectly logical. Class teaching in music is nothing new to us, and we have liked it always. As the writer has had to contend so often, the one greatest mistake in music teaching, all through the past, has been that every incoming pupil has been received and looked upon as a potential professional. In these days, at least, this condition is being righted, but only after almost irreparable damage. Now many of us know that of all those who have studied music in the past, only twenty-five percent have gone beyond what we reckon as Grade III in a scale of ten grades. And how do we know this? By the publishers' records, the most practical evidence of all. The demand for music in certain grades tells us exactly; and of this twenty-five percent who pass beyond the third grade, how many become professionals? That we are unable to tell exactly. But, really, we need less half-baked professionals and more intelligent music lovers, music lovers who remain such always; and for such we need a painstaking foundation.

### The Musical Heart Changeth

FORTUNATELY THERE IS A GROWING GROUP of devoted and capable teachers who are realizing conditions. Not long ago we

DR. PRESTON WARE OREM

cradle," of course! "Ah!" say you, "but there are no more cradles." If really so, more's the pity. But, at any rate, we will use the expression figuratively, and what are we getting at? That the infant cannot too soon become accustomed to the hearing of music; at first, to the more primitive elements going hand in hand: Rhythm and Melody. To the rhythmic rocking of the cradle, or in the arms, should be added the melodic element of song. The song of the mother to her young is probably the oldest of all singing. And when we say singing, we mean singing. To sing lullabies, one does not require a so-called "cultivated" voice, any more than does ac-

heard of one little flaxen headed tot of three, who, having been taken to a pre-school music class by her mother, and after having played delightfully (as she thought) with others of her kind, called to her mother, "Oh, mamma, when is the teacher coming?" This little girl had been gathering in certain principles of rudimentary rhythm and melody without even being aware of it. To revert for an instant to our original proposition, it may be noted that, in many instances a perception of pitch may be discernible at a very early age. Many an infant may be tempted to join in with the cradle croon. The very young will soon endeavor to imitate all sorts of familiar sounds. Should these sounds be of a musical nature, so much the better. At least one little subject of some of our own recent experimentation seems to have a very definite idea of pitch, at the age of two and a half. This matter is worth looking into. Our tests were made with toy horns of several sizes.

As yet, we have not mentioned the piano. Why should we, at this stage? We are more interested in establishing a general musical atmosphere; agreeable sounds, singly or in combination. But right here let us register a warning: The piano itself is to be kept sacred, in both the home and the studio. There is to be no senseless banging upon it, by anyone. The growing infant is to be taught gently but firmly, to regard it with respect. Later on it may be discovered that this attitude will have proven of great help.

Now let us not be misunderstood. We are not advocating the wholesale making of musical prodigies. Far from it. But we are urging that the growing child be "given a break." Our idea is that music, manners and behavior go hand in hand, always each reflecting the others; and the attitudes of the parents and of the teachers, respectively, have much to do with it all. Moreover, we are seeking to promote continuity, progress without any interruption. If this attitude be Victorian, we are proud of it. We know that it is the fashion, promoted by certain essayists who should know better, to sneer at things Victorian; but the Victorian Era was at least a vast improvement upon that of the four Georges which preceded it; and we see but little to be proud of in the times which have followed. Never must the American Home, and all that goes with it, disappear.

### We Move Ahead

SO FAR AS MUSIC TEACHING of the past is concerned, we have made some sad mistakes. The other day an intelligent woman of middle age said to us, "Oh, yes, I had piano lessons, of course, when I was a girl; but I never attempt to play now." Whenever we, as a teacher, hear anything of that sort, we feel a sense of guilt almost personal. Something was wrong with the teaching, of course, and with the pupil, very likely; but surely no preparatory musical atmosphere had been established. Music must be heard from the very beginning and participated in, as soon as possible. And how is this early participation to be attained? By rote of course. One need not in the beginning worry about details of notation. That will come along later on; and, by the way, we need no crutches for it to lean upon when it does come. We have never seen any devices for the simplification of musical notation which were not more complicated than the thing itself. Notation, as it has grown through the centuries, has become a very accurate picture of that which we hear. Always of course, in all teaching, should come the thing itself before its sign or symbol.

And technic? The best technic grows out of doing things and doing them interestingly. Later on, when it is really needed, it will come. In our own student days, after toiling away at exercises which, we were assured, would be very good for us indeed, we used at times to wander into a vaudeville where we would find fellows

doing stunts on the keyboard that were entirely beyond us. Our only consolation was that it might be that, if we handed the other fellow a Mozart sonata or a Bach *Invention* to play, he would be just as badly stumped.

As to teaching materials, there are many to be had in these days, produced usually by those who have derived them through actual teaching experience. But it all needs devotion and resourcefulness. One more story, a true one. In conversation not long

ago with a successful woman pianist and composer, we found this lady bewailing the fact that her fourteen year old son had taken no interest in learning to play by conventional methods. It was her own idea that, had he been introduced to music by very easy stages and at a much earlier period, things might have been different. We agreed. Ways and means must be found. Like the beautiful baritone gentleman in "I Pagliacci," we have been trying to sing the *Prologue*.

## FIFTY YEARS AGO THIS MONTH

**WILLIAM H. SHERWOOD**, who had perhaps the most complete technic of any pianist of long American ancestry in our musical annals, gave some wonderfully wise advice on developing a proper use of the hands and fingers

for piano playing, as gathered from a paper read before a contemporary New York State Music Teachers' Convention:

"If the fifth finger be held so that the first joint reaches down from the hand at an angle of forty-five degrees, the other two joints being enough curved to cause the tip of the finger to stand perpendicular to the keys, the hand will be in such a position that it is comparatively easy to raise the fourth or 'ring' finger. It were well to note right here that a great deal of power can be developed, and better quality of tone therewith by other means than merely by the distance of lifting the finger, and the hammer-like blow intended through this process. If the wrist be made passive and light, then turned slightly away from the body, at the same time that the knuckle joints of the second and third fingers are held moderately low, the player may find the means of liberating the ring finger to a sufficient degree for any necessary purpose. This subject is almost too difficult to explain without practical illustrations, but it might be suggested that the weaker side of the hand be pushed lightly toward the keyboard (that is, forward from the body), with the wrist very loose, in such a manner as to throw the knuckle joints of the fourth and fifth fingers upward and the finger tips inward. If this is done rightly it will allow more slack, or room to act with the fingers, and a larger

space under the weak part of the hand.

"This leads me to uttering a word of caution about the amount of force to be used. Nearly all students hammer the keys and exert the strong muscles of the arm too much. They use the power of the muscles controlling the stronger fingers and wrist, when attempting to play with the fourth and fifth fingers, consequently the weak fingers break down, the weak side of the hand falls in, and someone takes advantage of this defect (with the heavy weight of the arm directed against it to make it constantly worse), by 'cutting a tendon.'

"Let the student learn how to relax the muscles first, and become passive, quiet and gentle. Take a good deal of time—away from the piano—to examine the number of positions and motions and subdivisions which are possible to be made with the arms, wrists, knuckle joints and fingers. (There are many more of them than our instruction books show the existence of.)

"As these new movements involve an entirely new range of exercises and powers, it follows that we need to strengthen and distinguish the separate parts. A player cultivates habits so limited in ways and means and so quick in action, that he fails to notice how such distinctions can be made clearly and correctly. If he finds out how, he seldom gives time and care enough to establish any change from old to new ways. Out of the many muscles in the arm and hand he has cultivated a few only with such persistence that the effort to act is to use the accustomed ones which have strong nerve centers and a full flow of vitality. The other weaker parts get less vitality, less consciousness of separate volition, on account of greater attraction of will power for those which respond promptly."

### The Mind's Ear

By LAURA R. BALGUE

WHEN A PIANO TEACHER receives a pupil who does not know the tone names, she may begin at once to teach them in something like this simple way.

With the pupil, sing the tone names up and down the scale for a little while at each lesson until the child can do it fluently alone. Next, choose an easy melody—or improvise something still more simple—and sing that with the child until she can do it alone with perfect accuracy. *Bobby Shafto; America; Home, Sweet Home*; these are simple enough for apt pupils. Of course the teacher, and later the pupil, is playing clearly with all of this singing. For the third step, have the pupil to sing her school songs in this manner. The fourth step is very important and will require patience with some pupils. It is to learn that "Do" is movable, and how to apply it accurately by ear.

Require all who can possibly do it to

come to the lesson with melodies learned by ear, and also with improvised melodies. Sing the syllables to all of these. Musical children delight in it. Praise but do not criticize the child's original efforts. Make it plain to the child that this training of the mind's ear comes outside the regular practice time, and be strict and observant to see that the printed lesson does not suffer. Let no one say truthfully that a pupil of yours who plays by ear cannot play well by note. Show the child the folly and shortsightedness of condemnation of playing by ear. All accomplished musicians can sit down to the piano and play by ear catchy tunes and hymns. Improvising and playing by ear are fine memory builders.

As one needs words for coherent everyday thinking, so he needs also names of tones for coherent musical thinking. Both are necessary in climbing to higher ground. Keep the children climbing upward!

IF YOU LIKE symphonic music, and there is good reason to believe almost everyone does, it is still possible to tune in on Sunday afternoons to a grand symphony concert via the Columbia Broadcasting System (3:00 to 4:00 P.M., EDST). For Howard Barlow's Sunday afternoon concerts with the Columbia Broadcasting Symphony Orchestra have returned to the airways to take the place of the regular New York Philharmonic-Symphony Orchestra broadcasts, until the latter return in the fall.

Barlow's Sunday afternoon symphony concerts have been a regular network summer feature since 1936. Besides playing famous works of the standard repertoire, Barlow devotes a generous portion of the programs to modern American music, some of which works in the past two seasons, he has introduced for the first time on the airways. Compositions commissioned originally by Columbia and works submitted this past year by unfamiliar composers are to be repeated on occasion. These compositions deserve renewed hearings, Mr. Barlow contends. As the conductor is still busy examining the large number of new manuscripts received last season, he is not asking for others to be sent to him this summer.

Among recent novelties presented by Barlow and the Columbia Broadcasting System Symphony Orchestra have been "Symphony" by William D. Denny, this year's American *prix de Rome* winner, and a two-piano concerto, "Symbolistic Study, No. 6—Mountain Vision," by Arthur Farwell, co-winner of the National Federation of Music Clubs composition contest.

It is interesting to note that the title "Everybody's Music," previously borne by these concerts, has been discarded as no longer a necessary index to their nature. Barlow believes that public acceptance of fine music has grown beyond specific cataloging and that no concession need be made to it. The radio public, familiar with an fond of symphonic music, knows that whenever Barlow has anything to do with a broadcast they are going to get an interesting program.

Some of the richest contributions that America has made to the world's musical literature are the spirituals of the South. They are music of the people, full of the wishes and needs of a transplanted race full of the heartaches and the anguish, the prayers and the hopes of those who have an undying faith. There are three fine programs featuring spirituals, each week of the Blue Network of the National Broadcasting Company: Sundays, 11:30 to 12:00 noon, EDST, and again on Fridays, 12:15 to 12:30 P.M., EDST, the Southernaires, one of the outstanding quartets of its kind in this country, can be heard. On Mondays, 10:30 to 11:00 P.M., EDST, the Fish Jubilee Choir also may be heard in a similar program.

In addition to the summer symphony series being presented under distinguished conductors on Sunday evenings, concert by the National Broadcasting Company's salon and concert orchestras are broadcast on Mondays (6:30 to 7:00 P.M., EDST, Red network), Tuesdays (7:30 to 8:00 P.M., Blue network), and Wednesdays (6:30 to 7:00 P.M., EDST, Red network).

For those who like chamber music, we recommend the broadcasts of the Primrose String Quartet usually heard on the Blue network of N.B.C. on Thursday nights from 8:00 to 8:30 P.M., EDST. William Primrose, the English violist, is a first desk man in Toscanini's National Broadcasting Company Symphony Orchestra and a noted soloist in his own right. He has been called the Kreiser of the viola. His associates of the quartet are also players in the Toscanini orchestra.

# The Diversions of the Masters

By JEROME BENGIS

WE KNOW THE GREAT MASTERS of music rather intimately through their works; each has a language of his own, and speaks as the divine inner voice bids him. But at times we tire of thinking of them as geniuses; for, like every living thing in nature, they too had their rest, their periods of leisure which were so sweet because they were so well earned. Those were the times when, unclenching their souls of their art's sacred vesture, they became simple lovers of indolence, pursuing common pastimes much as lesser men do. Then they were like children who, when summer comes, fling their grave studies to the air and fly headlong into a whirlpool of overflowing joyousness.

If we stay with the masters during their hours of idleness, we shall see much which shall make us smile; for, behold, in the twinkling of an eye one immortal genius shall become a young boy eager to win at billiards; or another shall take to cushion throwing; or still a third will steal a slice of cherry pie out of the kitchen when the cook's back is turned. And all these things shall fill us with amusement, yet with wonder; for it is not often that a genius can win at billiards, for nature generally restricts his ability to one field alone; nor is it often that a genius indulges in cushion throwing, without having his own precious head knocked off; nor yet is it every genius who can forget his sacred art long enough to remember that there is in this world such a delicacy as cherry pie.

## Titans at Play

BUT HUSH, NOW! Let us take a peep into Master Bach's home and see what he is about at this early hour of morning. He sits at his clavichord and plays his morning hymn; for, whether or not he is at work, he is always close to God. At his back stands his good wife, Anna Magdalena, and his large brood of children. Emanuel and Cristoph are among them, and, somewhat sleepily, they render their praises to God. Amidst many a hushed yawn. Now and then some child pulls another's pigtail, and a little titter runs through the group; but, no sooner do Papa Bach's fervent eyes alight on the wrongdoers than all mischief is stopped and all eyes turn upward with feigned piety. Later on, after dinner, he plays with them for a little while. Now he is the stern parent, rapping a child's knuckles; again, and he is a child himself, taking part in all their little tomfooleries.

But on leaving Bach and looking in at Handel, his fellow titan, we are, indeed, pleasantly surprised. What is he doing, this man who "set the Bible to music?" Neither leading a family choir (for he has no family), nor indulging in mischief-making of any sort. He is poring over many papers and putting them in order. Perhaps they are of some religious nature; or perhaps some suggestions for a text for a new oratorio? Oh, no; they are pictures and articles on rare and curious decorative art; for Handel is forever making collections of them. When he is not doing this we may find him, however, making every effort to gain admittance into the society of politicians and literary men, among whom he moves with native dignity, his inevitable wig gracing his proud and stately head. But the safety of musical history is more insured when Handel is not too sociable; for then he is not apt to be getting into quarrels and consequently fighting duels, as on the memorable occasion when he fought one and his life was saved by a large button on his coat.

Gluck, nevertheless, is more sensible. He stays at home and plays—with cats! In the whole history of music there never was a more devoted cat lover; indeed, his passion for felines was second only to that of Thomas Gray, who wrote an elegy on "A Favorite Cat Drowned in a Tub of Goldfishes." And what is more, Gluck not only loved cats but trusted them as well—to such an extent that there are many who firmly believe that he is their intercessor in heaven. He trusted them with no less a delicate organ than his eyes; for he liked nothing better than sitting in his garden with one of his dearly beloved cats seated on either of his shoulders. To anyone coming up to Gluck's house, the cats surely must have seemed like two mysterious emblems of the Hades of Gluck's opera, "Orpheus and Euridice." Occasionally, when they licked his cheeks and mewed gently in his ears, sudden floods of inspiration would well up in him,

which in turn would find their outlet in music. Let us, therefore, in praising his works, praise also his excellent cats, as well as his bottle of Burgundy, from which he would obtain some harmless stimulation during his hours of leisure. For his Burgundy was always with him whenever he was with his cats: the three were inseparable companions.

## The Swan of Salzburg Gambols

IF THIS HAS BEEN SURPRISING, what is to be said for the diversions of Mozart? What does he do in his spare time, this Raphael of music? Does he read angelic verses or indulge in other sweet things befitting his heavenly spirit? Oh, no, indeed! Better to fold one's wings occasionally, so as to prepare them for a still higher flight to come. What is more delightful than playing billiards—when one does not play with money? Besides, poor Mozart, during his later years, had no money with which to play; so he was content with playing at home, with his wife, Constanze. He was very careful in aiming his cue and lavished no less precision on his every stroke than he did on the aerial ornamentations of his music. Occasionally, when Constanze was too tired to play, he called in one or two of his friends to share in a game; and when these, too, were not available, he ended by playing by himself. When he was away from home he loved to write letters, and in them he would indulge in all sorts of extravagances—humorous, affectionate, keenly sarcastic, or even somewhat naughty, depending on his capricious moods. Now and then he even employed amateurish drawings to illustrate certain descriptive passages. But we must not overlook Mozart's third diversion, which reveals a weakness not only personal, of his own, but also of the age in which he lived. It was, indeed, true that Mozart "walked with his head in the heavens"; but his was a head which, though equipped with one of the rarest of brains, yet had one of the most insignificant exteriors. The same was true of his general person, which was lamentably unimpressive. Consequently, Mozart took to collecting jewels, naively thinking to hide his physical plainness behind them; and since, like most geniuses, he could not afford precious stones, he had to be content with glass imitations. He had collections of all makes and sizes and, when wearing them, disliked having people ask whether they were genuine. Truly, never before has so rare a jewel hidden behind jewels which were so worthless.

Haydn, of course, was always the joker *par excellence*. When he was not at his music, one may be sure he was always up to some harmless mischief. He loved nothing more than to play a little prank on one of his friends; nor did he mind when someone did the same to him. Big child that he was, he also loved buying little sweet stuffs for children; and it was a source of infinite delight to him to have the little ones come running up to him to see what their "Papa Haydn" had for them. This was not only very much in accordance with the childlike beauty and lovable simplicity of his music, but also with the gentle love of children borne by the Savior, whom Haydn always adored.

## A Tone King Diverts Himself

BEETHOVEN'S DIVERSIONS were, however, more varied. Like Haydn, he liked playing jokes on his friends, but unlike them, would not tolerate anyone who turned the hose on him. Joking, to him, was only a one-sided affair; hence he was only a great jester when he confided his humor to his music. Nor was his a gentle, refined humor, like that of his great predecessor, but a droll, bearish humor sometimes bordering on coarseness, but always strictly removed even from the slightest hint of obscenity. For example, once he left a greeting card at the home of a friend. On one side of it were the words, "We remain, as ever"; but, on turning it over, a couple of asses stared one in the face. Or he thought nothing of composing an elegy on the death of a cat, or of sending droll canons to his friends. His quarrels with his servants may also be numbered among his diversions. Hence, he would quarrel with Nanny, his maidservant, on Monday, discharge her on Thursday, and take her back on Sunday; and the following week he would start the procedure all over again. During his younger years,

MODERN ARTISTS AT THEIR HOBBIES

1. Yehudi Menuhin; 2. Josef Hofmann and his second son, Edward; 3. Nino Martini; 4. José Iturbi.

when he was a newcomer into the cream of Viennese aristocracy, he took dancing lessons. We can picture this uncouth young man dancing the graceful minuet and prancing hither and thither like a colt.

It was during this most unfortunate time that he also took to horseback riding, and almost broke the horse's back, as well as his own. Later on, and until the very end of his life, he took to reading Goethe, Ovid, Sir Walter Scott, and many others, to increase his education, in which he always felt himself very deficient. He wrote voluminous letters, which were in such scrawling penmanship, and with such a profusion of blots, that, as Goethe remarked, "It seems as though Beethoven writes with a broomstick." In accordance with the affectation of the day, he sometimes wrote in French, and wrote it as anyone but a Frenchman. It was characteristic of him to begin a letter by saying that, due to eye strain, he would write only a little note; then to write a postscript which was five times as long as the letter itself. But of course his most constant diversion was his habit of taking five mile daily walks. Neither rain nor snow could stop him from taking these long rambles, which were a great necessity, for both physical and spiritual well-being. His passion for strolling in the woods is too well known for comment; for here he was close to Nature, who alone was his constant companion.

Schubert was content with fewer diversions than Beethoven, his overshadowing contemporary. On certain occasions he would indulge in pillow fights with the poet Mayrhofer, with whom he lived and some of whose poems he set to music. On other occasions he would make merry at the taverns; and many a pretty *Fräulein's* rosy cheek was affectionately pinched by his chubby fingers. He liked occasional drinking, in the spirit of the Bohemian, and, when tipsy, would make mock sermons. On one such occasion he shouted out to all present how great a composer he was, which he would never have had the courage to do if he were sober. Many a fine day, he, like Beethoven, would take excursions into the country; and during the evenings he was often to be found taking part in his musical gatherings, known, after him, as the *Shubertiaden*. It was here that all his friends gathered, and that they not only had the joy of hearing him perform many of his works on the piano, but also render his *Erkling* on—a comb!

### A Caricaturist in Music

CHOPIN INDULGED in similar fooleries; but, like his music, they were always of a highly polished order. George Sand, and others who knew him, all bear witness to his astonishing talents for mimicry. After he had given a too intimate revelation of himself, during one of his pianoforte improvisations, it was his custom to dispel all lingering impressions by going into the adjoining room, doing something to his hair to make it match that of some famous contemporary, and, returning again, to give a comic imitation at the keyboard of the person in question. He especially took keen delight in imitating Liszt's emotional tantrums—much to the displeasure of the latter, who seemed to think that tantrums were the natural right of every virtuoso. He also liked to play blindman's buff with the ladies, if the ladies were attractive enough to make such a pastime worth while. When he was not doing this, however, and when away from home, he would write to his friends, commissioning them to order an elegant suit of clothes for him, or to find him a new apartment of certain exact dimensions, with so many and so many rooms, and overlooking a garden. The wall paper had to have a restful shade, and not be vulgar; for, to Chopin, vulgarity was the unforgivable sin.

If there is an unmistakable similarity between Chopin the man and Chopin the musician, how equally is this true of

Mendelssohn. He was the most nimble hearted of musicians and the most nimble footed of men. The same graceful elasticity which characterizes his music was ever present in the numberless activities with which he filled the hours spent away from his work. Like Lord Byron, he loved to swim, and perhaps this partly accounts for his love of the ocean, which we encounter again and again in his music. He also loved horseback riding, and he took a special

delight in jumping fences and climbing trees. Occasionally he would even become so boyish as to snatch a slice of cherry pie out of the kitchen when the cook's back was turned. Like Mozart, he enjoyed a game of billiards, and, like him, he also was a voluminous letter writer and drew pictures to illustrate certain descriptive passages. In both the handwriting and the subject matter of these letters, we find all the

## Music of Worth to the Movies

By VERA ARVEY

JUST AS IN UNIVERSAL'S "Three Smart Girls Grow Up," when actor Robert Cummings only seemed to be playing the piano, but was not, many Hollywood stars have their sound tracks made by professional

Maria Ouspenskaya was playing on the nearby set for the cameramen and Miss Dunne was humming part of the song. Miss Bitter played, to the intense dissatisfaction of the director. "It sounds too

### MELODY COMES TO LIFE

*This is the way in which Hollywood is attempting to bring Melody to life in a new movie "Second Fiddle".*

musicians. Although the studios keep musicians under contract, these are often jazz players who are also adept at writing songs and at commercial arranging. When a classic musician is needed for a film, it is sometimes necessary to call in expert players from outside. Henry Svedrofsky (also a conductor) and Louis Kaufman are two of the violinists who are employed in this way as soloists, to "dub" for stars. Pianist Max Rabinowitch, former accompanist for Chaliapin and Isadora Duncan, is such a fine sight reader and so accurate at timing that the studios set great store by him. One of the most prominent concert pianists now in films is Marguerite Bitter, who dubbed for Gene Raymond in "Flying Down to Rio," who was one of four featured pianists in "Josette," and who played with Margaret Hart for Jeannette MacDonald and Ramon Novarro in "The Cat and the Fiddle." She had previously played in the stage show of the same name. In the picture, Novarro (who is an accomplished musician) actually played the piano; but his music was omitted in favor of Miss Bitter's, and only his photograph used.

"Love Affair," RKO's film starring Irene Dunne and Charles Boyer, brought an interesting problem to Miss Bitter. In the picture, Maria Ouspenskaya plays the part of a woman who had once been a famous pianist, but who is now long out of practice. Miss Bitter was called to the studio to teach this actress how to play an old classic song for close-ups. The following week, Miss Bitter came to the studio to record the music, at the same time that

perfect—too good for an old lady who is out of practice!" he declared. Thereupon he asked Miss Bitter to act in her playing, so that her music would express what Maria Ouspenskaya was showing on the screen. First she was to play timidly, with a few wrong notes (a very difficult thing for a real artist to do on command!), then with more assurance, and finally perfectly.

For "Quality Street," Miss Bitter recorded several old minuets before the picture was filmed. Afterward, the director selected the one he thought best suited to the mood. That is one of the ways of dubbing for actors. It is the easiest method. There are two others. Playing while the actors are acting on the set is also easy. But the third method, that of waiting until the film is finished and then synchronizing the music with the action, is the most difficult of all, for it is then necessary to watch the screen while playing and to fit the music to each movement. It is also necessary to watch a stopwatch. If the musician allows his eyes to stray from the screen to the keyboard for a single second, the music is slightly off and the recording must be begun over again.

Another use for pianists in Hollywood is at the time (in some studios) that a picture is finished, after the composer has seen it and has composed his incidental music for it. Then a pianist is called in to play and time this original music from the manuscript, while the director and orchestrator sit in on the conference to familiarize themselves with the score and to offer suggestions.

## How to Teach Broken Chords

By

STELLA WHITSON-HOLMES

WHEN THE YOUNG PIANIST undertakes broken chords for the first time, she faces with undue stiffening of the fingers and with stiffening of the hand and arm muscles often extending entirely to the elbow. This is due partly to the fact that the hand spans a wide reach with extraordinary difficulty, but mostly to the fact that is overanxious, and fears she cannot accomplish it.

And well she may be, for she is tackling a big problem which needs to be separated into a series of small units to be mastered separately. There are none of these small subdivisions of the problem which she cannot understand if given a reasonable opportunity. The teacher will find anxiety quieted if the pupil can handle the problem set before her very eyes, notation, step by step, making a series of progressive acts necessary to the proper playing of a broken chord. Let us say that the broken chord to be learned is the common chord of C major, appearing, of course, thus:

The pupil should play the following steps successively beginning with:

and progressing with:

\* Each of these steps is, in itself, a simple problem when properly placed before the child's vision, but they will be confusing if merely taught orally, thus increasing anxiety and its attendant stiffening. In every case, the pupil should, of course, count aloud, as correct time values are an important factor.

\*\*\*\*\*

### Couldn't Fool Him on Pitch

A tenor, "found" in a factory, was tried before a well-known London manager. He sang with singular purity the usual ballads about 'earts and 'opes and 'app'omes. The manager was duly impressed, but with a view to an engagement, ventured to suggest one improvement.

"I should like to hear an 'h' or two," he said.

"Can't teach me anything abaht music, gov-nor," was the reply. "There ain't no 'h's"—the 'ighest note's G."

# Music Makers in Old New England

A Timely Review of Many Quaint Customs

By MARGUERITE ALLIS

Author of *Connecticut Trilogy* and *English Prelude*

★ ★ ★ ★

I

## *The First Hundred Years: 1630-1730*

MANY WRITERS ON MUSIC have insisted that early New Englanders had none, other than a few psalm tunes; that they hated it and considered it a device of the devil. As a musician, the writer accepted this view. Then, due to circumstances unnecessary to define, she turned from music to literature and began extensive researches into New England folkways. Among the volumes studied was one by a Connecticut clergyman, whose Tory sympathies during the Revolution had forced him to flee to England where he retaliated for indignities suffered in Colonial America, by filling a book with fact and malicious fancy so artfully mingled that historians from that day to this have been busy sorting out and quashing his misrepresentations. One of the Reverend Samuel Peters' statements had a familiar ring. No musical instruments were permitted in Connecticut, so he said, except "the drum, the trumpet and the jewsharp." All those writers on music had taken their texts from Peters! But was it true? Peters had not been born until after the period under discussion, and most of the "Blue Laws" he held up to ridicule were of his own invention. No statute against musical instruments ever has been discovered in any New England colony. What Peters should have said, and perhaps meant to say, was that no instrument, "except the drum and trumpet," was permitted in the meetinghouse. Reference to the jewsharp may have been an intended joke; however, quantities of these tiny instruments were imported for barter with the Indians, who adored them. But the point is this; nobody seems to have stressed sufficiently the sharp line drawn in early New England between the sacred and the secular—or, as it was put in those days—the sacred and profane.

### *Poetess and Historian*

OUTSIDE THE MEETINGHOUSE there certainly was music; or why should Ann Bradstreet, New England's first poetess, make frequent allusion to harps and lutes, summer "with pipes full glad"; dolphins "loving music"; the mother of a sick babe who "with weary arms she danced and By-By sang"? Daughter of one Founding Father and wife of another, Ann lamented that old age can "no more rejoice at musick's pleasant sound." And she did not mean psalms, either; for song was vocal and music instrumental, always in the thought of that time. For her the blackbird and thrush "tune their lays," the "merry grasshopper sings," and the "black glad cricket bore a second part." Her son Samuel, absent in London, is besought in verse to "Fly back and sing amidst this Quire"; that is, in the family circle; as choirs had not yet fought their way into New England meeting-houses. Ann's most pregnant reference to

music, one irrefutably indicative of familiarity with instruments, is where she stresses the foolishness of expecting "sweet consort from broken strings." This lady was not condemned for levity. On the contrary, she was admired and encouraged by her own pastor in Ipswich, the Reverend Nathaniel Ward, and her brother-in-law, the Reverend John Woodbridge, another Puritan parson. These two seem to have conspired to carry off a collection of her verses which they had printed in England in 1650. She wrote copiously to the end of her days, and no voice was raised against either her piety or the propriety of her poetry.

Then there was Judge Samuel Sewall who spent a good part of a long life writing diaries through which the bright pattern of his love for music frequently shines. Four trumpeters tootling in the New Year, and century, of 1701, on Boston Common, charmed him into following them to "the Green Chamber" where they played on until daylight. During a visit to England under the Commonwealth, he went with another Boston Puritan, Mr. Brattle, to a "consort of musick" in Covent Garden—not the opera house, of course; that did not yet exist—but to chamber music in a private home in the neighborhood. If this was a sin, he did not lament it as such in his diary. His only comment on "Cousin Sarah" was that she played for him on her flute. He considered himself qualified, how-

ever, to discriminate between good and bad music in taverns. That music accompanied feasting also in Boston is evident from his enjoyment of some at "Col. Hutchinson's"; and, when that promised by the Lieutenant Governor for a public dinner, was not forthcoming, the Judge was disappointed. Samuel Sewall's standing in the community was above reproach. Then why, if music was taboo, did he dare to have a virginal in his house? Or why should the inventory of Mr. Nathaniel Rogers of Rowley frankly list "a treble violl," worth ten shillings?

### *A Musical Inquisition*

SUCH THINGS WERE PROBABLY RARE in the first settlements, not because forbidden, but because the scant space in immigrant ships was needed for more vital freight. Yet as early as 1716 a Boston news-sheet carried an advertisement of musical instruments for sale, together with assurance that the same would be skilfully mended and tuned. No penny pinching Puritan would risk his capital on such expensive merchandize, unless violins, hautboys, flutes, spinets and virginals were certain to find customers.

What airs gentlewomen fingered from these thin voiced strings can be only conjectured. The writer never has discovered, or heard of any one who has discovered, in this country an early edition of Fitzwilliam's Virginal Book. Nor do we expect to find mouldering copies of clavier music which charmed the court of Louis the

Fourteenth. Composers who wrote masses for the Church of Rome would have damned Couperin along with Palestrina. Yet, standing in some ancient pine paneled parlor, one has felt free to fancy the walls breathed faintly of old English folksong—such melodies as Cecil Sharp rescued from oblivion in the home counties of their inception and later in our own southern mountains. To say that these airs failed to be handed down from parent to child in New England, because of early Puritan scruples, is no more reasonable than to claim that their near extinction in Old England was due to the same cause when Oliver Cromwell, leader of all the Puritans, kept a private band. Before advancing our own theory as to the reason for their loss in New England, let us call attention to the attitude toward music, both sacred and profane, held by the most revered of all the pioneer divines.

### *To Sing a Psalm*

AFTER HE HAD FLED from old Boston in Lincolnshire to new Boston in Massachusetts, the Reverend John Cotton published a tract laying down the rules for psalm singing in public. It is interesting and important that this contained a word on music outside the meetinghouse: "nor do we forbid the private use of any instrument of musick therewithal; so be that attention to the instrument does not divert the heart from attention to the matter of the song." It might be a good idea if modern vocalists obeyed that rule, both without and within present day places of worship.

As for song in old Puritan meeting-houses—not churches—the Puritan had nothing to do with churches, English or Roman. His place of worship was a meetinghouse—plain, unadorned, austere, like his religion; and he put all profane—that is, secular things behind him when he entered its door, after having been called thither by a fanfare of trumpets, the roll of drums, or a blast on a conch shell. He had no thought of creating beauty with the voice raised in worship of a God who spoke in thunder and lightning. After the sermon, which paused only while the parson turned the hourglass, and prayers scarcely less lengthy, respite came when one of the deacons struck a candlestick with his fist, took a pitch of sorts from the sound produced, and whined a single doleful, long drawn out sentence from the psalm of the day. This the congregation echoed with more or less exactness, according to the individual ear. With this process repeated through innumerable verses, each worshiper choosing his own

A scene from Howard Hanson's "Merry Mount" at the Metropolitan Opera House in New York.

tempo, the result must have resembled a cats' concert. The psalm lining deacon was selected for piety, not virtuosity; and, although the Book of Psalms brought over by the Salem settlers contained notes to sing them withal, when the famous *Bay Psalm Book* was published on this side of the water in 1640, with King David's words transposed and distorted to fit, very loosely, five tunes, there were no notes. Everybody was supposed to know *Martyrs*, *Windsor*, *Hackney*, *York* and *Old Hundred*; and, in his own opinion, everybody did. The trouble

was that Deacon White's "lining" of York bore no resemblance to Deacon Black's, and that Squire Brown's lady insisted on singing *Old Hundred* her own way and not Goodwife Green's.

### So Came Notes and Anathema

SOME MUST HAVE FOUND this unsatisfactory, for the 1647 edition of the *Bay Psalm Book* had notes. Many, however, considered singing out of a book hardly less pernicious than praying out of a book; and, anyway, few could read notes. Versions of the "Five

Tunes" grew more and more varied, until, when groups, from parts a distance from each other, joined in worship, the cats' concert swelled into a chorus like unto that of souls in torment. Amid the tone deaf, fortunately, were some who cringed from such cacophony, from such butchery of melody. About 1720 advocates of taught singing arose; notably two parsons, the Reverend Thomas Symmes, shepherd of one of the Massachusetts flocks, and the Reverend Nathaniel Chauncey of Durham, a hamlet near Middletown, Connecticut.

Each published a tract. Symmes's "Dialogue on Singing" expressed views similar to Chauncey's, more long-windedly entitled "Regular Singing Defended and Proved to be the only True Way of Singing the Songs of the Lord." Both favored the establishment of singing schools where every body should be taught, *do, re, mi*.

This raised a storm of protest from those who believed the soft Italian syllable held some hidden obscene meaning unfit for the lips of the godly. Plenty of diehards opposed the change, on general principles. Milder citizens thought the old extempore singing more solemn and sanctified. A large number objected on the ground that singing schools would keep the young folk out of nights with subsequent danger of their becoming "lewd and loose persons." And this in the era of bundling—a courtship custom whereby swain and sweetheart were bundled into bed together by complaisant parents. The loudest cry against singing schools came, however, from those who insisted that singing from notes was a popish practice and would lead to organs. Here was something undoubtedly hateful to the Puritan, not as an instrument, but as an appurtenance of the Churches of England and of Rome, like the rosary and the crucifix. Organ notes were an offense to Puritan ears, as incense was to their nostrils.

This antipathy was transmitted to their descendants, through many generations; so that it was not until near the beginning of New England's third century of life that organs were generally installed in meeting houses. Added to Peters' fairy tales, this fact undoubtedly helped to foster the notion that all music was frowned upon by our forefathers; when the truth is that they banned it only from the meetinghouse; and this not very successfully, either, after singing schools won. Then a master or chorister must be appointed to initiate the young folks in the mysteries of clefs, notes and rests; and if, incidentally, a good time was had by all, none of the consequences predicted by the diehards materialized.

### His Satanic Majesty's Fiddle Joins the Choir

WHAT DID COME TO PASS was a change of seating in the meetinghouse. Hitherto ladies and lasses had faced each other from opposite sides of the gallery. Now the former were grouped just behind the latter, around all three sides. When the chorister rose, he sounded his pitch pipe, and hummed a chord, they burst into "part singing." While this was a vast improvement over the whining chants of their grandfathers, a good many uncertain ears needed a prop. Somebody suggested a fiddle. A fiddle! A bawdy tavern fiddle brought into the meetinghouse! Shades of the Pilgrims; No! The grim mouths of the older deacons snapped shut like mousetraps. Choir and chorister put heads together. A fiddle, perhaps, was going too far. Would not something else answer the purpose? How about a violoncello, or a bass viol?—not to call the latter by so dangerous a name as "bun-fiddle."

In some towns this compromise was effected painlessly; the diehards finding reasonable the argument that these stringed instruments could not possibly be related to the tavern fiddle; since the latter lay prone when played, like papists kneeling to pray, while the larger viols stood upright, as good Congregationalists did. Many refused, however, to be hoodwinked by such sophistries. One of Mr. Chauncey's Durham flock would stamp up to the door at meeting time and demand, "Is the great fiddle there?" If the answer was "yes," he would stamp down the steps again, muttering something about being damned if he "set under the same roof with a Dragon"—a dragon being any object savoring of popery, such as a statue or a stained glass window.

(Continued on Page 543)

## RECENT RECORD RELEASES

By PETER HUGH REED

RECENT RECORD RELEASES have provided some interesting musical adventures for those who like to explore varied territory—ranging from such old favorites as Beethoven's "Sonata Appassionata" and the Weber-Berlioz *Invitation to the Dance* (superbly performed and recorded), to a "Concerto for Two Pianos and Orchestra," by the American, Harl McDonald, and the rarely heard "Eleven Viennese Dances" of Beethoven.

Walter Giesekeing, whose popularity on records grows by leaps and bounds, plays the "Sonata Appassionata" of Beethoven (Columbia set M-365) with appropriate nuance and emotional vigor. Better perhaps than anyone else on records, he conveys the rising and the falling away of the several motives of the first movement; and in the passionate last movement he keeps the figuration continually thrilling and vibrant. As in most of his recent recordings, he displays an amazing command of tonal coloring, which the reproduction fully discloses.

Turning to Ravel's *Alborada del Gracioso* (Columbia disc 17137D), Giesekeing further exhibits his amazing gift for tone colorings. Under his fingers, this witty and scintillating composition becomes a miniature tone poem with exquisite tonal hues and amazing flashes of technical dexterity. Again, in Debussy's early *Reverie* (Columbia disc 17138D), a piece recently misused by popular writers, Giesekeing gives a performance that should turn piano students to performing it as the composer intended it to be played. Coupled with *Reverie* is Richard Strauss's song, *Serenade*, in an arrangement by the pianist.

Those who would like a recent souvenir of Paderewski's art, that does full justice to a piece requiring simplicity of tone together with singing tone, should acquire his recording of Mozart's *Rondo in A minor*, K. 511 (Victor disc 15421). A lovely work, played and recorded in the best traditions, it shows the Polish master's command of *legato* and of tone color.

Toscanini, with the British Broadcasting Company Symphony Orchestra (Victor disc 15192), gives a superbly performed recording of Weber's *Invitation to the Dance*, making this familiar composition much more of a virtuoso affair than is usually heard. And the same orchestra, under the direction of Sir Adrian Boult, turns in a competent performance of Tchaikowsky's *Serenade for String Orchestra*, Op. 48 (Victor set M-556).

An album of Boston "Pops" recordings, purporting to set forth a typical concert of this orchestra (Victor set M-554), contains a strangely conglomerate group of pieces. Opening with Glinka's brilliant *Overture to "Russlan and Ludmilla"* (disc 4427); it continues with two ineffective arrangements of Negro spirituals, *Deep River* and *Nobody Knows de Trouble I've Seen* (disc 4428); "Five Miniatures," descriptive trifles by Paul White (disc 4429); the *Doctrinen Waltz* by Eduard Strauss, a brother of Johann (disc 12428); and the popular *Intermezzo* from Granados' "Goyescas," coupled with Tchaikowsky's

*Polonaise from "Eugen Oniegin"* (disc 12429). The vital Glinka overture is something everybody should have, and the "Goyescas" *Intermezzo* will undoubtedly please all those who have been waiting for a modern recording of this old favorite. Needless to say, Arthur Fiedler does justice to these compositions.

One of Beethoven's less pretentious tributes to his fondness of the country surrounding Vienna is his set of eleven dances, written in 1819 for a seven-piece country

WALTER GIESEKING

band. Practically never heard in the concert hall, they have been engagingly performed in a recording (Columbia set X-133) by Weingartner and the London Philharmonic Society, together with a dramatic *Larghetto* from the composer's "Incidental Music to Egmont."

Although overshadowed by his "Unfinished" and his lengthy "Symphony in C major," Schubert's "Fifth Symphony" is nevertheless a delightful and rewarding work. Its spontaneity is attested from the opening bars. The joyous, bouncing motive of the opening *Allegro*, recalled by Dvořák in the first movement of his "Symphony 'From the New World,'" is full of youthful elation; and the second movement is songful and tender. The *Minuet* has been compared to that of Mozart's celebrated "Symphony in G minor"; and the gay *finale* has been commended for its fine workmanship and brightness. Sir Thomas Beecham, conducting the London Philharmonic Society, gives us a treasureable performance of this early Schubert score. The recording is splendid (Columbia set M-366).

Koussevitzky has played for many years a "Concerto for Orchestra in D major," by Karl Philipp Emanuel Bach, which we often have hoped he would some day see fit to record. That day came at last; and we have the work in Victor's set M-559, superbly recorded. In three movements, this composition boasts a vigorous first movement, a similar sturdy finale, and, in between, a hauntingly beautiful *Adagio* which the composer's father, Johann Sebastian, might well have been proud to have written.

The "Concerto for Two Pianos," by the American composer, Harl McDonald, is

richly and brilliantly performed by the Philadelphia Orchestra, with Jeanne Behrend and Alexander Kelberine at the two pianos, and with Leopold Stokowski directing (Victor set M-557). The work, a strangely uneven one, does not sound any great depths nor convey any compelling motivation. Beginning with an opaque, rather heavily laden movement, the concerto continues with a theme and variations (slow movement), more immediately appealing and sincere in expression, and ends with a vigorous and primitive dancelike *finale* founded on a *juarezca*, a dance of Northern Mexico.

It was our pleasure recently to call attention to four sets of Haydn quartets that Victor released (sets M-525, 526, 527, 528). After hearing the four albums, we wish to suggest to our interested readers that they acquire them in the following order: first, album M-527; second, album M-525; third, album M-528; and lastly, album M-526. We spoke of the contents of album M-525 a couple of months ago, so let us briefly turn our attention here to the contents of album M-527. It contains three fine quartets from various stages of Haydn's career: the fourth from the highly regarded "Six quartets" that form "Op. 20"; a neglected masterpiece; the second quartet from "Op. 74"; and the last quartet that Haydn wrote, a truly great work, Mozartian in both its character and spirit, "Op. 77, No. 2." The performers of these works, as in the other albums, are the Pro Arte Quartet. The recording, made in England, is good throughout.

The Coolidge Quartet, turning its attention to American music, gives highly polished but completely unemotional performances of Griffes' "Two Indian Sketches" and of an *Andante* from the "Quartet in E minor," by Chadwick (Victor set M-558). The Friends of Recorded Music already have issued a much more desirable performance, by the Kreiner String Quartet, of the plaintive *First Indian Sketch*, coupled with one of the greatest songs in the English language, Griffes' *Lament of Ian the Proud*, sung by William Hain (disc No. 5).

The Roth String Quartet, turning its attentions to music of its native Hungary, plays Dohnanyi's "Second Quartet, in D-flat major, Op. 15" (Columbia set M-367), with fine feeling and style. This work, written in 1907, is one of its composer's foremost chamber compositions. The Roth performance displaces an earlier one by the Flonzaley.

Marian Anderson gives a noble, if not completely moving performance of Brahms' "Rhapsodie," one of the composer's greatest vocal scores, assisted by the Philadelphia Orchestra and the Choral Society of the University of Pennsylvania. And with the same orchestra the singer is heard in this composer's songs, *Dein blaues Auge*, *Der Schmied*, and *Immer leiser wird mein Schlummer* (Victor set M-555). The songs are over-weighted with the orchestral backgrounds, but we recommend the "Rhapsodie," which can be procured complete on discs 1919 and 15408.

"Shaped" or "Buckwheat" notes look like this excerpt from James D. Vaughan's "Hallelujah Voices."

A typical gathering of singers in the South using Buckwheat notes.

## A Primitive Excursion

THE NEXT MORNING WE STARTED for the Springs, several miles off the paved highway, over a road which in places cut across fields and through shallow streams. As we neared the Springs, wagons filled with sunbonneted women and overalled men slowed up our progress. Horseback riders wound in and out of the procession, and automobiles, loaded with farmers and their families, were interspersed throughout.

The road curved its way into a large wooded spot where dense foliage effectively kept at bay the hot Texas sun. Horses, tied to wheels, munched hay from wagon beds, around the outer circle of the grove. More cars were parked here, their mud spattered sides testifying to much travel along the back road districts.

As additional wagons and cars arrived, they were left near the outer fringe of trees, while all occupants deserted them for the center where a crowd of possibly three hundred people strolled about. A school building was to be used for the singing, and most of the people were gravitating toward this wooden structure.

Having managed to squeeze into one corner of the building, we could get a good view of the meeting without being in the way of the singers. It was the season in Texas when the crops had been "laid by" and the work-browned men and women were now ready to sing "to the land I am bound." There was little spirit of gaiety about the session, as the members showed a deep reverence for the old time shape-note songs which had been sung be-

fore them by their parents and grandparents.

For the youngsters, however, it was a picnic. Barefooted towheaded boys in overalls, and little girls in fresh print dresses, darted through the crowd. Older girls in their teens, self-conscious and highly uncomfortable in tight fitting shoes, gathered in small groups to exchange bashful banter with strapping farm swains. Delegates to the convention from various districts were easily identified by their white ribbon badges. They were the leading singers from their communities.

The milling about on the floor of the building stopped suddenly at the command of the chairman, "All singers get to their places." With an ease born of long practice, the members arranged themselves in folding chairs to form a square. In the center was space for the leader. The sopranos were in front of the leader, trebles at the left, basses at the right and altos at the leader's back.

Each singer had a songbook on his lap, many of them tattered and worn from use, and some dating back to 1844; but they were for effect only, for not a person there would have admitted that he didn't know every song in the five hundred seventy-five page book by memory.

Over a singer's shoulder we could see his half opened book. All the songs were in the *fa-so-la* or four-shape style, the notes being of triangular or square mold. Because of their peculiar shape, they are called "buckwheat notes" by the round note adherents, and their users are derisively known as "buckwheelers." The shape-

noters in turn deride the round note singers as "roundheads" and there is constant argument between the two groups as to the best musical notation.

With the last note of the complete scale omitted the seven notes of the key, in Four-shape notation, are

In addition to the four-shapers, another strong singing group is known as the seven-shapers. This group has taken the four notes of the four-shapers and has added three notes. The seven-shapers also flourish around Texarkana and in rural areas of the Southern states. The scale in Seven-shape notation is

We were interrupted in our over the shoulder pilfering by the chairman's voice announcing that "Brother Wilkins will lead the lesson."

A stocky, ruddy faced man walked to the leader's position in the center. The short red hairs on his sunbrowned wrists glistened as he raised his arms for the attention of the assemblage, called the page of an old fuguing song, banged his tuning fork against a table, and "keyed" the tune.

His arms dropped, and the basses were off in a thunderous roar of

"He makes the corn in talley's grove,  
And waters veil the sky to cheer th' plains below."

The trebles came in, quickly followed by the altos and finally the shrill sopranos joined the musical cavalcade. The ghost of old William Billings, New England schoolmaster, who first introduced fuguing songs into the United States, must have been hovering happily about the building.

Walking about in his small cleared space the leader gave the entrance cue to division. He had no book or baton, carried the beat with both arms up and down. The singers kept their eyes on the leader, many beating time with

THE FILLING STATION ATTENDANT emphatically hitched up his trousers and then glanced with faint disgust at two arguing men across the street.

"Some of them dern buckwheelers and roundheads at it again," he offered in explanation, "Every time a couple of them get together, they start wrangling. Check your tires, lady?"

The small town near Texarkana, where we had stopped, basked lazily in the mid-day heat and, except for the pair across the street, there was little sign of activity. An occasional squeaking of a chair was heard as a grocery store loafer shifted to a shadier spot.

"What are those men arguing about?" we asked, with not so very mild curiosity.

"Aw, they just can't agree on how to sing. See that little fellow? He's a four-shaper. That big fat man he's talkin' to is a round-shaper. Now if a seven-shaper would come along you would really hear an argument."

When, as children of the Kansas wheat belt, we had heard harvest hands, who made their seasonal journeys to our place, sing songs in the evening which they explained were used by the shape-noters in the south, our childish curiosity was aroused by the strange term, but we never had pressed the point further. Yet here we were apparently in the midst of this unique singing group, with all their primitive enthusiasms for their favorite systems of vocal notation, and watching their animated confabs, as cool as cucumbers.

"Are there many of the shape-note singers around here?" queried one of my companions.

"Dunno, lady, sometimes it seems the woods is full of them; and then you don't hear anything of 'em for a spell. They have meetin's around, but I never go to 'em. I can't sing nohow. They're goin' to have a sing to-morrow at the Springs, I think."

Our little party had intended going into Dallas to the Pan-American Exposition, but it would have to wait a day. We were going to the singing. The Springs, it was learned, was a wooded grove several miles from Texarkana, so we drove back to the Arkansas-Texas border city to spend the night. On the way a small homemade sign was noticed in a roadside field, and its rather rickety letters spelled:

"All-day Singing at the Springs  
Bring Your Basket."

as they sang with all the enthusiasm of their thirsty souls.

There was a feeling of immense power in the song as each group vied for supremacy. These American singing guilds, known for more than two hundred years as shape-noters, sing songs which spring from the soil and are nourished by the hills and valleys that bear their crops. They are the only known singing groups in the United States which still use the oldtime fuguing songs.

### And Leaders Propagate

THE FINAL NOTES HAD SCARCELY DIED AWAY before the chairman noticed a visitor who had slipped in quietly to stand at the rear.

"Don't go hidin' like that," he called to the visitor. "We've been waitin' for you to show up. We want you to be tone bearer for the meetin'. Friends, you all know Brother Bartlett. He's taught more singin' schools in the Southern States than any other four-shaper. Years ago he brought the shape notes over the hills from Georgia to us."

Brother Bartlett, a pleasant smiling man in his late fifties, his lean wiry body topped by a shock of gray hair, walked to the conductor's podium. Without looking at a book, he spoke softly, "Folks, I'd like for you to sing page 406. It's my favorite song, the one my mother used to sing in Georgia, when I was a little tot playing at her knee."

In the silence that followed, Brother Bartlett, ignoring the tuning fork, keyed the tune vocally and raised his arms in a dramatic flourish. This time the four divisions joined their difficult melodic progressions in a mighty volume which thundered its way through the open windows and swept across the rolling fields.

Song followed song at the meeting, the singers reluctantly taking time out at noon for the basket dinner, to resume eagerly thereafter. Every person who was a leader of his neighborhood group was given the privilege of the floor and allowed to lead two or three songs. There were few spectators, as those in attendance came for only one thing—to sing. Their entire enjoyment was in active participation.

At the close of one song, a tall loose-jointed Texan, who I later learned was an amateur "tune maker" from over near Rock Creek, whispered to the chairman, who then rose to announce "Brother Johnson just told me he has a new song he would like us to try out. He has only a few copies so I will give one to each section."

Brother Johnson produced several sheets of paper on which the score and words had been traced with pencil. Each division secured a copy and gathered in groups so that all could see. For a few minutes the singers studied the new score, humming the notes.

"You'll have to key the tune," the chairman told the tune maker, as all ears awaited the opening note.

Brother Johnson hummed the tonic and the assembly took it up in galloping tempo and carried it lustily to completion, although not one of them was familiar with it. All our group of visitors were astonished at this difficult feat of musical sight reading.

Wherever there are shapenote singers, there are tune makers. The birds, trees, cotton and corn inspire verse which in time demands a tune. It was just such a melodious conception which the group had finished singing. Occasionally one of these backwoods songs has sufficient merit to find its way into the official shape-note song book. Then the tune maker's cup of happiness is filled.

### And Juvenile Leaders

NO SING IS COMPLETE without the children's division. The shape-noters are hanging on tenaciously to their type of singing, which

in these days of jazz orchestras, crooners and musical movies is meeting serious competition. The South is the last stronghold of shape-note singing, as it has been driven from the North and East. For this reason, the adults encourage their children to carry on the shape-note singings and to push back the ever encroaching roundheads.

A boy about five years old was called to the leader's position and asked to take charge. In a childish treble he called the page number of a song, tuned the key perfectly and started beating the time. The adult singers followed him with utmost precision and at the close looked with undisguised pride on the youngster. Although the boy could neither read nor write, he was thoroughly at ease leading the song. Next a little girl of six was called to lead, and several other tots got a chance to show their skill at leading the singers through the difficult musical passages.

At the start of each song, the syllables, *fa-so-la-mi* were sung, then the singers doubled back and sang the words. All the verses were sung in their entirety, yet the singers never opened a book. They picked out and sang the shape-notes with the *staccato* rapidity of a hungry pullet pecking at an ear of corn.

No piano or other instrument of accompaniment was used to detract from the deftly interwoven melodies of song. This type of singing required almost a sense of absolute pitch.

For an entire day the rural festival continued as leader after leader appeared before the gathering and song after song was rolled away in rapid succession, with the singers showing no signs of exhaustion from their continual vocal efforts. The sun was hanging low in the skies before the meeting broke up and then only because the singers had to get home to do the chores.

## Jascha Heifetz Transposed to the Films

WHEN THE CANDENT GENIUS of Jascha Heifetz flashed upon the New York public, on October 27, 1917, the critics opened their treasure boxes of adjectives and loaded them upon the new virtuoso, then just sixteen. "Here," they said, "is a born violinist"; and this was virtually a fact. Heifetz can hardly remember a time when he did not play the violin. Almost as soon as he was able to walk, his father put a fiddle in the hands of the three year old baby and gave him his first lessons. At four he was studying in the music school of his native City, Vilna, in Lithuania. At eight he was already under the instruction of the great Auer, who, the following year, permitted him to make his first appearance in St. Petersburg. This was the overture

to a long chain of extraordinary successes with great European orchestras.

It is not surprising that Samuel Goldwyn sought to secure Heifetz for a film. His unerring intonation and rich tone were just of the type which modern sound recording discoveries demand for super results. Previews of the new Heifetz film "They Shall Have Music," indicate that unusual revelations in tonal beauty mark this notable picture. Only the most advanced technical skill could capture the rare nuances of the amazing player. He has been most applauded for his incomparable taste. Since taste is largely instinctive, and only one who is born with it is able to touch the horizons of the musical soul, only he knows how to go just far enough without going too far.

Heifetz's fine personality and his vast platform experience make him ideal for the motion picture world. Goldwyn and the United Artists Corporation are to be congratulated for presenting this great Artist in his prime in a striking new picture which combines musical virtuosity with an excellent screen romance.

One of the distinctive features of this picture that should be of huge interest to educators, is the fact that the producer has employed a real "boy and girl" school symphony orchestra of forty-five players, all members of the California Junior Symphony Association, aged from nine to fourteen. They play the overture to Rossini's "Barber of Seville."

Music lovers, teachers and club members will find in this film valuable promotive matter for all educational interests and readers of THE ETUDE not only will want to see the film, but also will want to urge others to see it.

## Color in Piano Styles

The chintz motive on the walls is carried out in the covering of the piano case

Not an antique but a modern design which fits in with the classic outlines of this beautiful room

Imagine a Zebra Skin upon a piano "a la Congo", but isn't it effective?

WHEN SOLOMON, the preacher in Ecclesiastes, wrote, "And there is no new thing under the sun," he was probably very right; but certainly there has been a marked difference in the decoration of pianos, in order to make them conform to what the interior decorator feels is necessary to blend with modern tastes in home and music room arrangement.

All of the leading piano makers think first of the inside of the piano, its soul; and this is right, because the piano is first of all a musical instrument. Most of the manufacturers, however, have shown an

admirable initiative in designing piano exteriors that are in themselves beautiful works of art.

Elsewhere we have shown the magnificent new case of the piano presented by Mr. Theodore Steinway to the White House. Now we show other pianos in chintz, zebra hide, and in Kordevon—the latter a new finish devised for pianos and originated by the Rudolph Wurlitzer Company. Apart from the musical quality of these instruments, the idea is to create a new and essentially colorful piano which may be adapted to any decorative scheme.

## Music's Debt to the Poets

By ARTHUR O'HALLORAN

IT IS A MATTER of first importance to the art of music that many of its greatest masters had also a love for poetry and a discriminating taste in literature. What priceless gems would the world have lost had Schubert, for instance, not read his Goethe or Shakespeare? We would be without the immortal *Erl King* and *Hark, Hark the Lark*, to mention but two famous songs of Schubert, beloved both as songs and as pianoforte transcriptions.

To Heine we are indebted for *The Lorelei*, the Germanic legend so finely set to music by Liszt. Liszt also used poems of Goethe for songs. Purcell has set poems of Herrick, the English poet who lived in 1591-1634. To Sir Walter Scott we owe the words of the *Ave Maria* so superbly set to music by Schubert, who also wrote his song *Wild Roses (Heidenröslein)* to words by Goethe.

Of American poets Longfellow has had many musical adaptations; whilst, of famous English poets, Browning, Swinburne, and Tennyson have had gracious musical settings.

Schumann, Grieg, Mendelssohn, Dvořák, and Macdowell, are among the famous composers who owe much of their popularity to a happy blend of the art of poetry with music.

Kipling has been drawn upon freely for musical illustration—both his prose and verse. Included among the composers who have used Kipling texts, are such distinguished musicians as Sir Arthur Sullivan and the impressionist, Cyril Scott.

**M**MUSICAL PROGRAMS TO LIGHTEN heavy working days in business organizations may seem fantastic, perhaps contrary to the usual ideas for working efficiency. Some business heads may even consider music during working hours as an unwanted intrusion, like hearing a blaring brass band from a passing parade. But a recently conducted experiment demonstrates that it all depends upon the type of music, and that soothing harmonies coming from properly arranged sources can be advantageously adapted to reduce the nerve strains of modern business and to induce happier working moods.

The Insurance Building, Oakland, California, has won a national reputation in the office building field, for pioneering unusual services that build good will and make its tenants permanent. Among these are open air gymnasia on the roof, for both men and women, and other health building facilities. Its latest innovations include daily programs of soft, modulated music, introduced as a special feature during the recent holiday season by P. Delaware Smith, the building manager. These were heard throughout the entire building during the eight business days preceding Christmas and proved highly popular with tenants.

### A Cautious Experiment

THE INTRODUCTION OF MUSIC into these business offices during their regular working hours was approached by the building management with considerable hesitancy. There was the danger of possibly disturbing executives and of lowering working production by distracting the personnel. That season of the year is always the busiest time for these tenants, particularly of offices that are branches of large eastern concerns. Books must be closed for the year; outstanding accounts collected; salesmen are reporting; and annual reports must be compiled and sent to home offices. Mr. Smith had long believed that business is conducted to-day at too fast a pace, with too much emphasis on speed that allows too little time and thought to the things that make life worth while. In his opinion, music could be made to serve a valuable purpose in bringing mental ease and needed individual relaxation from business worries.

At that time the public appeared much concerned over the gloomy European outlook. Mr. Smith felt that the American people had particular reason to feel thankful, as compared with those living in war troubled European countries. At first he considered utilizing this thought as a basic theme for the building's holiday greetings, but this he rejected in favor of something better. This seemed an excellent opportunity to try out some of his beliefs about music—that it could be employed to drive away business cares, to stir the emotions, and to bring a happier spirit into business life.

According to the sound equipment people who installed the facilities, this seems to be the first instance where daily musical programs have been broadcast throughout an entire office building, over an extended period of time. As this was just an experiment, the equipment contract carried a clause providing for its immediate cancellation if the music proved distracting to listeners.

The music was distributed throughout the entire building by means of RCA System Sound Projectors, controlled in the

office of the building management. The equipment was modulated by the sound engineers so that the music could be heard clearly yet softly in the main floor lobby or on upper floor halls and corridors but would not be audible behind closed office doors. Sound distribution for the main floor came through a cathedral type

The choice of the kind of music was not left to chance, but was worked out after careful study. During the experiment, all office occupants, building maintenance employees and large numbers of transient visitors daily would be exposed to the music. Individual preferences and dislikes would have to be considered. Too much of any one type of music, no matter how fine or desirable, would be monotonous.

The music was mixed deliberately, to provide for variation. To insure the desired results, an arbitrary schedule was made up in advance every day, which took into consideration the playing hours and special nature of the music most appropriate for that period.

More than two hundred musical selections were available. These ranged from waltzes, college songs of leading California universities, jingles, marches, orchestra pieces and vocal solos, to classical, religious and symphonic music. Favorite Hawaiian and marimba band selections were also included. It was found that "hot swing" jazz pieces were not wanted. For convenience in scheduling and handling, all records were classified and kept in separate groups.

they heard *Anchors Aweigh*; *Jingle Bells*; *Whistle While You Work*; and similar cheery selections. Surprised transient visitors stood in the lobby listening.

During the first three days the building management made careful tests. All floors were checked to get tenants' reactions. They were asked "Is the music disturbing you?" and they replied "No, we like it."

The soft music coming from the concealed speakers could be heard distinctly in all parts of the corridors; but, the moment an office door closed, the music was shut out. Doors had to be propped open to hear. On one floor check up, it was found that twenty-five out of twenty-seven offices had the doors wedged open to listen.

From the morning the music started, the enthusiasm mounted and grew every day. A group could be found listening in the lobby most of the time. People had heard about it in other buildings or came from other parts of the city. After visitors had finished their business in the building, they invariably lingered in the lobby to hear more.

After the opening day, tenants began phoning and writing notes to the building management requesting that favorite selections be programmed. If they were not on hand, Mr. Smith made arrangements to get them. When he experienced some difficulty in getting particular arrangements requested—like when someone wished to hear a famous orchestra's rendition of Dvořák's "New World Symphony"—tenants began bringing in their favorite record collections. These were added to the programs. Very frequently a lobby visitor would ask for some favorite to be played. This was always arranged, if it did not conflict with the desired type of music for that hour. Nearly as many requests for musical favorites came from men as from women. These requests came not only from the younger but also from the older men.

### A Business Stimulant

AT FIRST IT WAS THOUGHT that the music might possibly slow up the movement of elevator traffic; but it was discovered that people listening in the lobby moved away from in front of the elevators so as not to interfere. Peppy music, when people were coming in or going out of the building, stimulated the movement of traffic.

Indicative of the enthusiasm with which tenants responded to music mixed with their work are two typical tenant reactions. The head of one firm commented, "The holiday period always gets me down because for me it is the busiest, hardest working time of the year. Our firm is closing its books. My home office calls on me for information and special reports. Because of this additional work, this period is depressing. This year it's different. The daily music causes me to forget the pounding to do this or get that done. It makes me and my whole staff work in happier mood."

The president of a financial institution whose office buzzes with activity during the hours the country's stock exchanges are open, remarked, "I was doubtful when I first heard the music. During this period our staff is working under heavy strain, but there never has been a time when our organization functioned so smoothly, efficiently and with (Continued on Page 531)

# A New Experiment with Music in Business

By EARL BURKE

*Soft, modulated music greets incoming tenants from a speaker on the mezzanine floor.*

*Musical production and control room. At left, attendant is placing a musical selection on electric turntable. On the right is panel for regulating volume and tone.*

speaker concealed among decorations on the mezzanine railing overlooking the lobby. On alternate floor levels tiny modulated speakers—instead of the usual blaring type—were hidden in the iron grill-work of stairways. The fact that speakers were concealed added to the charm when music came gently stealing through the corridors. Listeners wondered where the music came from and frequently inquired, "How do you get that delightful effect?"

### A Varied Musical Diet

IN THE OFFICE OF THE BUILDING management, record selections were played on an electric turntable operated like a phonograph. Volume and timing were controlled from a radio panel. The tone could be regulated so as to sound louder on the lobby floor than elsewhere in the building; and, if too resonant on any upper floor, it could be tuned down separately.

The make up of daily schedules called for marches and similar peppy music to be played from eight to nine in the morning, when people were coming to work, during the luncheon period, and around five o'clock when occupants were leaving the building. At all other hours of the day more subdued types of music were released. The building management knew from its traffic counts of the hours when the building carried the greatest number of visitors and the exact times when it would be filling or emptying, so as to change the music to fit the time of day.

### A Fortuitous Launching

THE FIRST MUSICAL MONDAY MORNING people began coming into the building with the customary long faces, reluctant to begin the work grind for the week. It was interesting to observe how their gloomy facial expressions changed instantly when

THIS PARTICULAR PAIRING of "cousins once removed" deserves especial mention, for the change from one key to the other is so striking that composers have used it time and time again—and always effectively. The rise in tonality of a minor third produces a peculiar feeling of stimulation, a kind of lightheaded buoyancy. Cole Porter, whose music is often harmonically out of the ordinary, brings this modulation into one of his best known songs, *Night and Day*.

Ex. 10

This quotation from *Night and Day*, and those used later from *Smoke Gets in Your Eyes* and *Innocent Innocent Baby*, are reproduced with the kind permission of the Music Publishers Holding Corporation, owners of their copyrights.

At *x* the music is lifted abruptly from the tonic triad of E-flat major to the tonic triad of G-flat major. And at *y* it drops back just as abruptly to its old key. Musical sleight of hand!

A more famous example of the same modulation occurs in the *Grand March* from "Aida," by Verdi.

Ex. 11

In this case the music is lifted a minor third from G major to B-flat major. For lack of space the quotation includes only the closing notes of the first appearance of the tune and the opening measures of its repetition. If you have seen the opera you will recall this dramatic moment. Four trumpeters on the stage blare forth the melody. Hardly has its last note died away when four more trumpeters appear in the procession. Instead of repeating the music in the same key, they announce it a *minor third higher*, thus heightening the effect of the scene.

Wagner was very fond of taking a musical phrase and repeating it a minor third higher. This device appears in the *Pilgrims' Chorus* from "Tannhäuser", in the music which accompanies the entrance of *Tristan* in the first act of "Tristan and Isolde", in the famous *Liebestod* from the same opera, and in the "Faith" motive in the *Prelude* to "Parsifal."

# The Threshold of Music

By LAWRENCE ABBOTT

Assistant to Dr. Walter Damrosch

## Keys That Are Related—Sisters and Cousins and Aunts—Natural Laws That Guide The Flow of Chords

This article is the thirteenth in a series on "The Doorstep of Harmony." The first appeared in *The Etude* for January, 1938.

### Part II

Another mutual cousin, or connecting link between two distant keys, is the subdominant minor. This intermediary makes possible a change of key which delights many a composer—a downward shift to the major key located two whole tones below the original key. For example, the modulation from C major to A-flat major. The connecting link in this case is F minor, which is the subdominant minor of C and the relative minor of A-flat.

An example of this modulation occurs in *Smoke Gets in Your Eyes*, from "Roberta" by Jerome Kern.

Ex. 13

From D major to G minor is one jump; from G minor to B-flat major is another jump. But Jerome Kern's modulation eliminates the middleman and goes directly from D to B-flat. Zee Confrey, in *Kitten on the Keys*, makes the same down a major third change of key, when he switches from the opening tune to a second one.

Having discussed the various relatives which a key can have, let us meet a typical family group so that we may observe brothers, sisters and cousins side by side. Here are the relatives of C major.

Ex. 14

In these ten measures will be found the ten keys most closely related to C major. In each case the first chord is the tonic triad of C major, while the final chord in the measure is the tonic triad of the related key. As you might expect, the next to the last chord in each measure is the dominant seventh of the related key. It will be noticed that the last two keys, being cousins once removed, are so distant that an extra chord is required to make a smooth transition.

Just as C major has its relatives in good standing, so every other major key has similar relatives. And every minor key, too, has its set of relatives, substantially the same as those of the major keys. Of course, in the case of minor keys, their dominant and subdominant keys are likewise minor. For instance, the subdominant key of C minor is F minor, while its dominant key is G minor. We shall find, however, that every minor key has another close relative, for which there is no equivalent among the relatives of the major keys—the dominant major. If we are in C minor, we can modulate just as easily into G major as into G minor (perhaps even more easily).

Thus, we have

Ex. 15

(a) modulates to the dominant minor key, whilst (b) modulates to the dominant major key.

It probably has been already guessed why the second modulation seems, if anything, a little more natural than the first. It is because the dominant triad belonging to the minor scale's "house of chords" is a major triad. We are therefore accustomed to hearing G major chords frequently in C minor pieces, and it takes only the presence of the leading tone, F-sharp, in the chord preceding it, to turn the G major chord into the tonic of a new key.

### The Stepping Stones of Modulation

WE HAVE ALREADY MENTIONED that a chord may belong to two or more different keys and may thus act as common ground on which these keys may meet. Between any two keys which are related we can find such "stepping stones"—chords which are shared in common by each of the keys, and

which will take us across without the necessity of making a single awkward leap.

C and its relative minor, A, have the following chords in common:

Ex. 15

C and its dominant, G, have these chords in common:

Ex. 16

C and its subdominant, F, have these chords in common:

Ex. 17

C and its tonic minor, C minor, have these chords in common:

Ex. 18

Technically speaking, these chords common to both C major and C minor are three separate chords. But we can readily see that they are hardly more than three variations of a single chord, the two triads being component parts of the dominant seventh chord.

### Double Meanings in Music

"STEPPING STONE" CHORDS do not necessarily give us advance warning as to the key for which we are headed. They can give us broad hints, of course; but there is only one chord which provides us with positive information: the dominant seventh; and even that does not tell us whether the coming tonic is going to be major or minor. With any other chord the ambiguity is far greater. We can guess, perhaps, three or four keys to which the chord *might* lead us, but we can not be sure which of the three or four it is going to be until we hear what comes next.

Suppose we switch on the radio and tune in on the middle of a piece of music? The first chord which strikes our ears, let us say, is the major triad on F. What key are we in? Perhaps we are in F, listening to the tonic; and perhaps in C, listening to the subdominant triad. Or, again, we might be in A minor, listening to a chord on Fa, or we could be even in B-flat major, listening to a dominant triad; or in B-flat minor. We cannot tell for sure.

This same ambiguity is true, to a greater or lesser extent, of every chord. As soon as we strike a chord which might belong to some related key, as well as the home key, we are lost in a musical fog, without a compass. Until the next chord sounds we cannot tell into which of the possible keys we are actually going to land. In other words (to scramble metaphors), you have to lie low with your listening ear, waiting to hear which way the cat is going to jump.

That is one thing that makes music so fascinating. For instance, in the "Symphony in C Minor," *Fourth Movement*, by Johannes Brahms, we find

Ex. 19

This is the majestic, chorale-like theme which the sonorous brasses intone in the *Finale* of Brahms' "First Symphony." (Continued on Page 552)

# BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

WILLIAM D. REVELLI

FAMOUS BAND LEADER AND TEACHER  
CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

THE REQUIREMENTS of a conductor sometimes seem without end. He must be more than a pedagogue—must be an organizer, a diplomat, a zealot, and a showman. He is in the public eye, subject to high praise or loud censure. His personality and the scope of his efforts must be each broad enough to maintain him and his musical organization as the pride of the school or community.

Not the least of his special knowledges is a thorough understanding of Program Building. Many a competent conductor and musician has stopped short of success through an inadequate grasp of the psychology of preparing programs. Perhaps the word "success" is incapable of having definite limits, but it is certain that no conductor is a success if he fails to attract audiences to his concerts. In spite of the many functions which bands or orchestras can be assumed to fulfill, they are primarily entertainment organizations. It is their duty and, after intensive effort, their right to play to sizable audiences.

Program building, then, may make the difference between obscurity and prominence; and its elements are far more involved than at first might be apparent. This is particularly true in the case of the average school or municipal band or orchestra. The conductor of a musical organization of finished and capable musicians may feel free to select at will those compositions which he would like to have it perform; and he can range with impunity into the fertile fields of the masters. Not so the school or average community director. He faces players of limited playing proficiency, and the tradition of past musical programs weighs upon him. He hardly dares to attempt a satisfactory performance of the masterworks.

Added to the obvious limitations of inexperienced or indifferently capable members is the problem of instrumentation. Many symphonic works which might have been essayed, must be foregone through insufficient instrumentation, or attempted with often impractical substitutions for the originally required instrumental voices. Considerations of this type cannot help but affect the choice of program numbers and the general tone of the concert.

The importance of wise choosing is too often woefully apparent to the concertgoer who sits through one performance after another, vaguely or definitely aware that the conductor has missed his cue and made a misfit, not of his group, but of his program.

## The Too Difficult Program

IN THE RANKS of amateur organizations, the usual program often can be placed in the category—"too difficult." We find school bands and orchestras in particular performing works which are entirely beyond the technical or aesthetic capacities of the youngsters, and as a result the program becomes a constant toiling for notes on the part of the players and a complete dislike for classical music on the part of the au-

dience. Who has not felt the relief of an entire audience when an amateur organization has struggled far afield and finally gets back to a simple march or selection within the capabilities of the players?

All good music is not difficult, nor is all difficult music necessarily good. But it is for the conductor to choose good music

An idea of what constituted the monotony of this particular concert may be had by comparison with landscapes in travel. The traveler is soon bored with flat, unendingly identical and barren countryside. Hours of passing through such country either will put him to sleep or the landscape will be forgotten and he will turn

haustion at the end of the program. A concert in good taste must allow the listener opportunity to relax at intervals, and it must rouse him somewhat at others. Even individual selections must have their dynamic contrasts. A sensible audience is cold to the musical organization which indulges only in volumes of tone that are loud and louder!

## The Lengthy Concert

ANOTHER SERIOUS MISTAKE, often made in program building, is that of too great length. The ambition may be well meant, but its reception is not in accord with the intention. If the program lasts more than two hours, it is too lengthy. We prefer a concert length of a two-hour maximum, with at least a ten-minute intermission placed a bit beyond the half-way mark in the program, allowing the second half of the program to be shorter than the first.

For the small high school band, whose instrumentation, membership, and efforts are correspondingly limited, we would suggest a concert of shorter duration—perhaps one and one-half hours, with no intermission. In all events, it is certainly better to have the audience ask for more than to have it plead for less. Many a person, with justification, has remained away from concerts because the conductor felt that every selection which his band or orchestra had rehearsed should be performed, regardless of the time involved.

As in other phases of program building, the wise director will time his concert to a nicety. He will not overwhelm his audience, nor will he purposely deny a sincere desire for more.

## Public Taste in Programs

ANY CENSORSHIP BOARD would find it difficult to agree on what "public taste" is, but they do know that it exists. Any agency for entertainment must cater to that taste, if it is to fill its function. Yet this does not imply a cheapening of the product; we need not resort to music of no musical value, and we need not turn to devices which get attention but little more. It is quite possible to satisfy the musical desires of our patrons without programming worthless music, and we believe it is possible to influence taste subtly.

At most, one cannot entertain nor can one educate an empty auditorium. The problem of filling the auditorium takes care of itself, when wisdom and good judgment are applied to building programs for the musical organization.

The great John Philip Sousa, overmuch as he may be mentioned, was an example of the conductor who performed to the tastes and musical wishes of his public. Yet his programs ingeniously elevated as well as energized public taste. His programs always included music of the highest quality—transcriptions of orchestral classics, symphonic poems, overtures, waltzes, suites, solos—arranged, in many instances, especially to suit the character of his organization. # How to Build

an

# Alluring Program

By

WILLIAM D. REVELLI

which fits the talents of his organization, and which is not beyond the comprehension of its players. There is decidedly a scarcity of good easy material, but there remains a sufficient amount of facile material to enable our school and community organizations to prepare programs whose structure is sound and whose effect is entertaining in every sense of the word.

It is not to be assumed that all programs for this type of organization must be easy throughout, as it is often possible for the able conductor to select a number of moderate difficulty and to train and prepare for its performance so that it reflects credit on the group. When a difficult number is well done a sparkle and verve is given the program as a whole; but when a selection hopelessly exceeds the capabilities of the performers, or when a concert is a series of difficult numbers, an adverse effect on the audience is inescapable.

## The Monotonous Program

A FEW YEARS AGO I was invited to act as guest conductor of a certain High School Band's Annual Concert. The director was quite concerned over the fact that his audiences were so small and inappreciative. The situation is hardly without parallel; a glance at the program and the cause was easily understood. The director had forgotten completely that audiences attend band concerts to be entertained—to enjoy good music well performed. This particular concert, though perhaps carefully rehearsed, impressed us, as it did most of those present, as being monotonous.

to other pursuits. Country of variegated landforms, on the other hand, may hold his attention for long periods. One cannot help enjoying vistas embracing mountains, valleys, waterfalls, patched pastures and far-away forests. In this concert there were a number of selections whose character was similar in mood, length, tempo, and instrumentation. There was an excess of heavy music: two symphonic poems, two overtures, two slow moving tone poems. The program was not punctuated with a single march; and both the tone poems and a modern number were abstract and non-melodic. Here was a monotonous vista indeed; one cannot wonder at any lack of appreciation shown by audiences at such concerts.

The unfortunate thing about this concert, and this is probably true in many cases, was that the instrumental organization performed quite admirably. Its instrumentation was adequate and the conductor a competent musician. Yet a poorer organization with a better program might easily have had more attention and given more entertainment.

The rules of monotony are inviolable; a concert that is overloaded with novelty numbers and clap-trap music is just as little appreciated as the heavy concert. Frequently school bands are found in one extreme or the other. The matter of extremes, too, can extend to concerts which are too quiet throughout, and those which make such a loud and long use of the percussion and brass sections that both the players and audience are ready to drop with ex-

# THE ETUDE MUSIC LOVER'S BOOKSHELF

## Musical Biographies For Children

Twenty of the most famous writers of music, in all history from Palestrina to Debussy, are included in a new and well written book designed for children.

All of the list are among those called great masters, with the exception of our own immortal writer of folksongs, Stephen Foster.

The book is illustrated with full page portraits, and the size and binding are very attractive.

## The Romance of a Publishing Family

"TIN PAN ALLEY," that itinerant "Boulevard de Jazz," has, through the last seventy-five years, moved to many different parts of New York City. Frank Harding established his publishing house on the lower Bowery in 1860 and won success by publishing the "hits" of Tony Pastor, the whilom emperor of a variety dynasty which endured many decades. From there, the Alley gradually moved uptown, until it reached Longacre Square and the forties and the fifties. Of course, there are other "Tin Pan Alleys" in other cities, but they are no more the real thing than a midway "Streets of Cairo" is like the avenues of the capital of the Khedive. "Tin Pan Alley" must surely derive its name from those little cubicles of cacophony in the offices of the publishers in which vaudeville, variety, and burlesque singers were schooled in the "hits" they were supposed to "plug." In each little studio there was a piano, which judging from the tin-panny sounds, must have had pie plates where the springs should have been. Monroe Rosenfield, composer of *With All Her Faults I love Her Still*, a gay, irresponsible Bohemian of Broadway memory, is credited with coining the name, "Tin Pan Alley."

In the early period the popular publisher's real work day began when he closed his roltop desk and sallied forth to any of the fifteen hundred or more theaters, night clubs, cabarets, cafes, saloons, or places of lesser repute, to promote by entreaty, bribe or threats his potential "hits." It was the only way of marketing his wares. A demand must be created, and this was done by inoculating the singing public by rote with his themes. If the melody was a "natural," it caught on with the rapidity of an epidemic, and the whole country started to sing it and play it, while the shekels poured into the publisher's coffers. As in the case of the theatrical manager, the publisher literally went into a new business each year, with each new series of productions. If they were successful, he prospered; if they failed, he was on the verge of bankruptcy.

Many of the popular songs of the early days were either nauseating bathos, feeble attempts at wit, or illiterate doggerel set to the most commonplace tunes. Always remember, however, that popular songs are no better than the great public that sings them, and there is no finer existing evidence of the musical and sentimental reactions of the *hoi polloi* than the songs of their era. It cost the publisher a large part of his profits to "plug" his songs. When vaudeville, variety, and burlesque became organized into a trust, it is said that, instead of paying individuals, the pub-

lishers paid the powers that were over a million dollars a year to get their "hits" initial recognition. Theoretically, this practice is now ended, and the writer believes that relatively little is to-day expended in bribes to singers, conductors or managers, to promote new issues.

Many of the early actors and singers started in what can be called only the gutters of the theater. Like some of the publishers who have risen to heights, they do not seek to disdain their very humble and disagreeable beginnings. Some came from hard working Jewish families with little means, in which the old mother worked day and night to promote the interests of her children. Others came from devout Irish Catholic troupers, as did the Cohans; and what George M. Cohan has done is the marvel of the show business. Others came from old time actor and minstrel families, carrying out the traditions and the superstitions that have come down through generations. Others, according to the chronicles, were out and out bums and dipsomaniacs, wandering from petty job to petty job, and glad to sell their manuscripts for a round of drinks. In the latter class were to be found some of the most talented and human of individuals—pathetic ghosts of what "might have been."

Many of those, who have risen to the highest in the popular song field, have started in the lowest plane of human entertainment. Izzy Baline began as a singing waiter in a Chinatown saloon. He is now Irving Berlin with a score of successes

in Confederate uniform, now hanging in the Central Park west residence of Isidore, is one of the proudest possessions of the family.

Of all Marcus' capable sons, it remained for Isidore to write the annals of the family, and his own biography, which he has done in the third person, with the literary aid of the late Isaac Goldberg and Frank Owen ("From Ragtime to Swingtime").

The Witmark family lived at first on the rim of Hell's Kitchen in New York—"a sanctuary for gangsters and thieves hiding from the law." Isidore describes the location candidly and dramatically. Brother Jay earned, as a prize for mathematics in school, a small printing press, and that press was the start of the important publishing firm. The New Year's card business was good, and the whole family took an interest in the printing business. Their inclinations, however, were musical and theatrical. Julie

The signing of the copyright renewal for *Sweet Adeline* November 20, 1930. Seated: Henry Hart, Harry Armstrong, Isidore Witmark. Standing: Jay Witmark and Richard Gerard, author.

to his credit. All honor to him and to the others who have scaled the peaks, because they have climbed from the deepest valleys.

The leap from old time popular song trash to the modern "streamlined" popular music is almost as great as from *Chopsticks* to a *Nocturne in C minor* of Chopin.

Among the most enterprising and successful of all popular publishing firms has been that of M. Witmark & Sons. Marcus Witmark, after whom the firm is named, had comparatively little to do with the organization, save as the progenitor of five remarkable boys, Frank, Julie, Jay, Eddie and Isidore. The elder Witmark was born in Prussia. He came to America in 1853; and his career in the New World started as a peddler in the South. In 1861 he joined the Confederate Army, equipped and trained his own company, for which he received a commission from Governor Brown of Georgia, as lieutenant. He was wounded at the Battle of Gettysburg. His portrait,

had a sweet, plaintive voice. He was for years a prominent minstrel singer and stands out as one of the big figures in minstrelsy, that kind of American court opera which ran continuously from 1843 for over seventy-five years and is still followed by amateurs. Julie's services were very valuable as a song "plugger." Isidore, primarily a business man, had studied music and composed. Eddie and Frank were juvenile stage prodigies. Jay was all business.

The first Witmark songs were published in the eighties. The business continued under the family management until it was bought by the Warner Bros. Pictures, Inc. magnates in 1928. Since that time, under the editorial management of Richard Kountz, it has added a large catalog of valuable educational material for orchestra. Vast changes, from the first publications have come into the output of the firm. Popular music went "high-hat"; and the day of the millionaire musician arrived. Even in

1917, the royalties of Ernest R. Ball reported to have been over \$30,000 a year—many times what Schubert earned during his whole life.

The "name" orchestras, the radio, and the movies, all called for arrangers with the technic of a Wagner, a Berlioz, a Strauss, or a Tschaiakowsky; and these arrangers have been munificently and properly rewarded (quite different from the day when Richard Wagner worked as a hobo in Paris for starvation wages!).

The achievements of the Witmark firm are truly remarkable. It published twenty-four of the leading operettas of Victor Herbert, thirteen of the operettas of Julien Edwards, twelve of the operettas of Gustav Luders (including the "Prince of Pilsen"), twelve of the operas of Karl Hoschna, of the stage works of Manuel Klein, of the operettas of A. Baldwin Sloan, twenty of the operettas of Sigmund Romberg, thirteen of the musical works of Chauncey Olcott. From 1886 to 1930, the firm credited itself with no less than four hundred and fifty song successes; and the list includes such compositions as—*Sunshine of Paradise Alley* (1895, Frank and Bratton); *Mr. Johnson Turn Me Loose* (1896, Ben Harvey); *Gypsy Love Song* (1898, Victor Herbert); *My Wild Irish Rose* (1899, Chauncey Olcott); *Sweet Adeline* (1903, Gerard and Armstrong); *You Love Me in December As You Do in May* (1905, Ernest R. Ball and James W. Ker, the latter became the Mayor of New York City); *Love Me and the World* (1906, Dave Reed, Jr. and Ernest R. Ball); *Sweet Mystery of Life* (1907, Victor Herbert); *Italian Street Song* (1908, Victor Herbert); *Mother Machree* (1909, Ernest R. Ball and Chauncey Olcott); *When Irish Eyes Are Smiling* (1912, Ernest R. Ball); *Kiss Me Again* (1915, Victor Herbert); *Smiling Through* (1918, Arthur Penn); *Let the Rest of the World Go* (1919, Ernest R. Ball); *California, Here I Come* (1923, de Sylva and Ball); and a score of others long remembered.

The classical stupidity with which the publisher, the music critic, and even the public, reject songs which eventually become famous, is nowhere better illustrated than in the case of *Sweet Adeline*, the swan song of the expiring bibulous gentlemen with more sentiment than sense. The song was written by Harry Armstrong and the words by Richard H. Gerard. Armstrong had exhausted himself by playing fourteen to sixteen hours a day as a pianist in Coney Island Honkey Tonk. Isidore Witmark recognized his ability and hired him in a clerical musical job, at eighteen dollars a week. The original name of the famous song was "You're the Flower of My Heart, Sweet Rosalie." The song was turned down flat by four of the leading popular publishers. Finally Gerard changed *Rosalie* to *Adeline*; and, because of the change it was accepted and published. It again failed, when it was placed on the shelf and remained a whole year on the shelf of the publisher, until a quartet living in Hammerstein's "Victoria," New York, "plugged" it.

# THE TEACHERS' ROUND TABLE

Conducted Monthly by GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Correspondents with this Department are requested to limit their Letters to One Hundred and Fifty Words

## Debussy Prelude

Relating to the *Prelude in A minor* from the "Pour le Piano" suite of Debussy, how do you sustain the bass tone as marked in the music? Also, do you divide the sixteenth note figure between the hands, or not? The *sostenuto* pedal does not work satisfactory here, and a half or a quarter damper does not seem to procure quite the desired effect, either, of sustaining the low tone. Also, do you pedal the whole-tone cadenzas along toward the end of the prelude?—D. W. M., Florida.

Sorry to disagree with you, but the only way to produce the required effect is to touch the low A's with the *sostenuto* pedal. Make all the time you need to play these A's; and, if you want additional richness, add the lowest A on the piano, thus;

Then proceed, dividing the hands, as indicated in the music.

Yes, by all means pedal the cadenzas. Just remember that almost all teachers and students use pedal too sparingly in Debussy compositions. Always play full, solid bass notes, then pedal to the limit, or even beyond it! If the sonority becomes confused, it is a simple matter to "flash" off a half-quarter pedal, still holding the fundamental bass tones necessary for long pedal effects.

## Varieties of Staccato

Will you please explain the difference in *staccato* notes, their attacks, cut offs, and so on? What is the difference between the *portamento*, up-arm *staccato*, wrist, and any others? When there are a number of notes in a phrase, and the final note is marked *staccato*, how should it be played; and would the technique be different whether it be a half note, quarter or a very short note? Also would the second note that is marked *staccato* in just a two note slur, be played the same as a longer phrase? I refer mostly to the *staccato* notes in Mozart's "Sonata III" (K. No. 545).—Mrs. G. L. L., New York.

The true *staccato* is so vaguely comprehended by most piano teachers, that it could take a small sized volume, with supplementary sound film assistance, to clarify this important pianistic principle. Therefore I will not try to answer your *staccato* questions; for if I did—in this brief space—you would be more than ever in the dark. Instead, I'll try to write a brief introduction to *staccato*, which I hope my patient readers will understand. So, for better or worse, here goes!

Elementary pianistic *staccato* is a whipping movement of finger, hands, forearms or full arms. The ideal *staccato* is that which is produced with the finger in contact with the key. Artists and good pianists always play *staccato* with this key contact; any other approach results in excessive loss of motion, prevents speed and clarity, fosters excessive contraction, and makes bad tone. The two principal ways *not* to produce *staccato* are:

1. the *snatch* method—pushing the key down as if it were too hot and then jerking back the fingers or hand from it;
2. the *whack* method—hitting the key from the air by the use of finger, hand or arm stroke.

Both of these futile snatch and whack methods were taught by poor pedagogs of

one hundred years ago and are still going strong to-day. An exasperating commentary on pianistic progress, isn't it?

If you will place your curved third finger on C—then, without leaving the key top or without raising the finger and with no help from your hand or arm, play C by snapping your finger into the palm of your hand, you will hear and feel the purest, swiftest *staccato*. Indeed, it is by far the brightest, clearest tone anyone can make. An expert pianist can easily snap so sharply that the key will sound twice—the force of the impact making the hammer strike the strings a second time. Pianists sometimes employ this pure *staccato* for a special isolated effect; but it is impractical for general use, since it requires excessive force and lost motion.

The whip cracking *staccato* is the best for general use since 1. any whiplike movement implies rotative forearm help (try it for yourself); 2. it is exactly like the finger flash employed in ordinary finger technique; and 3. it can finally be developed so that the fingers flash, or whip, without leaving the key top.

You will have to be patient with me—for this is so hard to explain in black and white. It would be the simplest of matters, if only I had you and a piano here!

Now touch the top of the C again with that third finger; as you feel your elbow tip floating easily, let the finger flash up suddenly, not more than an inch from the key, and in the same impulse let it play the C lightly *staccato*. The key is released instantly by the finger bouncing back up and resting lightly again on its key top. What has happened? You have played *staccato* as efficiently and economically as possible. To accomplish this you have 1. used slight "loosening" rotary help of your forearm; 2. taken only an instant of active effort; 3. immediately ceased all effort the moment the tone sounded; 4. played a perfect finger stroke.

Hand, forearm, or full arm, *staccato* are variants of this—you perform the same action with a larger tool. The approach remains the same. For fast *staccato*, the fingers stay close to the key top and a shift of the hand to the next tone takes the place of the bounce.

Slow, whipping *staccato* exercises for fingers and hand should be practiced for a long time before rapid *staccato* is attempted. Never hold the fingers in the air, and always play lightly.

That two note slur question is a very important one, but it will have to await a later date.

## Those New Ideas

Many of the things you say on the Round Table page are so new and strange to me (I have taught piano twenty years) that I am all at sea. I try my best to use some of your ideas but find it hard to adjust myself to them. Is it just because I am so "dumb," or do others have the same trouble?—P. T., Oklahoma.

What a delicate position you put me in! But I'll answer boldly—of course you are not "dumb." No one except a person of good intelligence would write as sincerely as you have done. You have been searching for the light and should not be blamed if the light you find is too strong. The very fact that, after twenty years of teaching, you are filled with what the Bible calls "an holy discontent" for the truth, means that your mind and spirit are still alive and

—one who can clarify the modern technical work. Above all, study with a good teacher receptive. Try to adjust to the new piano pedagogy—experiment on yourself and your pupils; then accept only as much of it as you are convinced is beneficial to your principles for you, at first hand.

Twenty years are nothing: I have been at it for twenty-five—and I tremble when I think of the accusing fingers my students of those far off years can point at my incompetence. I was a terrible teacher. Why, even in THE ETUDE I had several articles on technic which would cause me to die of mortification if they were reprinted to-day! Almost all the pianistic ideas and "truths" of that day I have cast aside. Will it be the same twenty-five years from now? I wonder! At any rate, let us be malleable, receptive and creative until the hour when the music of this earth grows dim in our ears.

## A Difficult Trill

"I am exasperated by that opening trill in thirds in the *Etude*, Op. 25, No. 6 (in thirds) by Chopin. It just seems that if I could 'get by' that trill I could play the *Etude* in tempo. The more I practice it, the worse it gets. Is there nothing I can do about it except keep on practicing and trust to time and luck?"—F. M., North Carolina.

"You're telling me," as the boys say! If you think you are having a tough time with that trill, it is nothing compared with the agony I have endured—for I have a double-jointed thumb! So, let's weep double chains of tears to commiserate with each other.

You must first decide what fingering is best; most persons come back to 3 1, 5 2 after trying other combinations. Then you will of course remember that smooth, rapid playing of double notes depends largely on the free rotative balance of the forearm. This does not mean that your forearm should visibly shake or rotate excessively, but that the arm must swing lightly from the suspended elbow tip. In order to feel this balance, the trill should first be practiced in broken thirds, thus:

the D-sharp and the E sounding slightly louder than the B and C-sharp. Practice in short and long groups until the swiftest possible tempo and the lightest, freest tone are achieved, wrist rather high, as little arm movement as possible. Next, practice the trill as follows (without the C-sharp) with the same freely rotating quality as in the broken thirds; again with the minimum "lost" arm movement:

Now you are ready for the real trill; after slow practice in which you gently stress the upper tones, play it very lightly and rapidly *once*, arm bounding from the piano to your lap at the last tones:

After a moment's rest, do it twice, three, four and eight times—hand quiet, fingers on key tops at all times, wrist medium or

high, top tones (D-sharp, E) slightly brought out (rather large order, isn't it?).

Ex. 4

Cortot, in his interesting edition of the Chopin "Etudes" offers many detailed suggestions, exercises, and so on, which might be of help to you. My only objection to the use of so many preparatory exercises is that mind and muscles become so clogged up and jittery with the "preparations" that one is never actually sure of the real thing when one finally gets to it.

For this reason, I have been careful to offer only what I consider the essence of preparation necessary to master the trill. I hope it will help you as much as it has my own students.

## Expanding the Hand

"What pieces would you suggest for a nine-year-old boy with small hands, but who is able to play fifth and sixth grade music? He has wonderful technique, lots and lots of speed; also a very good memory. He has a love of various types and sounds of pianos.

"Can you tell me what grades these pieces are classed: *Clair de Lune*, Debussy; *Valse Caprice*, Josef Hofmann; *Polichinelle*, Rachmaninoff."—Mrs. C. R. J., Wisconsin.

That's a new one on me, a youngster who dotes on different kinds of pianos. There's no predicting the tendencies and talents of these modern children! What fun he must have in a piano store! Yet it is all to the good—for the more pianos he plays, the quicker will he be able to adjust to new instruments, a major problem for all pianists. We know to our sorrow how hard it is to get accustomed to instruments other than our own, and how ill advised it is to practice constantly on the same piano.

If you will look up the chapter on "Expanding the Hand without Injury," in Cooke's "Mastering the Scales and Arpeggios," you will find very practical help toward developing your boy's hand.

Unfortunately, I am no expert on grading piano pieces, but I have always rated the three pieces you mention as "early advanced."

For other light music of approximately the same grade, suitable for small hands, you might examine: *Harpsichord Miniatures*, Gwendolyn Scott; *The Hidden Waterfall*, Chenoweth; *Persimmons*, Gwynn; *Rain*, Anson; *Recollections of Johann Strauss*, Thompson; *The Maiden's Wish* (Waltz), Chopin-Barth; *Valsette* (from "String Quartet, Op. 18"), Beethoven-Hodson; *Rhapsodie Mignon*, Rovenger; *Reverie*, Debussy; *Les Sylphes* (Impromptu-Valse), Bachmann.

## Double Jointed

Would you please tell me what I could do to cure a weakness of my thumbs. When I play an octave or a chord, the bone which is at the bottom of the thumb goes inside instead of remaining firm. So it is impossible for me to strike the note on the side of the thumb; it strikes rather on the surface of the pulp.—E. P., Quebec.

In a recent issue of THE ETUDE this page contained corrective exercises for that old, familiar bogie, the "double-jointed thumb"; please look over your files for it.

# The Scherzo from the "Sonata in F Minor" of Brahms

\* \* \* \*

## A Master Lesson

By GUY MAIER

**G**ATHER 'ROUND, ALL YE CON-DEMNNERS of syncopation and swing, and be at last persuaded! Here, in one short movement, Brahms has created a masterpiece of syncopation which should be played by all red blooded, young (and old) pianists. Every skyrocketing chord, each crackling phrase, every curve of its glowing line, will rekindle the fire of primitive man in you. Brahms, himself a master of fiery utterance, has seldom poured out more molten phrases.

And how happy our "swing" writers would be, if they could produce a composition one tenth as stirring as the *Scherzo*! They have fortunately overlooked its possibilities, for it could be used as a modern dance number, without altering a single note. Heaven forbid!

Written in 1851, in Brahms' early young manhood, the five movements of the colossal "Sonata in F minor" stand out among his most impassioned pages; indeed, this sonata—the first great masterpiece to come from Brahms' pen—is one of the longest and most exacting in all the piano repertoire. To avoid any mistake as to his meaning, the ardent young composer has set three lines of a poem by Sternau at the beginning of the second movement (*Andante*), a stanza telling of the ecstatic union of two loving hearts in the moonlight. The flaming *Scherzo* follows this *Andante*, which, in turn, gives way to a gloomy, disillusioned *Retrospect*. The first movement, full of glorious chords, is a tribute to youthful fervor and romance; and, in the *finale*, heroics and triumphs pile up in dazzling fashion. What an accomplishment for a young man scarcely twenty years old! No wonder the world called him the new musical Messiah.

### The "Single Movement" Problem

ALL SERIOUS STUDENTS should, of course, study the entire sonata. However, I am not one of those purists who cry "Unclean!" when an isolated movement is taken out and played. Why should anyone quibble over this? Most sonatas are written in three or four distinct movements, each an entity in itself, with pauses between the movements, and with no discernible spiritual relation or thematic material in common. The various elements—contrasting themes, patterns, developments, sections—are poured into these convenient molds by the composer. Even the greatest master of the sonata, Beethoven, substituted movements of one sonata for another, and published them thus. Who, then, shall call it a crime when a pianist decides to play one or two movements rather than the whole sonata?

It is not necessary to edit the music of Brahms, for there is almost never a trace of doubt as to his intention. His notations and directions are so clear and so complete that further amplification is redundant. May Brahms be spared the butchery of those nuisances, the "annotators", who have done their utmost to harm the works of other composers!

The only matters left for an interpreter to take care of, are:

1. To point out features and characteristics necessary for the better understanding of the music.

2. To indicate ways of practice and study, obvious to an experienced pianist, but less so to the student.

3. To add to Brahms' fingering.

4. To amplify the pedal directions (Brahms indicates its use only occasionally).

First, as to the *Scherzo's* general features? The four-measure swings at the beginning are like the long, winged, "seven league" steps of a superbeing, who bounds into the air at the first measure, and steps deftly down to earth at the fourth, to use this as a springboard for the fifth. If, in these measures, you will think of a leap (up accent) on the first beat of the first of them, a lesser accent on the first beat of the fourth, and a binding or curving over from the fourth to the fifth of them, with another leap at five, you will feel the rhythm perfectly.

(Play softly and lightly)

Ex. 1

Now change to

Ex. 2

The *tempo* of the *Scherzo*, one beat to a measure, is between  $\text{♩} = 76$  and  $\text{♩} = 80$ . If in doubt, play too slowly rather than too rapidly, for nothing ruins a syncopated piece more quickly than jittery playing. Make no basic *tempo* change anywhere, not even in the *Trio*; for Brahms has taken care that this will sound slower and more lyrical by using notes of longer value, more sustained melodic lines, and less syncopation. Since ritards are out of place in a composition of this kind, Brahms has indicated none.

The main body of the *Scherzo* should, of course, be practiced slowly, and without pedal; sometimes "flatly" *piano*, sometimes quite mechanically *forte*. Never play a single chord or octave, no matter how wide the skip, without first touching each key. Memorizing should be done at once, so that also the entire piece may be practiced slowly, in sections, with eyes closed, or without looking at the keyboard. This is very difficult in a piece containing such wide, tricky leaps, but is helpful in so many important ways that I will not even mention them. Can you think of some? Off hand, I can count five.

It is of course important to practice hands separately (do not dare to use your pedal!) for security and solidity. Exaggerate the loudness of those left hand first beats; note how these bass tones ascend by whole and half steps for the first sixteen measures. Practice often with slow quarter beat metronome, giving the third beat of each measure a slight accent, so that it may not suffer from too little tone or time. Then,

without metronome, practice entire sections, leaping swiftly from these third beats to the first of the following measures, but waiting a deliberate, relaxed moment before playing them.

All tones except half notes and phrased

An etching from a contemporary sketch of Brahms.

groups must be as *staccato* as possible; try to play them with short, quick up arm, and with fingers *always* on the keys.

When you finally permit yourself some pedal, be stingy with it; never use it for longer than two beats; and often make it so short that you are only "marking time" with it on first beats.

### Bit by Bit We Study

NOW FOR MEASURE BY MEASURE details. These are so many that only the minutest attention to directions will make this a real lesson.

"M" means measure or measures.

At the beginning count three quarters, and play the opening grace note arpeggio the moment you say "three"; this and all other arpeggios must be always played thus, in strict time. These first two measures are among the hardest of the piece, yet the solidity of the whole movement depends on them. It is a feat to play them accurately every time! I earnestly advise practicing thus; play the arpeggio *presto* to the last B-flat, then, only after a good wait, during which you make sure that the right hand D-flat and the left hand octave E are exactly under the fingers, play the first measure; and wait again before playing the

second. Stop and repeat this process several times each day. If you do not follow plan you will never be sure of the piece. I know, alas, by sad experience, that I do not conscientiously practice in this way, I miss the top or bottom notes out of three times.

Also, practice the left hand of these measures alone, *ff*, preparing each chord by moving instantly and easily from one to another, and playing with the utmost power.

A very brief pause should be made before the half notes in m. 4, 8 and 12 to give additional lift to the line. M. 5—8 may be played less brilliantly than the first phrase with a slight *crescendo* to m. 9. Be sure to play m. 13—16 lightly; in m. 15 play the low E-natural and F (treble staff) with the left hand. M. 17—20 and 25—28 again incisively *staccato*, with the usual wait before the half note. The phrases, m. 21—29—36, offer opportunity for soft, sharp contrasts in *staccato* and *legato* between the hands. (No damper pedal, and no *legato* tones "smuggled" in the L. H.) The indication, *sostenuto*, in m. 29—32, means to play more coolly and slightly *rubato*; but strict

a *tempo* again in m. 33 (use soft pedal with a real *piu mosso* in m. 36. Y. the right hand E—against the left hand in m. 35 is correct.

From m. 42 to play the last beats both hands *staccato* all measures; must be single handed practice with the right hand worked out without looking at the keyboard. This is such a "tough" page that only in this way—touch the last beats before playing—can the pianist be doubly sure. To help the memorization and accuracy in this section, note the final tones in m. 43, 45, 47 and 49 are the same in both hands.

Keep all this (m. 36—49) mysterious *pianissimo*, and do a *crescendo* until Brahms directs it (m. 50).

No pedal in m. 56, 58, 60, 62 and 64. Do not *diminuendo* soon; keep up the tone and the vitality. Stop time in m. 65—69.

short, big *crescendo* in m. 69, and an instant's wait before the shooting star chord in m. 70.

### With Gleam and Glitter

THE LEFT HAND FIGURES, in m. 72, 73, 78—81, must soar out and glitter: the arpeggio figures in m. 78, 80 and 82, in the right hand, must crackle and sputter. Play m. 79 less loudly than m. 80 and 81; everything from m. 82 on must sound dashing "abandoned" as possible. For the right hand "off beat" octaves in m. 86 as incisively as you can; and *rip* arpeggiated last beats in m. 87—94 with both hands together. Be sure to give the "ripped" chords plenty of tone and time. Wait an instant for m. 98, get on it, then give it all you've got, *sfz*! Shut off the chord instantly, wait exactly two measures and begin the

*Trio*: To play its rich chord line convincingly, you must feel each phrase as a complete unit. Count each phrase as one count to a measure—thus:

|            |          |
|------------|----------|
| m. 101—108 | 8 counts |
| 109—116    | 8 "      |
| 117—122    | 6 "      |
| 123—132    | 10 "     |

FASCINATING PIECES FOR THE MUSICAL HOME

# THE TWO BUTTERFLIES

In the last century Heinrich Lichner (1829-1898) created a definite type of piano study which was of peculiar value to teachers in "refreshing the technique" and adding buoyancy to the playing of pupils in the earlier grades. His compositions were a kind of mixture of Schumann and Mendelssohn in miniature form. In this piece, *The Two Butterflies*, Dr. Kern has captured the Lichner style with a more modern idiom. It should be played with what Mr. Mason called a "springing hand." That is, at the end of the little phrases the hand seems to spring up from the keyboard and a kind of effervescent, joyous character is given to the little piece as it goes bubbling along. Grade 3.

*Allegretto grazioso* M. M.  $\text{♩} = 112$

CARL WILHELM KERN, Op. 554, No. 2

The musical score for "The Two Butterflies" is presented in a standard piano format. It begins with a treble clef and a key signature of one sharp (F#). The tempo is marked "Allegretto grazioso" with a metronome indication of 112 beats per minute. The piece is composed of two staves, with the right hand (treble clef) and left hand (bass clef) parts. The score includes various musical notations such as notes, rests, slurs, and dynamic markings (mf, p, ten.). It also features fingerings (1-5) and articulation marks (accents, slurs). The piece concludes with a "Fine" marking and a "D.S." (Da Capo) instruction.

The first system of the musical score for 'Evening Frolic' consists of two staves. The upper staff is in treble clef and the lower staff is in bass clef. The key signature has one flat (B-flat). The music features various dynamics including *f*, *mf*, *calando*, *pp*, and *mp*. Fingering numbers (1-5) are indicated throughout the piece.

## EVENING FROLIC

This is one of a series of ten engaging pieces in a set known as "Saturday in Town." It is a graceful, easily played, well put together gavotte with Dr. Cadman's inevitable melodic fluency. Grade 3.

CHARLES WAKEFIELD CADMAN, Op. 35, No. 8

Tempo di Gavotte M.M. ♩ = 152

The second system continues the musical score. It includes dynamics such as *mf* and *f*. The notation includes various musical symbols like slurs, ties, and fingering numbers.

*Last time to Coda*

The third system of the score features a variety of dynamics including *mf*, *ff*, and *p*. It includes musical notations for slurs, ties, and fingering numbers.

The fourth system includes dynamics such as *p*, *rall.*, *a tempo*, and *ff*. It features musical notations for slurs, ties, and fingering numbers.

The fifth system is marked with a Coda symbol and includes the dynamic *pp*. It contains musical notations for slurs, ties, and fingering numbers.

The sixth system concludes the piece with dynamics including *mf* and *f*, and a *rall.* marking. It includes musical notations for slurs, ties, and fingering numbers.

# BIRDS AT DAWN

Stepán Esipoff is the *nom de plume* of Arthur B. Burnand (1859-1907), a gifted and well-trained English composer who was a graduate of the Leipzig Conservatory and a pupil of Mme. Clara Schumann. He wrote under many pen names, the best known of which was Anton Strelezki. Strelezki's songs *Dreams* and *Happy Days* were at one time very popular. *Birds at Dawn* is a finely constructed pianoforte idyl of essentially capricious character. In the preliminary study much attention should be given to the time, and here the metronome would be valuable to create a background of exactness. At *a tempo* in the last section the repeated notes in the bass may be played with the extended finger of the left hand. Grade 3½.

STEPÁN ESIPOFF  
Op. 49, No. 3

**Allegretto con moto** M.M. ♩ = 112

The musical score for "Birds at Dawn" is written for piano and is in G major (one sharp). It begins with a tempo of "Allegretto con moto" at 112 beats per minute. The score is divided into several systems, each containing a treble and bass staff. The music features a variety of dynamics, including mezzo-piano (mp), piano (p), mezzo-forte (mf), forte (f), pianissimo (pp), and pianississimo (ppp). Articulations such as "ten." (tenuto), "dim." (diminuendo), "smorz." (smorzando), "poco rall." (poco rallentando), "largement" (larghetto), "rit." (ritardando), "sostenuto", "dolce", and "dolciss." are used throughout. Performance instructions include "con Pedale" and "a tempo". The piece concludes with "al Fine" and "ppp dolce".

This page of musical notation is for a piano piece, likely in the key of B-flat major or D-flat major, given the key signature. It consists of ten systems of staves, each with a treble and bass clef. The notation includes various musical elements such as notes, rests, and dynamic markings. The piece is marked with a tempo of 'legato' and a dynamic of 'p' (piano). The notation is written in a style typical of 19th-century piano music, with a focus on melodic lines and harmonic support. The piece concludes with a 'Dal segno' section, indicated by the 'D.S.' marking at the end of the final system.

### Music for a Moonlight Boatride

## A New Experiment with Music in Business

(Continued from Page 501)

so little grief as now. Music brightens up the whole place. Let's have more of it."

"Repeated check ups showed that our carefully planned daily musical programs have been enjoyed by our listeners," stated Mr. Smith, in concluding. "Every year tenants begin asking, a month ahead of time, what the Insurance Building plans to have during the coming holiday season. Our music experiment has been so successful that I could no more think of eliminating it for next season than of doubling the rents without a protest."

For years the movie industry has used appropriate music to awaken the emotions

and to stimulate the creative faculties to work at their best. Every business organization experiences periods during the year when executives and harassed personnel are working under heavier strain than usual. Mr. Smith's successful experiment is in keeping with the tempo of the times. Most business people either spend the greater portion of their waking hours in their offices or in close touch with their work. Where physical conditions permit, suitable music can serve to give a needed mental uplift, to bring about better working efficiency and happier working moods during times of business stress.

## THE ETUDE MUSIC LOVER'S BOOKSHELF

(Continued from Page 506)

it on", and it made an immediate and extraordinary "hit" and has become the *piece de resistance* of many a convivial evening.

Well, Mr. Witmark's book is just crammed with striking incidents of this kind, showing how very precarious is the publishing business, unless great wisdom and rare experience in selection, favored by destiny, are at the helm. The Witmarks were friend makers. Isidore, a Mason, Rotarian, and the organizer of many amateur companies and professional groups, has friends everywhere, because he has striven to be a friend. He is also a "grand" hater. When anyone has "done him wrong," he simply erases the name from his life. He has been a strategic and shrewd business man, but that has not prevented his being imposed upon; and he is not unwilling to see those who have failed him get their just deserts.

The Witmarks knew how to handle tactfully and humanly the normal, supernormal and subnormal groups of men and women who were workers in their brain factory; that is, their composers and their writers. They won confidence by paying them accurately and liberally, and kept this confidence by promoting their works aggressively. Victor Herbert once said to the

writer, "I never worry about my royalties with Witmark. I am always surprised that they are so large"; and this is understood by the fact that he gave the firm most of his compositions from 1898 to 1919. Nothing contributes so much to the continued success of a firm as a relationship like this.

Isidore's contribution from his own pocket, in fighting the interests which strove to prevent authors and composers from being deprived of the fruits of their copyrights (prior to ASCAP), is interesting. His book is filled with humorous and entertaining incidents about composers and well known singers, not the least of which is the way Isidore "stage managed" his own wedding. When his bride suggested that the rehearsal was getting a little too long and they had better cut some of the original music Victor Herbert had written for the occasion, Isidore exclaimed in horror—"What? Cut Victor Herbert? I'd rather cut the wedding itself!"

"From Ragtime to Swingtime"

Pages: 408, with 84 illustrations

Price: \$3.50

Publisher: Lee Furman

## Music Memory

John Playford (1623-1686), the post-Elizabethan music publisher, judging from the number of books he wrote upon music and the large sales of his books, must have been a kind of Elizabethan Theodore Presser. He was famed for his very practical advice. In his "Introduction to the Skill of Musick" (1654) he wrote, "To learn to Play by Rote or Ear, without Book, is the way never to play more than what may be gain'd by hearing another Play, which may soon be forgot; but on the contrary, he which Learns and Practices by Book, according to the *Gamut*, (which is the *True Rule for Musick*,) fails not, after he comes to be Perfect in those *Rules*, which guide him to play more than ever he was Taught or Heard, and also to play his Part in Consort, which the other can never be capable of."

After thus calling attention to the fact that memory is not so much a gift as the development of a technic, Lilius Mackinnon, in "Music by Heart," commences her outline of how to memorize, which has been highly commended by many able musicians. She calls attention to the fact that "even the experienced musician was considered unsafe without his notes; and, 'as late as the year 1861, when Sir Charles Hallé was giving Beethoven recitals from memory, the critic of *The Times* accused him, not only of self-display, but of 'tempting the Gods.'"

In fact, the ability to play without notes was not expected but greeted as a kind of marvel, when it occurred.

The writer of this review, however, re-

members how surprising it was to him, as a young lad, when the great pianist, Raoul Pugno, played his program with the notes in front of him, as the custom of playing without notes was already established.

Of the several books and articles upon memory, this is one of the most helpful, as the writer by means of numerous notation examples explains definitely how to proceed. The chapters upon "Musical Thinking" and "Training the Habits" are especially noteworthy. Readers of *THE ETUDE* will find this book worth many times the purchase price.

## PIANO TEACHERS!

HERE'S AN OPPORTUNITY to become a local service representative for one of the world's great pianos—MATHUSHEK.

Distinguished in the field of fine piano building since 1863, MATHUSHEK PIANOS are acknowledged as being among the outstanding creations in the progressive development of the piano.

We suggest communicating with us for further details regarding this opportunity. Or if you happen to be coming to New York for the World's Fair and we have come to a tentative agreement, we will ask you to be our guest for a day at the well-known Narragansett Hotel in New York. After a visit to the factory, negotiations may be completed.

Write immediately for details regarding available territory which does not conflict with our present dealer relationships. Special preference for accredited teachers.

Music Lovers: Write for Mathushek's Musical Map of Manhattan and the Fair!

# THE SINGER'S ETUDE

Edited by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

## Is Singing a Gift or An Accomplishment?

By WILLIAM G. ARMSTRONG

**D**WELLING UPON THE FACT that hundreds of voices which, prior to cultivation, appeared anything but "gifts," have been, after cultivation, referred to as "gifts"; and calling to mind not one, but many instances in which voices have been reconstructed, with sepulchral toned contraltos and strident toned sopranos changed to softly brilliant mezzo sopranos, and throaty, nasal tenors to fine, sonorous baritones; then, again, considering that the most perfectly constructed vocal apparatus never could stand, without cultivation, the demands of interpretation: with all these conditions, and more taken into consideration, one is caused to wonder just where acquirement ends and "gift" begins.

Obstacles in the way of a good singing voice seldom come singly. If they did, that well worn superficiality, "think a beautiful tone and sing it," would be applicable in all cases. This, provided the single obstacle were not an anatomical abnormality, and that breath capacity, retention, and pressure permitted response of the vocal apparatus to the mental conception. If not, then what?

Let us take the worst possible combination of obstacles, and see just how one would go about finding a voice under the "debris." It will be a lengthy excursion at shortest, with many stopovers, and points of interest. And let us suppose such dragons to be slaughtered as: Rounded shoulders, flattened chest, protruding abdomen, and a jaw which moves not one iota during conversation.

Now how in the world can one expect even a semblance of good tone, let alone beautiful tone, when breath, the creator of voice, is sufficient only to keep life in the body; and pressure of breath is sufficient only for ordinary conversation? Singing is not a normal effort, but a supernormal one; hence it demands supernormal support, and that support is breath, breath, and more breath.

### A Healthy Voice in a Healthy Body

DO WE KNOW, and, if we know do we ever stop to consider what health means to voice, and what breath means to health? Do we know that the function of the lungs is dual; that they eliminate the impurities of the blood; that they digest the air—just as the stomach digests food—converting a portion of it into the substance of the blood? Do we know that this dual function converts the purple blood of the veins into the red blood of the arteries, and that it is this red blood which supplies all the wants of the vital operations of the human organization? Do we understand that the more complete the functions of the lungs, the more richly is the blood endowed with health giving properties which invigorate all the organs, and parts; thereby causing every function to be more perfectly performed; giving buoyancy to the spirits, and exciting and facilitating

intellectual activity? Do we know that the functional powers of body and brain are dependent upon a constant supply of fresh red blood; and that this fresh supply of purified red blood is dependent upon an adequate consumption of that nutrient property, that vital gas of the atmospheric air, oxygen; and that an inadequate consumption of it causes the nervous and muscular systems to lose their tone, with languor of body and mind as the result? Rounded shoulders, flattened chest, protruding abdomen; consumption of oxygen reduced to the minimum! Think a beautiful tone and sing it! Ask lazy nerves to ask equally lazy muscles to pull the organs of voice into position for beautiful tone? Impossible!

As has been so often designated, there are but two regions upon which the effort to emit and sustain voice must fall, namely, that of the expiratory organs, and that of the throat. Therefore, lacking adequate breath and expiratory power, the effort which should be centered in the expiratory action of the diaphragm, lungs, and abdominal muscles, will be thrown upon the muscular mechanism of the vocal apparatus, and with general disorganization as a result. For this reason it is utterly impossible to gain even an inkling as to the possibilities of a voice until breath capacity, retention, and outgoing control have been established. As the reverse is exceedingly common, the number of fine voices held in obscurity because of it must be great.

For this basic development, we advise practice of the exercises given in our earlier article (in THE ETUDE for June, 1938), "Breathing and the Diaphragm"; and, in addition, one toward development of expiratory power. Attach a length of string to a card, and hang it from a chandelier. Then, stand in an erect position with the chest elevated and the abdomen flattened. Take a deep breath and direct it at the card, testing expiratory power by moving farther and farther away from the card. Should dizziness be experienced, cease the exercise for the time being.

### Coördinating Nerve Centers

THAT A TIGHTENING OF THE JAW should take place upon the effort to emit and sustain voice in the case of rounded shoulders, flattened chest, and protruding abdomen, is quite natural, in that, as the muscles of the jaw are indirectly connected with the muscles of the vocal apparatus, contraction of the muscles of the jaw accompanies contraction of the muscles of the vocal apparatus. Therefore, again we say, do not expect conceptions of beautiful tone to materialize until the jaw has been made flexible. Again, do not venture an opinion as to the possibilities of a voice, no matter how inferior it may appear, until a faulty posture has been corrected and breath support established. To the writer's

knowledge, many are the voices which appeared in an altogether new light, with the removal of these impediments to response of the vocal apparatus to idealistic conceptions.

If the writer had his way, two rules would be set up, and followed. The first would be, at least six months of practice of breathing exercises before singing lessons are commenced: a word to the wise one who intends taking up the study. Our second rule would be, examination of the nose, by a specialist, prior to study, for good tone is not possible without a well formed nose, free from obstructions.

Now it takes time to develop breath capacity, retention, and power of expiration; and, as we cannot wait for a full and complete development before taking the next step, we must make the best of it and go on. So, having in mind the still existing want of breath pressure, and tendency to contract the throat, and tighten the jaw, we reason as follows: Here is a case in which the student contracts his throat, and tightens his jaw because he has not yet developed a full and complete breath capacity, retention, and pressure; and, as we cannot wait for that full and complete development before taking the next step, what are we going to do about it? Instruct him to relax his throat and jaw? Yes, and no. Yes, because it will help, and no, because, should he relax them, back will go the contraction with the effort to start and sustain his voice. What then? Invent vocal exercises which will cause him to use and depend upon what breath he has, and others which will

cause him to dilate his throat and move his jaw—an exercise such as

#### Ex. 1

Why the prefix *H*? Because it compels the use of breath through centering the effort in the diaphragm, lungs, and abdominal muscles. Why not just the vowel? Because that would mean starting the voice with the "glottis stroke"; and, so starting it would center the effort in the throat, thereby contracting it. Why the vowel in particular? Because the influence of *O* is toward dilation of the throat. Why not *E*? Because the influence of *E* is contractive. But this exercise will not induce jaw activity. No, we must have another one for that, one like this.

#### Ex. 2

Descend chromatically. Why the prefix *Y*? Because correct articulation of *Y* calls for movement of the jaw. Why only the sounds *O* and *A*? Because they are dark sounds; and, the effort made to form and utter dark sounds dilates the throat, contraction giving way to dilation; so that in the exercise *Yo Yaw, Yo, Yaw, Yo*, we have one that will combat, automatically, contraction of the throat, and inflexibility of the jaw. Yes!

(Continued in THE ETUDE for September)

## The Diphthong Vowels

By WILBUR ALONZA SKILES

"A" AS IN "DAY" is a diphthong vowel consisting of the two vowel sounds "eh" (fundamental) and "e" (vanishing). It is made with the tip of the tongue dropped just behind the lower front teeth—similar to the positions used for the creation of "e" as in "be"—while the middle part is somewhat raised and the back portion is lowered with the sinking of the larynx. This tongue position, of course, must be effected through mental control, never by direct local effort, which is merely a medium of destruction to the voice and its production.

"U" has the vanishing vowel "e," preceding the primary sound of "oo" as in "too." The latter sound, in such instances, is to be sustained, rather than the former. The tongue must rise in the center, of course, for "e." Then the other center of the tongue (from tip to extreme rear

within the depths of the throat opening falls into a furrow (groove) or, at least, it remains flat and broadly spread out for the making of "oo." However, the groove position of the tongue is the one to be acquired if complete control over the breath and tone is to be attained during the production of this "oo" sound. When the "U" sound is sustained in singing, the "e" sound thereof should not be brought out ostentatiously, lest the primary "oo" sound be engaged too abruptly. The introductory "e" sound of such words as "you," beginning with "y" and involving this "e" should be covered or moderated. Then you would sing "ih-oo" (not "e-oo") for "you," sounding the "ih" as in "with." In making the "oo" sound, the lips should be rounded, relaxed and protrude forward from the teeth, loosely.

"I," as used in "might," is made from

h" as in "lah" and "e" as in "be." "Ah" the dominant sound to be sustained, while "e" is the subordinate vanishing character and is enunciated inabruptly and yet quickly preceding the final consonant "t." One wrongly stresses the "ah" sound in such instances, such words as "might" will be given as "m ah-(ee)t." The pure sound "I" must be retained during the formation and modulation of this primary "ah" sound. The "ee" sound should be modulated and carried into shape more like "i." Then we would sing "m ah-(ih)t." By this delicate combination, the sound of "i" is not impaired or even imperiled. However, some authorities claim that "uh" is a better dominant sound for the making of this diphthong "I" than "ah," because, they say, the "ah" and "ee" (or the "ih") do not blend satisfactorily. Nevertheless, the writer prefers the "ah" sound as a dominant and the "ih" as the subordinate character, because these two sounds can be blended together perfectly, while the "s" definite sound is thereby retained. The easiest, and in fact the only effective, way of mastering the diphthong vowels is to master resonant vowel production. To attempt to master diphthong vowels before a blend of tone on each respective vowel sound is established, is simply a waste of time and effort.

## Porpora's Method By D. A. CLIPPINGER

THE MOST CELEBRATED singing master of the eighteenth century, Porpora, wrote books on the voice. Whatever his method was it never found its way into print. There may have been two reasons for this. Probably such a thing as method never entered his head. He did his work the way he knew was right and let it go at that. Perhaps, like other great men, he was busy doing things that he had no time to write a book telling others how he did it. Or he may have felt, as others have, that what he knew was so valuable to him that he did not feel inclined to put it in a book for others to capitalize it. He left nothing to be misquoted, misconstrued, and used as a peg upon which to hang a method. The secret, if he had one, perished with him. We gather from the scant history of Porpora he did not begin his career as a singing teacher, but as a composer, and to the end it was as a composer that he wished to be known. But in spite of himself he became the greatest singing teacher of his time.

He had a restless, roving disposition and it was difficult to anchor to any one place. He found him teaching in Venice, Dresden, London, primarily, no doubt, to introduce operas. He also tried to establish himself in Vienna, but failed because the Emperor, Charles VI, disliked his ultra florid style and his profuse employment of ornamentation, trills and flourishes.

## Melba in Miniature

MELBA'S RECEPTION on her first visit to London would have disheartened anyone with less determination to succeed. Sullivan thought she was not good enough for Savoy opera; and Randegger refused to take her as a pupil! Madame Marchesi in Paris saved Melba for the world of music.

"If you are serious and can study with me for one year," Marchesi told her, "I will make you something remarkable."

Actually, it was only nine months before Marchesi's "pupil of my dreams" made a sensational debut on October 12, 1887, at the Théâtre de la Monnaie of Brussels, as Gilda in "Rigoletto." In the following May she sang at Covent Garden, where she dominated the repertoire for nearly a quarter of a century, singing there for at least twenty successive seasons without a break.

Paris heard her in 1889, and St. Petersburg in the following year. In 1893 Melba took by storm the two most famous opera houses in the Old and New Worlds—La

Scala at Milan, in March, and the New York Metropolitan, in December.

Saint-Saëns, who found in Melba "the dear Juliet for whom I hoped," wrote his "Hélène" especially for her.

Melba memorized her parts by humming them or playing them on the piano; and, when giving advice to young artists, she once wrote, "Don't hack at your voice by using it to help you learn your parts. Young students do more practicing than they have physical strength for. They should take more outdoor exercise, get good cheeks and bright eyes, eat and sleep regularly. Take lots of exercise and save your voice, and you will keep it fresh. When the music is firmly engraved upon the mind, then employ the voice. Practice *pianissimo* in private, and the *forte* will come all right in public."

It is sound advice.—*The Musical Standard*.

\*\*\*\*\*

*He (Schubert) ought to have been alive now, to know how he is praised; it would have inspired him for renewed and greater effort. Few authors have impressed the seal of individuality so clearly on their works as he has done.*—Schumann.

## The Poet:

## The Singer

IT WAS WORDSWORTH who gave us the precious phrase, "Wisdom married to immortal verse." This can be a subtle way of pointing the necessity for the accomplishing of beautiful song settings and equally alluring poetical vocal interpretation—through becoming familiar with that which is termed immortal verse.

Mme. de Staël confesses "I learnt life from the poets." Life! Life, indeed—therefore to give a vital and beautiful as well as real interpretation it would behoove us to delve deeply into those poets who caused de Staël to make this confession.

Until we make frequent and studious peripatations into the field of poetry, the words we sing are apt to have but a cursory meaning; for in music we must understand the power of the word to be as important a factor as in the drama, aptly described by Shakespeare through Hamlet, "Suit the action to the word, the word to the action."

—Exchange

# OPPORTUNITIES

## ...in the Music Field

### ADVANCED COURSES OFFERED BY THE UNIVERSITY EXTENSION CONSERVATORY

*Music has always ranked high among professions. There is never an overcrowded field for the well trained musician.*

● Interesting positions are open in every part of the field. Schools and Colleges are making it necessary for every teacher to be equipped for his work; the Radio is calling for highly specialized training, and standardized teaching makes competition keen even in small communities.

Are you an ambitious musician?

The alert musician today does not rely upon the haphazard use of books and methods, but chooses a definite method and with special preparation, meets the competition. A successful musician is most always a busy one. Because of this very fact it is almost impossible for him to go away for additional instruction; yet he always finds time to broaden his experience. To such as these our Extension Courses are of greatest benefit.

Digging out for yourself new ideas for the betterment of your students is a wearisome time-taking task, even though you have knowledge of dependable sources. When you can affiliate with a school recommended by thousands of successful teachers, you may be sure that their confidence justifies your confidence in new ideas for your work which we make available to you.

Look back over the past year! What progress have you made?

If you feel you have gone as far as your present musical training will take you; if you are ambitious to make further progress, enjoy greater recognition, and increasing financial returns, then you owe it to yourself

to find out what this great Musical Organization has to offer you. At a very small cost and with no interference with your regular work, you can easily and quickly qualify for higher and more profitable positions in the musical world.

#### DIPLOMAS OR BACHELOR'S DEGREE

We put you in position to earn more and to prepare for bigger things. Quick advancement can be yours in the teaching field or any branch of the musical profession. With a diploma or Bachelor's Degree you can meet all competition.

#### RAPID ADVANCEMENT

Our simple and easy Extension method of teaching you both the beginning and higher branches of music right in your own home has been gained in a busy experience of 36 years. Follow the example of other musicians who have examined our lessons available to Etude readers by sending for them today.

# THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

## That "Tantalizing" Pedal Passage!

By

HENRY C. HAMILTON

EVERY ORGANIST of any considerable experience will recall certain passages for the feet, which, in spite of endless repetitions, seem never to go easily. The industry and patience of the player may have no limit. Perhaps he concentrates till the very act of walking brings to his mind that tricky toe and heel affair of the pedal board. Yet, in actual performance, there ever eludes him that delightful sense of mastery which he craves. Some puzzling impediment blocks the way.

Here is the point where the player should take stock of himself and of his manner of study, to find out the trouble; whether mental or physical? Like a detective following a clue, the organist also may discover a "clue" and thus overcome his own difficulties.

### *Each Individual an Entity*

FOR ONE THING, we are not all constituted alike. Just as wrists differ, so do ankles. The turning of the toe, out or in, is a prime consideration in pedal technic. One way or another may prove more natural; and it is the "holding of the mirror up to nature" which most often determines fluency in technically difficult passage playing. In this course, it should be early determined which foot passes most easily behind the other. Then, a slight adjustment of the bench, or of the body itself, may contribute largely toward greater ease in performance. These things, once realized, the organist is in a position to work with Nature—not against her.

It is now many years since the writer first studied the *Grand Chorus in D* of Guilman. At that time, with very immature pedal technic, but immeasurable ambition, he practiced like one possessed; yet small headway was made. A certain pedal passage, appearing twice in the course of the composition, eventually became a veritable nightmare. That intricate "run" for the feet burned up more of his nerve force than anything yet encountered. At the end of his student days, the piece was shelved: he was glad to forget it—for the time, at least.

More years passed before it was touched again. Owing to advancement in general musicianship, that pedal passage had lost some of its terrors. It seemed a trifle easier to play, but a few of the "bad spots" still remained. However, with the added technic now possessed, these difficulties were attacked with renewed vigor, as hope persisted that they might yet be conquered. Again the toe and heel method of former years was tried—with but poor results. Then was born the idea that perhaps a new and more natural way—for this particular organist, at least—could be worked out.

Habits of long standing seldom welcome

a change. This individual organist had for long been making a particular study of his own ankles; he knew their possibilities; and he began to feel equal to the task of mapping out his own course of action. The toe and heel indications, as printed in the edition being studied, were discarded; and, after some thought and experiment, he decided on what seemed to "fit" much better his personal physical equipment. Compare the two:

Ex.1

The foregoing, which had been practiced for years with unsatisfactory results, was changed to

Ex.2

and improvement showed itself almost immediately. Soon every part of the passage felt easier. A little awkwardness persisted, however, at three places:

1. At the first high A, which was overcome by a slight but very quick turn of the body to the right.
2. When approaching middle E in Measure 4, the body adroitly resumed its original position.
3. With the approach to B in Measure 6, a slight but quick turn to the left brought everything well under the feet, so that the last lower notes might be reached comfortably.

Nevertheless, these quick turns were not accompanied by any sliding along the bench. At no time was the body removed from "center."

### *We Creatures of Habit*

PHYSICALLY SPEAKING, the whole thing was now easy; but mental habits of long standing would sometimes play a trick. The new toe and heel progressions, necessitating different positions of the feet, would occasionally be forgotten. This difficulty was overcome by dividing the passage into sections for practice, so that the mind could, as it were, make fresh starts in directing the feet—something after the manner of a relay race. By this method it was not long until these sections merged so successfully that no apparent pause existed, and this pedal passage, which for years had given trouble, was now a source

The console of the great Wanamaker Organ at Philadelphia, one of the two largest organs of the world. The symmetrical arrangement of manuals, stops, tablets, buttons, pedals, and mechanical appliances for the feet, seem bewildering to the uninitiated.

of real genuine pleasure in its performance.

In all good keyboard work a skillful player seeks those positions in which everything lies best under the hands; and there is no good reason why the same principle should not be applied in pedal technic, so that all runs and other bothersome figures shall lie as comfortably as possible under the feet.

Then as a last word towards the accomplishing of all such hurdles, a feeling of relaxation should be cultivated—not only in the ankles, but also throughout the entire length of the limbs—yes, and throughout the entire body, till every item in both the mental and the physical organism shall be free to act without restraint from any quarter.

## Bright Tone in the Modern Organ

By PARVIN TITUS

IN VIEW OF THE WORLDWIDE use of the radio, and the inevitable increase of its importance to listeners and performers alike, American organists may interest themselves actively and profitably in those qualities which have made certain organs, of whatever age, landmarks in organ building, both here and abroad.

Recent trends of thought are leading us away from the concept of the organ as an aggregation of many voiced solo stops, each one judged on its own merits and without special regard to its contribution

to a beautiful ensemble of tone. Attention is being given more and more to the selection and voicing of pipes which will produce a clear ensemble of adequate, but not overwhelming, power.

A few of the factors involved in this changed design of the modern organ are:

1. A return to low wind pressures and a moderate voicing of 8' stops, with a consequent increase in the clarity and prompt speech of the pipes.

2. The elimination of heavy, thick-toned 8' flutes and diapasons prevalent

## THE ETUDE

MUSIC MAGAZINE

Theodore Presser Co., Publishers

1712 Chestnut St., Phila., Pa.

in most of early twentieth century organs.

3. A larger proportion of brightly-voiced 4', 2', mutation, and mixture registers on the manuals.

4. Chorus reeds which have vigor and brilliance, but which fit into the ensemble of manual tone.

5. The provision of independent pedal registers, including 4', mutation, and mixture pipes, whenever practical and possible.

6. Increased attention to the provision of ample speaking space for the pipes, which are placed as far as possible out into the room in which they are to be heard. A minimum of case work to obstruct free and easy speech of pipes.

Happily enough, the modern emphasis is less on size than on quality in organ designing and building; on performance rather than on exhibitionism. On soundly conceived and well built instruments, the music of Bach and the old masters and our modern recital and service music, all

can be played with a clarity, vitality and variety of tone unknown to many listeners. Colorful registration of almost endless variety is available, to challenge the performer's imagination and ingenuity, though his instrument be extremely small. Pedal parts sound with an individuality and clarity which clearly distinguish them from the manual voices.

Modern ideas of organ tone are not mere theories. They have proved their value in installations in buildings large and small, of varying acoustical qualities, and in recent radio broadcasts in which organs of limited resources have produced a richness and transparency of tone which aroused enthusiasm even in blasé radio technicians. Only as we organists are open-minded, honest artists, actively interested in perfecting the modern organ, will our builders dare exercise fully the skill and knowledge which they possess and wish to use to make their instruments of more vital service and interest to thousands of hitherto indifferent Americans.

## Some Beauties of Phrasing

By WILLIAM H. BUCKLEY

REMEMBER that the sign, *crescendo*, implies some degree of softness, since you have little opportunity of "growing louder" from that which is already loud. Similarly, *decrescendo* and *diminuendo* imply loudness.

Every phrase will have its climax to which you will swell out and from which you will die away. In your own private study of each number, mark the climactic syllable, and then train your choir to sing in phrases. This marked syllable will be the peak of each phrase. The natural tendency seems to be to swell out and die away on each syllable; but this gives no unity to the phrases. Also, the steady onward progression of the expression to and from the climaxes is totally destroyed.

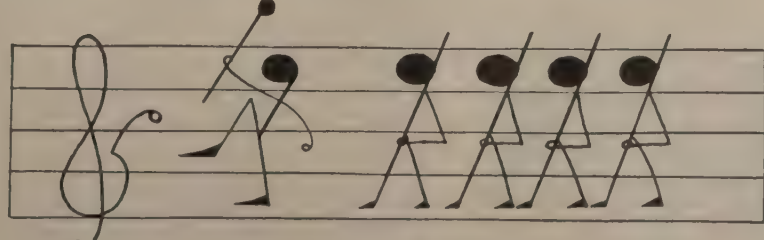

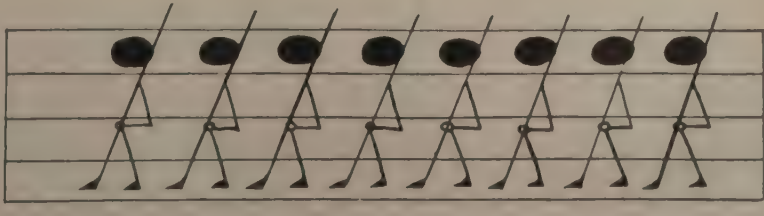

When approaching a climax the last vestige of each syllable must be louder than any other point in it. Illustrate your point by singing the phrase and by showing how your demonstration agrees in its effect with the diverging lines used in music to indicate this. The increase must be steady and regular. The lines must be as in "A" not as in "B":

A.  B. 

The choir should sing the phrase to the

which places the emphasis exactly where it belongs and so helps to bring out the simple eloquence and reverential spirit of the text.

### The Soldier's Chorus

Betty Greene Newcomer, daughter of Mr. & Mrs. Elwood Greene, 1913 Steuber Road, Hessian Camp, Reading, Pa.

*A glowing tribute*

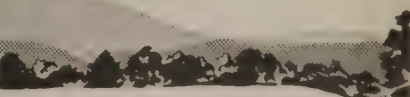

"The Sonatina pipe organ installed in our home a year ago has proven musically indispensable as a permanent source of pleasure and entertainment."

Just one of numerous such fine testimonies of jubilant WICKS owners. There is something about a WICKS organ that thrills you when you first sit at the console, and this intangible something LASTS!!

# THE ETUDE

## Piano Solo Composition

### PRIZE CONTEST

#### Four Generous Prizes

##### CLASS ONE

*Concert Piano Solo* (See Description Below)

**FIRST PRIZE - \$250.00**

**SECOND PRIZE - \$150.00**

##### CLASS TWO

*Entertaining Piano Solo* (See Description Below)

**FIRST PRIZE - \$250.00**

**SECOND PRIZE - \$150.00**

##### Class One

#### CONCERT PIANO SOLO

First Prize—\$250

Second Prize—\$150

Manuscripts entered in this class should be solos of average length written for the more advanced pianist. This does not mean a number demanding virtuoso ability for its rendition, since there are many appealing piano solos played in concert by master pianists, yet which are played frequently by many who may be generally described as advanced piano students or accomplished pianists. Any form such as the prelude, waltz, caprice, nocturne, etc., may be used, but the judges will be influenced more by compositions possessing the qualities of spontaneity and melodic freshness than by those written in the strict pedantic style.

##### Class Two

#### ENTERTAINING PIANO SOLO

First Prize—\$250

Second Prize—\$150

The publishers of THE ETUDE are firmly convinced that there is a definite place in the teaching repertoire for the recreational piece which reflects something of the present-day tendency in its rhythmic and harmonic design. Such pieces also are enjoyed by the average pianist and his or her intimate audience in the home or in small social groups where entertainment is the paramount consideration. Radio pianists catering to a wide and varied audience also appreciate compositions of this character. This class affords a splendid opportunity for the composer whose writing talent inclines toward pieces such as *Soliloquy*, *Holiday*, *Serenade for a Wealthy Widow*, *Nois* and *Floppette*.

This Prize Contest is open to all who wish to enter it, excepting members of the staff of THE ETUDE MUSIC MAGAZINE and employees of the Theodore Presser Co.

#### THIS CONTEST WILL CLOSE NOVEMBER 1, 1939

THE ETUDE MUSIC MAGAZINE feels that a Composition Contest of this character will stimulate composing efforts directed toward supplying present-day pianists (of whom there are many giving formal and informal recitals) with some new material for their audiences to enjoy, and that composers also will be moved to bring forth for those who play chiefly for their own amusement some new piano solos for them and their friends to enjoy. Only Piano Solos will be considered in this Contest. Do not send compositions of any other character.

#### CONDITIONS are simple.

All entries must be addressed to:—

#### THE ETUDE PIANO COMPOSITION PRIZE CONTEST

1712 Chestnut Street, Philadelphia, Pennsylvania

All manuscripts submitted must have written at the top of the first page—For THE ETUDE PIANO COMPOSITION PRIZE CONTEST.

The real name of the composer-contestant must not be placed on the manuscript. Write a fictitious name on the manuscript and write that same fictitious name on an envelope. Seal within that envelope a slip of paper with the real name and full address written upon it, and bearing in the lower left hand corner also the fictitious name. This sealed envelope should be attached to and sent with the manuscript. By this system judging may be kept free from any considerations other than the merits of each composition. One of the

greatest reasons for conducting a contest after this fashion is to assure the unknown composer the opportunity to have an equal chance with composers of established reputations. In this contest all are welcome to participate and every manuscript submitted will be reviewed by a number of competent judges. Their decisions will be impartial and final.

No composition already published shall be eligible for entry in this contest. No variation nor any adaptation of a previously published melody shall be eligible for entry in this contest.

The pedantic type of composition such as those running to involved contrapuntal treatment of themes should be avoided.

The Piano Compositions winning prizes are to become the property of THE ETUDE MUSIC MAGAZINE with full publishing rights vested in its publishers, the Theodore Presser Co.

Contestants may enter compositions in both classes.

Although there are two prizes in each classification, the publishers of THE ETUDE expect to find a number of the manuscripts not winning prizes to be deserving of publication, and accordingly expect to offer some contestants who are not prize-winners an opportunity to realize something on their composing efforts by offering to purchase the manuscript for regular publication purposes.

# ORGAN AND CHOIR QUESTIONS

## Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. I desire information regarding the world's largest reed organ—where it is, to whom it belongs and its size. Will you send me the names of some reed organ makers where I might purchase parts? Can you put me in touch with a person or firm who has for sale a very small used pipe organ at a low price? Some months ago a friend bought such an organ for one hundred dollars. Was that just luck, or is it possible for me to get one like it? It has two manuals and pedals, but I am unable to get the name of the firm that sold it.—W. R. L.

A. We cannot supply the information you ask as to the largest reed organ. We are sending you information as to securing parts. For information as to used pipe organs, we suggest that you communicate with various organ builders, advising them of your wish to secure a used instrument and so forth, and asking them to advise you when they have one available. If the instrument purchased for one hundred dollars was a good one, the purchaser certainly was fortunate and you might have difficulty in duplicating the purchase.

Q. At what tempo should hymns be sung in the church service? There is a State Teachers' College in the town, and they are taught to sing at a terrific pace. I realize that circumstances alter cases. No doubt a fairly good speed is expected in community singing, especially where there are young students only; but it seems to me that where there is a congregation of older people the situation calls for a more dignified tempo. In our hymn book we frequently have a skeleton bar in the middle of a line. I understand this to mean a slight pause. Some do not see it this way, as they overlook the bar altogether and sing in perfect tempo. An example of this is the hymn "Be Strong," music by David Smith—No. 407 in the Methodist Episcopal Hymnal. Should there be a pause after "strong"? In other words, what corresponds to a "hold"?—C. H.

A. There is no set tempo for all hymns. The tempos should vary with the character of the hymns, and might be faster in a small non-resonant building than in a large resonant one. We prefer a dignified tempo for hymns, rather than the terrific speed you mention. This preference applies to all services, whether the congregation be young people or not. If by "skeleton" bars you refer to "measure" bars—they indicate the primary accents—not any break in rhythm or time. We find the hymn you mention to be No. 300 (not 407) in the Hymnal, and our preference would be not to make a pause after "Be Strong," because of the rhythm of the music. "Holds" are generally indicated by the usual sign for a pause, except sometimes in Chorales, where they are inserted in the interpretation by the choir-master, at the ends of the lines.

Q. Will you please name a list of piano compositions suitable for Preludes, Offertories and Postludes? In our rural church we have a very small group of volunteer singers acting as a choir. They do not know much about singing—breathing, pronunciation, tempo and so forth. One member, in particular, insists on dragging the time, and Sunday after Sunday will sing at least two measures behind my playing all through the hymns. Please tell me what I should do. When mistakes are made should I correct them? As I am only seventeen years old I feel that I am too young to make suggestions to the older members of the choir. The member referred to has advised me that a good accompanist should play for the singer. As I have taken singing lessons I know that this statement is very true, but I do not think it applies to hymn playing. What is your opinion? At about what tempo should the Gloria Patri and the Doxology be played?—C. E. R.

A. We suggest for your use the following: "Sacred Music for Piano Solo," by John Church Company; "Church and Chapel Voluntaries," by Dreisbach; "Piano Voluntaries," by Presser; "Sabbath Day Music," by Ditson; "Ashford's Piano Voluntaries" (2 volumes); and also slow movements from piano sonatas, and so forth. It is unfortunate that conditions exist, such as you name. If you are in charge of the music, it is, of course, proper that you should correct mistakes, whenever you are convinced of such errors. As you say, the statement that an accompanist should play with the singer, is correct, but does not apply to hymns or concerted work that may be in your charge. We do not know what particular *Gloria Patri* you have in mind and so cannot suggest a tempo. Tempo is dependent somewhat on the size and acoustical properties of a room. A slightly slower tempo might be advisable in a large resonant room than would be permissible in a smaller, non-resonant one. We suggest about 72 units as a basis for the *Doxology* usually sung to *Old Hundred*.

Q. For the pianist turned church organist is there a book of instruction available, help one to acquire facility in the use of the pedals, scales for the toes, and, of course, better understanding of the use of the stops?—A. M. T.

A. We suggest your securing a copy of "The Organ"—Stainer-Kraft, which may be secured through the publishers of THE ETUDE.

Q. I expect to be playing a small organ in the Sunday School. With my inexperience with the instrument, the stops do not affect the quality of the music at all. It has eleven stops—named on enclosed list. Will you advise me as to the best registration for solo and school accompaniment?—A. O.

A. We presume the instrument to be a reed organ, and there probably is not much variety as to tone color. For school accompaniment we presume you might use "full organ" probably obtained by the opening of knee swells on the right and left hand side of the instrument. The stops to be used for solo accompaniment depend on the amount of tone required. We presume your soft 8' stop might be Echo and Dulcet; and we note that you have only one 4' stop—the Principal. Bass coupler brings into action notes on octave to the left from those being played while Treble coupler acts similarly on the right hand side. "Forte" increases the power of the stops in use. 8' stops speak at normal pitch (same as piano), while 4' stops speak one octave higher than the notes written.

Q. I am a Senior in High School, sixteen years of age, and have been taking organ lessons for almost a year. The urge came to me, as I suppose it comes to all organists, to build a pipe organ. Will you give me some suitable specifications for a duplexed, unified pipe organ of two or three manuals and pedal? I also would like to know which you think would be the best for me to do, build a three manual organ with compass of below middle C to F above Octave C, or build a two manual organ with the usual compass. Using the short compass I thought that I would buy a reed organ, use the key for the manual keys, and use the set of reeds (adopting action to play them) and get some old organ pipes. Along that line I arranged enclosed specification. Please give me your opinion.—A. F. R. L.

A. Reed organ Melodias are usually of 5 pitch and would not be available for the low notes of a 32' stop below your middle C. If you want to have a 32' stop we suggest you getting it by the installation of a 32' and 10' Bourdon in the Pedal Organ, or by an extension of your Gedackt rank, although a separate Pedal stop is advisable. We do not advise the building of the three manual specification with compass as suggested, and would prefer the two manual instrument with regular compass. Your stops do not seem to bear the proper relation to the ranks you mention to be included—for instance—an 8' Dulciana cannot be derived from the Gedackt set; nor can a 4' Octave, as that stop is generally understood. The Oboe, if it is not duplexed from a regular Oboe rank, would probably be formed by an 8' Gamba and a Nazard Flut 2-2½—which can be borrowed from your Gedackt unit and should be included as a separate stop in your Swell organ specification. Neither a 4' Flute Harmonique nor a 4' Concert Flute are of the same quality as the Gedackt, and a Viol d'Orchestra is usually of a different quality than a Gamba. The 4' Clarion is usually a reed stop and is not an extension of a Gamba. If your Reed unit is a Cornopean it might be used for a Clarion extension. The stops you mention (except the reed organ Melodia) are well chosen for a unified duplex instrument of 11 scope. The Gedackt should include 97 pipes (109 if 32' is included); Open Diapason 73 pipes; Gamba 73 pipes and Oboe or Cornopean 73 pipes.

Q. We have an old Packard reed organ. Some of the stop names are worn off. I am enclosing a list of the stops on which the names are legible, with blank spaces for those that are missing. Can you supply the missing names? Please tell me the meaning of "ft." Will you tell me what stops to use to make the most of The Lost Chord; The Holy City; Elegy (Massenet); and Ave Maria by Rossini?—J. H.

A. We cannot supply the names of the stops that are missing. 8' stops speak at normal pitch (same as piano); 16' stops speak one octave lower and 4' and 2' stops one and two octaves higher, respectively. The numbers you mention would require registration depending on the arrangement being played, and it would be difficult to suggest stops under the circumstances. Information about some of the stops included in your list might help you. Octave Coupler brings into effect notes one octave from those being played. Probably your Dulcet, Bass and Delicato are soft 8' effects, while Diapason and Pipe Diapason are probably louder 8' stops.

# THE ACCORDION DEPARTMENT

## The American Accordionists' Association By PIETRO DEIRO

As told to Elvera Collins

UNTIL RECENTLY there had been considerable confusion in the writing and arranging of accordion music. This has proved quite a handicap for accordionists and particularly for beginners. They not only had to learn to play accordion music but also had to familiarize themselves with numerous systems of arrangements, each with its own distinctive symbols.

A group of prominent accordionists, arrangers, teachers and publishers realized something should be done about this, they banded together for the express purpose of bringing order out of the chaos of accordion music. They felt that the notation for all other instruments had been standardized, and that the accordion should not be an exception.

This organization was called the American Accordionists' Association (A.A.A.). Its members worked quietly for many years, before they announced the existence of the Association.

Much research work had to be done, for the first point about which they wanted to agree was whether accordionists really needed their music standardized. If the answer was indifferent, there would be no need for an organization to spend time and money working in their behalf.

A general survey of the accordion field, which was accomplished by means of questionnaires, showed that players were almost unanimous for standardization of accordion music. Not only that, but they clearly outlined what they wanted. Teachers were also helpful in diagnosing the systems of various arrangers and pointing out what was thought was practical and what should be discarded.

A very fine spirit of coöperation was displayed among the composers and arrangers who were charter members of the A.A.A. Naturally it was necessary for many of them to concede certain points to relinquish some of their pet individual theories for the good of the whole. The old idea of every arranger for himself now become almost obsolete. Publishers of accordion music coöperated to the fullest. In many instances this was because it meant that they had to discard music plates which represented an investment. They had faith, however, that the ultimate good derived from standardization of music would compensate for the initial loss.

Although the A.A.A. was founded principally to solve the music notation problem, it now finds itself confronted with other problems. One of these is the classification of accordion teachers. During the last few years the demand for accordion teachers has been greater than the number available. Unfortunately this condition brought about the opening of many schools of accordion instruction, with a teaching staff which was incompetent. In fact, in many instances the teachers specialized on other instruments and could not even play the accordion, yet they attempted to teach

the accordion. This enables the organization to have a list of qualified teachers who can be recommended.

Various other problems will no doubt be presented to the A.A.A., as the association has pledged itself to do whatever it can for the good of the entire accordion industry. The organization owes much of its success to the fact that it is not commercialized, as it has been established on a non-profit basis.

### OFFICIAL NOTATION FOR THE STANDARD ACCORDION APPROVED BY THE AMERICAN ACCORDIONISTS' ASSOCIATION

Left hand accompaniment is to be written in the bass clef. Right hand is to be written in the treble clef.

The fingering is the same for both hands: the thumb is the first finger, index finger is 2, middle finger is 3, ring finger is 4, little finger is 5.

All notes for the left hand are written in the bass clef. The bass notes use the compass of one octave in this position on the staff.

Ex. 1

(The optional B and C are used only for facility in reading).

The chord notes for the left hand are written in the bass clef. A single note which is the root (Tonic) indicating the name of the chord. The chord notes and their position on the staff.

Ex. 2

Letters indicating the kind of chord are placed on top of the chord note:

- M indicating the Major chord,
- m indicating the minor chord,
- 7 indicating the dominant seventh chord,
- d indicating the diminished seventh chord,
- M} indicating two chords played together.

Example of the four C chords with their distinguishing symbols.

Ex. 3

A bass solo passage employing a compass larger than one octave may be written on any part of the staff, but will then be indicated as bass solo by the words Bass Solo, or the abbreviation B.S.

Ex. 4

A straight line—under a bass note or the fingering, indicates that the note is to be played in the counter-bass.

Ex. 5

# THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

## The Case for Class Instruction in Violin Playing

THE VALUE OF CLASS INSTRUCTION in violin playing has been questioned by many leading authorities. While a great number of teachers are somewhat indifferent to the whole question, there is on the contrary, perhaps only a small minority that out and out endorses it. The obvious conclusion to be drawn by the inexperienced teacher is that class work has no right of existence in the field of violin playing.

This impression would naturally be further strengthened by the fact that the violin is an instrument where individuality, the efforts and talents of the individual, counts more than anything else. By their nature, the problems of violin instruction are problems of individuality. Each student has his own particular difficulties; each student must be approached in a way suitable to his particular temperament. At the first glance one must admit that it seems rather ill-advised to bunch a number of them into a class and try to teach them the most individual of all musical instruments, the violin.

The most obvious point in favor of musical class instruction is that it gives people of limited means a greater opportunity to receive the advantages of a musical education. The price of training from a responsible, first rate teacher can be reduced so as to be no longer a luxury reserved for a few. Moreover, the class idea calls for a broader advertising campaign. The teacher can handle so many more pupils that he has to appeal to families of all social strata. The idea that a musical education can be obtained cheaply, as well as expertly, will be brought home to people who otherwise would never have come closer to music than a negative exposure to the musical background of moving pictures and radio.

The first question, then, is whether or not this advantage is great enough to make up for the possible drawbacks of this type of instruction. Or, in other words, which is more important, to develop merely the great talents and others who might afford it, or to introduce active music making to as many homes as possible, even if, in the process of doing so, some of the efficiency might conceivably be lost? There can be little doubt as to the answer. Besides, the class instruction need not necessarily interfere with the private tutoring of those to whom this form of instruction would be the most suitable.

### *The Teacher Analyzed*

THE GREAT DANGER of class instruction is that so very much depends on certain qualities in the teacher, much more so than in private teaching. One might say that the successful class teacher has to commercialize his art to some extent; and consequently there is a danger of leaving out the art entirely, making the whole thing a purely commercial venture. The class teacher needs an extraordinary amount of conscientiousness. It is all too easy for

the class work to degenerate into a continuous playing in unison, with occasional part playing, that can ruin the musical future of even the most talented child. In the class the instructor may "get by" with almost anything, and as the work is very tiring, it might often be tempting to let small things go by uncorrected. "The difference would hardly be noticed, anyway," says the easy going teacher.

Class instruction offers difficulties of a complex nature, rarely met with in private tutoring. In fact, one might almost say that it requires a certain talent all of its own to be able to teach a class of individuals to the full benefit of each. Enthusiasm, understanding, sound judgment, impartiality, a certain practical knowledge of child psychology, or perhaps one should say an instinct for psychology, form a part of this talent. And above everything, there must be an inexhaustible supply of patience. Patience, ever more patience! It of course should not be necessary to mention that a thoroughly sound violinistic training is an absolute prerequisite for the class instructor. After all, that should be a part of the equipment of every violin teacher, whether using the class system or not.

One of the most important features of the class system is the fact that it is a system. The children not only are taught in groups, but the groups must be also systematically arranged. As for the number of students in each group, this depends

largely on their age and grade. Experience has shown that with beginners one can hardly have more than five students in each class, since a great deal of personal supervision is needed. With slightly more advanced students this number may be enlarged, although a violin class should at no time exceed the number of ten. In the case of advanced students the classes must become smaller again, since much more playing by individuals is called for. One should preferably have from three to five students over a two or three hour period.

The grouping of the classes must be done with all the care and skill that the teacher possesses. The success of the class depends largely on the systematic selection of children who belong together musically, intellectually, and temperamentally. The general intelligence of the children must be somewhat on the same plane. The teacher must investigate school records, as well as carry on little tests of his own. He must test thoroughly their musical abilities. In the case of beginners, the children's feeling for rhythm, their sense of pitch and pitch discrimination, their ability to judge intensity and color of tone, must be exhaustively explored. The well known tests

devised by Prof. Seashore will prove helpful to teachers who might lack the necessary experience to formulate such tests of their own.

As far as temperament goes, the selection must be just as careful. Every class should have at least one child of the enthusiastic type. A slight contrast in temperament is desirable, both to avoid monotony and to act as a stimulant to the others; while on the other hand, a too great contrast is naturally apt to break up the unity.

The idea of competition is always mentioned, by those who advocate musical class training, as one of the most important justifications of the system. The students have a chance to keep a close watch on each other's progress. And most children have a desire, conscious or subconscious, to excel, to be a little better than their companions, or at least as good as they are. Although it is very doubtful whether competition in itself has any power to substitute where musical talent or desire for music making is lacking, it might nevertheless stimulate a student to greater efforts than otherwise would have been possible. Competition and companionship during the music lesson are healthful stimulants to progress.

### *Constructive Competition*

HOWEVER, FAR MORE IMPORTANT than competition, which even at its best is founded on a sort of envy, is the fact that there

means of the individual child. Where teaching is concerned, for instance, the teacher should guide one child into the correct position and motion, and then have the rest of the class observe and imitate, in turn correcting the others, under the guiding hand of the teacher.

In the case of beginners, one will undoubtedly hear the objection that private teaching will bring quicker results, which is true, of course. The advance of a whole class must of necessity be slower. On the other hand, the class has the advantage that every point must be mastered before the next step can be taken. With the class the foundation of thorough musicianship must be laid from the very beginning, while the private pupil often dashes ahead, playing notes with great facility and little understanding. For example, the students of the class must be kept at bowing exercises on the open strings, far longer than is the case with the private student. The whole future of the class depends on the exactness of its bowing and the uniformity of its tone. Lapses in bowing are very much more noticeable than in the case of the individual. The teacher must insist on absolute precision in using the various parts of the bow and on clarity of tone; must constantly stress that the lassitude of one student is sufficient to keep back the whole class.

### *Ear Training Benefits*

THE GREATEST technical advantage of the class system lies in the field of ear training. Contrary to the popular concept it is not only possible to train a child's ear through the group; but it also is actually possible to do it with more accuracy than is generally the case in private coaching, where again the progress is often too rapid to be thorough. The class has actually the advantage in its necessity of advancing slowly. The early stage of ear training is truly one place where slowness has a value; where slow progress means greater progress. The ear training should begin in the very first lesson, long before the hand fingers are put into action. Pitch consciousness must be developed as early as possible. The students must learn to distinguish the differences between whole and half steps (intervals), even between these can be connected with the spacing of the fingers. This is a necessity in group instruction where less individual attention can be given. When the fingering begins the most important point is thus achieved. There remains only the comparatively simple action of associating the placement of the finger with the sound of the tone already fixed in the ear. Here again it is advisable to let one pupil play at a time as a means of illustrating the ideas. The procedure might be somewhat like the following: The teacher plays the note, then on violin and piano; then has the class sing it. Next a selected pupil plays the same tone, with the rest of the class correct him. The teacher plays the tone over again on the piano and has the class compare the two tones. If necessary he moves the student's finger to the correct position, pointing out the immediate improvement in tone.

One of the most common shortcomings in the training of violin players lies in the absence of a knowledge and understanding of harmony. Group instruction is the perfect means of rounding out the musical

By KAARE A. BOLGEN

Understanding of the students. From the introduction of the open strings, the fundamentals of harmony can be imparted to the students in a way to make it a part of their musical make up. The mysteries of chord structure can be simply shown by having students play on various open strings, with the teacher completing the chords, explaining, demonstrating, and preparing the ground for the time when the students will be ready to use the left hand. Then the harmony study can begin earnestly. By having each student play one part of the chord, the teacher can conduct

a harmony course almost as complete as, and far more interesting than that of the piano student.

By no means the least of the arguments in favor of class instruction is the marvellous opportunity offered for ensemble playing. From the earliest period in his training the student will have the benefit of the maturing properties of part playing. In addition to making him a thorough musician, it will give an added stimulus to his studies and give him a more profound love for his music, which is, indeed, the greatest result of any musical education.

## Making the Study of Harmony Function in Violin Playing

By KARL E. WEBB

HARMONY, as it is usually taught, seems to have little place in the average study course of violin. Figural bass, four voice writing, and har- monizing of melodies are something outside the experience of the violinist. Yet the study of harmony can be made a vital part of violin practice.

Harmony generally starts with the study of intervals. In his exercises, the violinist studies the melodic interval, and by adding these tones together get the harmonic interval. To get the most good of the study the student should analyze a study he may be practicing. For example, if he is working on Kreutzer, No. 1, should call every melodic interval as he plays it on his violin.

his will do two things for the student: show him the name of the interval, and its sound. Soon this will become automatic, and better sight reading and intonation will result.

The study of scales is the next step in harmony. Here the student should not only recognize the scale when it is started on any key tone, but also recognize it when it is on any tone. He will soon learn that all the scales in a piece are not in the original signature. These few scales from Kreutzer will explain,

A-Harmonic Minor

not only should the student analyze the scales, but also he should play various scales beginning on one tone on the violin.

G Major G Harmonic Minor

These may be also practiced with different tones as the starting point.

A good preliminary practice in chord playing is to take any tone on the violin and play Major, Minor, Augmented and diminished Triads. Start on any tone and

spell these as you play them. Now you are ready to analyze your studies, as below, by naming the root of the chord and naming its color.

Since all music is made of scales or chords, the tones not belonging to the chords are non-harmonic tones. These can be analyzed thus.

After the student has progressed thus far he is ready for harmonization of the studies. He should listen for the scale or chord implied in the melody, then outline this chord pattern. After the chords have been outlined they can be set in interesting rhythmic patterns to be used as an accompaniment.

These arpeggio accompaniments appear in many violin concertos while the melody is sustained by some instrument in the orchestra, or by the piano in the reduced score. In this way the violinist has made his harmony really function as part of his playing.

### Bow Control

By ADA E. CAMPBELL

SET THE METRONOME at sixty and pull the bow as slowly as possible on the G string, counting each metronome tick. The minute movement of the bow will cause the nerves in the hand to become a little unsteady, and the sound will be a little "chuggy." Practice this at least five times every day and you will be pleasantly surprised at the added control developed. The aim should be for sixty beats to the first bow, then increased eventually to one hundred fifty. It can be done!

## The Guitar—Fingers or Plectrum

By GEORGE C. KRICK

**W**HENEVER GUITARISTS come together it is inevitable that eventually the conversation drifts towards the question: Will the plectrum guitar supplant its classic predecessor? And in frequent letters to this department it is asked: "What do you advise me to study for the purpose of a professional career—the classic guitar or plectrum?"

To answer this question intelligently it is necessary at first to make a comparison of these instruments, as to their tonal quality and the purpose for which each is intended. During many years of playing and teaching the guitar, the writer has yet to meet one who, after listening to Andres Segovia, Vicente Gomez or Julio Oyanguren, did not admit that the tone quality of the classic guitar, strung with gut and silk strings, is far superior to that of the plectrum guitar strung with wire and played with a pick. Beauty of tone in an instrument being the prime requisite of an artist, we cannot help but cast our vote in this connection for the classic guitar.

For several hundred years this type of guitar has been the accepted instrument of all great virtuosos, until to-day it is recognized as the standard guitar. Its technique has been developed and standardized; original compositions, in unlimited quantities by the great classic and modern writers, have been published; transcriptions of classic gems are available; and all of these are possible only to the guitarist using his right hand fingers and not a plectrum.

Some one will ask: Why do we not hear more players of this type? First of all, to play the classic guitar pleasingly requires a person of a sensitive, thoroughly musical nature, one who is able to "feel" beautiful tone and eventually is able to produce this on his instrument, one who is attached to the instrument, for the same reason, and is willing to study his instrument for years until he gets the desired result. Persistence, patience and perseverance are additional requirements for those ambitious to master the guitar; and, sad to relate, many of our American music students do not possess these qualities—they like to "cut across lots," so to speak. Some music dealers, and even certain music schools, tell us in their printed advertisements—"Play guitar, it is easy to learn." To play the classic guitar requires the same amount of application and study as the piano or violin; and a practice period of an hour daily is essential in order to acquire even a fair technique to enable one to play compositions of medium difficulty within a period of one to two years. As an instrument for the home circle, either alone or as a companion to other instruments or voice, the classic guitar is unsurpassed, even in the hands of an amateur who is enamored with its beautiful tone quality. One of the discouraging features for the beginner is the difficulty of producing a sufficient amount of tone, owing to the softness of the finger tips; but this is soon overcome by diligent daily practice, after the fleshy part of the fingertips has begun to harden.

Another factor to consider is the instrument itself. A guitar made for gut and silk strings must be constructed on a more scientific basis; and on that account it costs more; and, in addition, gut strings and also the silk wound basses break more easily and thereby add to the cost of upkeep. These matters frequently have a tendency to influence a prospective player to turn to the wire string guitar. From a professional standpoint, there are two avenues

open to the ambitious guitarist, either that of concert artist or teacher.

To become a public performer, one must have musical talent, personality, an all-consuming love for the instrument, and willingness to work hard for many years. If one has these attributes, he cannot fail to reach the desired goal.

The guitar, strung with wire strings and played with a plectrum, has often been called the "American guitar." It is true that the instruments with carved top and back, and F holes instead of the rosette, were first constructed in this country, but in Italy for many years the street musicians have used wire strings, mainly because they could not afford to buy gut strings, that would break easily out in the open air. For the same reason wire stringed guitars have been on the American market for many years.

When, as often happens, a new dance music style developed some seven or eight years ago, the tenor banjo, was displaced, in most of the dance bands, by the softer voiced and romantic guitar. In order to compete with the strident tones of the trumpet and saxophone, guitar manufacturers developed the present day plectrum played instrument. The purpose of this guitar is entirely different from that of the classic type, as it is mainly intended to provide a rhythmic background for the other instruments. This is where the plectrum guitar properly belongs, and for that reason it is the writer's opinion that it will never compete successfully with its classic relative, as a solo instrument. While soloists possessing remarkable digital dexterity have appeared from time to time, we venture to state that none can be compared, from a purely musical standpoint, with any of the modern exponents of classic guitar playing. Its popularity with the younger generation can be attributed to the ease with which a tone may be produced with the aid of the pick, and the absurdly low prices at which these so-called guitars may be purchased. However, we must admit that many have been attracted to the instrument by listening to plectrum guitarists, either as soloists or accompanists; but after studying a year or two they finally turned to the classic guitar.

As an orchestral instrument the plectrum guitar offers the prospective serious student splendid opportunities for financial reward. While perhaps only one in a million may become a "Segovia," many may find their niche in a prominent dance band. It should be understood, however, that the time has arrived when a so-called guitarist, able to play only from symbols, cannot hope to connect with a first class dance band. The members of these bands are well trained musicians and technical experts on their respective instruments; and guitarists are expected to equal them in musicianship. Already some of these bands have eliminated the guitar, primarily on account of the lack of musical training of the players. On the other hand, a guitarist who knows his instrument from A to Z, reads music at sight, can play from a piano score if necessary, has had training in harmony, and who is able to improvise, can make himself so valuable to his orchestra that he cannot be dispensed with. The exit of the tenor banjo from the dance orchestra may well be traced to the low standard of musicianship amongst its players. But the classic guitar will grow in popularity among those who love it for its exquisite tone and adaptability to render all types of music.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

## Interest in Child's Instruction

N. B. H.—I am glad to hear that you have just purchased a violin for your son and that your entire family is so much interested in it. It is this family interest in the progress of the music of the children which causes the children themselves to try their best to make their very best progress.

## Violin Literature Books

J. W. G.—The books on violin making I named are very good, but inexpensive. As you want more expensive works by more noted writers, you might get, "Violin Making as It Was and Is," by E. Heron-Allen. This is a standard work and very comprehensive. Then, there is "The Violin and How to Make It," by Kleches. There are many more. Probably your best course would be to get the work by E. Heron-Allen, and after you have studied this thoroughly, get some of the others. As you live in a large city, you will find many books on great violin makers, and possibly on methods of violin making, in the public library of your city. Also visit some of the large music dealers, who can no doubt show you works of this kind.

There is a very comprehensive work by G. Hart, on "The Violin—Its Famous Makers and their Imitators." This contains a vast amount of information on the violin, but it is somewhat expensive.

## The Writer's Son

H. G. B.—You evidently have gotten me mixed up with my son, Robert Braine, Jr., the pianist and composer. His compositions are widely known, and his orchestral works have been played by many of the leading symphony orchestras in the United States, and some in France. I am sure he will be pleased to have your Woman's Music Club in Nashville devote one of its meetings to his works. I will forward your letter to him.

## The Left-Handed Pupil

C. L. B.—I get so many questions about left-handed violinists; whether it is best for them to keep on in the left-handed manner, or change to bowing with the right hand. I could tell better if I could see the child and teach him for a few months. It all depends on what degree of left-handedness the boy is afflicted with. If he is only slightly left-handed, and can write, or use tools with the right hand, probably he could learn to bow the violin with the right hand; but, if it seems impossible for him to bow even passably well in the usual manner, it might be best for him to bow left-handed. You might try him with the right hand, but if it seems impossible to teach him in this way, there is nothing to do but to make a left-handed player out of him. However, as you say he is only five years old, he may develop the use of the right hand. It is much better for him to use the right hand in bowing. For instance, in a large orchestra, where uniform bowing is necessary, it would look very awkward to see part of the violinists bowing with the right hand, and part with the left. The best way is to try him with the right hand for a few months. I have known many instances of very young left-handed violinists changing to right hand bowing, with great success.

## All About Shifting

L. H.—1. The violin about which you inquire is evidently a very modern instrument by an Italian maker. I do not know just how you could get any information about him and his work, unless he has an agent representing him in this country. If you will write to the Italian Ambassador in Washington, he may be able to furnish this maker's address. 2. Get the work, "Violin Teaching, and Violin Study," by Eugene Gruenberg, which gives full directions for shifting, in all its various forms, also a vast amount of other information in violin playing. This book may be purchased through the publishers of THE ETUDE Music Magazine.

## Who Is Right Rubus?

L. A. M.—THE ETUDE, in the past few years, has been swamped with requests for information about supposedly, "Russian" violins, named "Right Rubus." Everyone seems to have one. They are indifferent looking instruments with rounded edges, and a mediocre tone. Somehow or other the rounded edges seem to "catch" the public, and they are considered valuable. These violins do not seem to be listed among violins of note, and "Right Rubus," if there was such a person, does not seem to have been a violin maker of note. I have never known a first class violinist to possess one of these instruments. No doubt they are imitations of some better known violins, and that they are of small value. If a concert violinist visits your home town, or Portland, which is near your home, we would advise you to show him this violin and get his opinion of it. Or you could send it to a first rate dealer in old violins in one of the large cities. In the meantime, do not try to sell the violin for a large price.

## Preparing for the Symphony Orchestra

J. N. Y.—For the violin student preparing for work in a symphony orchestra, I do know of a better work than "The Modern Concert-Master: A complete Course of Progressive Orchestral Studies for Advanced Violinists." This is a representative collection of difficult, prominent and characteristic passages, selected from the symphonic operatic works of the most celebrated, classic, romantic and modern composers of the world, compiled and arranged by Gustav Saenger. It is intended as a thorough and practical for all prospective members of symphony concert orchestras. It is in three books: Book 1, "The Classic Era"; Book 2, "The Romantic Era"; Book 3, "The Modern Era." Any of these may be secured from the publishers of THE ETUDE.

## Cannot Give Commercial Rating

R. L. J.—THE ETUDE does not give a financial rating of music firms, nor the quality of the goods they sell. Their commercial rating can be obtained from any bank. I do not know of any book from which you could obtain information which would enable you to judge whether any violin supposed to have been made by one of the great masters, genuine or imitation. This knowledge can be obtained only by years of experience as dealer in old violins, or from a violin repairer or maker; or if the student has chance of handling many famous violins. In touch with Lyon and Healy, violin dealer, Chicago, Illinois. They make a specialty of judging old violins and are strictly reliable.

## Revarnishing a Violoncello

M. S.—Varnishing old violins and violoncellos, which have had the varnish scraped or broken off in places, is quite an art. I cannot give an opinion on how your violoncello should be treated, without seeing it. If it is a good instrument, it should be sent to an experienced instrument maker, who would do the work as it should be done. If, however, the instrument is of only nominal value, probably should not be revarnished, but be as it is. It all depends on the quality of the violoncello. If it is a good instrument, it is revarnished by a first rate workman, the tone would probably be as good as ever, but if varnished carelessly, with the wrong kind of varnish, the tone might be ruined. The repairer must examine the instrument first, and can then advise you what is best to be done. As you live in Colorado, you no doubt visit Denver occasionally. You will find excellent experts in that city, who can give you the best advice on what is to be done.

## The Cost of a Good Violin

D. W. 1. A genuine Stradivarius violin costs \$25,000. If in good condition, so there is small chance of the one you are considering being a real Strad. 2. A great many violinists pay only twenty-five dollars for their beginning violins, but of course you can get on a very modest toned instrument for that price. It would be better if you could afford a violin costing one hundred dollars. You could get one with a fair tone for that amount, and one that should last you for a number of years. Really great violins are very expensive.

## The Maker Scheinlein

H. S.—A well known authority says of a maker in whom you are interested: Mathias Friedrich Scheinlein (Langenfeld), 1710-1777. Well made, high instruments, but very little in wood: His violins are medium in price, and some of them have a fairly good tone. I belong to the German school of violin making.

## To Acquire Vibrato

I. W.—1. By tremolo. I suppose you mean the vibrato, which is produced by a tremor motion of the hand while the finger holds firmly to the finger board. The best and quickest way to learn the vibrato is to go to a good teacher and get him to teach it to you. If, however, you wish to try to learn it by yourself, you might get the book, "Violin Teaching, and Violin Study," by Eugene Gruenberg, which treats this subject quite extensively, in several well written chapters. This book can be purchased through the publishers of THE ETUDE Magazine. In practicing the vibrato, the neck of the violin is held lightly between the thumb and the first finger of the left hand. The finger which makes the required note is pressed firmly against the finger board, and, to make the vibrato, the hand swings to and fro, giving a trembling character to the note. It will be you to acquire the vibrato if you watch other players, and study their hand movements. 2. Do not know of any violin bridges which cause a vibrato effect. 3. A very pleasant solo for violin and piano is the Sixth A-flat, Op. 86, by Ch. Dancs; also Trauere by Schumann, is a well known, melodious piece.

# BANDS AND ORCHESTRAS

## How to Build an Alluring Program

(Continued from Page 505)

In the same evening one might hear symphonic masterpiece, a light overture, a picture, and those stirring Sousa marches, played as only the Sousa Band can play them. Occasionally it performed a paraphrase on a popular melody, armed with such good musical taste that the "high-brows" could not object.

Today the great bands and orchestras use the same principles in their concerting. The Goldman Band concerts epitomize what programs should be, and the enormous crowds which attend performed by this fine organization give witness to the fact that people do appreciate the music, and do enjoy programs of excellence which such men as Dr. Goldman have the foresight and wisdom to create. They play a sufficient number of popular selections, and their programs are gently interspersed with marches and lightly rhythmical and melodious music to maintain the universality of their art.

The band or orchestra conductor must understand his audiences, their likes and dislikes. He must have his finger on its pulse, but he must also prescribe; and, if his prescription is careful, the audience will be glad to accept what is best for it. It cannot be expected that all tastes can be made equal, but each program can contain something which is truly popular. Audiences everywhere pretty much the same the country over. Music has done much in the way of raising the common level. There are now as many musical enthusiasts in the country community as in the large urban centers.

One of the most creditable movements of our day is that of music appreciation classes in most of our high schools and colleges, by famous bands and organizations such as the New York Philharmonic-Symphony Orchestra, have enhanced, by radio, opportunities for musical advancement. These are more critical and less tolerant of poor performance, because of having heard superb performances so readily so often. Program builders, who fail to recognize this new found critical power, do not do justice to the organizations which they serve.

### Opening and Closing the Program

Among the arts, certain of the forms are traditional and time tested, and these forms are best. But there is nothing about music tradition that allows for mechanization of the program. Concerts should not, by any means, all begin alike and all close alike. We have, however, formed definite opinions about opening and closing the program, and it first seems that an audience should not be put to sleep, either during the end of a concert. At a concert which we recently attended with a friend, the program closed with a soft, subdued tone, which was of sufficient length to lull the audience practically slumbering. A friend remarked, somewhat inelegantly, "That's right, put me to sleep, then send me home!"

The practice of adhering to the tradition of opening a concert with a march instead of a regular concert type of composition, as evidenced by so many of our school bands, is not easily understood, even though it does not necessarily indicate poor program building. Occasionally it is desirable to begin a program with a march of the concert type, or with an opera professional;

but it is not the most desirable to use a stereotyped form of program. While marches are an integral part of any band program, we also object to the time worn usage of marches as encores after every overture, symphonic poem, or tone poem in the program. Marches may be used as encores only preceding an intermission and at the close of the concert, but only rarely in the body of the program itself.

### Applause and Encores

IT SEEMS A PECULIARLY inept practice to list the encores of the organization on the program. In the first place it presupposes that there will be encores, and secondly the effectiveness of encores is lost if the audience has this advance notice of what is going to be presented. Encores should be and are rightly, the "surprise packages" bestowed upon a gracious audience, and for this reason we should not be too generous with them. Sometimes a bow to the audience in acknowledgment of applause is more effective and has more dignity in it than performance of an additional selection.

There have been concerts where the better informed listeners have slackened their applause for fear of having to listen to a multiplicity of encores throughout the program. Applause is something spontaneous; it is the physical expression of an audience's enjoyment of the entertainment. But when applause is forced and perfunctory, the conductor had better look to his program and cut down on the encores.

### Program Repertory

MARCHES SHOULD BE SELECTED with great care and thoroughly rehearsed, not picked at random or performed because they are a part of the marching repertory. Too frequently we hear marches which show signs of insufficient rehearsal or which are unworthy of concert stage presentation, and this in a formal band concert. There are, of course, many folks who attend concerts anticipating the pleasures of a rhythmic number which causes them to tap their feet and nod their heads; but there are also those attendants who are interested in the more serious and intellectual, or abstract, types of music. These people are interested in the works of Bach, Wagner, Brahms, Ravel and Debussy; and they get as much enjoyment in their appreciation as do those who relish the other types of musical composition.

There are those who respond most to the light opera, or semiclassical composition, and they delight in Victor Herbert, Rudolph Friml, and Sigmund Romberg. It is a serious mistake to eliminate the works of composers such as these; and this type of composition can be safely added to the program without altering its standard of excellence. As in any part of the program, careful selection of works by great masters—for they, too, did not write music that is all perfect—and of works by lesser lights, will give that program a quality which makes it a pleasure to hear and which fulfills the purposes of the musical organization.

There was, perhaps, a time in the past when the problem of building a program of good quality band music was a most perplexing one. The material available for the small municipal or school bands of those days left much to be desired. Much of it was trite, and few works of importance were arranged or written for the band. In

# AMERICAN CONSERVATORY OF MUSIC

CHICAGO

54th SEASON

Founded in 1886 by John J. Hattstaedt, today The American Conservatory of Music is outstanding among institutions for music education in this country. Its graduates are to be found occupying positions of honor and responsibility in every department of music.

Member of the National Association of Schools of Music

**The Faculty**—One hundred and thirty artist teachers of national and international reputation comprise the faculty.

**Accredited Courses** are offered in Piano, Vocal, Violin, Organ, Orchestra and Band Instruments, Public School Music, Children's Piano Work, Class Piano, Musical Theory, Dramatic Art and Dancing.

**Certificates and Degrees** are conferred by authority of the State of Illinois and recognized the country over. Degrees conferred are those of Bachelor of Music, Bachelor of Music Education, Bachelor of Speaking Arts, Master of Music and Master of Music Education.

**Dormitories**—Desirable living and boarding accommodations can be secured at the Conservatory Dormitories at surprisingly low rates. Particulars on request.

**Professional and Teaching Engagements**—Although the management does not guarantee positions, it has been most successful in assisting students to find remunerative situations in colleges, academies, music schools and in concert, orchestra, lyceum and choir work.

**Tuition** is reasonable in keeping with the times and may be paid in convenient installments. Complete particulars given in catalog which will be mailed on request.

**Students' Self Help**—The management makes every endeavor to assist needy students to find part-time employment. Many find work as teachers, accompanists, or part-time positions working for commercial houses, etc.

Fall Term Starts September 14th

# THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES

An Alphabetical Serial Collection of  
THE WORLD'S BEST KNOWN MUSICIANS

This series which began in February, 1932, has included to date a total of 3960 celebrities. It will be continued alphabetically until the entire history of music is adequately covered. Start making a collection now. Nothing like this has ever hitherto been issued. Etude readers desiring additional copies of this page and pages previously published are referred to the directions for securing them in the Publisher's Notes Department.

**Johann Michael Vogl**—B. Steyr, Austria, Aug. 10, 1768; d. Vienna, Nov. 19, 1840. Tenor. Sang under Süssmayer at Vienna court opera. Introduced many of Schubert's songs.

**Georg Joseph (Abbé) Vogler**—B. Würzburg, June 15, 1749; d. Darmstadt, May 6, 1814. Comp., organist, noted theorist. Best known as a teacher; Von Weber and Meyerbeer among many pupils.

**Hans Voigt**—B. Danzig, 1911. Comp., pianist, violinist, teacher. Studied at Academy for Church and School Music, Berlin. Has been mus. dir. of theaters in Ger. Orch. and pia. works.

**Henriette Voigt**—B. Leipzig, Nov. 24, 1808; d. there Oct. 15, 1839. Distinguished amateur pianist. Friend of Mendelssohn and Schumann. Latter dedicated his "Sonata in G minor" to her.

**Fritz Volbach**—B. Wipperfurth, Ger., Dec. 17, 1861. Comp., cond., pianist, organist. Cond. of choruses in Berlin and Mayence. In 1907 became mus. dir. and prof. extraord. at Tübingen Univ.

**Franz Völker**—B. Germany, Mar. 31, 1809. Dram. tenor. One of the leading opera singers of Germany. Has appeared at the Staatsoper in Berlin and Vienna. Has sung also at Bayreuth.

**Charles Volkert**—B. Regensburg, Bavaria, 1854; d. London 1929. For many years head of English branch of B. Schott & Sons. An intimate of foremost English and German composers.

**Otto Volkmann**—B. Düsseldorf, Oct. 12, 1838. Comp., cond. From 1924-33, city mus. dir. and conservatory dir. in Osnabrück, then active in Duisburg. Has written songs.

**Robert Volkmann**—B. Lommatzsch, Saxony, April 6, 1815; d. Budapest, Oct. 30, 1883. Distinguished comp. From 1875, prof. at Nat. Acad. of Mus., Vienna. Was member of H. Acad., Berlin.

**Augustus S. Vogt**—B. Lexington, Ont., Aug. 1, d. Toronto, Sept. 1, 1900. Cond., pianist, tenor dir., Toronto Cons. 1894, and until 1911 Mendelssohn Choir.

**Arnold Volpe**—B. Kovno, Russia, July 9, 1869. Comp., cond., teacher. Studied St. Petersburg Cons. Fdr.-cond., Young Men's Symph. O., N. Y. Active in Kansas City and Chi. then in Miami, Fla.

**Boleslav Vornáček**—B. Mladá Boleslav, 1887. Czechoslovakian comp. Studied at Prague Cons. under Stecker and Novák. Has written orchestral wks., pieces for violin and piano, songs and chor.

**Herwegh von Ende**—B. Milwaukee, Wis., Feb. 16, 1877; d. New York, Jan. 13, 1923 (1). Violinist, tchr. Studied in Chicago and Berlin. Fdr. in 1910 of Von Ende School of Music, N. Y.

**William R. Voris**—B. Whiteland, Ind., 1877. Comp., choral cond. Since 1925 in Tucson, Arizona. Has written many choruses, sacred and secular; songs, duets, and organ pieces.

**Thelma Votipka**—B. Cleveland, O. Dramatic soprano. Studied at Oberlin Cons. Debut with German Opera Co. In 1929 she became an active member, Chicago Civic Opera Co.

**Sasha Votichenko**—B. Russia. Comp. In 1916 attained fame as sole exponent of the Upanyan, a rare and unique instrument of the 17th century. Gave "Concerts Intime," playing his own wks.

**Jaap Vranken**—B. Utrecht, Netherlands, 1897. Comp., organist, choral dir. Studied at Music School of Rotterdam and the Damrosch Cons., N. Y. Has written masses, motets and orch. pieces.

**Jeannette Vreeland**—B. Philadelphia, Pa., Sept. 2, 1892. Soprano. F. with Percy Reuter Ste. Debut, 1923, in N. Y. with Minneapolis Sym. Appearances with Philh. and other major.

**Christos Vronides**—Greek comp., cond. In 1936 he conducted the Twin Cities Civic Symphony Orch. at Minneapolis, Minn., in several of his own works. Fdr.-dir. of Byzantine Vocal Ens., N. Y.

**Otto Vrieslander**—B. Münster, Ger., July 18, 1880. Comp., teacher. Studied in Düsseldorf and at Cologne Cons. Active in Munich. Has written song cycles and other works.

**Jean-Baptiste Vuillaume**—B. Mirecourt, France, Oct. 7, 1798; d. Paris, Feb. 19, 1875. Celebrated violin mkr. Made a 3-stringed double bass, a pedale sourdine, and other inventions.

**Louis Vuillemin**—B. Nantes, Fr., 1873; d. Paris, April 3, 1929. Comp., music. critic. Studied at Paris Cons. Was active in Paris as writer and critic. Composer of orch. pieces and songs.

**Paul Wachs**—B. Paris, Sept. 19, 1851; d. St. Mandé, July 6, 1915. Pupil of Marmontel and César Franck. Wrote salon pieces for piano, many of which attained great popularity.

**Theodor Wachtel**—B. Hamburg, Mar. 10, 1823; d. Frankfurt-on-Main, Nov. 14, 1893. Famous operatic tenor. In 1865 at Royal Opera, Berlin; 1869 sang in Paris; 1871 and 1875, in U. S.

**Axel Raoul Wachtmeister**—B. London, April 2, 1865. Comp., pupil of d'Indy at Schola Cantorum, Paris. Has been in N. Y. since 1916. His works incl. orch. pcs., instr. pieces, songs.

**Henry T. Wade**—B. N. ton, Mass., July 17, 1860. Comp., organist, ed. Studied N. E. Cons. with Philipp and Since 1924 at Hood Frederick, Md. Chora

**Mayo Wadler**—B. New York, 1895. Violinist, comp. Studied at B. Acad. of Mus., Berlin. Debut, N. Y., 1918. Toured Europe and U. S. with Caruso, Tetrazzini, and Raisa.

**Bernard Wagenaar**—B. Arnhem, Holland, July 18, 1894. Comp., teacher. Studied in Utrecht. His orch. works have been presented by N. Y. Philh. Orch., Detroit Symph. O. Has also songs & vin pcs.

**Johan Wagenaar**—B. Utrecht, Holland, Nov. 1, 1862. Comp., organist. Pupil of Richard Hol. Was organist at Utrecht Cath.; since 1904 municipal mus. dir. and con. chl. soc. in Utrecht.

**Johann Christoph Wagensell**—B. Nuremberg, Nov. 26, 1625; d. Altdorf, Oct. 9, 1708. Writer, Prof. of history, and libr., at Univ., Altdorf. Wrote a treatise on "Die Meistersinger."

**Ignaz Waghalter**—B. Mar. 15, 1882. German comp., cond. Has been mus. dir. of opera houses in Berlin. From 1912-23 in America. Since 1933 in Prague. Has written operas, and vin. pcs.

**Cosima Wagner**—B. Bellagio, on Lake Como, Dec. 25, 1837; d. Bayreuth, Ger., April 1, 1930. Wife of Richard W.; daughter of Franz Liszt. The Bayreuth Festivals the result of her efforts.

**Franz Joseph Wagner**—B. Germany, May 6, 1885. Comp., writer, teacher. Has been active in various German cities—Cologne, Bonn, and others. Has written church music and songs.

**Joseph Frederick Wagner**—B. Springfield, Mass., 9, 1900. Comp., cond. ed. N. E. Cons. Fdr. Boston Civic Symph. O. 1923 apptd. asst. mus. Boston Public Schools.

**Oscar Wagner**—B. Corydon, Ia., Oct. 8, 1893. Pianist. Pupil of Ernest Hutcheson. Soloist with N. Y. Symph. O. In 1937 apptd. dean of the Juilliard Sch. of Mus. and the Inst. of Mus. Art.

**Richard Wagner**—B. Leipzig, May 22, 1813; d. Venice, Feb. 13, 1883. Most famous dramatic comp. Estab. a new form, the music drama, "Der Ring des Nibelungen" among many works.

**Siegfried Wagner**—B. Triebseben, June 6, 1869; d. Bayreuth, Aug. 4, 1930. Comp., cond. Son of Richard W. Was a cond. at Bayreuth. Wrote operas, orch. pieces, violin and choral pieces.

**Bernard Wagness**—B. Tacoma, Wash., July 31, 1894. Comp., teacher. Studied with Stojowski, Friedhelm, and others. His lectures on modern principles of child pedagogy are notable.

**Matthias Walbeck**—B. Cologne, 1901. Comp., organist. Blind from his youth. Studied in Aachen and Cologne. Has been organist in Düsseldorf. His compositions are for organ and choir.

**Max Wald**—B. Illinois. Comp. Studied in Chicago and with d'Indy in Paris. His works have been played by Chicago Symph. O. In 1937 apptd. head of theory dept., Chicago Mus. Coll.

**Emil Waldteufel**—B. Strassburg, Dec. 9, 1837; d. Paris, Feb. 16, 1915. Comp. In 1865 apptd. chamber-musician to Empress Eugénie. His waltzes at one time as popular as those of Strauss.

**Herbert Walenn**—B. violinello teacher. F. and Prince of the L. Violoncello School. His students have world fame—Hortis, Bourg, Barbirolli, & o

## How to Build an Alluring Program

(Continued from Page 541)

Building his program, the conductor was forced to select some hackneyed overture or other overworked selection, usually poorly arranged, and to build his program around that core. This stilted type of program became a traditional one, whose form had been difficult to break. With the abundance of excellent material now available for band programs, however, it is no longer necessary for the conductor to depend upon the ceremony of the past. Even "old chestnuts" have been revised; and new arrangements in many instances are splendid and should be a part of the repertoire of every band.

### Instrumentation and Keys

TO THE RECENT GROWTH in interest and progress of school bands, the old problem of instrumentation, or lack of it, is no longer acute, even in the smaller communities. The oboe, French horn, bassoon, and other instruments, which were not formerly a part of the small band instrumentation, are now found in most community and school bands. We have learned that the voices of a band, like the program itself, need not be stereotyped, and our audiences are increasingly pleased to hear instrumental voices once uncommon. The conductor can find a wealth of material which will fit in with the program he has in mind and that will display the range of the instrumentation and its instrumental scope. One factor in program building is the matter of the keys in which the selections are played. There often has been the surprising effect of having listened to a program whose numbers were varied, and yet which was intangibly monotonous and even unpleasant. This may have been due to the lack of change in key, from one selection to another. While the second and third sections may be of different tempo and character, they become dull and almost senseless when executed in the same key as the first. This interchange of keys gives a sparkle and life to the program which is quickly appreciated by those in the audience, even though they may not be aware of its cause.

### Summary

PROGRAM BUILDING, then, has a great many things to it, and the conductor must be aware of certain considerations. They are important and undeniable, and the instrumental leader who acquires an automatic command of the principles of good program building serves not only his organization but also his community and the whole cause of music. It might be well to summarize

these elements of a successful leader:

1. Proficiency of players must be considered.
2. Scope of instrumentation should be a determinant in the program.
3. For less advanced units, programs should not be too difficult.
4. Programs should be varied and well rounded.
5. Proper length of programs should be observed.
6. Public taste must be recognized and subtly elevated.
7. Opening and closing numbers must be carefully selected.
8. Stereotyping of programs should be avoided.
9. Repertory should be broad and selected for fine qualities.
10. Keys must be varied, giving the program life.
11. Encores should not be overindulged or premeditatedly published.

With a desire to give further examples, we submit our idea of a well rounded and typically acceptable concert program. It should serve as the presentation of the idea, and not necessarily a form which should be followed mechanically. The principles which underlie the selection of numbers, however, are constant and recognizable as applicable to all programs:

### Program

*Komm Süßer Tod*.....J. S. Bach  
*Slavonic Rhapsody, No. 1*...C. Friedmann  
*Nocturne, from "Two American Sketches"*.....T. Griselle  
*Soloist—*  
*Russian Sailors' Dance from "Red Poppy"*.....Gliere  
*Les Deux Petits Japonais*.....Charrosin  
*Siegfried's Rhine Journey from "Götterdämmerung"*...R. Wagner  
*INTERMISSION*  
*Overture to "Oberon"*.....von Weber  
*Suite, In Malaga*.....Curzon  
a. Spanish Ladies  
b. Serenade to Eulalie  
c. Cachucha  
*Second Movement, Larghetto, from "Symphony in C Minor"*....E. Williams  
*Rhythms of Rio*.....D. Bennett  
*Manx Tone Poem, "Mannin V'cu"*..Wood  
(Encores—Short selections from musical comedies, marches, and so on, but not printed on the program.)  
The above program is not intended for the average High School Band, but rather for the well-instrumented community or college bands; yet it is not too difficult for some of the better High School Bands.

## Music Makers in Old New England

(Continued from Page 500)

After a time, nevertheless, there was a low voiced viol, a flute or a bassoon in every choir gallery, where they entered under the timid songsters for many years. Some are still cherished memorabilia. In a corner of the oldest stone house in the country still may be seen the stringed violoncello which crowned to Guilford's faithful; and we have caressed a like instrument in the library hard by the beautiful Farmington sanctuary it enlivened with its retinue. There is something indescribably appealing about these brown satin bodies so much darker than the necks, worn pale and smooth by sliding fingers long turned to rust. To a music lover's touch, they seem to respond by filling the air with silent melody as fragrant as the potpourri escaping from under the lifted lid of a rose jar. Where are the rest of Connecticut's ancient music makers? Members of the viol

family are practically immortal; virtuosos seek items hundreds of years old; many others repose in museums; but we have not heard of one purchased in New England. Did our bass viols and violoncellos, our oboes and flutes, all go the way of old English folk songs and the virginal books? The "awakenings" which engulfed New England in succeeding waves, from 1734 on, are accountable for many strange doings. Fanatics who cast their best clothes into a bonfire at the revivalist's command, and even added his breeches because they were velvet, would not scruple to burn "profane" music books and "dragons." It would seem highly reasonable that these latter day Puritans, rather than earlier ones, cost us our ancient heritage of music, and were responsible for prejudices which lingered until near the close of the nineteenth century.

## Chicago Conservatory

Established 1857

Your musical education at Chicago Conservatory will be directed along sound educational lines combined with the highest artistic standards. For 82 years such has been the reputation of this nationally recognized institution—a reputation that lends immediate prestige to its graduates.

Courses in all branches of Music and Dramatic Art leading to Bachelor and Master degrees. Piano, Voice, Violin, Cello, Orchestral and Band Instruments, Organ, Public School Music, Dramatic Art. Special courses in Harmony, Counterpoint, Composition, Orchestration, Ear Training, Normal Methods.

### SCHOOL FACILITIES

Noted faculty of 165 teachers  
60 studios with finest physical equipment  
Theatre seating 350  
Library  
Located in the musical center of Chicago.

### STUDENT APPEARANCES

All students make public appearances in the Conservatory's Little Theatre. Contracts also made for radio and concert appearances of advanced students.

### FALL SEMESTER STARTS SEPTEMBER 11

Institutional Member of the National Association of Schools of Music

Dormitory accommodations. For full information write to Jeanne Howard, Registrar, for new catalog E. T.

AND  
STUDENT SINGERS

Send for FREE CATALOG giving a biography of Charles Gilbert Spross; titles, keys, ranges and text writers of his songs; and a complete list of his cantatas and compositions for piano, violin and piano, and organ. A big help in arranging next season's programs.

**SPROSS' ALBUM OF SONGS**  
For High Voice For Low Voice

Attractive well-made volumes containing under one cover a fine collection of this composer's favorite songs. The high voice volume presents songs favored by sopranos and tenors; the low voice volume songs programmed by altos as well as those inimitable Spross songs for men that baritones and basses admire.

Price, \$1.00 Either Voice

### Noteworthy Song Successes:

## QUESTIONS and ANSWERS

A Music Information Service Department  
Conducted Each Month

By KARL W. GEHRKENS

Professor of School Music, Oberlin College  
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

### Staccato and Slur in Wind Instrument Music

Q. Will you please tell me how to play staccato and a slur on a wood wind instrument? The examples given show the slur, the staccato, and the legato; also the slur and staccato combined. The piece I am referring to that has this is La Precieuse by Louis Couperin-Kreisl, as arranged for the flute.

A. The problem of the execution of certain notes and phrases which have dots and slurs over them is perplexing; and yet the whole system of marking works itself out quite logically. Referring to your examples, reproduced here, No. 3 is an instance of ordinary tonguing for the flute, the length to be determined by the speed of the piece and also its character. For example, in a scherzo we would play even these quarter notes quite short and detached. The same is true in a march. The staccato, as in No. 2, ordinarily means that the notes should be short and detached and should be executed with the tip of the tongue in a pointed, rigid position. However, in a slow, andante passage even these staccato quarters would not be played too short, merely separated one from the other. Exercise No. 1 is of course the ordinary slur, with no tongue attack except for the opening tone in the group, and then started with the *te* or *tu* attack by the tip of the tongue releasing from its contact at a point in the mouth directly upon the ridge or gum above the upper central teeth. In No. 4 we have an example of legato-staccato or legato-tongue. In this case the execution lies between 3 and 1 in its broadness. In other words, the attack is made from a more relaxed tongue than in the case of either 2 or 3 and is done with the *d* or *de* stroke of the tongue. It is almost a slur in its broadness.

In the first three notes of Nos. 6 and 7 the dot at the end of a slurred group means to slur the last note along with the others in the group, but to drop the last note short of its value.

### A Trill Is An Old Favorite

Q. I would like to know how the trill is played in Silver Stars by Bohm (in the Introduction).—A. G.

A. It is played like this:

### Rachmaninoff's Polichinelle

Q. 1. Please tell me if Polichinelle by Rachmaninoff ever has been given as a Master Lesson in THE ETUDE.

2. What is the tempo of Section A? Also the agitato part. Is the agitato slower or faster than the first section? Can considerable freedom in the "bending of the tempo" be used for this part?

3. Is this a good music contest number, or would Mendelssohn's Scherzo, Op. 16, No. 2 be better?

4. In the introduction are the staccato F-sharps played *ppp* following the progression of grace notes and chords? I feel that they should be vigorous and crisp. Is that correct?—Mrs. L. C. G.

A. 1. The publishers of THE ETUDE inform me that there has been no Master Lesson on this composition.

2. M. M. J. = 160 is a good tempo, but it may be taken a little more slowly. The "agitato" is marked in the same tempo but it is usually played a little more slowly—about 135 quarter notes to the minute. There should be free "bending" of the tempo, as you say, in this part.

3. Both numbers are good and both are frequently heard in state high school contests. Use the one you think you play better. Or perhaps it might be well to play them both to some musical person and get his or her opinion.

4. I think they should be fairly vigorous—certainly not *ppp*. There should be a slight *crescendo* in the grace note passage leading up to the octaves.

### How Is the Turn Sign Made?

Q. A question has arisen concerning playing of turns in music. In some cases have found it written like this above the interval following a note and in other cases like this above the same interval. Is there a difference in the manner of playing in written in these manners, or is this merely two ways of writing the same thing? You note that one sign is the inverse of the other.—R. E. McM.

A. The correct turn sign is made thus: If it is made the other way around it is merely a misprint and the order of notes is the same, namely, first, the note above (in the diatonic scale), second, the principal note, third, the note below (in the diatonic scale), fourth, the principal note. If the sign is placed to the right of the principal note, the principal note is played first, after which the four notes follow as indicated above.

If the turn sign is placed vertically () or if it has a stroke through it () it is called "inverted turn" and the order is: first, note below, second principal note, third note above, fourth principal note. For further details see the article "turn" in Elson's Music Dictionary, which may be secured from the publishers of THE ETUDE.

### Playing a Glissando

Q. Please explain how the following glissando from the third movement of Ravel's "Alborada del Gracioso" is executed.—Miss P. S.

A. I think it must be the fingering that bothers you. I feel it impossible with my try of hand. I think if you use 14 ascending and descending you will be able to master the glissando. The reason the 3 is changed to 4 that with the fourth finger you are better able to articulate the high D.

### The Tempo of a Concert Etude

Q. Would you please tell me the tempo of the Concert Etude in F by Charles Denner, also, the length of it.—H. W.

A. Since concert etudes are "show pieces" it is difficult to state the proper tempo. The composition could be played with good effect at a tempo anywhere from 120 quarter note to the minute to the limits of the performer. I should say about 138 would be a fair tempo. Of course the middle part slows up a little. The piece is eleven pages long and takes about five minutes when played up to tempo.

### Typographical Errors

Q. In Romanza in A-flat by Mozart (measure 27) should the right hand take C-flat or C-natural? The melodic lead and harmonic relationship between hands is not satisfactory to my ear.

2. In the D-flat section of Reinhold's Impromptu in C-sharp minor (measure 8) I am in doubt as to whether the left hand should play G-natural or the G-flat as given.—A. B. D.

A. 1. There is no doubt about this not being C-flat.

2. If your edition has G-flat in this measure it is a mistake. It should be G-natural.

### Books on Form and Orchestration

Q. 1. Please suggest some books on musical form to follow Tapper's "First Year Analysis".

2. Also suggest some books on elementary and advanced instrumentation, which might be studied without a teacher.—V. P.

A. 1. "Form in Music," by Macpherson, "The Larger Forms of Musical Composition," by Goetschius, "Musical Form," by Prout, "Applied Forms," by Prout.

2. "Project Lessons in Orchestration," by Henckox, "Orchestration," by Forsyth, "Practical Instrumentation" (in six volumes), by Hofmann, English translation by R. Ligon, "Principles of Orchestration," by Rimsky-Korsakov, edited by M. Steinberg, English translation by E. Agate.

Any of these books may be procured through the publishers of THE ETUDE.

# VOICE QUESTIONS *Answered*

By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## Baritone with a Short Range

For two years, I have studied the art of production by Frederick E. Miller, for financial reasons I have discontinued. My voice is a heavy baritone, with sufficient range and resonance in the middle and lower registers but with a limited upper range. On the first line bass clef to D on the second line above the staff. The upper tones are very musical even breaking at times. My teacher says I will achieve a two octave range in time. After the A-sharp my voice weakens, and I can only reach the top if I sing with vigor. My own solution is that I must develop my easy singing to the sturdiness of Gibraltar and then add to the acute tones. Do you know a way I can use.—P. L.

From your written description of your range and method, it seems as if you sing up to the A-sharp on the fifth line with a firm, full tone and above that, in an effort to reach the top, you allow the vocal cords to become loose, with the result that the tone becomes weak and thin or it breaks. Remember that strength of tone and range of scale are possible only when the vocal cords are firmly approximated. To relax the cords, even for a moment, is to change both tone and quality. The crico-thyroid crico-pharyngeal and thyroid arytenoid muscles are used by nature solely to keep the cords taut at the desired pitch, so that they may resist the pressure of the breath and thus produce a secure and fine tone. The expression "Singing on the breath" means that all the breath is turned into tone and that none escapes through the loosened cords without setting them into vibration. Please read Stanley's "Science of Voice"; Sims' "Art of Singing"; and a few other books that explain the anatomy of the vocal tract. Try these exercises transposing them to your voice.

tone should have, as nearly as possible, the same quality and loudness. Do not growl low tones nor shout the high ones. Use the chest but not too much breath pressure, and be sure that the larynx does not rise high in the throat for the high tones so that you do not push your chin down your chest for the low ones.

**Singing Again after a Pause of Ten Years**  
I used to sing well when I was eighteen. For financial reasons I stopped, but now, at my nine, my interest is revived. At eighteen I could sing High C; but now, after eleven years of inactivity, I can only reach A above staff, but it is full and round. It seems as if my voice has changed from a dramatic soprano to a mezzo-soprano, with a loss of three notes. Is it because I have neglected my voice, or because I have lost weight, and am no longer as I was. Is mine a rare case, or do you hear of this before? My tone quality is good.—L. B.

They say the whole body changes every ten years. Why should you be surprised then if your voice has changed in eleven? Perhaps you are out of practice. Perhaps, when you sing every day under the instruction of a good teacher, his criticism may have helped you to produce your high tones more easily. If your voice has retained its tonality, and if you are in good health, there is no reason why you should not sing in your high register. Go back to your teacher, or find another equally good, and work hard.

## Other Young Singer

I have a pupil fourteen years of age whose range from A-flat on the second ledger line below the treble staff to F-sharp on the second line. Her tone has a nasal tendency. What exercises should she use to overcome this? What book of vocalizes would be suitable?

Would "Songs for Girls" be too difficult? How long should she practice?—M. I. S.

Does the young girl speak "Through nose"? Point out to her that she is helping the soft palate, the uvula, and peritonsillar muscles at the sides of the throat when she speaks. Vocal exercises can scarcely be expected to remedy this defect of speech. She must listen to her own speaking voice, and see that it is not placed in her head, and that it is produced more deeply. Her "Eight Measure Vocalizes"; Converse's "Vocal Exercises"; "Practical Method" suggested.

and 4. Commence with the very simplest words, with easily produced words and a good range, like *Shinin'* by Kullberg. First must cure her nasality of speech if she wishes to succeed.

5. At fourteen a young girl should not practice more than fifteen minutes at a stretch, for fear of straining her voice. As she gets older she may gradually increase the length of her practice period.

## Oral Exercises, Diction

Q. Can the editor of the Singing Department of the ETUDE tell me something about oral exercises? They stiffen my lips, something I wish I had known when I was a child.

2. It seems to me good diction in singing follows that of speech. Why not teach that way and save vocal teachers that work? —P. de B.

A. The underlying principle of oral exercises is to free and to strengthen all the muscles connected with vowel and consonant formation—the lips, tongue, buccal muscles, soft palate, and others. If they only succeed in stiffening any of these muscles there is something wrong with the exercises, the teacher or the pupil.

2. Good diction in singing must, indeed, follow that of speech as you point out. The same organs are used in both, but with two differences:

First—The singer uses a set conventional scale upon pitches indicated by the composer, from which he may not depart. The speaker may use whatever pitch of voice he pleases, and may vary it at his own discretion.

Second—In speaking, vowels and consonants have approximately an equal time value. In singing (especially in *Bel Canto*) the vowel sound occupies most of the time value, the consonant being short, crisp and clear, almost like a grace note in music.

## Catarrh, Dry Throat, Laryngitis

Q. For several months I have had a terribly dry and uncomfortable feeling in my throat. Whatever sound comes out of my mouth is not song but a scratchy sound that makes me feel worse. I have had to drop my church choir and I have gone to three different doctors.

The first said it was something dropping from my nose onto my vocal cords.

The second said it was my tonsils and suggested that I have them out, although my tonsils have never given me the slightest trouble.

The third said I have laryngitis, and he put drops in my throat for three weeks, leaving my throat better for a few minutes, but in a short time the dry feeling returns.

I have tried giving myself vocal lessons. I tried everything I read. Could that have anything to do with it?

1. What can I do to keep from getting hoarse over night?

2. Does extracting the tonsils affect the singing voice? If so how?

3. Will skating in the cold air affect the singing voice?

4. I hear that Nelson Eddy chins himself before singing. What good does that do?—R. E. D.

A. I will answer your numbered questions first.

1. Cure the abnormal throat condition, and the hoarseness will gradually disappear.

2. Tonsillectomy changes the shape of the muscles around the tonsils and their automatic resilience. The entire musculature will be somewhat stiff and unwieldy until the soreness and the scar tissue disappear. Time and exercise should restore their activity, and you should eventually sing better than ever.

3. I cannot see how skating can do you any harm, unless you are unusually susceptible to cold. On the contrary it might do your health a great deal of good.

4. If Nelson Eddy chins himself before singing, which I doubt, he does so to keep himself in good physical condition. He knows well that a sound body and a sound mind are both necessary to a beautiful singing voice.

In some dry climates there is a peculiar throat condition called dry catarrh. The mucous membranes of the head, throat and larynx do not secrete enough, and the whole mucous system is too dry. This makes singing difficult, the resulting tone being brittle and lacking in resonance. In attempting to give yourself voice lessons, you may have strained your larynx and brought on a laryngitis. Before attempting to study singing seriously, you should find a doctor who will cure you. Then find also a good singing teacher.

## Again the Young Voice

Q. I am a girl of 12 and a great lover of music. My ambition is to become a great singer and since I study the piano I find it helps my singing as well. My range is from A the second line below the staff to B the second space above, both in the treble clef. Should I start vocal lessons now or am I too young?—H. O.

A. Twelve is very young indeed to start singing lessons seriously. From this long distance it looks as if it would be wiser to concentrate on improving your musicianship, your knowledge of languages and to strengthen your physique by proper exercises. However, it is impossible to tell accurately without seeing and hearing you. Consult the best singing teacher in your neighborhood and abide by his advice.

## Famous Echoes

By E. HENRY EVARTS

No ONE ever quite gets over the childhood delight found in echoes. This phenomenon of sound bouncing back like a rubber ball is always fascinating. There are many famous sound reflections in America, although they are not all exactly echoes. In the gallery of the statues in the great rotunda of the national Capitol in Washington visitors are familiar with the spot where the voice is conveyed mysteriously from one part of the hall to the other by means of a reflection in the dome.

Many similar whispering galleries may be found abroad. The melody echo in Koenigsee, Bavaria, is unusual. One may

sing a complete short melody and in a second the entire tune comes back.

In Scotland there is a remarkable echo at Roseneath. A tone played from a trumpet may be echoed several times, but the tone deepens with each repetition.

At Woodstock in Exford, England there is an echo in which a two syllable word will be repeated from fifteen to twenty times, depending upon the atmospheric conditions and the force with which the word is spoken.

The renowned echo of Simonetta, near Milan, Italy, returns a pistol shot forty times.

## FAMOUS SONGS

### FOUR VOLUMES

SOPRANO ALTO  
TENOR BASS

Edited by H. E. KREHBIEL

A repertoire of songs of intrinsic  
and never-ending value

The best songs of Bach, Beethoven, Becker, Bohm, Brahms, Chopin, Dvorak, Fesca, Franz, Godard, Gounod, Grieg, Haydn, Hoffmann, Holmes, Jensen, Liszt, Loewe, Massenet, Mendelssohn, Mozart, Pergolesi, Purcell, Raff, Rubinstein, Saint-Saens, Schubert, Schumann, Scarlatti, Sinding, Spohr, Sullivan, Taubert, Tchaikowsky, Thomas, Tosti, Wagner, Weber, and others, are represented, together with the favorite folk-songs of the various nations.

PRICE EACH VOLUME—\$1.50

## ORATORIO SONGS

### FOUR VOLUMES

SOPRANO ALTO  
TENOR BASS

Standard oratorio songs in their  
original keys with the accom-  
panying recitatives

The series is a grand ensemble of the best  
Oratorio Songs of the greatest masters  
from Bach to Sullivan.

PRICE EACH VOLUME—\$1.50

## OPERA SONGS

### FOUR VOLUMES

SOPRANO ALTO  
TENOR BASS

Choicest solos from the standard  
operas, old and new

These four books comprise classified groups  
of the best known arias, scenes, canzoni,  
etc., from the standard operas. The  
numbers contained in each volume have  
been selected with the idea of furnishing  
each of the four voices with a versatility of  
material. The songs are set down in their  
original keys.

PRICE EACH VOLUME—\$1.50

## SACRED SONGS

### FOUR VOLUMES

SOPRANO ALTO  
TENOR BASS

Edited by W. J. HENDERSON

A standard collection of sacred  
solos by notable composers

The group of songs contained in this set  
is the greatest contribution yet made to  
collective sacred songs, and cannot fail to  
make a very powerful appeal to the inter-  
est of all singers.  
Mr. Henderson has here collected the very  
best of sacred song literature produced  
during a period covering two hundred  
years—from Bach to Cowen.

PRICE EACH VOLUME—\$1.50

## SONG CLASSICS

### FOUR VOLUMES

SOPRANO ALTO  
TENOR BASS

Edited by HORATIO PARKER

These collections of the most notable lyrics  
in German, Italian and French meet the  
needs of teachers, singers and earnest  
aspirants to true artistry. The songs are  
presented always with the original text.

PRICE EACH VOLUME—\$1.50

137—142—6 "  
143—149—7 "  
150—157—8 "  
158—165—8 "  
166—175—10 "  
and so on.

Because the *Trio* chords are *legato*, it is  
easy to strain the hands and arms to ob-  
tain the necessary smooth effect; there-  
fore, practice these chords sometimes with-  
out holding the tones; that is, play very  
slowly, release each chord the moment it is  
played—*relax*—meanwhile using the pedal  
to sustain it.

Be careful to give enough bass to sup-  
port each chord; in fact it is better to play  
the left hand so richly that the right is  
almost overbalanced. Play the high point of  
the second phrase (m. 112, 113) appreciably  
louder than the first. Make a good *crescendo*  
in m. 118—122—rather too much than too  
little; and delay the following *diminuendo*  
as long as possible, that is, in this style:

m. 123—125 = quite *f*  
m. 126—127 = *mp*  
m. 128—129 = *pp*  
m. 130 = *mp* with slight accent  
m. 132 = *p*

Phrase carefully the two-chord groups  
in m. 118—122. At the repetition of the  
first section bring out the right hand thumb  
gently, for color contrast. Be scrupulous  
about the silences (quarter rests) in m. 108,  
116, 157, 165; take your foot off the pedal  
and your hands off the keys! Use soft  
pedal freely throughout the *Trio*.

M. 143—149 louder than the preceding  
phrase; make a very quick *diminuendo* in  
m. 149, with a sudden, complete change of  
color in m. 150. Note, in m. 166, that  
Brahms requests a *diminuendo*, even after  
the previous *pianissimo* phrase (m. 158—  
165); which would make m. 176, *ppp*.

Here (at m. 176), where the rhythm of  
the first theme suddenly enters, be sure to  
continue in unbroken, strict time. Delay the  
ensuing *crescendo* as long as possible. M.  
183—191 should ring out ecstatically, with  
sharply reënforced (louder) tone at m. 188  
and 192. Be sure to play the right hand off-  
beat octaves in m. 193—195 as incisively  
as possible. After the *ff* in 192—196, be-  
gin m. 197 softer, and make another thrill-  
ing *crescendo* to m. 205; but do not accel-  
erate this phrase, for it cheapens it and  
upsets the *tempo* of the returning first  
theme.

As before, count the phrases aloud:

m. 196—203—8 counts  
m. 204—207—4 "  
m. 208—211—4 "  
m. 212—215—4 "

Note that the arpeggios in m. 207, 211  
and 215 are up beats; that m. 206 is *silent*,  
no pedal; that m. 207—210 are to be played  
softer than the preceding and following  
phrases; and that strict time is to prevail.

The return of the chief theme ca-  
taken slightly more deliberately in ord-  
drive it home with all possible intensity

Throughout the *Scherzo* make as i-  
variation in your dynamic range as  
sible, with vivid contrasts of brilliancy  
softness. Play such convincing *ff*'s and  
that no one will mistake your intent.

Always remember that this move-  
a very tricky study in placement and  
curacy; a small amount of careless p-  
tice will ruin it beyond repair. So, be-  
of allowing even one wrong note to c-  
up on you; touch every key before  
play it; leap instantly and relaxedly  
"cover" all skips.

Play the *Scherzo* on the slow side;  
do not be one who complains that Bra-  
music is "unpianistic"—for this is not b-  
If the Brahms *tempi* are taken at a  
sibly moderate rate of speed, his big b-  
fuls of notes become as adapted to  
piano as any other composer's music.

Above all, use plenty of "elbow gre-  
—good, hard, but relaxed practice for  
liance, accuracy and endurance. Do  
worry if you get fatigued (so does a  
ner or a swimmer!); for, to play  
*Scherzo* technically well requires a  
mendous expenditure of physical ene-  
And, after that to keep it from sound-  
"pedestrian", to hold its winging step  
off the earth, is an even harder task.  
But the result is eminently worth v-  
working for!

\* \* \* \* \*

Pianists often play brackets of short Bra-  
pieces, but seldom arrange these lists  
fectively enough. Here are two sure  
groups, which are not too difficult, and  
clude examples of all of his "periods."

I

1. *Capriccio in B minor*, Op. 76
2. *Intermezzo in E-flat major*, Op. No. 1
3. Selections from *Waltzes*, Op. 39—your own.
4. *Intermezzo in E major*, Op. 116
5. *Scherzo* from "Sonata in F minor, 5"

II

1. *Ballade in G minor*, Op. 118, No. 3
2. *Meadow Solitude* (Song, arranged by Maier)
3. *The Disappointed Serenader* (Song, arranged by Maier)
4. *Intermezzo in A-flat major*, Op. 76
5. *Intermezzo in C major*, Op. 119

Do you know the superb *Scherzo* in  
*flat minor*, *Opus 4*, just preceding  
"Sonata in F minor"? Written by Bra-  
when he was eighteen, it is throbbing  
youthful bluster and vim. Brahms  
sidered it so important that he gave  
whole opus number to itself. It is hi-  
recommended—especially to those pia-  
who cry out "Unholy!" at our excision  
this other *Scherzo* from its sonata! B-  
warn you, it is a hard nut to crack!

**SPECIAL INTRODUCTORY SUB-  
SCRIPTION OFFER**—Music lovers still  
have an opportunity to become acquainted  
with *THE ETUDE* through the Special In-  
troductory Summer Offer of three issues for  
35¢. This offer definitely closes August 31,  
1939, but until that date, we shall be glad  
to send the three delightful summer issues  
(June, July, and August) for only 35¢ in  
currency or stamps (in Canada include 10¢  
extra to cover postage).

If you are pleased with the three trial  
issues (and we are sure you will be) and  
wish to continue the regular monthly visits  
of our excellent musical magazine, the 35¢  
paid for the summer numbers will be credited  
on a regular subscription, the price of which  
is \$2.00 a year. In other words, in the Fall

send only \$1.65 (\$1.90 in Canada) and  
name will be entered for a full year's  
scription. This is a musical bargain w-  
you cannot afford to pass by.

Be sure to send the initial 35¢ not  
than August 31, 1939.

\* \* \* \* \*

**REPRESENTATIVES WANTED**—M-  
music lovers, including students and teach-  
represent us in the sale of *THE ETUDE* M-  
MAGAZINE. Add substantially to your in-  
by securing orders for *THE ETUDE* and  
the same time, do a real service for the  
scribing music lover, student or teacher  
have an interesting proposition. Drop  
post card for details.

**ELVE MASTER ETUDES IN MINOR KEYS, Op. 29, For Piano, by Franciszek Zachara**—Here is a work of significance. Gracious, flowing, and exceptionally pianistic, these *Twelve Master Etudes in Minor Keys* are born of a mature and refined musicianship.

The composer, Franciszek Zachara, is a distinguished young Polish pianist with a fine record of successful appearances in New York and other American cities. The *Twelve Master Etudes in Minor Keys* were among the first to introduce his works to American audiences, and it is with pride that they are now being published. These highly individual works, each of which is in a different minor key, cover an extensive range of usefulness. Work is included in octave and chord playing, arpeggios, scale passages, intricate rhythmic patterns and some with special emphasis on melodic production. Throughout the series the composer's inventive and melodic gifts are evident, and there is no doubt that these *Twelve Master Etudes in Minor Keys* will rank high among the more advanced repertoire, a field sadly neglected by many-day composers. In grade the range is from 6 to 8.

## SYMPHONIC SKELETON SCORES, A Listener's Guide for Radio and Concert, by Violet Katzner—

- No. 1 Symphony No. 5 in C Minor..... Beethoven
- No. 2 Symphony No. 6 in B minor..... Tschikovsky
- No. 3 Symphony in D minor.. Franck
- No. 4 Symphony No. 1 in C minor..... Brahms

Even the non-musically minded person gets a certain amount of pleasure from listening to a good orchestra playing good symphonic music, and the enjoyment is sufficient for that type of listener, limited as it may be by the lack of musical knowledge. The student, on the other hand, is able to derive the maximum of enjoyment from his listening because he understands the technical points involved. There is, however, a third type of listener who is musically minded but not necessarily a student of music, who wishes to get a maximum amount of satisfaction from listening to good music, with a minimum amount of study. It was this type of individual that Violet Katzner had in mind when she started work on her *Symphonic Skeleton Scores*.

Heretofore the analytical approach to musical understanding was limited almost entirely to advanced students because the available study material dealt with the subject too much in detail, using miniature scores, etc. This was fine for the student, but pity the poor layman who invariably lost track of the melody line in a maze of variations and counterparts which clouded the form beyond the point of easy discernment. In order to alleviate this difficulty, the author of the *Symphonic Skeleton Scores* has isolated the unbroken melodies of these great symphonies and presents them in an easy-to-follow form, with just enough analysis to differentiate the themes without losing sight of the composition as a whole.

Miss Katzner first explains, verbally and graphically, symphonic forms in general and then the form of a specific symphony in the same clear and precise manner. In that part of each book where the unbroken melody line is presented to show the different themes and variations in each movement, the measures, phrases, periods, etc., are marked to indicate what instruments are playing the melody at each particular point. Thus there is made possible a quick coordination of eye, ear and mind, adaptable to any type of listening-study program.

With the whole-hearted approval of many leading music clubs and teacher's associations as an incentive, work on the first four books in the series is going forward steadily. Each book, devoted to one complete symphonic composition, may be ordered now, by number and title, at the special advance of publication price of 25 cents. All four volumes may be ordered now for 90 cents, postpaid.

**CHANGES OF ADDRESS**—If THE ETUDE has been following you to your Summer home or vacation spot, be sure to promptly notify us when returning to your permanent residence so that we may make the necessary change in our records and prevent copies going astray. We should have at least four weeks notice in advance of any change in address, and need both old and new.

**THE COVER FOR THIS MONTH**—The cover for this month presents a seldom seen portrait of Teresa Carreño, who was one of the greatest, if not the greatest, of all women pianists. Teresa Carreño was born in Caracas, Venezuela, December 22, 1853; died in New York, June 13, 1917. She studied with L. M. Gottschalk and also with Georges Mathias (Paris). She was playing in public when only twelve years of age, and was only in her early twenties when she made a very successful tour of the United States. After a few years' residence in London she made concert appearances throughout Germany in 1889-90, scoring a brilliant success. In 1893 she was honored by the King of Saxony with the title of Court Pianist.

She was married in 1872 to Émile Sauret, the noted violinist. Within a few years this marriage was terminated by divorce. Her second marriage was to Giovanni Tagliapietra, a well known baritone. Divorce was eventually the fate of this marriage. A marriage to Eugen d'Albert, the great pianist, ran from 1892 to 1895. In 1902 she became the wife of Arturo Tagliapietra, a younger brother of Giovanni. The name of Teresita was given to her daughter. This daughter Teresita Tagliapietra has appeared with success as a concert pianist.

Madame Carreño, in addition to her fame as a pianist, gained a place among noted composers. She wrote a number of brilliant concert pieces for the piano and among her larger works is a published string quartet.

## POEMS FOR PETER, by Lysbeth Boyd Borie, Set to Music by Ada Richter (A Book of Rote Songs)

This entertaining little book is the joint work of two outstanding writers for children. Founded on subjects of direct appeal and graced with singable melodies, these songs should prove of immeasurable value. In the early school grades as well as in the home, their recreational uses will be unlimited.

Lysbeth Boyd Borie's irresistible verses are from her fanciful little volumes, "Poems for Peter" and "More Poems for Peter." Written originally for the poet's young son, they now enjoy a widespread vogue in their published form. And deservedly so, for who, after peeking inside the covers, can lay them down before the last luscious lines have been absorbed? Verses such as these which can endear themselves to children and grown-ups alike, are without doubt touched with genius.

Mrs. Richter's happy inspiration to set some of Mrs. Borie's poems to music has resulted in an enchanting collection of little songs. Her eminent success as a composer for children has been most gratifying, and again we "do off our hats." Among the titles chosen are: *Too Salty, Peter Family Tree, Who Do You Spoze?, Too Expensive, and Only Just Me*.

On single copies ordered in advance of publication, the cash price is 50 cents postpaid. Orders are now being received and the books will be delivered upon publication.

## OUT OF THE SEA, An Operetta for Children In One Act, Book and Lyrics by Ethel Watts Mumford, Music by Lily Strickland

Grade school teachers and others responsible for the education and the recreational activities of young children will find this new operetta worthy of serious consideration for early presentation. The story abounds in amusing, though fantastic, situations that will appeal to young players and delight audiences; the dialog is the natural everyday language of children use and understand; the music is catchy, yet easy to sing, and of moderate range, with choruses and refrains partly in unison and partly in simple two-part form.

The action takes place on a rocky sea shore and the opportunities for picturesque staging and costuming can be well imagined from the following cast: King Neptune, Undina, The Sea Serpent, The Oyster, The Hermit Crab, The Fiddler Crab, and Davy Jones among the sea people; an inquisitive Mr. Beebe, an Aviator, and two children in bathing suits, Jacky and Jilly, among the earth folk. Full directions for staging, costuming and dancing will be included in the vocal score.

Single copies of *Out of the Sea* may be ordered now at the special advance of publication cash price, 35 cents postpaid, delivery to be made as soon as the book is off-press.

## SIDE BY SIDE, A Piano Duet Book for Young Players, by Ella Ketterer

Piano teachers know that there are few modern duet books which are written for the first grade pupil, with both the Primo and Secondo parts equally graded. The author of this book, herself a successful teacher of wide experience, has felt this dearth of attractive material and has set about to remedy the situation.

*Side by Side* contains ten easy, short duets, each part being only one page in length. As already suggested, it is not a book for pupil and teacher especially (though it may be used in this way if desired) but is primarily for two beginning pupils of equal advancement. Playing passages remain within the five-finger position and easy rhythms only are employed. The few octaves that appear are optional; there are no sixteenth notes; and only the simpler Keys of C, G, F, B-flat, D, A Minor, and G Minor are used. Special care has been taken to provide a Secondo part which has a decided interest, this part often carrying the melody in the bass.

The music is original and tuneful. There are two easy marches, *Little Lead Soldier* and *Here Comes the Parade*. *The Bell in the Steeple* has a characteristic bell imitation; *Little Spanish Dance* introduces triplets in eighth notes; and *May Day Dance* is in three-four time. *An Important Occasion* is a broad martial movement and *The Elephant Marches* features a ponderous bass melody. The remaining duets are *Toy Sailboat* in six-eight time; *Dance of the Little Wooden Shoes*, an allegretto movement emphasizing staccato; and *The Rocking Cradle*, a lullaby.

Our readers know the many successful books and piano pieces by this gifted composer. Her *Adventures in Music Land* (\$1.00) has long been a favorite method and, more recently, *Adventures in Piano Technique* (75¢) and *28 Miniature Etudes* (75¢) have brought forth much favorable comment. To get a first-from-the-press copy of this worthy addition to piano teaching materials, send your order now for a single copy at the low advance of publication cash price of 30 cents, postpaid.

**THE THRESHOLD OF MUSIC, A Layman's Guide to the Fascinating Language of Music, by Lawrence Abbott**—The Theodore Presser Co. takes great pleasure in announcing the publication in book form of the series of articles appearing in THE ETUDE during the past year or more under the title "Harmony at Your Doorstep" by Lawrence Abbott. Since the publication of the first article in this important series, we have received many requests that this material be made available in book form and we are happy to accede to these requests.

The author, grandson of the famous American clergyman, Lyman Abbott, is assistant to Dr. Walter Damrosch at the National Broadcasting Company. Through this position in the broadcasting field, he has received thousands of letters from people who have a "smattering of music," but to whom the language of music is all a baffling mystery. These concert and radio music lovers "play a little" at some instrument but have no idea of becoming professionals. They likewise do not want to be bothered with text books, rules, and written exercises. Still they have a keen interest in finding out "what it is all about." The many books on harmony which are available are unsuitable for such study and simply bewilder the average reader. Those music books which have been written for the layman invariably avoid the subject of harmony.

Mr. Abbott solves this problem in a very sound, readable, and entertaining presentation. He says that he has prepared this book "for the person who doesn't care about being able to write harmony but merely wants to know about harmony in order to become a more intelligent listener." The work is aimed at the casual reader and sets out to inform him how to understand music. It is designed to be read at home, with a piano near at hand. A special feature are the numerous examples from music of all periods. He quotes from the works of Beethoven, Bach, Brahms, Wagner, Debussy, Puccini, Dvorak, Franck.

Mendelssohn, Tschaiowsky, Chopin, and other classical giants. Interspersed with these are excerpts from the lighter works of Victor Herbert, Oley Speaks, Franz Lehar, Johann Strauss, Ethelbert Nevin, right down to the tunesmiths of Tin Pan Alley, with examples from such ingenious hits as *Indian Love Call*, *Rhapsody in Blue*, *Ol' Man River*, *Darktown Strutters' Ball*, *Japanese Sandman*, *Smiles*, and *What is This Thing Called Love*?

Theoretically speaking, the subject matter includes a study of tones and related tones, scales, intervals, triads and seventh chords, and carries the reader right through modulation, chromatic harmony, and the ninth, eleventh, and thirteenth chords. The concluding chapters of the book discuss "Trends of Modern Harmony," "The Idiom of Jazz and Blues," and "Favorite Harmonies of the Great Composers."

That every serious musician will want to read this popular approach to harmony is taken for granted. Of course it is recommended especially for that legion of music lovers who want to learn to listen more intelligently. Opportunity is now afforded our readers to order a single reference copy at the special advance of publication cash price of \$1.25, postpaid, delivery to be made immediately upon publication.

**WHEN THE MOON RISES, A Musical Comedy in Two Acts, Book and Lyrics by Juanita Austin, Music by Clarence Kohlmann.**—The announcement of a new musical comedy by the gifted composer, Clarence Kohlmann, collaborating with the talented librettist, Juanita Austin, will be welcomed by those seeking a new vehicle for amateur performers in high schools, junior colleges or community groups.

The story is based on a true Romany saying, "Wait 'til the moon rises." The events leading up to the rising of the moon and just what happens when the moon rises make an interesting background for the tangled love affairs of three young couples and a fourth "surprise" romance. With this as his inspiration, Mr. Kohlmann has written solos, duets, dances, a quartet and a number of choruses equaling, if not surpassing, in melodic beauty any of his previous successes.

Presentation of this operetta requires five male and four female soloists, with three short, male speaking parts, and a mixed chorus. The action of both acts takes place on the grounds of "Cedarglades," a fashionable resort hotel in New Hampshire. The time is the present.

Full directions for staging, costuming, dancing, lighting and other presentation details will be issued in a Stage Manager's Guide, available on a rental basis.

A single copy of the vocal score—dialogue, and piano accompaniment of the musical numbers—of this work may be ordered now, in advance of publication, at the low cash price of 40 cents, postpaid.

**THE YOUTHFUL BARITONE, An Album of Songs for Studio and Recital.**—Last month's issue of *THE ETUDE* had a most interesting editorial, "The Joy of Singing." It is natural for the normal individual to revel in self-expression through singing. That joy is enhanced for young people to-day through the fact that the public school systems of this country have capable well-trained music educators on their teaching staffs, so that the young people of to-day may be provided with a basic knowledge of how to sing and so that these same young people may have a sense of pitch and rhythm.

The great part of singing efforts in the public schools, however, must be in groups. Forward-looking music educators recently have been making endeavors to have all the vocal training given in school choral work carry over into the individual life of each student. This means guiding the young singers in finding suitable solo material. In order to meet the demand for such material this *Youthful Baritone* album has been prepared. In high school and college days the young men of the average baritone singing range will find this collection very acceptable for his own enjoyment or for the calls made upon him to participate in programs. School music educators and private voice teachers will find these songs very acceptable in the opportunities they offer for demonstrating to students of singing the points upon which work should be done to lift the rendition of a number up to an artistic quality and finish.

These songs particularly avoid the extremes of the baritone range, thus protecting the young singer at an important time in his development.

Already a large number of orders are in for this album. We see no reason why every school music educator handling vocal work in the schools and every private teacher of singing should not avail himself or herself of the opportunity to secure a copy of this album through the advance of publication bargain offer which soon is to be withdrawn. The advance of publication cash price is 35 cents postpaid. Only one copy to a customer at this price.

**AT THE CONSOLE, A Collection of Pieces for Home and Church, Arranged from the Masters, with Special Registration for the Hammond and other Standard Organs, by William M. Felton.**—The organ, very aptly termed "The King of Instruments," has undergone many vital changes in design and mechanical construction during the past decade. Students who started on the organ with the old style tracker mechanism have since seen many striking innovations such as the pneumatic action, the substitution of tablets for draw-stops, and the concave, diverging pedal board.

In the past few years several makes of organs with an entirely new principle of sound production have made their appearance. Prominent among these is the Hammond Organ, which discards the use of pipes as the medium of sound projection for a new and unique application of some of the laws underlying the phenomena of vibration. This characteristic organ tone is obtained by combining harmonics with basic tones which are created and amplified through the medium of electricity. The possibilities of color combinations are almost infinite on this instrument and the student feels the need of some definite and effective registration directions which may be altered from time to time at his discretion.

The fast growing demand for volumes especially registered for the Hammond and other electric organs has inspired the collection which we have entitled "At the Console." The numbers comprising this volume have been arranged from both well known and lesser known compositions by Bach, Handel, Tschaiowsky, Grieg, Liszt, Bizet, Pizné, Chaminade, Durand, and in addition, several well known folk songs have been included. The registration will utilize both the pre-set and harmonic drawbar devices of the Hammond Organ, as well as the registration for all other organs.

Single copies of this new book may be ordered now at our special advance of publication price of 75 cents, postpaid. Copyright restrictions compel us to confine the sale of this book to the U. S. A. and its possessions.

**THE YOUTHFUL TENOR, An Album of Songs for Studio and Recital.**—This album is coming into being for the same reasons as outlined for *The Youthful Baritone* volume, which is also included in this month's advance of publication offers. Perhaps there is even a greater need for keeping the tenor in his high school and early college days to songs suitable for a voice that has not reached its full powers or scope. Like its companion volume this album also will present a generous number of songs selected from successful offerings of a number of the best contemporary composers.

Do not delay taking advantage of the advance of publication offer of this book, under which you are privileged to order a single copy for only 35 cents—this amount to be remitted with the order, delivery to be made postpaid as soon as it is published.

**ALL-CLASSIC BAND BOOK, For Young Bands, Arranged by Erik W. G. Leidzen.**—The interest shown in this forthcoming band book has been very, very gratifying. While it is true that marches, novelties, and spectacular numbers always will be an important part of the band domain, music educators want to have the young instrumentalists in the school band know and enjoy those melodies which belong to the permanent literature of music. Such numbers also provide the finest kind of offerings for the school band's participation in programs before indoor audiences. Such classic music, of course, is available for bands of professional attainments,

but there has not been much music from classic sources available for school bands with only a season or two of playing experience.

Many music educators know how well the *Little Classics Orchestra Folio* provided good music for young school orchestras. This *All-Classic Band Book* will embrace music of the same type and quality, and the arrangements as made by Mr. Leidzen for young school bands represent outstanding examples of clever musical craftsmanship in giving each youthful instrumentalist an interesting part and the whole ensemble a colorful and satisfying fullness without making demands beyond the technical abilities of young band players.

This is positively the last month for this advance of publication offer. The instrumentation will provide parts for the C Flute and Piccolo, D-flat Piccolo, E-flat Clarinet, 4 B-flat Clarinet parts, E-flat Alto Clarinet, and B-flat Bass Clarinet, the Oboe, the Bassoon, 2 E-flat Alto Saxes, the B-flat Tenor Sax, the E-flat Baritone Sax, 3 B-flat Cornet parts, one of which may be used for B-flat Soprano Saxophone if desired, 2 Horns in F, 2 E-flat Alto Horns, 3 Trombone parts in Bass Clef, 3 Trombone parts in Treble Clef, Baritone Euphonium in Bass Clef, Baritone Horn in Treble Clef, Bass Horn, Tympani, Drums, and a Conductor's Score which provides a piano part that may be used in rehearsal.

The low advance of publication cash prices for this *All-Classic Band Book* are 15 cents for each part, the Conductor's Score (Piano) 25 cents. Remittance must be sent with the order in taking advantage of this offer and the books will be delivered postpaid when published.

**THINGS THAT CLING.**—In the hat manufacturing industry it is the fine fur from a pelt that is wanted, and not the hair. Particles of fur will cling and mat together, and can be made into the felt used for good hats.

Every year a lot of music publications come into existence. For the casual observer it is not easy to judge which have the clinging qualities or which, like the hair from a fur pelt, are deserving only of being eliminated, but the active music workers are the ones who discover which are which, and before long some of the publications drift out of the picture, but a steady sale continues for those which have the right qualities. These continued sales necessitate repeated printings. Thus it is something of a privilege for the active music worker to be able to learn what appears on the Publisher's Printing Order in the way of such reprintings. The list below has been selected from the Printing Orders of the past thirty days.

Theodore Presser Co. always is glad to extend to responsible music folk the opportunity of examining a complete copy of as many of these numbers as might be requested sent "On Approval."

#### SHEET MUSIC—PIANO SOLOS

| Cat. No. | Title and Composer                           | Gr. | Pr.    |
|----------|--|-----|--------|
| 23950    | Priscilla on Sunday—Bibbo                    | 1   | \$0.30 |
| 25638    | The Sleepy Kitten—Scott                      | 1½  | .30    |
| 25053    | In the Cathedral—Adair                       | 2   | .25    |
| 30104    | Dutch Doll—Mueller                           | 2   | .40    |
| 30061    | The Full Moon, Op. 63, No. 3—Mazurka         | 2   | .30    |
| 8802     | Rippling Water—Anthony                       | 2½  | .35    |
| 25011    | A Marching Song—Ketterer                     | 3   | .30    |
| 25062    | The Cello—Wright                             | 3   | .25    |
| 26036    | Black Swans at Fontainebleau                 | 3   | .40    |
| 26591    | Sounds from the Vienna Woods—Strauss-Saenger | 3   | .50    |
| 30153    | Tumble-weed—Bliss                            | 3   | .50    |
| 26188    | Melodie Russe—Beaudoux                       | 4   | .35    |
| 18616    | Hunoresque—Levine                            | 5   | .35    |
| 1962     | Menuet a l'Antique—Paderewski                | 6   | .40    |

#### SHEET MUSIC—PIANO FOUR HANDS

|       |                                   |   |     |

#### THE ETUDE HISTORICAL MUSIC PORTRAIT SERIES

—The summer concert season is well under way in most sections of the country and thousands of patrons of art are hearing once again the renditions of many noteworthy musical compositions in the comparatively comfortable setting of their favorite open-air "concert halls." Some of the selections heard are time-tested favorites of long standing but others may constitute a new musical experience for at least a percentage of the audience. The same thing may be said in regard to artists who perform these works: instrumentalists, conductors and vocalists. They may or may not be old friends, musical speaking.

It makes no difference, however, whether the music and musicians are well seeded, not because warm weather programs always inject a new spark of life into the musical firmament, releasing dormant enthusiasm in every listener, young or old. As a result music and musicians form the basis for numerous discussions during the summer months and many erstwhile debaters have at one time or another wished for a ready source of reliable reference material to prove a point. The sands of *ETUDE* readers have found this source in *The Etude Historical Music Portrait Series*.

This unique feature of *THE ETUDE* MAGAZINE appears each month as a full page of pictures and short biographical sketches. The series, presented alphabetically, has been running several years and is only now nearing completion. Back issues are available at the nominal sum of 5 cents per sheet of picture-biographies.

# Music of the Woodland

(Continued from Page 493)

herald, I the birds would warn  
We cannot tarry here too long;  
Then come forth and pleasure give  
With woodland mirth to fill their song.

*plays On Parade by Heinrich Lich-*

just hear our little waltzes  
All so charming and so sweet,  
Their melody and motion  
Music thoughts are made complete.

*plays Kewpies Waltz, by Carre  
Dunning.*

Children dear, are you happy, pray,  
With our musicale so under way?

eed, we're very happy! Say,  
Now let us ask the *Wise Old Owl*  
Please forget his nightly prowling  
And act as leader in our play.

thanks, my little flowerets gay,  
See your woods companions run  
They're in such hurry; I declare  
Why, here they are, all full of fun!

o bright rigged pecking friends, I  
see  
Have met the Meadow Lark so gay;  
Very secretive they seem  
In greetings that they have to say;  
Wonder what 'tis all about,  
Such animation they display;  
They wait and see if they reveal  
Their meaning in a roundelay.

l, or one he chooses, plays Rondo a  
Piacco (Anger About a Lost Penny), by  
Hodson.

re comes our handsome Cardinal,  
A beau he is, all hearts to win;  
He seems so spry and much concerned,  
This master young of violin.

rdinal, in bright red attire, enters  
playing *The Bumble Bee*, by Anna  
Milla Risher. He bends over each little  
ret, who smiles up at the player.

ough unannounced, your song, to me,  
seems quite as that of a Bumble Bee;  
Now tell me kindly, is it true?  
At bow's so long, what else play you?

ual:  
yes, that was *The Bumble Bee*  
Anna Risher; and, you see,  
How smart you seem as any lawyer.  
I play *Bourrée* by Henry Sawyer.

ow comes the little *Humming Bird*,  
So dainty is the lovely miss!  
I'm sure her buzzy song, when heard,  
Will fill your hearts with brimming  
bliss.

umming Bird plays *Wings of a Hum-*  
Bird Flashing, by C. C. Bocard; or  
Time, by D. G. Blake.

ss *Song Sparrow*, a dainty bird,  
Is loved for usefulness and cheer;  
He brings such happy melody,  
'Tis surely meant to please the ear.

l asks one to play *Squirrels at Play*,  
L. Williams; or *Minuet*, by D. W. de,

Owl:  
This lovely bird, so small, you see,  
Quite plainly has no need of me  
To herald her identity;  
The melody she brings, my dear,  
Is all so happy, full of cheer,  
'Tis always sure to charm the ear.

Owl names a bird to play *A Bird Calls*  
in the Wood, by Bernard Wagness.

Owl:  
Comes next a bird of calm appeal,  
Its song is one of hope and love;  
'Tis quiet, restful, and so sweet;  
All know the gentle, friendly dove.

PADEREWSKI AT 78 TRIUMPHS AGAIN—Here the great pianist is shown receiving a floral tribute from two Polish-American admirers.

Owl asks one to play *Moon Boat*, by  
Louise Christine Rebe; or to give *The*  
*Bluebird*, a musical recitation by Mildred  
Adair.

Owl:  
Alone the *Meadow Lark* draws near,  
His song, so very crystal clear,  
Draws soon a twittering crowd around,  
The like of which is seldom found.

Owl asks one to play *Hawaiian Melody*,  
for piano accordion, if possible; if not,  
then *Home on the Range*, piano, by  
Hodson.

Heron, a small boy, comes on imme-  
diately after the last number and sings or  
recites:

The Lark's a merry fellow,  
Though he has a frightful taste  
For rising with the morning sun,  
In most unnatural haste.

My mother says that, like the lark,  
I'm happy as can be;  
But, when it comes to getting up,  
I've lots more sense than he!

Owl (to Heron):  
Well! Seems to me, if you lived here  
'Twould be right hard, indeed;  
For the forest clock is right on time,  
And its call you'd have to heed.

Owl asks one to play *The Forest Clock*,  
by Carl Heins.

Owl:  
Our hearts go out to the Mourning  
Dove,  
For its melody rich and true  
Should wake kind thoughts and memories  
In the hearts of each of you.

Owl asks a bird character to play *Home*  
*Sweet Home*; *Long, Long Ago*; or *O*  
*Sole Mio on the piano accordion*, or piano.  
If singer is available, it may be sung.

Owl:  
With her lilting, trillful measure,  
Comes *Canary*, bright and cheery;  
Always we await with pleasure  
Her loved song, when we are weary.

*Canary sings* Listen to the Mocking Bird,  
by Winner.

Owl:  
The lovely *Nightingale* is come  
To bid adieu, with feathered friends,  
When *Flowers* and *Wishing Fairy* leave  
Our *Musical* of Woodland ends.

*Nightingale plays* Warblings at Eve, by  
Brintley Richards.

A Little Floweret goes at once to the  
piano and begins *Shadows*, by Leota Still-  
well, with all Flowerets singing.

*Wishing Fairy enters and gives piano-*  
*logue*, *My Wish for You*, by Cola Mae  
Spring and Clay Smith.

CURTAIN

## The World of Music

(Continued from Page 490)

KARL W. GEHRKENS, Editor of the  
"Questions and Answers" columns of THE  
ETUDE and Musical Editor of the Webster  
New International Dictionary, received on  
June 13th, the honorary degree of Doctor  
of Music, from Capital University of Colum-  
bus, Ohio. On June 6th, he and Carl Wil-  
helm Kern, with many musical works in the  
catalogs of the Theodore Presser Company  
and other publishers, received the same de-  
gree from Illinois Wesleyan University of  
Bloomington, Illinois.

THE NORTH SHORE FESTIVAL of  
Evanston (Chicago), Illinois, was revived  
with an opening performance on May 16th  
of Bach's "Passion According to St. Mat-  
thew," after a lapse of several years be-  
cause of unsettled business conditions. Dr.  
Frederick Stock infused "a reverential, awe-  
some quality" into this master work, as he  
led the chorus, soloists and the Chicago  
Symphony Orchestra "through its mystic and  
worshipful score."

RAVINIA PARK, Chicago, long the  
stronghold of Mr. Louis Eckstein's wonder-  
ful pet opera company, has forsaken the  
lyric muse and on June 29th began a series  
of symphonic concerts to last till August 6th.

THE PRINCESS OF PIEDMONT was a  
participant in the second representation of  
Ravel's "L'Enfant et les Sortilèges (The Child  
and Witchcraft)" and Vecchi's "L'Amphi-  
parnasso (Around Parnassus)," when these  
works were performed in the May Festival  
of Florence, Italy.

THE PHILADELPHIA OPERA COM-  
PANY announces six performances for the  
coming season: Mozart's "The Marriage of  
Figaro"; Gounod's "Faust"; Puccini's "Ma-  
dame Butterfly"; Bizet's "Carmen"; Verdi's  
"La Traviata"; and Strauss's "Der Fleder-  
maus."

THE NINTH ANNUAL FESTIVAL of  
American Music was held at Rochester, New  
York, from April 24th to 28th, sponsored by  
the Eastman School of Music under the  
direction of Dr. Howard Hanson. Twenty-  
five works of native composers were heard,  
and several of them for the first time.

THE AMERICAN GUILD OF BANJO-  
ISTS, Mandolinists and Guitarists held its  
thirty-eighth annual convention from July  
5th to 8th, inclusive, at Providence, Rhode  
Island. Teachers, students and visiting play-  
ers had the privilege of seeing an imposing  
display of published music for their favorite  
instruments.

"THE DEVIL AND DANIEL WEB-  
STER," an American folk opera by Douglas  
Moore, in the style of the German singspiel  
with spoken dialogue and occasional music,  
had its premiere on May 18th and at the  
same time served to dedicate the "im-  
pressively sponsored" American Lyric Theater  
of New York.

ELIZABETH A. GEST

## Knots and Notes

By Bertha M. Huston

"Oh mother!" called Ruth,  
On a bright summer's day,  
"Just see all the notes  
In this piece I must play."

"I KNOW THERE are hundreds, so black and  
so small; I'm sure I can't play them and  
miss none at all."

Her mother was sewing with beautiful  
threads, making some flowers with tight,  
nodding heads; lovely and dainty, in shiny,  
black pots, embroidered so neatly in tiny  
French dots.

"Why mother!" cried Ruthy, "how  
lovely they look, and they're just as thick  
as the notes in my book."

"I guess we must work  
In all ways to succeed;  
In knots or in notes  
It is patience we need."

## Letter to Beethoven

By E. A. G.

DEAR MR. BEETHOVEN:

Somehow I feel rather bashful about  
writing to you, because you are such a  
great composer; but I guess you will not  
mind. Your music is so beautiful that you  
must be friendly—I don't think you could  
be otherwise. I really think your music is  
wonderful, and I am always thrilled when  
I hear one of your symphonies on the radio  
or in a concert. I have learned one of your  
sonatas, the one in G major, Opus 14, and  
now I am learning the one in F minor. I  
also have some records of your concertos  
and symphonies.

It is too bad you had to lose your hear-  
ing when you wrote all that beautiful music  
to listen to. I should think that would make  
you feel like jumping in the river—that is,  
if there is a river near your town of Bonn;  
but by the time you became deaf you were  
living in Vienna, weren't you? And of  
course the Danube River is there. Anyway,  
I am glad you did not do such a thing, or  
we would not have had all your beautiful  
music. Then you had other troubles, too,  
my teacher says. Some people seem to get  
all the troubles in this life, and others do  
not get any. But then, may be that is why  
your music is so great.

One of my favorite orchestra pieces that  
you composed is the *Leonore Overture*  
that has the bugle effect in it, or hunting  
horn—you know the one I mean. Sometimes  
that horn is played "off-stage" and I get a  
big thrill from hearing it.

And then, just imagine living in the house  
when shells from the revolution were  
dropping on it, and still writing music!  
Your nerves must have been made of iron.  
I guess that shows how much bigger music  
is than war and things like that.

It is too bad you had to die in 1827, be-  
cause if you had lived longer, you might  
have written still more beautiful symphonies,  
only I don't believe you could, really.

Well, I have my piano lesson tomorrow,  
so I will go now and practice your sonata  
some more—it may be you can hear me!

From  
JUNIOR

## In the Cotton Fields

By MARJORIE KNOX

"LISTEN! The Negro cotton pickers are  
singing as they work!" cried Peter, sitting  
beside grandfather, as they bumped along  
in the rickety wagon toward the farm.  
"Can't we stop so that we can hear them  
better?"

Immediately grandfather pulled the old  
horse to a stop where they could see well  
into the green fields. He was being very  
patient with the interests of Peter who had  
never before been among Negroes. "Negroes  
sing like that all the time, at work or at  
play," explained grandfather, who had lived  
so long in the South that he knew much  
about the colored people.

Peter was humming, but paused to cry  
out, "I know that song they are singing,"  
and he sang the words:

No-bod- y knows the trou-ble

"I suppose that you know that you are  
singing an old Negro Spiritual," said grand-  
father. Peter didn't but he suddenly stopped  
singing. He had noticed how the Negroes  
swayed their bodies and nodded their heads  
as they sang.

"Why do they move around like that?"  
he asked.

"Because, son, a Negro's greatest interest  
in music is in its rhythm. The more motion  
he can put into a song, the more enjoy-  
ment he creates for himself. He is very  
emotional and composes all kinds of spirit-  
uals, which are those songs that have  
originated in the Negro church. Also, the

Deep riv-er, my

Negro has a lively imagination which he  
uses to compose work and dance songs." Grandfather looked to see if Peter was  
listening, found he was very intent, and  
continued. "Negroes get their song rhythms  
from the particular motion they are mak-  
ing at the time the song comes to them.  
They dislike being in sad or dreary places,  
so they sing of their desire to be away from  
them."

The western sun was low and the Negroes,  
their bags filled with cotton, straggled  
tiredly out of the fields. Grandfather and  
Peter proceeded on down the road. "Did  
you notice," asked the man, "how well those  
Negroes sang together?" Peter was a mu-  
sician and he agreed with his grandfather.  
"The Negro has a natural ability to har-  
monize his own voice with his fellow singers.  
It is the harmony and not the quality of  
his voice that has gained recognition for  
him."

It was dark when they arrived in a grove  
of trees where many crude shacks were  
huddled together. This was where the planta-  
tion Negroes and their families lived. It  
was a warm evening and around the steps  
of one of the shacks a group of men were  
swaying to the rhythm of another spiritual  
that Peter knew very well. As they passed  
Peter sang the words to himself.

Always Peter heard the Negroes sing  
these spirituals in true old time spiritual  
fashion:

Leader: "Swing low, sweet chariot,"

Group or congregation: "Comin' for to  
carry me home—"

Swing low, sweet char-i--ot

The leader started the next line, while the  
congregation hung on to the last word of  
their line until it became a hum in the dis-  
tance; then they started their second line.  
The entire spiritual has always been sung  
in that manner, or divided up a little differ-  
ently. As Peter watched the Negroes were  
swaying rhythmically again.

Peter and grandfather waited until the  
black men dispersed and entered their  
homes, then went on. Through the window  
of one of the houses, Peter saw a Negro  
dancing. There were several others watch-  
ing him—all were singing, clapping their  
hands, and patting their feet on the floor.  
One played the banjo.

They had left the Negro settlement and  
were almost back to the farm, when grand-  
father began whistling the old familiar  
(Continued on this page)

Music Time in the Cotton Fields

## Pickup Time

By Gertrude Greenhalgh Walker

ELSIE was visiting her grandmother. "Up,  
Elsie, you are moping. What is  
your mind, child?" asked her grand-  
mother. "Oh Grandma," answered Elsie,  
"sure I won't get it."

"Get what, Elsie."

"The prize that Miss Brown, my  
teacher, is giving to the student who  
made the most all round progress—the  
one who has memorized the most pieces;  
play major and minor scales; can give  
short biography of the composers they  
studied this year, and to the one who has  
the best scrap book. I just can't seem  
to find time to do any more than my  
share of practice."

"Well, Elsie, I'm sure your day has  
been as busy as many hours in it as that of  
your fellow pupils. It is only a matter of  
how you employ these hours. However, let  
me not worry any more. Come up to my  
room and I will show you my surprise draw-  
ing."

Elsie's eyes popped when she saw  
the lovely things Grandma had drawn.  
"Grandma," she exclaimed, "did you  
draw all these lovely things your own self;  
that lovely tatted handkerchief and knit-  
ted pretty shawl? Gracious, however did  
you find time to do it?"

"I just took time," Grandma answered  
quietly. "When I was waiting for my  
knitted some and between duties I take  
I always have 'pickup' work. That is, work  
that can be dropped or picked up as  
time is available. Before I know it, I have  
finished one thing and started another,  
that is the way I keep my surprise draw-  
ing filled with pretty things which I love  
to give for birthday or holiday gifts."

"Oh," said Elsie, "I get your  
Grandma, and I can apply it to my room.  
I do my regular hour without fail, and  
then when I am waiting for dad to get his  
car ready I will run over my scales or  
if I have spare time I could paste a  
picture in my scrap book. I guess, Grand-  
ma, I have let many a quarter of an hour  
slip by without accomplishing a thing. I  
now on I'm going after Miss Brown's  
prize."

"I'm sure you will get it, my dear,  
you remember the words of a popular  
song announced who said,

In time, take time, while time doth last  
For time is no time, when time is past

## In the Cotton Fields

(Continued)

song: *She'll Be Comin' 'Round the Mountain When She Comes*. Peter looked  
and laughed. But, seriously, grandfather  
explained:

"You know, *She'll be Comin' 'Round the Mountain*  
old Negro spiritual. It used to be called  
*When the Chariot Comes*; but mountain  
and railroad work gangs sang it until it  
almost completely changed."

"Say," said Peter, "when I go home  
tell the boys that. They're always singing  
that at school." Peter had spent a fine  
week with grandfather, on the farm, and  
learned much about the beautiful old songs  
of the Negroes, one of the most charming  
and melodious types of all American music.

## 551

# The Threshold of Music

(Continued from Page 504)

serve that Brahms has fashioned the theme entirely out of triads, partly because triads are simple, noble chords, in keeping with the spirit of a chorale, and partly because triads are more ambiguous than seventh chords, and so are more musically interesting in modulation, since they keep us guessing which way the cat is going to jump.

The theme starts in D minor (one flat), then moves to B-flat major (two flats). At the beginning of the third measure it sounds as if it were moving into E-flat major (three flats), with a dominant to tonic progression. But Brahms evidently decided not to advance any farther flatwards—for the E-flat chord turns out to be a subdominant, and the theme returns sharpwards from B-flat major (two flats) to F major (one flat) and then to C major (no flats or sharps).

## One-Foot-in-the-Old-Key Modulations

IT FREQUENTLY HAPPENS that a piece of music rambles through a succession of keys without ever really losing track of the original key. The chords stand as sure enough evidence that a modulation has taken place; yet our ears insist that the music has remained true to its first tonality. If we examine this kind of modulation we will usually find that, while the chords move from key to key, the melody never once lands on a note foreign to the original tonality. The music steps out with one foot, but the other foot remains firmly planted on the old harmonic level.

Take a melody like Liszt's well-known *Liebstraum*, for instance. Its harmony starts in A-flat major, moves in the second measure to F minor, in the third to B-flat minor, in the fourth to E-flat major, and in the fifth back to A-flat major again; but the tune, like a good old-fashioned wife, never strays from home. Here it is, in plain harmonies.

Ex. 20

Or take this melody from Gershwin's *Innocent Ingenue Baby*.

Ex. 21

We are never worried that the tune will carry us out of the key of E-flat major, although the harmony makes hasty calls at the keys of A-flat major and E-flat minor—and then, after a momentary return to E-flat, visits F minor and B-flat major, before returning to the home key. The melody, it will be noticed never deserts the E-flat major scale.

One-foot modulations are as common as rabbits in Australia. Popular songs, especially, are full of them. They help to make a piece of music colorful, without being too bewildering.

Sometimes this type of modulation is carried to the point of banality. Among the more hackneyed Broadway tunes, we often find the following stereotyped sequence of chords (the tune, let us say, being in C major): a triad on F followed by a dominant seventh on E, then a dominant seventh on

A, another on D, and still another on G, which brings us back to the tonic triad of C. What it amounts to is a series of dominant sevenths, one blending into the next in accordance with the bass law, while the melody tightly clings to the skirts of the original key. A good example of this sequence can be found in the wartime song, *I Didn't Raise My Boy to Be a Soldier*, by Al Piantadosi. It will be found also in many of the older songs written by Harry Von Tilzer.

"Barber shop harmonies" are often the result of a blending of dominant sevenths belonging to neighboring keys. One neighbor chord in particular—the dominant seventh of the dominant—has been so over-used that many listeners are heartily tired of it. But its usefulness cannot be denied. It is a staple article of musical diet, like potatoes—which, too, are dished out so often that many people become tired of them.

Here is an example of its use in *I've*

ity, but instead of our landing on the tonic triad of the dominant key we find ourselves on the dominant seventh chord of the tonic key. C-sharp, instead of rising to D as a well behaved leading tone ought to do, falls to C-natural, thus keeping us in the key of G.

## Diversions of the Masters

(Continued from Page 498)

delicate precision which also characterizes all of his music, just as, in the softly tinted water color paintings, which he loved to make of the Alps, we are reminded of the lovely atmospheric qualities of his superb tonal landscapes.

### Masters' Assorted Monkeyshines

OF THE DIVERSIONS of other composers, much less is known. Of Schumann and Weber, for instance, all we know is that

degree of literary ability. He also left an unfinished novel and many newspaper articles on newly invented musical instruments (Beethoven, also, showed great interest in the latter subject).

The diversions of Brahms were unlimited. He liked nothing better than strolling in the country. When at home with one or two of his close friends, he enjoyed a glass of good Rhine wine. Occasionally he would play a droll joke, as on the occasion when, taking leave of his father, he left him a copy of Handel's "Messiah," telling him to open it in time of need—a help would straightway "drop into his lap"—the "help" being (as his father learned later on, to his pleasurable astonishment) not the sublime music of the "Messiah," but several bank notes which were hidden among the leaves of the book.

Wagner's chief diversion consisted, in his devising delicate means of giving money to others, but rather in his planning indelicate means of taking it. The maxim "It is more blessed to give than to receive" was not applicable to Wagner's way of thinking. He loved nothing more than spending his leisure hours in buying beautiful clothing and perfumes, and in sending his bills to his friends, that they might render themselves worthy of posterity by paying for his luxuries. Occasionally, however, he would become nobler and buy costly gifts for his friends; but, since he invariably bought them with borrowed money, which he never bothered to return, his friends usually had the double honor not only of receiving Wagner's gifts, but of unknowingly paying for them as well. When Wagner was not engaged in the purse-draining activities, he was usually absorbed in his generously proportioned autobiography; but even more frequently he was found reading Shakespeare to his friends. He gave a very fine exhibition of how Shakespeare should not be read, and applauded himself with fitting enthusiasm. Or he would take to giving a one-man rendition of one of his music dramas, a would end by turning the dramas into tragedies. He would be the leading tenor, baritone, soprano, and the whole opera company, not to mention the orchestra and the guests, after being subjected to several hours of this unique concert, would all take leave of him with the polite smiles of people whose great curse is that they are too well bred to say what they think whereupon Wagner would become courteous and ask their pardon for his being tired to favor them with an encore.

Should we not rejoice that we were present at these Wagnerian concerts? Lilliputians, let us rejoice that, unlike Nanny, never incurred Beethoven's displeasure, at that Schubert never threw cushions at our heads. But whatever the masters' diversions, let us be indeed thankful that they could forget their work long enough to remember that they were human beings. For, if it is for their works that we cherish them as geniuses, it is for their human characteristics that we love them as men. Even so does Mother Nature, in her abundant wisdom, bring us closer to favored children and at the same time to serve for them a still more loving plan in our hearts.

### So, No Singing for Profit!

A Soviet teacher was conducting a class in arithmetic. "If a man buys six dozen apples for eighteen kopeks a dozen, how much does he get?" A little boy waved his hand wildly. "A jail sentence," he shouted.

### Which is Mighty Good Luck

Sir Frederick H. Cowen in his "Music as She Is Wrote," notes that a Part Set is a "short, unaccompanied piece of vocal music in several parts, which begins in a key and usually ends half a tone or more lower."

## Next Month

THE ETUDE for September, 1939, Will Be Alive with Musical Features

### Start Your Musical Season Right

William Roberts Tilford gives novel ideas for the preparation of musically intriguing pupils' recitals—the kind that bring new students to the teacher.

### Are you Aiming for the Opera?

Rose Heylbut, who has interviewed scores of opera singers, and has written a highly successful book upon the Metropolitan, points out many very interesting ways in which opera aspirants have succeeded.

### Strange Music Makers

John Hix, famous creator of the series "Strange as it Seems", has made a survey of scores of queer and interesting music makers, many of which will be entirely new to ETUDE readers.

### The Master of Masters

M. Isidor Philipp, dean of piano teachers of the world, has prepared a striking article upon Carl Czerny, pupil of Beethoven, teacher of Liszt. It embodies many fresh facts which will all help the reader.

### Musical Crime Prevention

Teach your boy to blow a horn and he will not blow a safe has been the advertising slogan of instrument manufacturers. An Editorial in September gives the evidence which proves the statement.

### Making the Child Love the Piano

Marcelle Chéridjian-Charrey, French expert in teaching children, gives practical ideas for parents and teachers.

*Been Working on the Railroad*, that should be familiar to everyone.

Ex. 22

As you can see, this most common of all one-foot modulations does not take us out of the key at all. In the third measure we think we are moving into dominant tonal-

ities. Schumann, as we all know, was editor of the German musical journal, *Neue Zeitschrift für Musik*; and in this he not only expressed much valuable criticism on music, but also gave full play to his soaring, and at times, fantastic imagination. Weber, too, could be critical in his own ingenious way, and he could criticize very unjustly, as on the occasion when he had the first and second violoncellos discuss their martyrdom on taking part in a performance of that great work which Weber considered a "musical monstrosity," Beethoven's "Fourth Symphony." To silence the complaining violoncellos, he at one time threatened them with the "Eroica." From this one would gather that Weber's genius lay only in composing, not in literary production; but his autobiography, *Tonkünstlers Leben*, reveals a startling

**William Richard Wagborne**—B. Edinburgh, Scotland, Nov. 13, 1881. Comp., cond., orgnst., tchr. Winner, Texas comp. contests, 1927-28. Fdr.-cond. Houston (Tex.) Orch. Ass'n. Res., San Angelo, Tex.

**Edyth Walker**—B. Hopewell, N. Y. Dram. contralto. Stud. at Dresden Cons. Debut 1895 in Vienna. From 1903-06 at Met. Op. House. Sang at R. Op., Berlin; at Hofoper, Munich; at Covent Garden.

# THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES

An Alphabetical Serial Collection of  
THE WORLD'S BEST KNOWN MUSICIANS

This series which began in February, 1932, has included to date a total of 4004 celebrities. It will be continued alphabetically until the entire history of music is adequately covered. Start making a collection now. Nothing like this has ever hitherto been issued. Etude readers desiring additional copies of this page and pages previously published are referred to the directions for securing them in the Publisher's Notes Department.

**William Vincent Wallace**—B. Waterford, Ireland, Mar. 11, 1812; d. Chateau de Bagen, Oct. 12, 1865. Comp., violinist. Toured S. Amer. and U. S. Opera, "Mariana," best of many works.

**Alfred Wallenstein**—B. Chicago, Oct. 7, 1898. Violoncellist. Pupil of J. Klenz. From 1922-29 with Chicago Symph. O. Solo violoncell with N. Y. Philh.-Symph. Orchestra.

**Frank Laird Waller**—B. St. Paul, Minn. Cond. Has been guest cond. of many orches., incl. Dresden, Berlin, Munich, Vienna, Paris, Cincinnati, and Minneapolis Symph. Orchs.

**Christoph Thomas Walliser**—B. Strassburg, Apr. 17, 1568; d. there Apr. 27, 1648. Comp., dir., tchr. Taught in Acad. at Strassburg; dir. of mus. of churches there. Publ'd. much church music.

**Adolf Wallnöfer**—B. Vienna, Apr. 26, 1854. Comp., baritone singer, later became operatic tenor. Sang in N. Y. 1897-98. Wrote operas, male choruses, piano pcs., and songs.

**Benno Walter**—B. Munich, June 17, 1847; d. Oct. 23, 1901. Vlnst., tchr. Was leader, court orch., Munich and vln. prof., Munich Cons. The King of Bavaria presented him with a Guarnerius vln.

**Bruno Walter**—B. Berlin, Sept. 15, 1876. Comp., pnst., noted cond. of Vienna opera; Munich opera; Gewandhaus orch.; and Salzburg Festivals. In 1939 was guest cond., N. B. C. Symph. Or.

**George A. Walter**—B. New York, Nov. 13, 1875. Tenor singer. For many years active in Europe. From 1925-35 at cons. in Stuttgart; since then in Berlin. An authority on Bach.

**Rose Walter**—B. Berlin. Operatic soprano. One of the best known opera and concert singers in Germany. Her repertoire includes all of the standard operatic rôles. Has sung in many German cities.

**Hermann Wolfgang Walther**—B. Göttingen, Oct. 12, 1882. Comp. Since 1923 in Munich. From 1923-29, dir. of Acad. of Mus. the Has written operas, a smaller works with orch.

**Johann Gottfried Walther**—B. Erfurt, Sept. 18, 1684; d. Weimar, Mar. 25, 1748. Comp., orgnst. Court musician at Weimar. Publ'd the first biographical dict. of mus. and musicians.

**William Turner Walton**—B. Oldham, Lancashire, Mar. 23, 1902. Comp. Has attained recognition among the younger British writers, by writing chamber works, songs, piano pcs.

**Bruno Wandelt**—B. Breslau, June 11, 1856; d. June 22, 1933. Comp. Was active as teacher and comp. in Berlin and Dessau. Wrote a piano method, also piano pieces and songs.

**Frank Edwin Ward**—B. Wysox, Pa., Oct. 7, 1872. Comp., orgnst. Pupil of W. C. Macfarlane & MacDowell. Filled import. techng. posts in N. Y. Wks. incl. cant., org., and pia. pcs., songs and anthems.

**Herbert Ralph Ward**—B. Brooklyn, N. Y., Nov. 28, 1885. Comp., orgnst., pianist. For many years orgnst. of prom. churches in N. Y. Has written songs and melodious piano pieces.

**John M'E. Ward**—B. Phila. Orgnlist. Has had a distinguished career of over fifty years as orgnst. and choir master, St. Mark's Lutheran Ch., Phila. Pres., Amer. Organ Players' Club.

**Harriet Ware**—B. Waupun, Wis. Comp., pianist. Stud. in New York, Paris, and Berlin. Many appearances in concerts of own works. Has written songs, a one-act op., choruses, and pia. pcs.

**Helen Ware**—B. Woodbury, N. J. Comp., vlnst. Pupil. Servick and Hubay. Deb. Budapest, 1912. Tours of E. and Amer. Spec. in Hu. programs. Orig. vln. w. and arr. Res. Wash., D.

**Herbert Walter Wareing**—B. Birmingham, Eng., Apr. 5, 1857. Comp., orgnst. Filled important positions in English churches and colleges. Wrote cantatas, org. and pia. pcs., and songs.

**Claude Warford**—B. Newton, N. J., July 11, 1877. Comp., vocal tchr. Studied Stuttgart, Berlin and Paris. Has written sacred and secular songs. Conducts studios, N. Y. and Paris.

**James C. Warhurst**—B. Hyde, Cheshire, England. Comp., orgnst., tchr. Studied with H. A. Clarke, C. von Sternberg. Many yrs. in Phila. Former Dean, Penn. Chapter, A.G.O. Ch. music.

**Frank Howard Warner**—B. Wilbraham, Mass., Jan. 24, 1875. Comp., orgnst. Studied in New York with T. Tertius Noble. In 1910 joined fac. N. Y. Sch. of Mus. & Arts. Songs, org. pcs. & pia. stud.

**Harry Waldo Warner**—B. Northampton, Eng., Jan. 4, 1874. Comp., violinist, violist. For 21 yrs., violist of London Str. Q. Has written light operas, orch. and ensemble works.

**Alfred E. Warren**—B. Edmont, Eng., 1834. Comp., pianist, tchr. Studied in London. Settled in Boston, 1861. Wrote many marches and waltzes which attained great popularity in their day.

**Elinor Remick Warren**—B. Los Angeles, Cal. Comp., pianist. Has appeared as soloist with Los Angeles Philh. Orch. Has toured as soloist and accompanist with Grete Stueckgold.

**Frederic Warren**—B. Chicago, Tenor, teacher. Stud. with Sbrigella and J. Reszke. Toured U. S., 1900. Debut in London, 1904. C. and con. appearances E. and U. S. Res. New York.

# Earn A Teacher's Diploma or A Bachelor's Degree

Are you satisfied with your present position? Do you feel that you could demand a larger salary and do better work with further training?

Professional musicians who are using our Extension Courses as a means of going higher in their profession are making a great gain financially.

You are invited to send for lessons and catalog. It may be the means of starting you upon a career that will pay dividends in increased cash earnings—dividends that couldn't possibly come to you under your present position.

**HAVE YOU STUDIED HARMONY?** Those who are making music their profession are always interested in improving their own knowledge, in progressing, and those who are best equipped receive the largest pay checks. You can make your services more valuable. Openings in the music field are growing very rapidly.

### NEW

## 11 EASY TRANSCRIPTIONS FOR PIANO

Tuneful, rhythmic music by well-known American composers, including the world-famous marches, *Our Director*, *National Emblem*, *NC-4*, and *Down Main Street*, carefully transcribed, edited, and fingered. As an attractive title-page does much in arousing the pupil's interest, this feature has been given careful attention, the editions carrying smart, modern designs in attractive colors.

| Title                           | Transcribed by | Title  | Transcribed by |
|---------------------------------|----------------|--|----------------|
| OUR DIRECTOR, March (Bigelow)   | Walter Jacobs  | MOONLIT RIPPLES, Barcarolle (Rofe)                         | Walter Rofe    |
| NATIONAL EMBLEM, March (Bagley) | Charles Repper | RURAL PICNIC, Rustic Dance (Rofe)                          | Walter Rofe    |
| NC-4, March (Bigelow)           | R. E. Hildreth | CANZONETTA (Rofe)  | Walter Rofe    |
| DOWN MAIN STREET, March (Weidt) | R. E. Hildreth | PICKANINNIES' PICNIC (Four Little Blackberries) (O'Connor) | Norman Leigh   |
| WU HU (Rofe)                    | Walter Rofe    | WHIP AND SPUR, Galop (Allen)                               | Walter Jacobs  |
| AUTUMN TINTS, Waltz (Rofe)      | Walter Rofe    |  |                |

The regular sheet music editions are 35 cents for each number, less the usual discount to Teachers.

# THE WORLD OF MUSIC

HENRI ELKAN

THE STEEL PIER OPERA COMPANY of Atlantic City opened its season with performances of Verdi's "Il Trovatore" on June 29th and 30th, with Henri Elkan conducting. This is the twelfth season of this enterprise, which would seem rather definitely to answer the question as to whether Americans like their "Opera in English." In all, this organization has presented thirty-four operas in four hundred performances.

HANS PFITZNER, eminent German composer, celebrated his seventy-fifth birthday on May 5th. The scion of a musical lineage, he has devoted himself to the expression of ideas in music, so that he often has been called the "last of the German romanticists."

THE OHIO MUSIC TEACHERS ASSOCIATION held its fifty-seventh Annual Convention, at Toledo, from June 20th to 23rd.

MRS. KATHERINE FLEMING HINRICHS, a popular contralto at the turn of the century, first in the productions of Gustav Hinrichs, "the father of opera in Philadelphia," and then in the Metropolitan Company of New York, died on July 10th, while visiting a daughter in Norristown, Pennsylvania.

LEOPOLD STOKOWSKI, co-conductor with Eugene Ormandy of the Philadelphia Orchestra and musician of the world, is reported to be experimenting on a complete electrical orchestra.

THE HOLLYWOOD BOWL SEASON of "Symphonies Under the Stars" opened on the evening of June eleventh, with Pierre Monteux conducting and Josef Hofmann as soloist.

THE AMERICAN GUILD OF ORGANISTS held its First National Biennial Convention (Eighteenth National Convention) at Philadelphia from June 19th to 23rd, with Charles Henry Doersam in the chair as Warden and with James C. Warhurst as General Chairman. Leading events were recitals on various church organs by E. Power Biggs, Ernest White, Edwin Arthur Kraft, Mary Ann Mathewson, John Klein, Clare Coci, Harold Heeremans, and on the Wanamaker Organ by Virgil Fox. With these were addresses, round table discussions, and a Reception and Luncheon for delegates and members at the Presser Home for Retired Music Teachers at Germantown.

M. ALFRED FRADEL has completed thirty years as conductor at the Casino-Theatre of Geneva, Switzerland, for the celebration of which event M. Péron, consul general of France, organized the celebration.

THE NATIONAL SYMPHONY ORCHESTRA of Washington, D. C. with Dr. Hans Kindler as conductor, is giving its usual series of "Sunset Symphonies" on Sundays and Wednesdays, at the Potomac Water Gap.

FOR THE J. S. BACH PRIZE competition recently held at Leipzig, one hundred and twenty-one composers entered works, including fifty-one symphonies and twenty-four operas.

CHARLES HENRY DOERSAM

## Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

THE RAVINIA PARK SEASON of the Chicago Symphony Orchestra opened with its program on the evening of June 29th. Conductors for the series are Sir Adrian Boult, from England; Vladimir Golschmann, of St. Louis; and Arthur Rodzinski, of Cleveland, Ohio.

MISS HELEN L. CRAMM, popular composer and creator of musical books for children, left by her will a gift of two thousand dollars to create a musical scholarship in her home city, Haverhill, Massachusetts.

THE NETHERLAND SOCIETY of Contemporary Music, of Amsterdam, Holland, has given an evening program in memory of the eminent Czech composer, Léos Janacek.

ROBERT ELMORE has been appointed to the post at the University of Pennsylvania formerly held by Dr. Harl McDonald who has become manager of the Philadelphia Orchestra. Mr. Elmore will teach the classes in composition and will share with Dr. McDonald the leading of the University Choral Society of two hundred voices.

LILY PONS as soloist, with her husband André Kostelanetz conducting, drew on July 6th a record attendance for the Robin Hood Concerts at Philadelphia, when ninety-nine hundred and five paid admissions and at least ten thousand were seated on the grassy slopes encircling the Dell.

THE TABERNACLE CHOIR of S. Lake City, Utah, inaugurated summer festivals of sacred and secular music in S. Valley, Idaho, on July twenty-second, with J. Spencer Cornwall conducting. This choir of three hundred twenty-five voices—said to be one of the finest musically trained in the world—has been in existence for seventy-five years.

THE NEW YORK PHILHARMONIC-SYMPHONY ORCHESTRA opened its season of summer concerts on the evening of June fourteenth, with Walter Damrosch conducting and Albert Spalding as soloist in the great "Concerto for Violin and Orchestra" by Tschai-kowsky. On June nineteenth Josef Hofmann was soloist in the "Emperor" Concerto for Piano and Orchestra by Beethoven; and the first week brought the début and warm reception of these concerts of the youthful Italian conductor, Massimo Freccia, so successful last year at the Stadium, and for this season a sensational success at the Robin Hood Concerts of the Philadelphia Orchestra.

MASSIMO FRECCIA

COLONIAL WILLIAMSBURG announced two series of Festival Concerts on the evenings of October 19th to 22nd and October 26th to 29th, the programs to be given in the ballroom of the restored Governor's Palace, by Ralph Kirkpatrick, harpsichordist and assisting artists.

JOHN BARBIROLLI, conductor of the New York Philharmonic-Symphony Orchestra, was married early in July to Miss Evelyn Rothwell, oboist, the ceremony transpiring in the Registrar's Office of Bloomsbury, London.

THE FREE SUMMERTIME CONCERTS in Chicago's Grant Park attracted a record breaking audience of seventy-five thousand for its opening concert on July 1st, when the program was given by the Woman's Symphony Orchestra under Izle Solomon and the All-Girl Orchestra of Philadelphia.

JOHN McCORMACK has entered the managerial field as a member of John McCormack and Frank L. Cooper, Ltd., with headquarters in Steinway Hall, London, England.

A DELIUS MEMORIAL FUND has been endowed by Mrs. Henry L. Richmond of Jacksonville, Florida, for the promotion of music education in that locality. In honor of Frederick Delius, the eminent romantic composer of England, who spent his youth at Solano Grove and Jacksonville, the fund is to be administered by the Duval County Board of Public Instruction and the Jacksonville Public Library.

JOHN FOULDS, composer of the "World Requiem" that was performed at the British Legion's Festival at Albert Hall in 1924 and of the incidental music for Bernard Shaw's "Saint Joan," recently passed away. (Continued on Page 617)

## Competitions

PRIZES OF TWO HUNDRED FIFTY DOLLARS and One Hundred Fifty Dollars, each, are offered for the best and second best Concert Piano Solo and for the best and second best Entertaining Piano Solo, entered in THE ETUDE Piano Solo Composition Prize Contest. Competition open to all composers excepting members of the staff of THE ETUDE and employees of the Theodore Presser Co.; closes November 1, 1939; complete information from THE ETUDE Piano Composition Prize Contest, 1712 Chestnut Street, Philadelphia, Pennsylvania.

THE CHICAGO COUNCIL OF TEACHERS OF SINGING offers its annual prize of One Hundred Dollars for a song to words chosen from the Psalms, by the composer. The prize is endowed by the W. W. Kimball Company; the competition closes November Fifteenth; and complete information may be had from Walter Allen Stults, P. O. Box 694, Evanston, Illinois.

THE PADEREWSKI PRIZE COMPETITION offers \$1,000 for the best work for Chamber Orchestra, and a second \$1,000 for a concerto or other serious

work for a solo instrument with symphonic orchestra. Works must not exceed fifteen to twenty minutes in performance, and must be received before February 1, 1940.

Full information from Mrs. Elizabeth C. Allen, Secretary Paderewski Fund, 290 Huntington Avenue, Boston, Massachusetts.

A PRIZE OF FIVE HUNDRED DOLLARS is offered by the Henry Hadley Foundation for the best composition in any of the major forms to be submitted within the autumn months. Full particulars may be had from the Henry Hadley Foundation, 633 West 155th Street, New York City.

THE EURIDICE CHORUS of Philadelphia offers a Prize of One Hundred Dollars for a Chorus for Women's Voices, in three or more parts, either a capella or unaccompanied, and to words of the composer's choice. Compositions must be received not later than October 1, 1939, addressed to The Art Alliance, 251 South 18th Street, Philadelphia, Pennsylvania, to whom application may be made for further information.

THE MUSIC TEACHERS' ASSOCIATIONS of Washington, Oregon and California met in a Tri-State Convention at Santa Cruz, California, from June 28th to July 1st. Lectures, recitals, and side excursions filled the days.

ALEXANDER GRETCHANINOFF, who soon will be celebrating his seventy-fifth birthday, is reported to be busily at work on a "Sixth Symphony."

MARY ANN CULMER, a young American conductor from Indianapolis, Indiana, recently led a Landes-Orchester concert in Berlin, when the program included Mozart's "Symphony in G minor," Strauss's "Don Juan," Cesar Franck's "Symphony in D minor," and Berlioz's "Carnival Romain."

A LONG LOST BEETHOVEN WORK has been discovered and performed during the past season at Düsseldorf, Germany. It is the incidental music to a Roman tragedy called "Tarpeja," which was first performed in 1813, and of which a printed edition appeared in 1825.

THE ORCHESTRA OF PALESTINE lately gave a pair of concerts at Cairo, and another pair at Alexandria, Egypt, with Eugen Szenkar (Isen-kahr) conducting.

VERDI'S "AIDA" was the pre-season offering of the Southern California Symphony Association, at the Hollywood Bowl, on July seventh and eighth. The cast, of Americans, included Dusolina Giannini as Aida, Bruna Castagna as Amneris, Frederick Jagel as Rhadames; Richard Bonelli as Amonasro, Douglas Beattie as High Priest, Tudor Williams as King of Egypt, and Eleanore Woodford as Priestess. Pietro Cimini conducted; and Catherine Littlefield's all-American company interpreted the ballet features.

BRUNA CASTAGNA

FERNANDEZ ARBOS, eminent Spanish musician, composer, and conductor of the Symphony Orchestra of Madrid, died recently at the age of seventy-six.

ISN'T THIS A FINE LOOKING BAND? This band is made up entirely of inmates of the famous San Quentin Prison in California. Read what its director, John A. Hendricks, says about the priceless value of music for self discipline, learn what music does to keep young folks out of trouble.

## Practical Crime Prevention

### "Better Spend \$5000 for a Band Than \$50,000 for a Jail"

**T**O-DAY a little news sheet printed upon green paper drifted on to our desk. It came from an institution the inmates of which the press has advertised as a peculiarly dangerous group of the toughest criminals in the country—the San Quentin Prison, in California, the largest prison in the world. Most of these inmates would not be fundamentally tough, if the machinery of society had not broken down somewhere. They are largely pitiable instances of individuals who never have had the advantages of the right early discipline. They have gone on and on, butting their heads against the walls of law and order, largely because no one cared enough or was wise enough to start them right. If these inmates had been taught to think right, few of them would have acted wrong.

Any right-minded parent would give anything he owns to prevent his child from getting behind prison bars. Some months ago an Etude Editorial, called "He Played the Wrong Instrument", told the story of a father who pleaded with a judge to release his son who had been caught in the crime mesh from playing automatic gambling machines. The father said, "I was too mean to lay out the money for a musical instrument he wanted to play." It gave parents and tax-payers a new conception of the worthwhileness of grants made for music study. Here we have an opinion of a man, acquainted with penal affairs, who has for years been watching the disciplinary effect of music. If the discipline had begun earlier, prison life might have been averted.

The *San Quentin Sports-News* contained one of the best expositions of the value of music we have ever read. "Why did Willie go wrong?" "What put him behind the bars?"

The main reason is that Willie evaded the discipline of society and determined to quarrel with it. The first real discipline he knew was that forced upon him within the prison walls. John Hendricks, Conductor of the San Quentin Prison Band, tells how music lessons might have kept Willie away from the prison gates. It is valuable, hard, cold logic from a man who has had years of experience in prison matters. Of course all parents are concerned about the success of their child; but, more than any material gain, is the need of protection of the child's life from those dangers of modern society which may bring disgrace and shame. Few parents, when they look at a child, ever imagine that the little one could by any possible chance lodge in prison. Still the prisons are filled with thousands of miserable men and women. But they are not the chief sufferers. Their sufferings are insignificant in comparison with those of the broken father and the crushed mother, with their heads bowed in misery every moment their dear one is in trouble. It is for this reason that we present in part the very fine article from this prison newspaper, the *San Quentin Sports-News*, which is reprinted from *The Cue* of Los Angeles. Let "Little Willie" have the disciplinary value of music study and his chances of getting into destructive mischief are reduced to a minimum. The father, who invests in a musical instrument and music study for his child, may be making the wisest possible expenditure of his money.

Writing in *The Cue*, John Hendricks says:

"A prison is not a place for amusement, but for discipline and rehabilitation. 'What,' might question the one who knows nothing of the subject, 'has music to do with

discipline and rehabilitation? To those who may have gone through the discipline of musical study, or have experienced rehabilitation through the influence of great music, the answer is very clear. The effect of hearing and really knowing music, on the human character, is intangible, but none the less profound.

"It is a significant fact that a surprisingly small number of inmates have had former musical training, especially in their young years. Why is this? It is unquestionably because those who had this discipline in their youth did not go wrong. Music helped them in two ways—discipline and character-building. Why doesn't the traditional Little Willie want to study music? Every parent knows that Little Willie would rather do almost anything else. Is it because Little Willie isn't musical? Not at all. Little Willie doesn't like to do anything which requires concentrated and disciplined effort, day in and day out over a period of years; something which means hourly practice or more before or after the regular school day. If Little Willie, in spite of the distaste for discipline natural to any healthy growing boy, succeeds in sticking with a musical instrument until it is mastered, he will rarely go wrong. He has had a training in self-mastery, represented by hours of work daily over a long period of time. He has also had the subtle influence of being on intimate terms with musical masterpieces. That is the reason that we find practically no inmates who had a vigorous early musical training. Such students almost never become inmates.

"It is known to psychologists that forms of discipline which cause secret resentment are unsatisfactory. It is often very difficult to find forms of discipline which do not produce this bad condition. But a musical rehearsal is such a form.

"Men playing in a band rehearsal must come to rehearsal with parts prepared. This means that they must present audible proof that they have done work on the parts by themselves, and with no one to prod them. If they have done this, it shows a certain amount of self-discipline. But in the band rehearsal there is a new and important element which enters—that of social discipline. Each man is individually responsible for his own part—no one else can play it for him. But he must balance his part with the rest of the bandsmen. He cannot blow his part too loudly, to show off. This would unbalance all the rest of the band. Neither can he play timorously; this unbalances the band just as much. He must do exactly his own share, neither more nor less. He must, to accomplish this end, take orders. The conductor's baton must be followed; every beat of the time is set by the baton. If he follows it, he is taking orders. If he does not follow it, he knows that he is disrupting the music, and that the conductor will be forced to stop and give him individual correction. The baton also tells him whether to bring out his part over the rest, or whether to subordinate it for the good of the whole group. He must obey. This represents social discipline; yet the taking of such orders is not accompanied by any resentment, and the musical result of his obedience exerts that intangible influence of which we spoke before, for his betterment. It is a more powerful influence when he shares in the music through playing one small part in it. The discipline of the baton is impersonal.

"An excellent feature from the standpoint of discipline is that no man can attempt to throw his guilt upon someone else. If there has been a mistake played in the bass trombone part, then the player of the bass trombone must be the one who made it! The men learn to admit that they have the wrong idea, and to change it for the right one. They find that they are respected for doing so; that it is not necessary to try to deny their guilt—the guilt of playing wrong notes, or an off-rhythm. If one of them does try to deny it, he merely becomes a laughingstock, since all the band can easily tell whence the mistake comes. These things occur, of course, as purely musical matters; yet there is no question but that they enter the lives of the inmates very deeply.

"The rehearsals are character-building, both in their discipline and in their musical influence. The man who learns

to obey the conductor and his baton is not so apt to disobey the representative of the law. The man who hears unfolding in front of him the better musical result caused by his conforming to orders will not be apt to be resentful of the orders of society. The man who has learned to admit, publicly, playing wrong notes, and has also publicly corrected it, will be less apt to try to shift onto others his own guilt of weightier crimes!

"A prison is a place of discipline, but also one of rehabilitation. Band work is a discipline of the best sort, the sort that leaves no bad effects, and is rehabilitating. There are very few inmates who have not been bettered through their contact with the best music which is presented to them by their confrères through the band; and when the inmate who has had band training graduates to the point of being paroled again to the outside world, he has not been degraded through experience as a convict, but on the other hand his is a graduation to a higher level of human behavior, understanding, coöperation, and self-respect."

Accompanying this article was a series of ten programs which look far more like what might be heard in Carnegie Hall than behind prison walls. "Don Juan," "Siegfried," "Tannhäuser," "Peer Gynt," "Egmont," "Fidelio," "Lohengrin," and other works, start the programs; and they are properly followed by popular numbers for the less advanced musical intelligences. With a touch of grim humor, one program bears the theme song, *Time on My Hands*.

In a supplementary letter to *The Etude*, Mr. Hendricks writes:

"Music at San Quentin may be divided into four groups; the band, the orchestra, the choirs, and the music educational program. All of these activities are in coöperation with the band, which acts as the focal point of all of the music work in the institution. The instrumental equipment is good, and the library of music is unusually complete. In the band department there are classes in music appreciation; in elementary music, in intermediate music, and in harmony and in arranging, for advanced musicians interested in professional or creative work. There are also available correspondence courses in these same subjects, for which high school or, in the case of harmony, university credits are obtainable. Under the supervision of the band, some of the men have been trained in various musical professional work—not only in skilled performance on an instrument but also in composing, arranging and in copying notes. The band's arrangers are given such difficult orchestral scores as Richard Strauss's 'Thus Spake Zarathustra', Tchaikowsky's 'Fourth Symphony', Dukas' 'The Sorcerer's Apprentice', etc., and make arrangements of them for band. I am quite sure that there are at present but *two*, even here in San Quentin Prison, who have had in their school days any serious training in music.

"The use of music is found to have a most excellent effect on the inmates, in a large number of cases. It is felt that the music causes greater contentment, to say nothing of a balancing emotional effect. Aside from these more or less passive uses in preserving peace and order, music also has a very positive rehabilitating influence in many cases. Inmates who come into the institution are usually emotionally unbalanced. Some are psychopathically unbalanced, and others are at the very least in an overwrought condition. Nothing is more powerful than music in acting as an emotional stabilizer. No matter what the background of the inmate, he will be better off for having heard fine music; and the band is often his first introduction to music of a better class. It is remarkable how many inmates learn to perform on instruments, or compose music, or both; who find an invaluable avocation, and in some cases a profession—which is a preventative against their forming bad associations or brooding over their troubles. Many of the *several hundred* men who are studying music spend a great deal of time in practicing their instruments, and take a genuine pride in their achievements on them. This is the largest prison in the world and perhaps one of the best governed. The Warden and the Captain are both

(Continued on Page 608)

Photos by Hartzell

What a delightful group of children! All pupils of Miss Esther Quick, a progressive teacher of musical Lincoln, Nebraska. She writes, apologetically, "At the time, I didn't think of telling them to get their hands in correct position." One of her recital programs appears at the end of this article.

## Make Your Pupils' Recitals Fascinating

IN A MID-WESTERN CITY, one teacher was so extraordinarily successful that he naturally made many of the other teachers jealous. One of his bitter rivals was heard to say, "I don't see how he does it. Here it is only the second week in September and he gives a recital in a crowded hall, and pupils fairly rush in upon him." They did not know that the envied teacher had been hard at work preparing for that recital all during the springtime.

Considering the matter merely from a very material standpoint, a fine pupils' recital is the rational and logical way of increasing the teacher's patronage. In fact, the pupils' recital is really the teacher's "show window," far better than any other kind of advertising. No matter what the teacher may say by word of mouth or in print, about himself, the thing that counts is what he is able to show through the work of his pupils. Professor Strutter may tell, in none too modest orotund tones, about his famous teachers or his great success with audiences; but, if he is not able to produce pupils, he is like the doctor who passes his patients over to the undertaker. What the public is interested in, in these days, are fine pupils, not the teacher's memoirs.

More than this, the pupils' recital is based upon one of the most powerful and persistent of all human traits. Psychologists call it "exhibitionism", the natural desire to have others see what we can do. This is particularly strong with children. Do not look down upon a child who is called a "show off". Almost all children are "show offs." This characteristic should be used as a means of fostering the child's interest. We knew the teacher who had competitions in scale and arpeggio playing, with prizes given for the best work at her recitals. No track meet ever aroused more interest. Those who excelled in speed, precision and ease of performance were cheered just as the spurts of a Cunningham on the cinder track are hailed by joyous crowds. There is nothing so convincing to a parent as to witness and hear the success of his child. Of course he is biased from the start. How could he be otherwise? The pupil may not do as well as some others, but his chief concern is in hearing his own child. More than this, he does not purpose having other children to enjoy advantages better than those of his own child. There is the story of one father who noted that another pupil of the same teacher was advancing more rapidly than his own son. He made inquiries and found that the other pupil was taking two half-hour lessons a week, while his child was receiving only one. The father of the other child was a business man; and this irate parent saw to it at once that his child received two one-hour lessons a week.

Your recital will produce for you in proportion to the interest you put into it. A perfunctory recital of ordinary material may be made interesting, with trimmings. This

depends upon the ingenuity of the teacher, not merely on the pieces selected, but also in the decoration of the studio and even in the costumes of the pupils.

One teacher of our acquaintance gave a recital by little tots that was called "Musical Playtime." At the expense of a few dollars she had one end of her studio decorated with colored balloons and a few toys. At the beginning, a pretty little girl who looked as though she might have been a not distant relative of Shirley Temple, came out and gave a greeting!

This is the hour for playtime,  
Music is lots of fun;  
Now let us have a gay time,  
Just watch our fingers run.

This was followed by the ensuing program in which every child was dressed in a homemade costume suggested by the piece to be played:

### PROGRAM

*Little Indian Chief*.....Strickland  
*The Alpine Yodeler*.....MacLachlan  
*Fairy Foot Steps*.....Farrar  
*Bubble Dance*.....Dean  
*Rose Petals*.....Lawson  
*Captain Hook of The Pirate Band*.....Miles  
*Dixie Land*.....Steinhammer  
*The Ginger Snap Brigade*.....Eckstein  
*Mac Plays the Bagpipes*.....Nicholls  
*On Stilts*.....Hall  
*Let's Play Soldiers*.....Geibel

By

WILLIAM ROBERTS TILFORD

*Gypsy Fires*.....Rebe  
*The Clown*.....Risher  
*The Brownies' Morning Song*.....Brown  
*Captain Kidd*.....Blake

The following supplementary list of desirable material in the early grades might be used in a similar recital:

### GRADE 1 TO 1½

*A Pirate Bold*.....Stairs  
*Soldiers at Play*.....Stairs  
*Little Fingers at Play*.....Dunn  
*Betty's First Waltz*.....Light  
*Sailboats*.....Stairs  
*Heads Up! Forward March!*.....Copeland  
*Indian Medicine Man*.....Richter  
*Tripping Along*.....Thompson

### GRADE 2 TO 2½

*In a Chinese Garden*.....Overholt

*Zuyder Zee*.....MacLachlan  
*Three Characteristic Sketches*.....Ketterer  
*From a Colonial Garden*.....Mana-Zucca  
*Three Characteristic Pieces*.....Endres  
*Indian Sunset*.....Klemm

### GRADE 3 TO 3½

*Carnival Dancers*.....Chauncey  
*Swaying Dajodils*.....Overlade  
*Twilight Melody*.....Brown  
*March of The Candy Dolls*.....Renton

### GRADE 4

*June Caprice*.....King  
*Sleeping Waters*.....Mainville  
*Lady of The Gardens*.....Roberts  
*Blue Veils*.....Federer  
*Deux Pieces*.....Beaudoux  
*Moon Mist*.....Cooke

Another ingenious teacher hit upon the idea of beginning a colonial recital with an imaginary conversation between George Washington, Thomas Jefferson and Francis Hopkinson. It ran like this:

### In Old Philadelphia

Scene: The home of Francis Hopkinson in Philadelphia. Hopkinson is seated at the keyboard of the piano, which, to carry out the illusion, may be made to sound something like a harpsichord by laying lengths of thick paper over the piano wires. Enter George Washington and Thomas Jefferson. Jefferson is carrying a violin case. Time about 1790.

HOPKINSON

Hello, Mr. President; Hello Mr. Secretary!

WASHINGTON

Why not George and Tom as it always used to be?

HOPKINSON

I did not know but that, since you have both risen to such heights, you would want to be addressed by your titles.

WASHINGTON

Nonsense, you know how Alexander Pope, in his "Essay on Criticism," called pride "The never failing vice of fools." But we have come together for music, wonderful music, and Tom has brought his violin and you are to play for us. And you, Francis, although you belong to the legal profession and are interested in banking, are also a musician and our first composer. You, too, must play for us.

JEFFERSON

All I can play are a few jigs and ballads, but I have a great joy in playing those. Music has meant a great deal in my life. When I am tired out with trouble and work, I take up my fiddle and play until I am happy.

WASHINGTON

I wish that I could do that. The report has gotten

around that I can play the flute. This is not true, but I am a very great lover of music and I go to concerts and to the theater whenever I find an opportunity. I am very fond of the tunes from John Gay's "The Beggar's Opera."

JEFFERSON

Now, I think that Francis ought to play his own famous song, "My Days Have Been so Wondrous Free."

(Francis Hopkinson plays this song, which is obtainable in printed form.)

WASHINGTON

Francis, that was fine. What do you think of this music that comes from Germany?

HOPKINSON

It is wonderful. Would you like to hear some? I have some German friends who arrived just last week. They speak little English, but I am sure that they would be glad to play for us.

JEFFERSON

Fine. Let them come.

(Hopkinson opens a door and beckons. Enter the Wildach Family: Father, mother, two daughters and two sons.)

HOPKINSON

Mr. President, and Mr. Secretary of State, these are my friends, The Wildach Family.

THE WILDACH FAMILY (together)

Ich habe die Ehre (ish hob-be dee air-uh; meaning, 'I have the honor')—as all bow deeply.

HOPKINSON

They want you to play for us. *Spielen sie bitte*, Vater Wildach (speel-en see bit-tuh, fah-ter veel-dahk; meaning, 'Play, if you please, Father Wildach'). Freilich! Freilich! (fry-lish; meaning, willingly).

(Here the Teacher may insert a program of classics in various grades, with each number announced by its player, before performance. At the end the Wildach Family leave the room, while the American statesmen applaud.)

The teacher will find excellent material in the "Guide to New Teachers," which will be sent to readers of THE ETUDE, gratis, by its publisher. It will be invaluable in the preparation of this program.)

WASHINGTON

That was very beautiful music, gentlemen.

JEFFERSON

I liked it, but I like my jigs and reels better.

HOPKINSON

But the world has to advance.

WASHINGTON

Right you are, Francis; but I wonder what kind of music there will be in our America one hundred and fifty years or so from now.

JEFFERSON

Yes, I wonder; but I get fearfully sleepy this time of day. I can hardly keep my eyes open. (Goes to sleep.)

WASHINGTON

So do I. Last night I dreamed that I had been dead for eight score years, and that I awoke in a concert hall. (Goes to sleep.)

HOPKINSON

You must have heard much very strange music. Goodness! sleep is overcoming me too. I wonder if we all will have a dream like that (Goes to sleep.)

Here the teacher may introduce a program of modern music taken from the following list:

A RECITAL OF EDUCATIONAL MUSIC OF THE

TWENTIETH CENTURY

Tarantelle Humoresque (Medium),

E. Stevenson

Danse Ancienne (Medium)....F. Zachara

Danse Negre (Medium).....Cyril Scott

Playera (Medium).....E. Granados

Cuban Dance (Medium).....Mana-Zucca

Souvenir (Easy).....T. Torjussen

The Green Lizard (Easy).....P. Vellones

Vision Infernale (Medium).....E. Poldini

On the Village Green (Easy)...Henriques  
The Lure of the Sea (Medium)...A. Mason  
Polka from "Schwanda der Dudelsack-  
pfeifer" (Difficult).....J. Weinberger  
Danse Russe (Difficult).....I. Stravinsky  
Preludes, Opus 34, Nos. 13, 16, 17, 24  
(Medium).....D. Shostakovich

A Juggler in Normandy (Easy),

E. Lehman

Cubanela (Easy).....D. Saperton

Marche Militaire (Medium)....E. Poldini

Festival of the Dragon.....C. Haubiel

The Fountain of the Acqua Paola

(Difficult).....C. Griffes

Espana (Difficult)....Chevallard-Chabrier

Majesty of the Deep (Medium)...G. Hamer  
Valse Tzigane (Easy).....M. Levitski  
Valse Petite (Easy).....H. H. Huss  
Triana (Difficult).....I. Albeniz  
A Fountain Set in Flowers

(Easy).....J. Weissheyer

Nocturno (Difficult).....O. Respighi

## FIFTY YEARS AGO THIS MONTH

EDWARD BAXTER

PERRY, who shamed

physical handicaps by

becoming, in spite of

blindness, one of the

most brilliant pianists

and most broadly

learned musicians in

the American profes-

sion of his day, gave

this charming word picture of the man-

ner in which Liszt, his teacher, con-

ducted his classes in which several of

his favorite pupils were from our land:

"His manner with pupils and social

friends varied widely according to his

mood and the persons he was with. It

comprised all the shades, from an in-

imitable courtly politeness, an almost

caricatured suavity, to positive rude-

ness and supercilious snobbishness. One

evening, having found special favor with

the master, rather through a sudden

whim of his own than any unusual

merit, he cordially invited myself and

friend to come and smoke with him

at an appointed hour next day; but

on our arrival the wind of his temper

had changed, and he audibly commanded

the valet to 'tell the fellows he was

sick, or dead, or not at home; or any-

thing that would send them where the

pepper grows.'
